$12 Union fee increase may be postponed

Legality of $1 million reserve fund questioned

By JULIA PRODIS

The possibility of a University Union fee increase is in doubt after a referendum was defeated. The ASI for eight months, was relying on oral communication and an inadequate filing system regarding the supposed 1976 referendum. He has since contacted the former ASI director and other school officials to learn that no referendum took place.

Another action that is being questioned is that of the former University Union Board of Governors. This student board voted in 1981 to set up an account called the UU Building Expansion and/or Modification Fund of over $500,000 (which now accounts for $5 million) in question to be used in the future for construction. The possibilities at that time included an $1 million account on the other side of campus or a recreational facility.

Also in question is the action taken by the FORWARD Committee, another student board, which has been researching financial possibilities for the construction of a recreational facility. A quarter of this year that the surplus funds from the UU Revenue Account totaling approximately $500,000 after next year’s expenses be combined with the Building Expansion and/or Modification Account to be used for a down payment on a recreational facility.

To get a definitive answer to these questions, Conway is trying to get in touch with the Chancellor’s office.

Since there was no referendum in 1976, yet there was a UU fee increase in 1977-1978 for opera...

Poly director elected VP of national Co-op

BY BRUCE PINKLETON

The proposed $12 Union fee increase has been delayed until the legal questions regarding a $1 million reserve account for future construction are resolved.

U.S. files suit against loan defaulters

The director of Cal Poly’s Cooperative Education program has been elected executive vice president and publisher of the national Cooperative Education Association. Dr. Fred Abitia will serve a one-year term as president of the Cooperative Education Association.

Abitia has been head of the Cal Poly work experience program since its inception in 1975. During that time he has guided its growth from only 22 students to nearly 1,000 students.

People come from all over the nation to learn about Cal Poly’s Cooperative Education program because in the last decade we are probably one of the few schools that have come from practically nothing to having nearly 1,000 students. Participate in the program, said Abitia. We're in the top ten universities right now in terms of numbers of students.

Many students are interested in cooperative education programs because it gives "students the experience that we can never duplicate on the campus," said Abitia. Cooperative education produces reality in subjects that students are interested in.

While most Cal Poly students are not interested in Guaranteed Student Loans, this isn’t true for the nation’s college graduates as a whole — and the Justice Department is doing something about it.

According to a recent Newsweek Campus article, the United States Justice Department has filed 53,000 lawsuits against student loan defaulters since December.

The defaults on federally guaranteed student loans could total $3 billion, a fraction of the $42 billion in federally guaranteed student loans granted through 1984.

The Justice Department has also been issuing the names of suspected defaulters to newspapers, listing the amounts owed.

This practice is very effective, said Robert Ford, a Justice Department deputy attorney general. I don’t see anything wrong with letting the public know what is on file.

While federal prosecutors insist that they do not go to the press until private efforts have failed, some debtor’s attorneys have complained that the process is abusive.

“It was dirty pool,” said Hazel Bright, who found herself on the U.S. attorney’s “Top Ten Most Wanted List” in Boston last February. “The amount quoted in the papers ($7,412.26) didn’t even reflect payments made.

Although Cal Poly graduates have a good repayment record there is sometimes a need for action to recover funds. Financial Aid Director Larry Wolf said that with the National Direct Student Loan program, Cal Poly can send the names of defaulters to the Franchise Tax Board so that income tax returns can be sent to Cal Poly instead of the former student.

He said that the same action is available for the Guaranteed Student Loan Program.

As to the effectiveness of the publicity of names, Wolf said he doesn’t think it works too well.

“T don’t think the program works, he said. There used to be public notices of delinquent drivers. I don’t think that’s any inhibitor.”
It's nice to hear some good news once in a while.

Statistics were released earlier this week which indicate that Cal Poly has the lowest default rate in 1985 of all the California State Universities for paying back guaranteed student loans.

According to Finance and Director of the Word Cal Poly has a 4.9 percent default rate as of March 31 for the 3,800 to 4,000 loans given to students annually.

All other state universities had a default rate higher than 5 percent. San Diego State Dominguez Hills had the highest default rate at 14.4 percent.

