Students debate way to finals

By KAREN ELLICHMAN

Although the debaters on the Cal Poly Forensics Team did not win their usual awards at a tournament in Stockton on Oct. 22 and 23, two students did well in individual speaking events, according to the assistant forensics coach.

Political science major Kate Wolfsberg and speech major Rob Malach, both competing in their first tournament of the season, won awards in several speaking events.

They are both showing great promise, said assistant coach Bob Brown.

Malach competed his way to the final round of open negotiations, an event that tests students' abilities to reach mutually agreeable decisions.

The student also went to the final round of novice persuasion with a ten-minute prepared conversational speech. The Stockton tournament was the fourth collegiate competition Malach has attended.

Wolfsberg also competed her way to the final round of novice persuasion with a speech about non-military involvement in the Middle East.

The big Cal Poly win of the tournament was Wolfsberg's second place award for novice impromptu speaking. Wolfsberg explained that for an impromptu speech, a student is handed a topic by the event judge and has seven minutes to create and deliver a speech on that topic.

"I like doing impromptu," she said. "It's fun, except when the judges give you lousy topics. I got good topics for the preliminary rounds, but in finals I got terrible topics like, 'A stitch in time saves nine.'"

Wolfsberg took first place in all of her three preliminary impromptu rounds, a feat which Brown said is rarely done at a student's first collegiate tournament. "It's highly unusual for someone to even break into final rounds at a first tournament," she said.

The Cal Poly Forensics Team will travel to Northridge next for the Cal Lutheran Invitational Tournament Nov. 2 through 4, and an absence of human rights around the world. He said foreign policy must begin to address the issue of revolution, and the revolutionary policies of simply fighting communism has not solved the world's problems.

He gave the example prior to the Carter Administration, when America supported the white anti-communists of Rhodesia. When Jimmy Carter took office, though, he rightfully put America's need for human rights ahead of supporting a country that has no anti-communist leaders in that country, Beecher said.

"We need to get rid of our white, Oriental paranoia," he said. "The importance of human rights, Beecher said. "In the third world, human rights means pure water, getting rid of the dysentery that kills children, and being able to afford proper medical care."

"We get older, he added. "We get wiser."

"We can't detect deployment," he said. "And the bad part is that this weapons system will never allow on-site inspection of their military operations."

"A president always likes to look good," he said, "but it will be impossible for the Soviets to take the debate away from the arms control negotiations."

"I can give a perspective of developing countries as someone who grew up there," Ali said. "I can create an awareness because this world is becoming smaller."

"We need to find out what international revolution is the worst, but it will be impossible for the arms control program to act as extralegal adviser to the military operations," he said.

"The physics professor said that the third world revolutionaries are simply reacting to their inability to feed their families."

"The physics professor said that the revolutionaries are opposed to capitalism."

Dundon said that the people in third world countries cannot make long-range plans because their main concern is to fill their stomachs.

Dundon said that the bulk of American economic assistance is given in military aid, not agricultural development or other constructive assistance. The professor gave the example that Reagan wants to prevent the targeting of money toward the poorest third world regions, so he could use it to hold down revolutions in the areas where he has no influence.
It's Halloween!
With Halloween comes witches, goblins and ghouls. Or Halloween candy, apples and cider. Trick-or-treating, dressing up and practical jokes.

But for many college students these are things that only lurk in the past. To them, that's not Halloween anymore.

So, what is scary to the average college student?

We've compiled a short list of some things that might be spooky.

IT'S SCARY WHEN...

Your schedule for next quarter comes in the mail and you got a D.

You have a big date and the automatic teller eats your bank card.

The bartender takes a second look at your fake I.D.

There's $14 in your checking account and CAR forms are due.

You walk into your apartment to find all your belongings packed into boxes, stacked in the middle of the living room.

You sign a contract for a new apartment, then are notified your financial aid has been canceled.

Your alarm goes off at 6 p.m.

