Crowded classes common at Poly

By LEANNE ALBERTA

A native of Canton, China, and a U.S. citizen for 16 years, Ding is also an expert in the analysis of complex architectural structures. Hence, his experience in research, teaching and educational administration has helped develop both professional and research-oriented curricula.

New dean selected to head architecture

An initiative on the November ballot that would establish a statewide lottery and use the proceeds for education is generating controversy.

The California State University Board of Trustees last week voted against Proposition 37, which could raise up to $700 million a year for education in the state.

If approved by voters, the lottery would provide a minimum of 34 percent of its revenues to elementary and secondary schools, community colleges and the two state university systems. Fifty percent of the revenues would be used for prize money, and no more than the remaining 16 percent could be used for administrative costs.

"I am concerned that the funds which might possibly come to education and the state university system would supplant tax support rather than supplement income from the state," Board Chairman

Wallace Albertson said in a news release.

Albertson even though the proposition states that lottery proceeds would supplement existing funding sources, and not replace them, there is no guarantee that it will stay that way in the future because the allocation of revenues is subject to future acts of the legislature.

At Cal Poly the idea of a statewide lottery to finance education seems to cross partisan lines.

Brian Perry, the Reagan Bush youth chairman for San Luis Obispo County and a member of the College Republicans, said his organization hasn't taken a unified stand on the lottery.

"It's an individual issue at this point," Perry said.

Personally, Perry has some reservations about the initiative. "I haven't decided completely. I'd like to see more money go to education, but I'm worried that all of the proceeds are marked for education," he said.

In a sense, it could be setting an undesirable precedent, Perry said and he speculated there might be a lottery for state health care or some other state program.

While he would like to see more funds for education, Perry emphasized that he is happy with George Deukmejian's funding for education program.

San Luis Obispo has seen the biggest gains in the past year, but according to Donald Coats, associate dean of educational services, it's a scene few students understand.

"The university is anxious to enroll as many students in classes as possible but there is a state university policy that dictates the maximum number of students allowed in a class," Coats explained.

We have 101 lecture rooms and between 9 a.m. and 3 p.m. these rooms are at the highest demand. Coats continued. "Because most students prefer to take classes during these peak hours, it makes it more difficult to schedule all of them into a limited number of course sections."

Math, accounting, computer science and English classes are commonly impacted. Coats said that many students are now dropping into classes they need and this catches up with them when they are juniors or seniors.

This quarter we had 1,428 students sign up for English 114 and we only had space for 1,000," Coats said. "This meant that 428 students were unable to enroll in this class, but English 114 is offered every quarter and students who are unable to get in the first time should keep trying."

Dedra Arsenault, a counseling technician of educational services, claims one of the biggest problems is matching instructors to available rooms.

Sometimes I'm not noticed that an instructor can take more students if he could find a room with more seats, Arsenault said. "Then I look for an instructor who has a classroom that has more seats and we make a room change. So far, in this quarter, I've made 25 room changes," Arsenault explained.

Coats also said that in many classes student enrollment must take place into accounts. "We can't have 50 students running around in a machine shop class. Coats said. "It simply wouldn't be safe."

New architecture dean Day Ding

An expert in structural engineering has been chosen as the new dean of Cal Poly's School of Architecture and Environmental Design.

Gar Day Ding, an architect and engineer with international academic and professional experience, will assume his position in January.

Ding, head of research for the University of Illinois' Building Research Council, was named to the position by Cal Poly President Warren J. Baker. A selection committee recommended him from a field of nearly 100 applicants.

By KIM MILLER

"The university is anxious to enroll as many students in classes as possible but there is a state university policy that dictates the maximum number of students allowed in a class," Coats explained.

The Winning Ticket

Like just about anything else, the lottery proposal that is on the
ballot this election is a question of opinion.

If approved by voters, Proposition 37 could raise as much as $700,000
million a year, 34 percent of which would be used to fund elementary
and secondary schools, community colleges and the two state uni-
versity systems.

Fifty percent of the funds would be used as prize money, and the
remaining money would cover administrative costs.