This comes on the heels of news that the U.S. Justice Department has filed 15,000 lawsuits against student loan defaulters. By the end of the year, the amount of defaulted loans could total $3 billion, according to a recent report in Newsweek on Campus.

It's nice to hear that Cal Poly has a low default rate compared to other state universities and the nation as a whole.

Cal Poly Financial Manager Tony Flores told Mustang Daily that there was a time when there was a default rate of 15 percent nationwide among colleges, but that Cal Poly has always been below 14 percent.

Flores said one reason our default rate is low is because Cal Poly students are "more responsible and recognize their obligations."

As college students working hard to achieve an education, we should give ourselves a pat on the back for paying back our loans.

And to the 4.9 percent of Cal Poly students who did default on their loans — in the future, we hope you live up to your financial obligations.

It's not fair to damage the chances of future college students to receive a college education.

### Letters

**Speaker tells of food, hunger**

**Editor**

The ASI Speaker's Forum Committee should be complimented for bringing France Macre to speak. Personally, I totally regret that there seems to be so little publicity and so few posted notices about this event. Lappe spoke to a capacity room at least five years ago when her message was just missing a few voices in the wilderness. It's time, I believe, for her message to be heard at Cal Poly.

The complex human problem of hunger and famine is something that most of us tend to regard as 'a thing of the past'. In an attempt to stimulate more interest in the global problem I'm introducing a series of columns called 'The Complex Human Problem of Hunger'. That includes banning abortion; I'm against it. But in my letter to the editor, I'm calling on the Secret Service agent and the beneficial bureaucracy to do more than distribute. I'm suggesting that the Complex Human Problem of Hunger and Famine is something that the global problem is engaged with.

In the meantime, according to the world's great statistical authority the United Nations, there are between 600 million and 700 million hungry people. This figure is an estimate of the number of people currently affected in a year. It's nice to hear that Cal Poly students have a low default rate compared to other state universities and the nation as a whole.

From What's Happening (a biweekly publication of the San Luis Obispo County Board of Supervisors)

**Reader clarifies his own opinion**

**Editor**

Let me stress that my May 13 letter was intended to present my own opinions on laws concerning abortion. I believe that those in opposition to legislation involved with abortion. I am against the legislation, not against the pursuit of greater social harmony. That includes banning commercials of theater, literature or anything that creates more extremist-inspired hatred but that isn't right for all people.

I appreciate Al Polito's response to my letter but, I only mentioned Christ because so many extremists see fit to include "He's in their arguments." I was referring to the Mustang Daily Editorial Board for months of creating extremist articles and letters. Good luck in your future adventures and careers.

**Typos, errors & upset reader**

**Editor**

The number of typographical errors found in the Mustang Daily has reached such extreme levels that the situation is no longer for a newspaper one assumes is striving for professionalism. Although errors are certainly human, the large number of typographical mistakes found in many Daily Mustang articles suggest careless proofreading and sloppy editing.

The Daily, I have observed, is constantly printing articles with obvious typos in them. In this case, I have ignored these mistakes and tolerated the annoyance they cause. The errors I found in the May 13, 1985 issue are, however, more blatant and repugnant that I am compelled to correct. I will cite two articles in the May 15 issue, for example. I hold the Mustang Daily accountable for these non-forgivable errors and I found no less than 13 typographical errors. Some were so mistakes of those that I wondered if new words had been invented overnight, words such as "devour, "beer, "who, "abortion, "heoic," and "number.

It is possible that Dr. McKim has never written any books on the subject of evolution.

Dr. McKim was well prepared for the debate so that he admitted that he had read Dr. Gish's books. Dr. Gish did not appear to be concerned about Dr. McKim's past accomplishments.

It is possible that Dr. McKim has never written any books on the subject of evolution.

Dr. McKim was very courageous towards Dr. McKim and Dr. McKim's 'debating style than the prejudice that exists in the modern day.'

Reader declares debate winner

**Editor**

1. I attended the creation versus evolution debate. The debate took place at Cal Poly. I have had talks in public speaking and I was more interested in debating a style than the press.

2.) Both participants obviously were well prepared for the debate.