You haven't been to a class for two weeks, finally go and find the class has been moved.

You find the right classroom and everyone Scatrons and number 2 pencils out.

You go to your next class and everyone's turning in term projects which you knew nothing about.

Your big computer project is in trouble and the system is down.

The English professor flashes your essay on the overhead projector to go over all the things not to do when writing a paper.

Your chemistry professor says the grade range on the mid-term was 50 to 93. You had 50.

You're next in line to the cashier at the Snack Bar and you realize your wallet.

You see your roommate across the Snack Bar flirting with the guy you were eyeing for months.

The professor asks, "Does everyone understand?" Everyone nods their head except you.

You pick up your grades and the sheet is blank.

You go home for the weekend and find your bedroom has been converted into the new sewing room.

All your childhood belongings have been sent to the Salvation Army.

Your girlfriend says, "We have to talk."

Your mom says, "Remember your cat Seymour?"

Your alarm goes off at 6 a.m.

The mechanic asks, "When was the last time you changed your oil?"

Somebody laughs at your Halloween costume and you're not wearing one.

Letters

Reader responds to letter, says Mondale is 'shallow'

In a recent editorial, an article I wrote regarding Walter Mondale was criticized as shallow. I will admit I was familiar with Mondale's position on foreign policy and his ideas on how to bring the war in Vietnam to an end. However, the article was not intended to portray Mondale as a shallow individual.

The article was intended to criticize Mondale's lack of commitment to the Carter administration's peace policy. Mondale seemed to be more interested in achieving a two to one military superiority over the Soviet Union than in pursuing peace negotiations.

Shallow is a man who defines success by the number of victories he can achieve. Shallow is a man who refuses to admit that America has a tremendous economic recovery. Shallow is a man who expects to reduce the federal deficit by two thirds in four years, while at the same time creating new jobs and increasing the appropriations to other social programs.

Shallow is a man who says he is going to reduce the military budget and at the same time achieve a two to one military superiority over the Soviet Union in the 80s.

Shallow is a man who expects to have at least 25 violations with the SALT II agreements. The Democratic defense plan calls for resubmittion of SALT II to the Senate. Recently the Soviet Union was found to have at least 25 violations with the SALT II agreements. The Democratic defense plan calls for resubmittion of SALT II to the Senate. Now that's shallow.

Shallow is a man who defines taxes as such. Taxes punish the American people for the mismanagement of an earlier presidential administration.

Shallow is a man who does not understand basic economic principles. When you tax something, you get less of it. When you subsidize something, you get more of it. Got that Walter? If you tax the efficient corporations and the inefficient farmers, you will get less of the former and more of the latter.

Shallow is a man who in one breath says that he will cut back on production of nuclear powered carriers and in the next breath says that he is committed to the modernization of American conventional forces.

Shallow is a man who does not understand basic economic principles. When you tax something, you get less of it. When you subsidize something, you get more of it. Got that Walter? If you tax the efficient corporations and the inefficient farmers, you will get less of the former and more of the latter.

Shallow is a man who in one breath says that he will cut back on production of nuclear powered carriers and in the next breath says that he is committed to the modernization of American conventional forces. That, dear esteemed reader, is hypocrisy.
Editor:

As election time draws near, we often find that the issues have not been clarified by the rhetoric from both sides. We are left to wonder if the candidates are so obscured and confused. If we were ever so clear in the past, they are not in the present. It appears that political manipulation and in the heat of argument, I think we would find that there is a fundamental difference between the two parties and their candidates. The Republicans strive to count on something from a lobbyist, or invitations to a reception — even the passage of a pet bill. The Democrats strive to do something for the country who are off, while the Democrats endeavor to increase the standard of living for all people.

