Faculty contracts sought to improve quality of education

By Marc Meredyth

The California Faculty Association began the 1986 bargaining process last week with contract proposals to the California State University System Trustees designed to improve the quality of education on CSU campuses.

CFA, the largest higher education faculty bargaining unit in the nation, is proposing a 15 percent wage increase, increased professional development opportunities, a reduction in work load and a limit on the number temporary faculty used in the CSU system.

Anne Shadwick, CFA state president, met with the Cal Poly chapter of CFA Friday, at a barbecue in Curves Park. There she told faculty that the 1986 proposal is designed to improve substantially the poor working conditions of faculty, and as such will help improve the quality of education.

Shadwick said salaries in the CSU system have not kept pace with salaries in private industry and other comparable institutions. She told faculty that if CFA were to try and bring salaries up to private levels, the union would have to propose around a 30 percent increase.

"We feel a proposal of 15 percent increase would be a more realistic figure to bargain from," Shadwick said.

Shadwick said the present faculty workload is not conducive to quality education. She said faculty need more time to devote attention to the needs of students and to keep up with professional development, research and teacher education.

CFA, which represents 19,000 faculty on 19 CSU campuses, is proposing a reduction in teaching load from 36 quarter units per year to 31.5 quarter units per year for full-time faculty.

Charles Andrews, Cal Poly accounting professor and president of the local CFA chapter, said CFA is hoping to gain more opportunities for faculty to obtain professional development. He said universities in the CSU system encourage and require professional development, but "we'd like to have more time and money." Andrews and professional development is important to students also, because it the latest innovations and information are brought back to the classroom or laboratory.

The last part of the general four-tiered proposal demonstrates an increasing concern over the use of temporary employees to meet the systems teaching needs.

Shadwick and Andrews said temporary instructors are being used extensively on most campuses. At Cal State Fullerton over 50 percent of the faculty are only part-time employees, Shadwick said.

The drawbacks to this are two-fold. Andrews said. First, these employees have no job security. "They rock the boat," he said. "And second, they simply don't renew their contract." Some of these people have lectured for 10 years and then suddenly their contract isn't renewed." Furthermore, the university can assign more units of teaching to the part-time people, giving them less.

Proposals are hurt by this arrangement because temporary faculty do no counseling. Thus, the regular faculty have

BIG gets new name, structure

By Rebecca Berner

Food Services is forming a new committee on campus to handle students' complaints, questions and suggestions concerning their meals. Residence Hall Food Service Committee, made up of one representative from each residence hall, will replace the Board of Ideas and Gripes, or BIG, which handled student complaints last year.

"This is a new approach with more student involvement and representation," Food Service Customer Relations Coordinator Jeanette Altimus said. BIG had only two student representatives, while the new committee should have at least eight representatives who will meet twice a month with Altimus, Resident Student Development Coordinator Polly Faraman and Assistant Food Service Director Alan Cushman. They hope to have representatives chosen and the first committee meeting held by the end of October.

"We need as many eyes and ears out there as possible," Cushman said. He said the name "Board of Ideas and Gripes" had negative connotations. Cushman hopes the new committee will deal not only with complaints but with new ideas and suggestions as well. "We want this to be the site the student can go to and we would like to encourage their participation.

Basically, Food Services wants to know what the students want. "When we plan special meals we'd like to know if they would prefer a luau to a Cinco de Mayo celebration or whatever," Cushman said. Both Cushman and Altimus are realistic, however, about the construction of the committee.

Chemistry major’s view of the world

In an attempt to better understand the world we live in, we all categorize things. In science, chemists use the Periodic Table to classify the different elements (you should remember this from the science classes you took in high school).

So, I got to wondering what if all elements of society were categorized? A completely inanimate substance, has no real use. Atomic weight: 112 (not to be confused with the number of votes he got in his re-election campaign).

- **John DeLorean** (JD) (Latin: God's uncreateable) - Common name: the snow man

What follows is a chemistry major’s view of the world:

- **Reneon** (RR) (Latin: Regain experimentalism) - Common name: ronny

All elements are made up of protons, neutrons, and electrons used to aid in the production of nuclear weapons.

- **George Bush** (vp) (Latin: President's overshadows) - Common name: bush

Council members, along with the president, are a special interest group among us. If you think about it, you should remember this from the science classes you took in high school.