3. Dr. McKim took the high road by双方一致 of the debate and his organization was not a gorilla.

Dr. McKim focused on Dr. McKim's theories more than on the broad field of creation science and evolution science. I found that point out that there are also various Americanists who specialize in evolution, but Dr. McKim focused on the controversial subject.

**Correction**

In Tuesday's issue of the Mustang Daily concerning the proposed University Endowment. As stated, the increase, the story incorrectly states that $812 initial University Endowment for the next year. The increase is $845 for the year. According to Executive Director of the ASI Speaker's Forum, the following year would decrease to $845 for the year. The fact that the increase would increase to $845 for the year the following year, contingent upon the approval and success of possible revenue generating areas in the U.U.
Pregnancies not God's fault

Editor:

I would like to respond to Rory Barboraroy's letter in the May 13 Mustang Daily. He commented on both my and Dorothy Smith's letters concerning abortion.

First, I would like to thank Rory for giving me another opportunity to stand for what I believe about this issue. Your questions are worth answering and I am glad that you were willing to react to my letter.

Second, I must correct your quotation of my letter. I did not say that "No one has a right to take another human's rights." Perhaps because of misprint, a mistake was made. What I truly said was, "I do not believe that the pro-life philosophy is one of keeping women from their rights. But no one has the right to take another human's life."

The issue in life and death of a developing human. We are allowing the killing of thousands without even blinking an eye. Tainting the ethical question with "women's rights" is merely a way we rationalize the murder of many, many lives.

Third, you said that the government has no place involving many lives. The Constitution which has allowed you to enjoy the liberty you have. Or, what about those who are so zealous about the back alley question? We would not take such stands unless we truly believed that the government would eventually agree that a moral of some sort must be adhered to — whether it be racial justice or the preservation of lives. But, I will repeat, what right do we have to kill the lives of those developing humans?

Fourth, I must admit that I, as you had claimed, never had to deal with an unwanted pregnancy of my own. And I am sure that the anguish of deciding what to do with the baby is extremely difficult. But I have researched how women often respond to having an abortion. They suppress their guilt as if nothing has happened. As a result, they may become alcoholics, drug abusers, anorexics and emotionally depressed. I also understand that those who give birth to a baby for adoption can sleep at night, knowing that the child is safe in a caring home. It seems to me that the alternative to abortion is much better in the long run.

Furthermore, I would like to ask you, Mr. Barboraroy, a question much like the one you asked me. Have you researched in depth the agony an unborn child experiences during an abortion? What does it feel like to be poisoned by salt, torn limb-by-limb, or be crushed by forceps in order to fit through a suctioning device? Those inhumane treatments are performed every day on fetuses who may be even four or five months old. Forgive me for being so blunt and perhaps emotional, but such rude awakenings have caused many of us to change. And to answer your question, I justify my reasons thus stated.

And finally, "my" Jesus Christ is so great that, although loving and able to forgive, is also a righteous judge and will not tolerate the deaths of innocent beings. I am not sure why you want to blame God for the anguish of an unwanted pregnancy. "The only way and unwanted pregnancy could be God's fault would be if He forced us into sex. You asked, "Why do women who don't want to have children have to get pregnant?" This is a circular question. It's like asking "Why do people who don't want to be obese have to be obese?" Unless the person has some chemical disorder, his weight is in his own control — a matter of changing eating habits. Why pass the buck and blame God? Women who don't want to have children do not have to get pregnant. If anything, they should try not to get pregnant if they do not want children. But if she does become pregnant, she will give birth to a child no matter what. Our question is whether he will be dead by abortion or alive.

Employers also value students with cooperative education expe-
rience. For instance, about 80 percent of those hired by IBM have cooperative education ex-
perience, said Abitia.

"When a student is placed in that type of environment they learn by quantum leaps," said
Abitia. He explained that there's a transformation that takes place in students who have worked in a
coop. These students are confi-
dent and self directed.

Abitia's duties will include working very closely with the "National Advertising Council" which will be promoting cooperative education for the next three years with $800 million budget.

This is the organization that helped develop advertising slogans such as "Help take a bite out of crime" and "The mind is a terrible thing to waste," said Abitia.