It is not surprising that the Cal Poly campus should be TestCasecl Republication because the conditions of our country are the same as many of us. The sons and daughters of the people have benefited from the "pro-business" stance of the Republican Party. Neither it is surprising that we should vote as our parents have voted. Yet, we young people who are starting off in life with advantages and our parents never knew we have a moral obligation to share our good fortune (that we gained solely from our birthright) with those who are less fortunate than ourselves. The standard of living in this country is higher than it has ever been in history. It is time that we begin to look toward our own needs of others in our country and the needs of other people. We certainly are all need is well met.

Learning center can ease students' work

By SUSAN DETLEFSEN

Students who have trouble knowing what to study for a test, need help organizing their time, or just want to improve their spelling and vocabulary skills can find help at the Learning Assistance Center. "The Learning Assistance Center is to help students to improve their academic and personal learning skills — those skills students may find necessary to make it through college successfully," said Patricia Stewart, coordinator of the Learning Assistance Center.

“The effort to bring Alila to Cal Poly started in 1976,” said President Baker. “He has been living in an apartment in the Yosemite dorm now.”

Alila has been living in an apartment in the Yosemite dorm since his arrival in San Luis Obispo in September 14, and said that many people seemed to be concerned about that. "I haven't seen any problems with the problems Africa is experiencing," he said. Occasionally they have a barbeque or a Halloween dance, but that's to be expected."

Alila's wife, Esther will be joining him in December just as soon as her mid-wifery course she's taking in Kenya is completed. Their two sons will stay behind.

How has he prepared his wife for this trip to California? "Well, I've told her that the climate is not a problem, since the climate here is very similar to ours," Alila said. "But I've told her that she should be prepared to answer all kinds of questions, as everyone here keeps asking about her."

If anyone, by walking through the University Union Plaza, happens to notice a couple of ladies bouncing about on a teeter-totter, do not be too concerned.

"It's not a radical club preaching regression back to childhood, but simply Alpha Phi Sorority raising money in a teeter-totterathon for the American Heart Association."

The sorority is putting 120 man-hours — or women-hours as the case may be — from Oct. 25 through Nov. 4, to raise money.

The whole house participates, said Laurie Caddel, member of Alpha Phi. The pledges take three hour shifts and the active sisters take two hour shifts.

"We bring radios and hot chocolate at night when it gets cold," said Caddel. "Sometimes other sisters show up for support, so it can actually be fun."

Alpha Phi has been teeter-tottering since 1974. The teeter-totter was made by Phi Kappa Psi. Caddel said all 109 chapters in the national sorority raise money for the Heart Association.

Cal Poly women go for a week of Sorority teeters for heart funds

Dorm Antics

Hey Edmund, the pressures of school seem so far away out here on the waves, absolutely no worries!

What could be more relaxing?

Maybe I should take up golfing.

HOW IS THE STRIKE GREG?

PHIL IS IN NEGOTIATIONS WITH THEM NOW.

DO YOU THINK HE CAN SETTLE THE DISPUTE?

PIECE OF FREEZED DRIED GEE.

NO, BUT... GUYS...

TAKE A HIRE ON FLESHY ONE.

I have known and worked with key political leaders on a local, state and national basis for many years. I know what it takes to be an effective leader.

Dr. Robert E. Kennedy, President Emeritus of Cal Poly.

CARL HYSEN
Supervisor
5th District
"Qualified to Serve...Willing to Listen"

Carl Hysen will make an outstanding member of the Board of Supervisors. He has the education, experience, ability to work cooperatively with people and enthusiastic energy He will be a true representative of the people.

CARL L. HYSEN FOR SUPERVISOR COMMITTEE
1717 CONEJO AVENUE, SAN LUIS OBISPO, CA 93401
DR. ROBERT E. KENNEDY CHAIRMAN
PAUL BURKHARDT, TREASURER

IT’S CALENDAR GIRLS 5TH ANNUAL HALLOWEEN 1/2 PRICE SALE

3 DAYS ONLY!

MONDAY OCT. 29TH * TUESDAY OCT. 30TH
WEDNESDAY OCT. 31ST

3 MONTHS REG. $89.00

NOW 3 months for $44.50

543-3465

UNIVERSITY SQUARE 956-B FOOTHILL BLVD

Will not be held over! Halloween will be the last day.
The Cal Poly image often conjures up images of students working on a complex mechanical problem or building an experimental structure in Poly Canyon. But environmental research and engineering tasks are also part of the technical nature of Cal Poly.