So, I got to wondering what if all elements of society were categorized? A completely inanimate substance, has no real use. Atomic weight: 112 (not to be confused with the number of votes he got in his re-election campaign).

- **Donalind Munro**

Although the political game playing can.

- **Dovey**'s blatant bias against students by attacking students that live on campus and don't fall within city boundaries.

- **For many years, scientists debated as to whether this element had limited and mundane uses. Although this has since been disproven, many feel it is still yet to reach its true potential.

- **Atomic weight: unknown, too much misinformation to make an accurate approximation.**

- **Yuppies** (VP) (Latin: Moneyus foolish) - Discovered by: Jack Kemp and Gary Hart.

This extremely dense element is dark green in its natural form, and therefore its sole use is in making money (can only be found on expensive private golf courses). Natural state: greedy.

- **Doctors** (By) (Latin: Helpus peoples) - Discovered by: Adam

This extremely volatile element is often unpredictable, and handled improperly, can be dangerous. Up until the early sixties scientists were convinced that this element had limited and mundane uses. Although this has since been disproven, many feel it still yet to reach its true potential.

- **Atomic weight: unknown, too much misinformation to make an accurate approximation.**

S. African black burned to death

JOHANNESBURG, South Africa (AP) — A mob burned a black man to death Sunday in the second straight day of clashes between rival black groups near Durban, and anti-apartheid violence spilled into white areas for the third day in a row, police said.

Police also reported they shot and killed a black man hearing a gasoline bomb in Dordrecht in eastern Cape Province.

An explosion that police believed was caused by a bomb went off in the men’s room of a hotel near Durban where about 150 black youngsters were guests as a “children’s day,” but no one was injured.

Peter Davidson, owner of the Executive Hotel in Umhlazi, a black township west of Durban, told The Associated Press: “We don’t know who would have done it. I am not involved in politics.”

The death toll from Saturday’s street battles between rival black groups in Umhlazi was unclear. Police said four people died, but the independent South African Press Association reported six deaths.

17 killed in Georgia plane crash

JUNKINSBURG, Ga. (AP) — An airplane filled with parachutists crashed Sunday near a rural airport, killing all 17 people on board, the Georgia State Patrol said.

Patrol spokesman Bill Wilson said the 16-passenger airplane was owned by a Jenkinsburg parachute club. Vanilu Evans, a black man to death Sunday in the second straight day of violence.

The plane crashed on a road off state highway 16 in Butts County, Wilson said.

Racial riots flare in British slum

LONDON (AP) — Bulldozers shoved burned-out cars off streets while shopkeepers boarded up broken windows Sunday in the racially mixed slum district of Brixton after a night of rioting erupted when police shot and wounded an unarmed black woman.

A dozen stores were gutted, 26 civilians and 10 policemen suffered minor injuries and 45 people were arrested in seven hours of rioting, police said. It was the second racial riot in three weeks in a British urban slum district.

EXHIBIT

From page 1

"Organic" sounded like a cross between a chant and a flock of birds interwoven in chatterbox conversation.

"Sound is a form of color. Words have rhythm," Lurie said.

Because Lurie’s works were composed for a number of voices, so was his performance, which included much audience participation. The combination of his voice and a volunteer dancer to express his painting, "I Love You Sweet Flesh of Weekender," set the audience rolling in laughter. Contortions, intense facial expressions and physical movement, brought this painting to life.

"My music was responding to Frankie, and Frankie was responding to me," Lurie said.

The exhibit climaxed with the audience participating in a round conducted by Lurie, shouting back and forth intensely and finally coming to a murmuring end.

"It’s been a privilege to have him. He’s hairy handed. He has performed in Europe, at numerous clubs and college campuses," Galerie Coordinator Jeanne Labarbera said. "His works are vibrant, exciting and appealing.

Student assistant Laurel Pint said this is "the most exciting show we’ve ever had. I think it was exceptional because it had a combination of art, music and poetry. The intensity of the performance was incredible."

Lurie said his flair for poetry originated 19 years ago when he wrote his first poem.

"It looked like music to me," Lurie said.