There will be two thrusts of the cooperative education advertis-

ing campaign, first, that cooperative education helps in-
crease the quality of education in the United States. Second, that cooperative education will help increase U.S. production.

Society installed

Upson Pi Epsilon, a computer science honor society, is holding installation ceremonies tonight in the University Union, room 220 at 7:30.

Fourteen students and 3 pro-

fessors will be inducted to the chapter at the campus. The chapter will be honored as well as being installed as the Epsilon chapter on the national level.

Any interested in taking part in the discussion of how the debate went and of points made during the discourse is invited to attend.
Another bomb?
SF college evacuates 7 story building

SAN FRANCISCO (AP) - Police at City College evacuated and searched a seven-story classroom building Thursday after receiving an anonymous call saying a bomb had been planted there, authorities reported.

The threat came one day after a package exploded at the University of California at Berkeley, seriously injuring a graduate student, and two days after a timed pipe bomb was discovered and disarmed at San Francisco State University.

"We received a phone call about 8:40 this morning saying a bomb had been placed in Batmale Hall. The building has been evacuated," said JoAnn Hahn, a City College spokeswoman. "There was a suspicious box found. However when they opened it, it was a box of business cards."

As a precaution, Ms. Hahn said police conducted a second search of the building, which houses the computer science, mathematics and behavioral science departments along with a number of faculty offices.

On Wednesday, graduate student John Hauser, 26, suffered serious hand, arm and eye injuries in the incident at Cory Hall on the Berkeley campus, officials there reported. The building houses engineering and science classes. The package was in a room used by computer students.

On Tuesday, a pipe bomb was found by a janitor at San Francisco State University. It was disarmed by authorities and there were no injuries.

After the bomb was discovered at SFSU, an anonymous caller told campus security there were two bombs on campus and said: "This is for flunking me."

No additional devices were found.

LA man pleads guilty to federal computer break-in

DENVER (AP) - A Los Angeles man has pleaded guilty in federal court to misdemeanor charges that he broke into government computers at Denver and Fort Collins.

Philip Gonzalez Fadriquela, 28, agreed to the plea bargain on Wednesday in which one other misdemeanor and three felony counts were dropped.

The charges against him were believed to be the first in the nation filed under a new federal statute aimed at prosecuting computer "hackers" - those who break into others' computer systems.

Fadriquela faces up to three years in prison and a $15,000 fine. Sentencing will be next month.

Prosecutors agreed to dismiss a charge that Fadriquela illegally entered a government computer system in Berkeley, Calif.

Authorities say Fadriquela also is under investigation in Los Angeles for allegedly gaining access to an Air Force computer system.

Prosecutors say he illegally tapped into other computer telephone systems which let him make long-distance calls without charge.
School visitation program

‘Teacher for a day’

By KEVIN CANNON

The Pacheco School Visit Program, a project that puts Cal Poly faculty and students in contact with elementary teachers and their pupils, is proving to be an ‘invaluable’ experience for everyone involved.

In its second week, the program is the second round of a pilot project in cooperative education.

‘The experience that my students get out of this is most invaluable,’ said Susan McBride, an education professor. ‘They are on their way to becoming real teachers.’

The program is designed to benefit four separate groups: Cal Poly professors, Cal Poly education majors, elementary teachers and elementary students.

‘Everyone is involved and we all get so much out of it,’ she said.

The project involves the use of unused Pacheco Elementary School, adjacent to the Cal Poly campus.

Poly faculty members Bob Cichowski, a specialist in science education, and McBride, who specializes in language arts, worked with the elementary teachers to set up lessons for the elementary students.

Cal Poly students made learning games for the visiting children and worked directly with them teaching and learning how to teach.

Cal Poly students do the actual teaching and the faculty primarily supervise and give feedback. They circulate throughout the classroom writing comments on cards that will be given to the students.

‘They (Poly students) get to utilize or put into practice what they have been learning about,’ McBride said.

‘This will give them a taste of what it is really like to teach,’ Cichowski added.