The California State University's Board of Trustees is against the
proposal. They believe that the money raised through the lottery
should be used by legislators to phase out taxes, instead of
combining the two sources as Prop. 37 states.

Besides displaying distrust in state legislators, the Trustees also
think the funding of education gives a frivolous air to a noble purpose (funding education), which will have a bad ef-
fect on the poor and that education is being used by business inter-
est to promote their own agenda in state legislation.

We agree with the Trustees about not trusting our legislators to
show great care for the funding of education. After all, student fees
don't seem to be going down much and teachers' salaries don't seem
to be going up much.

However, while the Trustees are good at sending out press releases spelling out their reasons for opposing the lottery, they
seem to be sitting on their hands when it comes to looking for new,
practical methods of getting more funds for state education.

The problems the Trustees find with the lottery proposal are of
their own perception, not of fact. They are in the position to lobby to
keep legislators from rewriting the proposal once it is passed and
guarantee the money is used properly.

We urge students to vote yes on Prop. 37 and let the Trustees
fight to insure it works for the state educational system.

Election didn't help plight of South Africans

It isn't exactly startling news that
Piet Willem Botha has been elected as South Africa's first Executive
President. Now equipped with more powers than any other South African
leader before him, the 68-year-old, who virtually published books on the
future of the troubled republic's 35 million white, brown and black inhabi-
tants.

Botha is now both Head of State and Head of the Executive. He appoints the cabinet and most members of the
ministerial councils. He signs or rejects any law, after first deciding what is an "own" and what a "general" affair under the
new tri-cameral parliamentary system.

A few weeks ago, amid country-wide protests and unrest, which claimed the
dlves of at least four blacks, the then-
Prime Minister confidently dismissed the overwhelming boycott of South Africa's first "mixed" elections as a "minor
obstacle." The fact that more than 80 percent of all eligible so-called colored and
Indian voters couldn't be bothered didn't
seem to disturb him much. And yet, it
was mainly his invitation to South Afri-
cans of mixed race and Indian origin; numbering at least 3.5 million together, which was brazenly rejected. In some
constituencies the turnout was embar-
rassingly low; in fact, a dozen victorious whites received less than 150 votes as a mandate to take up their new $30,000
jobs in parliament on September 18.

Botha's idea was to improve the odds
by shifting some of South Africa's ethnic arithmetical minus. Instead of 4.5 million whites versus 30 million blacks, he
wanted to present the country and the
world public with eight million empha-
sised non-blacks versus 26 million blacks with no say in the republic's affairs.

It didn't work, and the man at the helm was quick to tell an African audience in Bloemfontein that it was now necessary
to find a constitutional solution for urban blacks. Not so much so that whites would feel safer, not so much because of time
running out, but in his words, "for the sake of justice in the country." Afrikaners like nothing better than to
think of themselves as a just and Chris-
tian people and they thanked their leader
with warm applause for his wisdom.

What Botha and his people overlook is that non-whites have realized that the
new system will not really let them share
power. Colored people and Indians didn't
only abstain from voting because of im-
timidation, of apathy or even out of soli-
darity with disenfranchised blacks. More
than for any other reason they boycotted
the elections because neither Botha nor
anyone else could answer their stubborn
question: "What's in it for us? In what way
will we now really have power?"

They feel that whites basically keep in
control and are not prepared to join the
hated system for a few token dark faces in
the future cabinet.

The other main flaw of the new era is that the old era is still going strong. Not
only most, but all the laws telling South
Africans where to live, learn and love are
still on the statute books. Not even the
obnoxious law prohibiting sex across the
colour line has been abolished, in spite of a
year-long study by a parliamentary select
committee. In any case, according to a
recent survey, Afrikas speaking whites
overwhelmingly favour retention of all
the laws entrenching segregation. What's
more, even 40 percent of the so-called
liberal English speakers are against mixed
sex, as are about a quarter of peo-
ple of mixed race, who, ironically, own
their very existence to cross-race and
color bar.

As the Cape "Argus" editor noted:

"Those who protest to be last upon
reform will have to embark upon
gargantuan programme of national re-
eduction. General mutiny on apartheid
with such politically expedient real
will have to be assumed of it and fast
South Africa's new State President and
the newly-elected colored representatives
and delegates, as well as their white col-
leagues, will be measured against their
success in implementing that programme.