Lurie said his enthusiasm for art was further enhanced when he saw a poster that had the words he saw. "He had a paintbrush in my hand unrolled, he composed for a number of voices, and he was responding to art..."

"He saw a poster that had the words he saw. "He had a paintbrush in my hand unrolled, he composed for a number of voices, and he was responding to art..."

Memories of Womankind," set the audience to express his painting, PI Love myself. My poems are waiting for the combination of art, music and poetry. The intensity of the performance was incredible."

Lurie said his flair for poetry originated 19 years ago when he wrote his first poem.

"It looked like music to me," Lurie said.

Lurie said his enthusiasm for art was further enhanced when he saw a poster that had the words he saw. "He had a paintbrush in my hand unrolled, he composed for a number of voices, and he was responding to art..."

"He saw a poster that had the words he saw. "He had a paintbrush in my hand unrolled, he composed for a number of voices, and he was responding to art..."

Lurie began painting only two months to collaging until 20 percent in the last year. "This shows a growing awareness, an increased activism among CSU faculty, he said. The CSU Trustees have flatly refused to negotiate directly with the teachers union. "In the past, we had to see new, and refreshing in my benefit."

"He saw a poster that had the words he saw. "He had a paintbrush in my hand unrolled, he composed for a number of voices, and he was responding to art..."

Teen suicides plague Indian town

In less than two months, eight young adult Indians have hanged themselves on the Wind River reservation, a sparsely populated, 2 million-acre tract of barren plains and rolling hills in central Wyoming.

The suicides have galvanized mental health agencies, educators, priests and social workers, but they admit they are at a loss to explain the deaths.

Counselors who have lived here all their lives say they have never seen such a mental health crisis. Before, since the beginning of the reservation, a sparsely populated Indian community at the base of the Wind River Mountains, where the unemployment rate among 6,000 Indians is nearly 80 percent, where many teenagers have a drinking problem, and where there are few recreational facilities for youths, at least eight young male Indians have hanged themselves on a tree.

The suicides have galvanized mental health agencies, educators, priests and social workers, but they admit they are at a loss to explain the deaths.

The rash of suicides began Aug. 12, when a 20-year-old jail inmate hanged himself with his socks. Four days later, 16-year-old Donovan Blackburn hanged himself with his sweatpants from a tree.

Several days after Blackburn killed himself, Darren Shakespeare, 14, hanged himself from a tree with baling twine. Shakespeare had been at Blackburn's wake and threatened he would be next.

This month, five men and teenagers committed suicide, all by hanging. The latest was discovered Saturday.

Some say many students felt Blackburn's suicide was a courageous act. It makes her job tougher to show them the difference between courage and cop-out.

On a recent Friday, Stone was preparing for a suicide prevention session with some students. She apologized for not having an organized program, explaining she had spent the morning admitting one student to the mental health hospital in nearby Riverton and was making arrangements to admit another.

The two students had threatened suicide.

Students in her session complained there was nothing for them to look forward to that weekend, that all the tribal recreation money went for bingo, that they had no cars in which to go into town to cruise.

There is no mall on the reservation, no shopping center, no movie house.

Stone tried to persuade them they weren't any worse off than the youths in nearby Riverton or Lander, who also are bored on weekends. But the Indian students weren't convinced.

At least four of the suicides occurred while the young men were under the influence of alcohol. Students say 51 percent of the students have a drinking problem and 47 percent have tried drugs.

St. Stephens administrators applied unsuccessfully for a federal grant for an alcohol education program. They are offering programs anyway on a shoestring budget. Students have been trying to support each other since the suicides began, while teachers and counselors give special attention to high-risk cases.

Pat Stoeher, with Fremont Counseling Service in Riverton, a city bordered by reservation lands, emphasizes that teen suicide is not unique to the reservation.

Teenagers across the county are under mounting pressure from parents and peers. Death is perceived as an escape rather than a permanent departure, she says.

MATHEMATICS

COURSE

Course Title: Math 23 R, Review of Elementary Algebra. Offered on the Cal Poly Campus by the math department for ELM students.

Pre-requisites: An unsatisfactory Entry Level Mathematics Requirement (ELM) in any other area.