Natural resources management professor James Vilkitis, along with students from three successive NRM classes, have prepared a number of environmental impact analyses and management plans to be used in conjunction with a wide variety of engineering projects—by city and county governments, and by private enterprise—on the central coast. Their research and recommendations help project engineers to address environmental concerns effectively—in addition to initial engineering requirements.

Last year the classes prepared an analysis for the county of San Luis Obispo streambed maintenance program dealing with vegetation hindering flood control. The city has begun initial demonstrative phases in managing the vegetation.

An environmental impact analysis prepared by the NRM students will help marry environmental and engineering concerns, Vilkitis said, preserving or improving the aesthetics of the creek while improving flood control.

In the past, the classes, made up of NRM majors with an environmental services concentration, have completed analyses and management plans for the San Luis Obispo wastewater treatment plant, the Elkhorn Slough in Watsonville, a toxic waste transport program for Estero Bay (the greater Morro Bay area) and a land use plan for the Big Sur area.

Vilkitis' classes are now in the initial phases of an analysis for the San Luis Obispo County Airport Specific Plan, which outlines future land use at the county airport. They will research such areas as air and water quality, water and power supply sources, drainage and flooding, traffic circulation and airport noise.

In an interdisciplinary manner, students research each area as specialty groups. NRM major Ted Briggs said that working in groups brings the diverse elements of environmental services into focus and gives students professional experience. "It gives you real practice..."
with working in the real world—obviously when you are working on an environmental document you can't do it all yourself," Briggs, president of the Cal Poly chapter of the Association of Environmental Professionals also praised the broader perspective a group effort can provide.

The three classes—NRM 403, 405, and 409—are taught by Vilkitis in series. The first covers an environmental impact report will be prepared. The second is spent in formulating the report and the third quarter in defining a long-range management plan using the report as a guide. The physical implementation of the program is up to the agency in charge, Vilkitis said, as clerical work. "The students are not go-fers," said Vilkitis. "It's all related to practical experience and it's gotten the students jobs." Graduates have been hired by oil companies, environmental consultants, planning firms, and waste water treatment districts. "We give them enough tools and information so they can go to work in any field without any additional training," Vilkitis said. "If the student is eager to work, I don't think he will have any trouble getting a job.

Briggs agrees. "I feel confident that I can find a job in my general major." He explained that the environmental services field is growing and that industry is changing its way of thinking. "Industry has finally realized that they should play the game rather than break all the rules," Briggs said he would eventually like to find a job as a consulting firm and specialize in toxic wastes and groundwater contamination.

Dealing with various governmental agencies is often a trying learning experience. Vilkitis explained. He said students are used to the quick pace of their classes and often find the slow speed of the bureaucratic process frustrating. Although Vilkitis directs the student's work, he does not do it for them. "I guess they discover the learning themselves. I just direct them to a situation that will give them that learning.”

"I would consider him more of a facilitator (than a teacher) in some respects," said Briggs.

Vilkitis began teaching at Cal Poly five years ago after selling his partnership in a national consulting firm with offices in three eastern states. "I didn't like it—it was challenging when it was new," but he added that most projects involved basically the same problems and the job eventually lost its challenge.

Briggs explained that Vilkitis’ recent professional experience is particularly valuable to students because he can prepare them for a job market with which he is intimately familiar. "It gives us a better concept of what is going on than just the book work," said Briggs. "James (Vilkitis) has worked all over the country for years. When we have a problem he is able to draw on that experience because he's been there. I think he's a real asset to the department."