They are not off to a good start.

Thomas C. Kshemeyer is a 1976 Cal Poly
journalism graduate presently work-
ing and freelance writing in South
Africa.

Dean Kenneth Schwartz, now serving as interim dean, will return to teaching upon the new dean’s arrival.

**NEW DEAN**

**CRIME PREVENTION**

**From page 1**

**Two more common crimes committed against students each year are bike and backpack thefts.** Since the start of 1984, approximately 60 packs and 35 bikes valued at $300 each were stolen, said Carmack.

If a bike is recovered, however, it cannot be returned to its owner unless the bike is licensed with either the Cal Poly or San Luis Obispo police departments. Siebol said last year 200 to 300 bikes were recovered that will never be returned to their rightful owners because they were not licensed.

“The Cal Poly Police Department licenses bikes for free and the San Luis Obispo Police Department licenses bikes for a $6 fee for two years,” Siebol said. “At the very least students should engrave their drivers license numbers on their bikes, key chains and anything else of value.”

The new style U-shaped bike locks are recommended to prevent bike theft. “No bikes have been stolen from campus (while locked with this style lock) when secured properly,” Carmack said, adding that lock manufacturers guarantee a $250 to $350 reimbursement to the owner of any bike stolen while locked this way.

Siebol and Carmack agree that students moving here from larger cities tend to be naive about crime in San Luis Obispo.

Siebol encourages the installation of dead bolt locks in off-campus housing. “Most apartments don’t have them and the regular key locks can be pried off as easily as with a pair of pliers sometimes,” he said. The police department offers a free security survey to recommend preventative measures against residential break-ins. Interested students should call 549-7342.

Carmack said prevention is simple. Lock your backpack up in one of the free lockers available on campus, for example, or keep the pack with you, he said. “It’s the little things like taking time to lock possessions up and take care of valuables.”

Even if valuables are stolen they can be replaced. It is not so simple with rape. Twenty rapes were reported last year but “the authorities agree that if the number of reported rapes is multiplied by five, a more realistic figure is reached,” Siebol said.

He said, “Women in particular, I cannot stress enough, if your gut tells you something is wrong listen to your gut and not your head.” Women who feel they are being followed should find a pay phone and call 911, a toll free number.

Statistics report 60 percent of rapists and 75 percent of burglars enter their victims houses through open windows.

Siebol said that a new type of crime is occurring locally to reflect a national trend. It involves automatic banking cards. “People are writing their code numbers on the back of their cards and when the card gets stolen, the bank account is being drained,” he said.

Although San Luis Obispo is not a large city, its crime rate is proportionate to that of a big city, so the chances of being victimized are just as great. A little prevention can go a long way.

**ELECTRICAL ENGINEERING AND COMPUTER SCIENCE MAJORS:**

We’ll be on Campus October 16 & 17

At that time we’ll ask you to share the responsibility for discovering where you best fit in ROLM. Consider working on one of our project teams in software-arts such as voice and data communications, distributed data base management, integrated voice/data applications, data, voice and network architecture, or Ada.

Explore a team hardware design position in areas such as digital telephony, voice and data communications, local area networks and packet-switching, or analog, digital and VLSI design.

Or you can talk with us about combining your hardware, software and customers’ protection skills in the areas of product support, production, field service or sales engineering.

Headquartered in Santa Clara, California, ROLM designs, manufactures and markets digital-controlled business communications systems, and the most advanced ruggedized computer systems in the world.

Sign up with your Placement Office for an on-campus interview or forward your resume and letter of interest to Vicky Anderson, Engineering Recruitment, M S 350, 4900 Old Ironides Drive, Santa Clara, CA 95054. Watch for posters announcing our campus presence.

We are proud to be an equal opportunity affirmative action employer.
Mustang Daily joins the world of computers

BY LISA MCKINNON

It's a typical day in the Mustang Daily newsroom. There are reporters rushing in and out to call sources on the office phone, or to confer with an editor about problems and ideas. Every available surface space, it seems, is littered with old newspapers, press releases and final drafts of stories printed long ago.