Noel Krysalis’s third and fourth grade combination class from Baywood Elementary School attended on Mondays and Tuesdays, and Lynelle Newitt’s fourth grade class from Santa Rosa Elementary School in Atascadero attended on Wednesdays and Thursdays.

The elementary students also get a lot from the program. ‘They experience learning in a very different way,’ said McBride.

The children learn about geology, including how to identify several different kinds of rocks. They are split into ‘rock groups’ such as Granite and Marble and participate in learning activities in these groups.

Ten-year-old Shawna Kelly, a fourth-grader from Baywood Elementary school said, ‘It’s fun — I want to know when I can come back.’

Another experience the elementary students get is a chance to work in the Apple computer lab at Cal Poly.

The main advantage for the students in a program such as this is the low student-teacher ratio. They will have approximately three students for every teacher.

‘The activities that the students learn in the seven ‘rock groups’ include educational games that the Cal Poly students designed and built. ‘A great deal of time and effort went into making these games,’ said McBride. ‘The energy it takes is actually too much to expect from just one teacher.’

During the two weeks, the students will get a chance to tour the campus. They will get to see what college is all about.

‘Perhaps it (the tour) will tantalize their thoughts about going to college,’ said McBride.

The elementary school teachers work together with Poly students and faculty and learn different things to teach and different ways of teaching.

‘Science is generally the hardest subject to teach,’ said Cichowski. ‘We show them how to take science and make it interesting for the kids.’

‘This gives them elementary teachers a chance to update their science experience. ‘I have been wanting to do this for years,’ said McBride. ‘I get as much out of it as anyone else; I love to work with the kids.’

She said that a top priority in the Education Department has been getting the students much needed field experience.

Gary Bolos, a junior education major, said, ‘Not only does it give you a taste of teaching, it gives you a taste of the kids.’

So far the second round is just as successful as the first. Teachers and principals from other elementary schools in the area have attended to observe the projects.

Cichowski feels that there are definite possibilities of the program continuing. ‘We already have many schools in the area wishing to get involved and I would like to see it continue.’

Baywood Elementary students take a break from ‘hi-tech’ learning, with a creativity session.

Something from nothing: self-made meals

By THOMAS WILLIAMS

You open the door to the refrigerator for the thirteenth time in as many minutes only to find the same items that were there the last time you looked: two slices of bread (both ends sliced); a bottle of ketchup and an empty jar of mayonnaise; an orange that's been in there since you moved in and a package of flour tortillas that you could play frisbee with.

So you open the cupboard to see if anything new has appeared in the last few minutes.

Nope, still the same stuff: half of a package of pasta, an empty box of cereal that you left there as well; and a box of cookies that might as well be donated to the NHL for hockey pucks.

To top it off, you haven't eaten all day and you're starving - you have to eat. Typical enough?

College students often have to be magicians in the kitchen in order to quiet those pangs of hunger that cry out in the middle of their 1 p.m. classes and cause professors to pause and wonder what made such a disturbing sound.

Making something from nothing is not an easy task, but some students have found several creative solutions to the problem.

Poly Royal Queen Angela Darnell has a peanut butter fetish. She eats it straight from a jar with a knife, puts it on breakfast cereals and even on hot dogs.

When asked what she does at lunchtime, she said, "I survived." "But I added the raisins and cinnamon," Darnell has a peanut butter and cinnamon "I made from mayonnaise, black olives and bread. To create the masterpiece, he dices the olives and mixes them into the mayonnaise. After he has blended the two into a smooth gel, he spreads it over two slices of bread, sticks them together and eats it. Yum!

Jayne Vogel, a home economics major, said that her roommate's favorite thing is a sandwich made from cream cheese, mustard and bacon.

"My mom used to make it for me when I was a kid," he said. "But I added the raisins and cinnamon."

John Ornstein, a business senior, invented a concoction made from mayonnaise, black olives and bread. To create the masterpiece, he dices the olives and mixes them into the mayonnaise. After he has blended the two into a smooth gel, he spreads it over two slices of bread, sticks them together and eats it. Yum!