Vilkitis taught part time at a junior college in Massachusetts before coming to Cal Poly. "I like teaching and I enjoy working with young people and students;" he said. "I decided I was tired of flying on the airplanes. Now I live in my office!"

Don't let anyone tell you California does not change with the season. There are places where the leaves turn with the best of Vermont groves, and everywhere are the signs of the land dying, going to sleep. The Morro Bay Museum of Natural History, as it always does, offers its "Adventures with Nature" to prove California's sensitive nature. Here is a November schedule through Friday, Nov. 9. In case of rain, call the museum at 772-2694 to see if the activity you want to join is still scheduled.

- **Pismo area, Saturday, Nov. 3, 10 a.m.—** The Monarch butterflies are here for the winter, and Felicity Detloff leads the search for them at the butterfly grove, a quarter-mile south of South Beach Campground on Highway 1 in Pismo Beach. A quarter-mile trek, one hour.

- **Pismo area, Tuesday, Nov. 6, 2 p.m.—** Tom White leads an easy walk along the bluffs of the state park, for a view of the coast in approaching winter. Meet at the Ranch House. Two miles, two hours.

- **Morro Bay mudflats, Tuesday, Nov. 6, 2 p.m.—** Tom White leads a trek in search of life forms on the mudflats. Meet at the south end of the Marina parking lot in Morro Bay State Park; wear shoes for mud and dress warmly. Probably a good idea to bring a flashlight, too. One mile, one hour.

Also on that day, at 7 p.m. in the Pismo area, is the monthly Coast Mounted Assistance barbecue for members and potential members. Call Bill Denneen at 929-3647 or Ranger Dave Berry at 495-1225 for details. Rain will cancel.

- **Los Osos Oaks Reserve, Wednesday, Nov. 7, 10 a.m.—** Explore the land of Chumash and the land of elvish Tom White, as he leads an informative walk through the oaks reserve. Meet at the entrance to Pismo Beach State Park on Pier Ave. and confirm. Two hours.

- **Montana de Oro State Park, Monday, Nov. 5, 2 p.m.—** Tom White leads an easy walk along the bluffs of the state park, for a view of the island of Chumash and the land of elves with Tom White, as he leads an informative walk through the oaks reserve. Meet at the entrance to Pismo Beach State Park on Pier Ave. and confirm. Two hours.

- **Pismo area, Saturday, Nov. 3,10 a.m.—** The Monarch butterflies are here for the winter, and Felicity Detloff leads the search for them at the butterfly grove, a quarter-mile south of South Beach Campground on Highway 1 in Pismo Beach. A quarter-mile trek, one hour.

- **Los Osos Oaks Reserve, Wednesday, Nov. 7, 10 a.m.—** Explore the land of Chumash and the land of elvish Tom White, as he leads an informative walk through the oaks reserve. Meet at the entrance to Pismo Beach State Park on Pier Ave. and confirm. Two hours.

- **Los Osos Oaks Reserve, Wednesday, Nov. 7, 10 a.m.—** Explore the land of Chumash and the land of elvish Tom White, as he leads an informative walk through the oaks reserve. Meet at the entrance to Pismo Beach State Park on Pier Ave. and confirm. Two hours.

Poly Twirlers hooked on dance

By Lisa LONG

Grab a partner and swing with the Poly Twirlers, Cal Poly's square dancing club.

"We provide a place to dance and meet people," said club President Suzanne Rhodes. The 20-year-old junior biological science major joined the club "when a friend got me into it." "Once people see it, they're hooked," she said. Perhaps this explains why Poly Twirlers have club's 21st year of existence.

The range of membership includes Cal Poly and Cuesta College students, faculty, and a few dancers from the community.

The club square dances every Monday at 7:30 p.m. in the Graphic Arts Building, Room 106. Members pay $15 per quarter which enables them to vote, hold office, and dance for free on Monday nights. Non-members may dance Monday nights for $2.50.