There is something missing amid the usual noise of excited voices and ringing telephones. However, the clckety-clack of the journalism department's ancient manual typewriters is no more.

As of this quarter, the Mustang Daily has gone electronic with a news processing system manufactured by Compugraphic One Systems, a company which deals in computer equipment specifically designed for newspaper production.

Although the old clackety-type writers are still around, the editorial, reporting and classified advertisements staff at the Daily have already shifted their loyalties to the five visual display terminals and the quiet-sounding, whisper keyboards of the new system.

Plans to update the journalism department with such a system have been in the works since January 1983, said L. Joane Sommer, general manager of the Mustang Daily.

"We wanted to install state-of-the-art equipment for students to use so that when they go out into the workforce they can adapt with ease," she said.

The $68,000 Compugraphic One system, paid fully out of Daily funds generated through ad revenue, was originally scheduled for installation during the Spring Quarter, but met with transportation and technical problems. Rita Mills, a senior journalism major who is continuing as the Mustang Daily's editor following the Summer Quarter, watched some staff writers as they attempted to learn the ins and outs of computer journalism and said, "I wish we had started in the Spring, just because fall is so hectic."

Despite any confusion the system may add to the already hectic atmosphere of the newsroom, Mills said its advantages far outweigh the disadvantages.

"We've been behind for a long, long time," she said. "Most other student newspapers have been on computer systems, even ones without journalism departments for quite some time."

She added that now the Mustang Daily not only gives students professional experience as reporters but also gives them experience as terminals, which are used in the industry. "It gives them an edge," she said. "Plus it's fun."

The terminals are expected to save the Daily staff a lot of time, too.

In the old days, a reporter had to go to the end of the line where the editor would make a copy of the story. The story was proofread and edited by various editors, then was measured for the amount of space it would take up in the paper, and a headline was written for it. In the process, a story stood a good chance of becoming lost.

No more. Now, once a story has been typed into the terminal, the writer or editor can call it up simply by punching in the right code. Although the newspaper production will be eased by the system, the Daily staff is still getting used to the computerized age. Mills said they are still working out some problems, and she praised the staff for the extra time they have been putting in.

"It's been hectic, but in the long run it will be well worth our effort," Mills said.

Cal Poly students will soon have access to the computer terminals in the Reserve Room of the Robert E. Kennedy Library on a 24-hour basis. The 47 terminals located in the Reserve Room were moved from the Computer Center during Summer Quarter to make room for a new IBM 4341 computer now housed in the Center. But Summer Quarter students found the terminals, formerly accessible 24 hours a day, only available during summer library hours: Monday-Thursday 8 a.m.-5 p.m., and closed weekends. Complaints from students and special attention from Associated Students, Inc. President Kevin Creighton resulted in the extension of Reserve Room hours to 24-hours a day for the last six weeks of every quarter, beginning Fall Quarter.

Of the locations on campus that house computer facilities, four offer 24-hour service with 40 terminals available. The lengthened hours of the Reserve Room will increase computer access to over 80 terminals.

The computers were initially moved to the Reserve Room for monetary reasons. "It was the only feasible place," Computer Center Manager Dave Yang said in a recent interview. The University was trying to "save some money," said Yang.

The reason 24-hour availability will only occur during the last six weeks of each quarter is due to "lack of funding." In a July 17 memorandum to ASI President Creighton, Director of Operations Frank T. Lebens was not able to identify a readily affordable means for expanding the hours of the Kennedy Library Reserve Room during the Summer Quarter.

However, funding is available for Fall Quarter. Lebens notified the Library Director, David Walch, that funding for extended Reserve Room hours will be provided and a student assistant will be present for the last six weeks of each quarter, providing 24-hour service, seven days a week.

**Students! Work Smart. Work Simply...With Hewlett-Packard.**

If you’re in Science or Engineering, chances are your classes include Calculus, Physics, or Chemistry, Engineering Statics, or Dynamics. You’re running up against some tough calculations, with statistics problems, hyperbolics, and logs. The HP-11C calculator helps you breeze through those problems with a few simple keystrokes.