Ernie Peterson, a poultry science junior, has a favorite sandwich made from cream cheese, mustard and bacon. His

roommate Andy Frokjer said the creation is definitely different. "He takes a gob of cream cheese and spreads it on one slice of white bread. On the other slice he spreads mustard, and between them he puts half a pound of bacon," Frokjer said. "This is the same guy that tells me I should eat cereals with fiber in them for breakfast instead of Froot Loops."

Hector Nunez, a business sophomore at Cuesta College, has more of a masochistic favorite food: Jalapeno peppers. He eats them straight from the jar, as if they were popcorn. He makes Jalapeno omlettes, puts peppers on his pizza and even eats them with toast.

"My father is addicted to them," Nunez said. "I'm not addicted yet, but I'm close," as he bites into a Jalapeno and the juice squirts on his face, blending in with the beads of sweat already on his forehead.

Eating habits vary just as much. Some students have quirks and idiosyncrasies in their eating habits that make others scratch their heads and say, "That's weird."

One unusual habit is putting milk and sugar into a bowl, mixing them up and then adding the cereal, at least this way students can find out how long cereal will float before it sinks.

Another favorite pastime of students is seeing how many of the O's in Spaghettios you can fit on each prong on a fork. Or a more traditional habit of stringing up a string of spaghetti, all except for the very end and then pulling it out of their throats again.

Categorizing food out of a dish are also common traits among students. Cooking fried eggs and leaving the yolks, segregating the peas from the carrots on a plate of mixed vegetables and finding the fake, pink cherry in a fruit cocktail and seeing if it will bounce as high as a rubber ball, are all characteristics of the finicky eater.

In any case, students have to be regarded as the epitome of creative gourmets, the cornerstones of edible invention and the sultans of dietary delights. Somehow, they manage to keep their stomachs full and create extravagant, lavish meals out of empty cupboard space.

If college doesn't teach them anything else, it will teach them fine art of elegant cuisine.

When Quality Counts
WASHINGTON AP — Deep in the Rocky Mountains, in the bunker that controls America's nuclear "button," an Air Force general picked up the phone he would use to alert the Pentagon of a Soviet missile attack.

Nothing happened. No one told the general he first had to dial "0" for operator.

Up in space, a U.S. spy satellite giving first warning of rockets fired from Eastern Siberia was temporarily blinded in 1975 by an accidental gas field explosion.

At sea, communications to America's missile-bearing submarines were cut because the Navy command plane circling overhead was out of radio range with the boats.

These and other breakdowns, many of which have been acknowledged by the Pentagon, were described in a book published this week by Daniel P. K. Wagoner, a former White House assistant to President Ronald Reagan, who has gone to work for the prestigious Brookings Institution.

The book and study are critical to understanding whether the Pentagon is doing enough to alert the White House, the Pentagon, satellite relay stations and missile command centers and would effectively wipe out U.S. ability to launch a coordinated retaliatory strike.

— Most presidents since the dawn of the atomic age in 1945 haven't really understood the details of nuclear strategy and have devoted little time to rehearsing what would be the most fateful and fatal role assigned to any individual: commander-in-chief in a nuclear war. Describing a Reagan war rehearsal, an unidentified Pentagon official told Ford, "He acted like an automaton; like part of the set instead of the main actor. Reagan was saying things like, 'What do I do now? Do I push this button?' Some fresh-faced colonel says something — 'Mr. President you have to do such-and-such in seven minutes' — but there were no questions from Reagan.

— Soviet targeting strategy calls for a handful of missiles to hit key communications links like the White House, the Pentagon, satellite relay stations and missile command centers and would effectively wipe out U.S. ability to launch a coordinated retaliatory strike.

One of a Soviet missile attack.

Poly’s ‘The Miser’ is a winning effort

By SUSAN EDMONDSON

The setting is 17th century France, and the characters are doing what French people do best — falling in love. But things aren’t quite that simple in Moliere’s comedy, “The Miser,” which premiered Thursday night in the Cal Poly Theatre and will continue through Saturday night.

The play centers on Harpagon, a man so stingy he makes Ebenezer Scrooge seem like Santa Claus. Harpagon’s sole love in life is his precious money box, that is, until he falls in love with the beautiful and youthful Marianne. The situation is quickly complicated when Harpagon’s son, Cleante, announces that he too is in love with Marianne.