You don't have to be an expert to join in the square dancing. The dancing is "purely for fun," said Rhodes.

Monday nights attract 20 to 30 dancers complete in square dancing attire. The women must wear dresses (preferably with full peticoats) and the men must wear long sleeve shirts.

A caller is present at all club dances. The caller guides the dancers through fancy footwork and keeps them from colliding with one another.

The club is affiliated with the Central Coast Square Dance Association and has participated in square dances from San Diego to San Francisco. There are 13 clubs in the Square Dance Association.

The club will hold exhibitions in the dormitory and perform in the University Union Plaza during Winter Quarter.

Poly Twirlers upcoming events appear in the club bulletin board. They have attended square dances in Utah. "He basically told me to get my butt down to Scottsdale, Ariz." said a member.

Steve Sommer

"I'm hoping that the administration will put the shuttle service into operation," said Gamble. "It won't cost much and it will certainly further research on this campus."

"The shuttle service will also make the interlibrary loan faster," said Gamble. "Books and materials could be transported on the shuttle in a much shorter time than what it would normally take."

Sommer earned the Ragland F. Colley award, given to the outstanding active in the nation. This is determined by activities in school, fraternity and community.

"I was informed by Dave (a fraternity brother) that the conference started that I was a candidate for the award," said Sommer in a phone interview, who has graduated and is working in Utah. "He basically told me to get my butt down to Scottsdale, Ariz."

Sommer said that the national magazine of Theta Chi was runner-up for outstanding active.

"What happened was that the conference was a year behind. That is why it was such a big surprise," Sommer said.

Besides being ASI vice president, Sommer was president of Theta Chi and headed many community projects with the fraternity.

 Theta Chi is the eighth largest fraternity in the nation with approximately 150,000 active members.

Steve Sommer

sponsoring better social functions. Senior Cal Poly construction major and Theta Chi Vice President Dave Grubb earned the Keyman award for being at all the seminars.

"There were days when I had to be there from eight in the morning to nine in the night," said Grubb. "It was pretty ex-hausti..."
The Cal Poly women's soccer team has gone on a tear this year. The Mustangs are 5-1, with their only loss coming to UCLA on the road earlier this year. The Mustangs will return home the weekend of the Nov. 10 and 11, with one of the games a rematch against their Bruins.

The Cal Poly women's soccer team improved its record to 5-1 this Sunday in Mustang Stadium, with a 1-0 overtime win over Fresno State.

The two teams were tied when the regular period ended. Neither team could score until there were four minutes left in the game when Cal Poly's Kristin Sandberg fired a shot past the Bulldog goalie.

The Mustangs will play two games on the road this weekend. Saturday they will go against UC Riverside and Sunday they will play San Diego State. Cal Poly will not return home until Nov. 10 and 11, when it will play its final home games before the playoffs begin.

Myers, Taylor players of week

WASHINGTON CREEK, Calif. (AP) - Washington State running back Rueben Mays and UCLA linebacker Tommy Taylor have been named Pac-10 players of the week, conference Executive Director Thomas C. Hansen said Monday.

Mays, a junior from North Battleford, Sask., set an N.C.A.A. single-game rushing record of 357 yards as Washington State beat Oregon 50-41 on Saturday. Mays carried 39 times for a 9.2-yard average and scored three touchdowns to break Eddie Ivery's 1976 Georgia Tech mark of 356.
You didn't pull all those all-nighters just to wind up making doohickeys.

You burned a lot of midnight oil earning your degree. But you're now in a position to make it all worthwhile at Lockheed Missiles & Space Company. Your education and training can lead you to the outermost limits of advanced technology. We're currently helping to develop many of the nation's most sophisticated aerospace and defense systems.

We'll endeavor to insure that you receive all the additional career training and educational opportunities you wish. To take you as far as you want to go.