Need to simplify problems that are even more complex? The HP-41CV gives you 128 built-in functions—and the HP-41CX over 200—to simplify your long assignments. Use up to 6,437 bytes of memory to save the programs and formulas you use often. And there are thousands of software programs, so you don’t have to start from scratch next term.

If you’re in Business or Finance, you’re probably taking Accounting, Statistical Methods, Finance, and Investment Analysis. Classes loaded with tedious calculations. End the pencil-and-paper drudgery with the HP-12C. The most powerful decision-maker on the market! Dedicated keys make time value of money calculations, amortization, Net Present Value (NPV), Internal Rate of Return (IRR), and statistics solutions as simple as a single keystroke And it’s easy to change values or correct mistakes without reentering your entire problem.

Hewlett-Packard calculators. They help you work smart this term. And next term. And even later on the job. Get your HP today from your local HP dealer.

For the location of the dealer nearest you, call TOLL FREE 1-800-FOR-HPPC.
With visions of expenses dancing in your head...

A Renter has to Beware

By ROSEMARY COSTANZO
Staff writer

Many students enter into rental agreements without fully understanding what they have gotten themselves into.

To alleviate some of the unexpected surprises of the rental world, the Cal Poly Housing Office has published a renter's check list. Here is a list of questions students should consider before signing a lease:

• What is the rent each month? In sharing rent, must you pay with one check, or can each roommate write separate checks? When must rent be paid? Is the first and last month's rent required before moving in?

• What about insurance? Renter's insurance is available from some insurance companies but usually if the apartment is shared with roommates no insurance is available because no one person is in control of the apartment. Students are urged to check their parent's homeowner's insurance policy to see if it covers them.

• Inventory Checklist—Housing experts suggest you be as thorough as possible listing the apartment damages you find, to prevent owners or managers from holding the damages against you. The housing office has lists available.

• Do you pay expenses? This refers to utilities, storage space, air conditioning, parking spaces, cable television, and late rent payment. A person should make sure they know the exact amount that they will be charged for these services.

• Are laundry facilities available? The number of washers and dryers available and the condition and cost of using these machines should be considered.

• Are the entrances and exits well lit and in good condition? Are there any water stains that would indicate leaks?

• Bathrooms—are the plumbing fixtures in good working order and reasonably clean?

• Kitchen—is the sink in good working order, reasonably clean, and is there a garbage disposal?

• Are the kitchen appliances in good condition?

• Windows—are screens provided on all the windows, and are they in good condition? Are there drafts around the window frames?

• Carpeting and floors—are they clean? Are there any water stains that would indicate leaks?

• Walls—are they clean? Are there any holes or is the plaster cracked?

• Windows—are the screens provided on all the windows, and are they in good condition?

• Security—Does the entry door have a deadbolt lock or a security chain? And who should pay for any added security, you or the owner? Experts say you should contact police and public safety about security does and don'ts.

• Are pets allowed? Some apartments may have extra charges for pets.

Other questions a person should ask before signing that lease is the location of the apartment. Is it within walking distance of school or work? Is the neighborhood quiet?
Housing woes

Even with new housing, some are still left out

By ROSEMARY COSTANZO
Staff Writer

The housing shortage in San Luis Obispo is nothing new. Some students start looking for a place to live as early as February for the upcoming year. But there are always those who return to school in the fall and scramble to find a place to live.

This year the housing dilemma has a few new twists. An unusually high number of students who had hopes of living in the residence halls on campus were told their applications for admittance had been denied at the end of Spring Quarter. At that time Director of Housing Robert Bostrom put the number of students who would be without an on-campus home at 400. "We seldom turn this many students away," but the priority system is well publicized. First priority goes to new students for the fall and students who started school in the summer. Then continuing freshmen, sophomores, juniors, in that order. Lowest priority is given to continuing seniors. The situation is not hopeless for students who still find themselves without a place to live as the second week of school is about to begin.

The on-campus housing office is the best source of rental listings for students. This week the housing office has been receiving from 7 to 10 listings of rentals available in the area. Rentals listed in the office have not been inspected or investigated by anyone representing the university, and the housing office accepts no responsibility in connection with them.