Aaron Elmore stars as the frugal Harpagon, in one of the best of his many performances on the Cal Poly stage. With the help of an excellent make-up job by Howard Gee, Elmore is transformed into the elderly, balding penny-pincer. Elmore contorts his face into a variety of expressions — conveying emotions with a mixture of stinginess and suspicion, curiosity, amusement or anger. Harpagon’s lust for money is amusing, and the audience can’t help but love this hopelessly misguided old man.

Another enjoyable character is the mysterious, mischievous match-maker Frosine, portrayed by Julie Galvin Elmore. Frosine is quick-witted and somewhat meddling, further complicating the romantic triangles in the plot but also steering the characters toward their own true loves.

Other notables in the cast include Monique Parent, portraying Harpagon’s daughter Elise, and Steve Blair, portraying Elise’s lover Valere. Valere has been on the job of a servant to Harpagon in order to be near Elise, and during this time he is searching for the money owed him by his parents.

Adding to the enjoyment of the play is the comedic ability of Greg Owens, who portrays La Fleche, a valet to Cleante. La Fleche is an expert at hiding his wit and curiously under the exterior of a dopey servant. One of the more amusing scenes in the play involves an exchange between La Fleche and a suspicious Harpagon, in which Harpagon accuses La Fleche of stealing and then proceeds to search him.

The pacing in “The Miser” flows smoothly on stage, partly due to director Roger Kenvin’s English version of Moliere’s comedy. The script is Americanized just enough to help the actors feel at home on the Cal Poly stage. Kenvin retains Moliere’s gift for sarcastic dialogue while still inserting some choice American phrases.

The cast of “The Miser” plays off each other very well and they seem to be enjoying themselves almost as much as the audience enjoys watching their antics.

**Baseball team has down year**

**New records set during season of disappointments**

BY JANET HASEROT

Although the baseball season was unsuccessful in terms of record, some Cal Poly team members had an award winning season.

Senior outfielder Monty Waltz earned the title of co-MVP for the California Collegiate Athletic Association. He was also on the All-CCAA first team.

Second baseman Steve Sax and outfielder Jason Maas made the All-CCAA second team. Poly's 26-32 season record, is not much to brag about, but individual and team records were broken this season.

Waltz is the first player at Cal Poly to ever hit .400 and he broke the RBI record with 72. He broke the doubles and home run records. He hit 18 of both. Waltz has also walked 49 times, more than any other.

Carl Hjeres was a relief pitcher turned starter.

Mustang Leftfielder Mass earned 64 runs also setting a school record. There were some negative records set as well by the Mustangs this season. The team gave up 594 hits and 397 runs. The total earned runs by the Mustangs opponents peaked at 323 for a record. The Mustangs had only one legitimate starting pitcher by the end of the season. The pitching staff was hard hit this year, losing two starters to eligibility and another to a sore arm.

**Dodgers wondering where their offense is; second worse in NL**

LOS ANGELES (AP) -- A batting slump that won't go away has the Los Angeles Dodgers talking to themselves, wondering out loud where a big inning can be found.

Runs have been extremely difficult to come by so far this season for the Dodgers, who have scored fewer than every team in the National League except the San Francisco Giants. Slumps are part of baseball but... "Not for this period of time," said longtime Los Angeles infielder Bill Russell. "I've been on teams where we've gone through bad spots, but nothing like this."

In 23 of their first 34 games, the Dodgers have scored three runs or less and they've yet to score more than six in a single game. Nine times they've failed to score as many as two.

They've totaled 95 runs in those 34 games, an average of less than 2.8 per game. So despite an exceptional team earned run average of 2.74, the Dodgers were only able to split their first 34 outings, leaving them 2½ games behind first-place San Diego in the National League West.

"With our pitching, we don't have to score much," said veteran outfielder Al Oliver, in his first season with the Dodgers. "But we have to score more than this."

The collective woes of the Dodgers, who are hitting just .230 as a team, is an outgrowth of soihe individual problems. Pedro Guerrero (.274) and Mike Marshall (.271) have respectable averages, but Ken Landreaux is hitting .170 and just about everybody else is struggling.