Credit: 2 semester units (not transferable to Cal Poly)

Time Section 1: Mon and Wed., 10:15-12:00 (CS 2308)

Time Section 2: Tues and Thurs., 1:00-2:30 (CS 2216)

Room Science B 05 (Bldg. 52, Cal Poly Campus)

Questions: Contact the Mathematics Department

ELM Examinations: There will be an ELM Exam open to enrolled students on Thurs., Jan. 10, 1:00-3:00.

ENTRY LEVEL

MATHEMATICS (ELM) TEST

REGISTRATION DEADLINES

DEADLINES

OCTOBER 4, 1985

January 4, 1986

April 25, 1986

July 11, 1986

OCTOBER 19, 1985

May 10, 1986

July 26, 1986

The ELM test is designed to assess the basic skill levels of entering CSU students in mathematics. The CSU Executive Order states that all entering students must complete the ELM Requirements before the end of the first two quarters of enrollment. Failure to do so will result in probation and disqualification. Registration forms and the EFT-ELM Information bulletin can be obtained from the Test Office located in the Counseling Services Building. An ELM workbook can be purchased from the bookstore.
Spielberg helps in search for extraterrestrials

HARVARD, Mass. (AP) — With the touch of a lever, “E.T.” director Steven Spielberg on Sunday inaugurated a search for real-life extraterrestrials, switching on a giant antenna that astronomers hope will detect radio signals sent from outer space.

“This marks the beginning of a really powerful search that has a decent chance of finding something,” said Paul Horowitz, a Harvard University professor who designed the 84-foot communications dish, part of the most powerful radio-scanning system ever used to hunt for aliens.

The dish, capable of scanning 8.4 million radio channels, marks an escalation of such efforts by The Planetary Society, which scans the skies for signs of life from its Oak Ridge Observatory in Harvard, a small town northwest of Boston.

Since 1983, the space-watching group had been searching with a simpler scanner, which picked up only 180,000 radio channels.

The new antenna, known as Project META, was built with the help of a $100,000 grant from Spielberg, the science fiction filmmaker whose credits include “Close Encounters of the Third Kind” and “E.T.,” which featured a lovable alien.

Spielberg whisked into Harvard just long enough to flip on the antenna with the help of his infant son, Max. The communications dish hummed as it rotated skyward.

“It’s the most sophisticated search for extraterrestrial intelligence in human history,” said Carl Sagan, the popular science writer and president of The Planetary Society, who joined Spielberg, Horowitz and other astronomers at the observatory to dedicate the antenna. Afterwards, they toasted the event with champagne.

Horowitz said the antenna was capable of reaching to the edges of the known galaxy. If there is life on other planets, he said, “this kind of communications system can do the job.” He said he will visit the observatory once every two weeks to check on the project.

The scanner, which took two years to construct, is more versatile than its predecessor and includes changes that should increase the chances of raising alien messages. The antenna is hooked up to a computer room, which records all radio signals emitted from space.

The previous system had turned up only the radio waves that all planets naturally produce, but improvements in the scanner keep him hoping for concrete results, Horowitz said.

He said astronomers will be looking for a narrow radio signal to indicate other life forms.

“We’re looking for planetary systems around stars,” he said. “There are more than 1 million stars, so the cheapest way to look at a million stars is to look at everything at once.”

Because of his involvement in the project, Spielberg said he’d be happy if the scanner produced a response from first to pick up signs of life beyond Earth.

“I just thought it was time to get involved in some science-reality,” he said. “I can’t write the outcome of this. I just hope that there is more floating around up there than Jackie Gleason reruns.”

U.S. Department of Transportation
Carpool riders save fuel

By Janet Haserot

In 1980 the San Luis Obispo Regional Ridesharing Program, an extension of the 1974 program created by Cal Trans, began to help nearly 3,000 commuters join or form carpools and vanpools.

The goals of the program are to conserve fuel, reduce the number of vehicles on the road, reduce air pollution and help commuters get to and from work quickly and efficiently, said Sally Francis, regional ridesharing manager. "We're trying to educate people to their commuting options," said Francis.

The largest number of ridesharing applications are turned in by Cal Poly students, said Francis. "I think this is because students have more flexibility than the general public. They can hang around on campus for an hour while waiting for their ride," she said.

San Luis Obispo County commuters who are ridesharing have covered over 225,000 gallons of gasoline and have kept 400 tons of pollutants from the air. Over 631 million gallons have been saved and 31 1/2 million miles have been avoided being driven.