If a student wants to turn somewhere besides the housing office for assistance in finding a place to live, they should check ads in the newspapers and ads for student apartments. There are rental agencies in San Luis Obispo that list student apartments. Some agencies will computer listings of available rentals. The lists will indicate the type of rental, the number of bedrooms and bathrooms. Some of the agencies will charge a one-time fee that allows someone unlimited use of the service. Other agencies charge for a 3- to 6-month list subscription.

Appointment now required for DMV to act

by KAREN ELLICHMAN
Long lines at the Department of Motor Vehicles are becoming a thing of the past, said a DMV operations officer.

“(At the DMV) we want students to know that a new appointment-telephone system for all transactions is in effect,” said Susan Lambert.

Gov. George Deukmejian this summer created the new system, equipping drivers to make appointments for all DMV transactions, said Baggs. The San Luis Obispo DMV field office, at 609 California Blvd., began using the system Aug. 6, she added, with the goal of reducing customer waiting time.

“Our (San Luis Obispo) department was one of the last to go on hệ system, because the appointments system was first tested in major cities,” Baggs said. And the system proved to be a success at cutting down lines.

Baggs said there are now three ways to make transactions at the DMV all by telephone. First, drivers can make appointments with the DMV staff for transactions which require personalized help. Second, for many transactions drivers can simply call for instructions and mail-in forms. Third, after a telephone briefing, the number for driving tests is 543-1190. The telephone lines are open from 8 a.m. to 5 p.m., weekdays.

“When you think of the DMV, think of the telephone,” said Baggs.

She said the appointment system has already eliminated some waiting time, which previously was up to 30 minutes long, for the drivers who make appointments.

“However, those drivers who do not (telephone for appointments) are put on standby until someone who has made an appointment doesn’t show,” explained Baggs.

Baggs emphasized that drivers should make appointments for DMV transactions the week to 10 days in advance. The drivers should also tell the telephone personnel how many transactions—such as transfer of vehicle license or renewal or registration—need to be processed.

Lambert, DMV transactions one week to 10 days in advance. The drivers should also tell the telephone personnel how many transactions—such as transfer of vehicle license or renewal or registration—need to be processed. She said.

Art lectures featuring imagination

By GREGG SCHROEDER

A grant from the California Council for the Humanities will help fund a series of arts and humanities programs at Cal Poly.

The series, "The Creative Imagination: A Paradigm for Science and Art," is sponsored by the School of Communicative Arts and Humanities.

Speakers will "show us the ways in which the imagination can help us face the future by guiding us on the pursuit of human values," said Diane P. Michelfelder, a faculty member of the Cal Poly philosophy department and project director. She will be assisted by Sarah Dills of the art department.

The series will begin with 87-year-old critic Mortimer Adler and poet Kenneth Burke. He will discuss "Imagination Thursday, Oct. 4. Burke will share his thoughts on ways of imagining the imagination from Aristotle to I.A. Richards.

The presentations are free and open to the public and will begin at 11 a.m. in room 220 of the University Union, in addition to his daytime schedule.

Stafford will remain on campus Oct. 25 to do a poetry reading at 8 p.m. in the Mustang Lounge in the UU.

Also, Domhoff will continue his daytime theme on Nov. 15 at 7:30 p.m. in the Mustang Lounge discussing "How We Imagine Power in America."

Michelfelder, who wrote the grant proposal for the series, told the Mustang Daily that speakers are chosen by a committee of 10 persons which includes faculty members from the School of Communicative Arts and Humanities and one community member. Committee members choose a theme and bring in nominations from their respective departments.

"Potential speakers are then given the theme," Michelfelder said. "Those that accept the invitation give us a specific topic. It's just a shame that everyone uses the word imagination in their titles."

The events in this year's series are likely to be lively and enlightening," Michelfelder said. "I would encourage everyone to come."
Soccer women open Saturday

The Cal Poly women's soccer team is coming off a second place finish last year in league to University of California Los Angeles and will begin its quest for a championship this weekend at home with two games in Mustang Stadium.