"If it wasn't for our pitching, there's no telling where we'd be," Russell said. "As bad as it's been, we're still right there."

"That's the bright side to this. We've just got to stay where we are until we come together."

The Dodgers have hit 24 homers, third best in the league, but even that bright spot is tarnished by the fact that 20 have come with the bases empty.

The Dodgers have scored more than one run in only 11 times this season. Even the Houston Astros, a team that's never been known for its high power, dwarfs that output with 39 multiple-run innings.

The slump has already begun to snowball and it's catching every member of the Dodgers in its path.

"We're pressing and everybody is trying to do too much," Russell said. "People are bringing it to our attention when we come to the ball park and everybody's trying too hard."

Dodger batting instructor Manny Mota agreed with Russell, saying, "We're just trying too hard. We are more than capable of hitting. We have a lot of talented hitters on this ballclub. We know the guys are going to hit; we're just trying to do too much, especially with men on base."

For this season the team's inability to score baserunners has devastated any momentum they may have had. The Dodgers lead the league in men left on base with 232, almost eight per game.

So, while the struggle to regain their offensive footing goes on, the Dodgers are trying to remember what it's like to have some fun at the plate again.

"I think everybody would enjoy an 11-2 game," said second baseman Steve Sax. "What we need are a couple of blowouts."

When the No. 2 reliever also was lost to ineligibility, the Mustangs had one starter and two relievers and several players with limited experience. Catcher Mike Czyz, with limited experience as a pitcher proved to be a pleasant surprise on the mound with a 3-2 record.

The year was particularly disappointing despite the potential, said the team's coach.

"After the way we started in the beginning of the season with the high expectations," said coach Steve McFarland, "we were very disappointed the way we finished up. There were frustrating situations that occurred throughout the season which distracted on-the-field play."

Poly started last week with a 12-0 loss to the No. 2 ranked Division I team in the country, Stanford.

The Poly traveled to Cal State Dominguez Hills to close out the CCAA season. The host Toros took both games from the Mustangs by scores of 6-4 and 3-0 to put Poly at 11-4 in 4th place in the CCAA standings.

Harvey Martinez turns the double play.

Group wants to peak Mustang athletic spirit

BY KERRY BLANKENSHIP

Athletes that always wanted to be college football players will now have their chance to play for Cal Poly's football team -- if they are up to par with their competition.

Support University Mustang Athletic Team, a seven-week old student organization, plans to turn competitive Cal Poly into a campus with spirit. The Twelfth Man Competition is a start to promoting that spirit.

"Cal Poly is a conservative campus," said Mike Hogan, campus president of SUM AT, "and lacking in school spirit -- SUM AT's the answer to solving this problem."

SUM AT hopes to involve the entire student community by sponsoring activities that involve the student body and promote Cal Poly spirit at the same time. The organization has been quite successful, despite the fact that it is a rookie organization.

"People have really jumped in and are ready and willing to promote school spirit," said Hogan. "Fraternities and sororities have so far been great supporters of SUM AT."

SUM AT most recently sponsored and promoted a sorority triathlon during Greek Week, and plans for the future include a talent show and Homecoming events.

The concept of the Twelfth Man Competition came from Texas A&M where the practice of getting students involved in intercollegiate athletics is common.

"We are trying to create an atmosphere," said Head Football Coach Jim Sanderson, "where students are able to get directly involved with school activities in a physical manner."

Former high school football players are eligible to compete in the Twelfth Man Competition, which will begin on Monday.

The competition requires that competitors complete and excel in events that include weight lifting, running and endurance tests just to name a few.

Competitors advance to the final competition -- which will partially take place in the University Union plaza, during activity hour on May 30. The top eleven finishers will then each become the No. 12 man in eleven different football games and will play with the Mustangs. The No. 12 man will practice with the team, receive a trophy, keep the No. 12 jersey, and if the Mustangs travel -- the No. 12 man will travel. According to Coach Sanderson SUM AT is trying to affiliate with fraternities, sororities, and other clubs. This would result in participation of large groups through the individual player.