So if you're about to take your first steps toward a career in advanced technology, do it in the company of stars. You'll find we offer one of the most comprehensive benefit packages in the industry. And when you look back on all those sleepless nights, how can you settle for less?

Phone contact: College Relations, Lockheed Missiles & Space Co., Employment Dept. 988729, P.O. Box 304, Sunnyvale, CA 94088-3040. We are an equal opportunity affirmative action employer. U.S. citizenship is required.

We'll be on campus Nov. 14. See your Career Placement Office for details.
LA tired says Robinson, in loss to San Francisco

ANAHEIM, Calif. (AP) — Los Angeles Coach John Robinson found no great mystery in Sunday's lopsided loss to the San Francisco 49ers, the Rams' worst defeat in 21 years.

"We played a team that I thought played at their best, and we did not play up to ours," Robinson said Monday of the 33-0 setback a day earlier. He grinned and added, "There were two pretty obvious statements."

The Rams' coach said that, while he was not using it as an excuse, there was a possibility his players were tired since they'd played the previous Monday night in Atlanta.

Malone plucks birds, rivets Steeler spot

PITTSBURGH (AP) — For the first time in a month, the Pittsburgh Steelers don't have their quarterback, as backup Joe Montana completed six of nine passes for 33 yards to running back Rich Erenberg and "overcame some early adversity and wasn't thrown by it," said South Carolina Coach Joe Morris.

"He has to be well to challenge the job," Noll said.

Malone tossed scoring strikes of 18 and 17 yards to John Stallworth and 7 yards to running back Rich Erenberg and "overcame some early adversity and wasn't thrown by it," said South Carolina Coach Joe Morris.

"He has to be well to challenge the job," Noll said.

For the first time since 1962, the Texas Christian University Horned Frogs are one of the country's top 20 teams.

"It's a great honor for the school and the players," TCU second-year Coach Jim Wacker said Monday night after the rankings had been announced, "but frankly, I'd rather wait until the season is over and see us ranked in the Top 20. Then it would stay there forever."

TCU, now No. 6, last made the Top 20 during a 6-4 campaign in 1962. You have to go back to 1959 to find the Horned Frogs in the final poll. They were seventh that year.

"We had a team meeting yesterday and talked about bowls and polls," Wacker said. "I think the players realize that you can lose it (the ranking) faster than a blink of an eye. We want all their concentration in Houston (Saturday's) game."

The Rams, 5-4 and apparently out of their offensive style, which is run-oriented, too soon.

"We're a certain type of football team and we have to play a certain way," he said.

"I know I kept saying during the week that there was nothing to it and we were rested and ready to go, but..." The 49ers only lost this year came after a Monday night game.

"We're a certain type of football team and we have to play a certain way," he said.

"I know I kept saying during the week that there was nothing to it and we were rested and ready to go, but..." The 49ers only lost this year came after a Monday night game.

Again emphasizing that the 49ers clearly deserved to beat his team, Robinson complimented Joe Montana, who threw for 365 yards and three touchdowns. The San Francisco quarterback completed his last 13 throws.

"Montana was great," he said.

"He can do things a lot of other quarterbacks can't." Strangely, the Rama didn't seem to play as badly as the final score would suggest since a 52-14 loss to Chicago in 1963 — would indicate.

Robinson said if the Rams hadn't made some mistakes in the first half, as they fell behind 19-0, the game could have been much closer.

He said the Rams perhaps came out of their offensive style, which is run-oriented, too soon.

"We're a certain type of football team and we have to play a certain way," he said.

"I know I kept saying during the week that there was nothing to it and we were rested and ready to go, but..." The 49ers only lost this year came after a Monday night game.

Again emphasizing that the 49ers clearly deserved to beat his team, Robinson complimented Joe Montana, who threw for 365 yards and three touchdowns. The San Francisco quarterback completed his last 13 throws.

"Montana was great," he said.

"He can do things a lot of other quarterbacks can't."