The opening game this year for the Mustangs will be against San Diego State, Saturday, 6:30 p.m., and first year coach Scott Stitesman said the team faces tough competition this weekend.

"San Diego State and UCLA are two of the teams to beat this year," he added. His team has had many minor injury problems this year. He added his team has had many

SECOND TIME AROUND, 158 Higgins, San Luis Obispo
THE BUMBLEBEE, Corner of Monterey and Main, San Luis Obispo
BIG RUTH, in Montecito, San Luis Obispo

Kickers begin on wrong foot

After a disappointing 0-2 start in league play, the Cal Poly men's soccer team will attempt to turn around their season this weekend in two league matches at home.

Winning both games is the key to having a realistic chance at grabbing the league title, said Cal Poly soccer coach Wolfgang Gartner. "For sure we will turn around the record. Those two games are real important to see if we still have a chance in league,"

Cal Poly is 1-4-1 overall this year, but has lost all four games by a total of five goals. Gartner said his team's overall record is deceiving.

"Our non-league schedule is pretty tough," he said. "We played some of the better teams in the country." He added that he was disappointed with the loss, but his team has played well despite its record.

The game Friday, 7:30 p.m., is against Chapman. The Mustangs will play Cal State Dominguez Hills on Saturday, 7:30 p.m. Both schools belong to the California Athletic Association. Gartner said both schools don't have a football program and can devote more money to soccer.

Last year Cal Poly finished the year with a 5-5-1 league record and 9-8-3 overall. Gartner emphasized that his team can compete with any college team.

I think the Cal Poly soccer team can play with any soccer team.

Technology's Leading Edge

Challenging opportunities in the U.S. Air Force are offered to motivated young men and women in the following categories:

- Program Management
- Weather Officer
- Physician
- Chemical Research
- Behavioral Scientist
- Operations

If in the next 12 months you will earn a college degree in any of these areas, or an undergraduate specialization in mathematics, physics, computer science, engineering or industrial technology, you may qualify for a challenging career as an Air Force officer. You must be under the age of 35 and a U.S. citizen. For more information, contact your Air Force Recruiter. Contact SSgt. Ron Medrano (805) 543-0700.

You need not be a student to register.
YES, there are differences. And we think you should know what they are. Ask yourself these questions.

WHEN YOU LEASE A CHICKEN, DO YOU GET THREE MONTHS FREE DURING THE SUMMER? Probably not. But when you lease your telephone from AT&T this fall, you won't pay any lease charges next summer. You can use your phone at home, and bring it back to school in the fall.

DO LEASED CHICKENS COME IN A SELECTION OF COLORS AND STYLES? No, Chickens don't come in many colors. But the AT&T telephone you lease this fall comes in a variety of colors and three popular styles.

ARE LEASED CHICKENS REPAIRED FREE? Don't kid yourself. Repairing a chicken is a delicate process that requires the work of expensive professionals. However, in the off chance your AT&T leased telephone needs repairs, we'll fix it absolutely free when you visit any of our AT&T Phone Centers.

AREN'T LEASED CHICKENS SHIPPED DIRECTLY TO YOU? Ship a chicken? Don't be silly. However, your AT&T leased telephone will be shipped directly to you after one call to 1-800-555-8111, or you can pick up your phone at any of our AT&T Phone Centers.

ONE FINAL QUESTION: DOES IT COST THE SAME TO LEASE A CHICKEN AS TO LEASE A TELEPHONE THIS FALL? Hardly. While we have no hard data on the exact cost of leasing a chicken, we can tell you with some certainty that the cost of leasing a telephone this fall is far less than you might think.

The decision to lease a chicken or a telephone, of course, rests with you. But should you opt for the telephone, remember: you get three months free next summer, and you can take the phone home with you. There's a choice of colors and styles, free repair, and we'll ship you the phone or you can pick it up at any of our AT&T Phone Centers.

It doesn't cost much either. And that's something to crow about.

AT&T Consumer Sales and Service. To order your telephone, call 1-800-555-8111 for delivery right to your door or for information concerning AT&T Phone Center locations.

San Luis Obispo
705 Higuera