"This program is for people who are willing to change their lifestyle," said Francis. "This is not a negative change, they can save money and reduce personal tension."

With the ridesharing program, members of a one-car family will not have the problem of tying up the car all day and they'll save wear and tear on their car, said Francis.

"Savings money attracts people to the carpools, but the friendships keep them together," she said.

The San Luis Obispo Regional Ridesharing Program is free and it is as flexible as one wants it to be. People are encouraged to try the program for a designated period of time to see if it fits their needs. "Chances are they'll realize how nice it is not having to drive everyday," said Francis.

Each commuter's file is entered into a computer and matched with other commuters who live and work in the same area and who share similar work hours. Commuters are matched with others who have contacted the ridesharing office who want to form or join a carpool. It's up to the commuter to decide how often he wants to share the ride with someone else. The program can be as flexible as the commuter chooses.

The largest number of ridesharing applications are turned in by Cal Poly students.

O.H. unit in full color

By Andrea Bernard

Stroll up to the Plant Shop at the ornamental horticulture unit and see the fruit of students’ labor in full color.

A variety of potted and nursery plants, cut flowers and mini-gardens fill the walkways and shelves of the shop, all carefully cultivated and maintained by students through their department coursework. Customers can see completed perennial, annual, coniferous or fern grotto gardens developed by students in class and displayed in the shop.

Two student managers under the supervision of O.H. Unit Manager Dave Pocht are responsible for overseeing Plant Shop sales and service. Part of these sales includes the Enterprise Project, a business within the instructional program of the department. Students purchase materials through the Cal Poly Foundation, grow and sell the resultant crops and in return receive two-thirds of the net profit from sales. The remaining one-third returns to the department for funding purposes. Enterprise Project sales take place four times a year on campus and continuously through wholesale to nurseries from San Francisco to Los Angeles.

The Plant Shop, open weekdays from 1-5 p.m. and Saturdays 9 a.m.-5 p.m., also offers floral designs such as corsages and bouquets for sale created by students in the Cal Poly chapter of the American Institute of Floral Designers. Advisor Robert Gordon works with an average of 30 students interested in operating or working in florist shops in the future. While at Cal Poly, chapter members can gain experience in wedding arrangements, provided exclusively for Cal Poly faculty and staff members.

Poll says Americans think foreign trade hurts U.S.

LOS ANGELES (AP) — A majority of Americans blame cheap labor abroad for the success of foreign goods in U.S. markets and support congressional attempts to restrict foreign imports, a new poll concludes.

A national six-day Los Angeles Times poll, which ended Thursday, showed that 51 percent of those surveyed supported a bill to reduce textile imports, a measure expected to go to the floor of the House in the next several days.

Thirty-seven percent of the 1,967 people surveyed opposed it, said Times Poll Director L.A. Lewis.

The majority of those polled said foreign trade hurts rather than helps the United States and three of four described it as a serious problem the United States’ new status as a debtor nation.

Those surveyed were unsure how to resolve the trade imbalance, however, since they were uncertain whether foreign countries would retaliate if the United States restricted foreign imports.

Of those who said they were aware of President Reagan’s trade policies, 50 percent said they opposed them, while 34 percent approved them. However, a large number of people said they were unaware of his policies.

GET INTO THE FITNESS PICTURE AT THE YMCA.

College Students. Now before October 15th, you can join the San Luis Obispo County YMCA for only $160. Your "school year" membership will expire on July 1, 1986. That's at least 8 months of full YMCA services, longer if you act soon. Join today for the greatest value. You must pay in full and present a current college I.D. when joining. Stop by today, and remember, your weekly cost is only $4.00. The San Luis Obispo County YMCA is easy on your budget.

YOUR MEMBERSHIP INCLUDES:

* 7 Racquetball/Handball Courts * 13 Station Nautilus Gym * Universal & Free Weights * Aerobics Classes * Redwood Sauna * Whirlpool Spa * Basketball * Wallyball * Lap Swimming

A transient sleeps on a park bench in downtown San Luis Obispo. The Center for Practical Politics will address the issue of homelessness.

The frustration with these first three reports is we are presenting evidence on these trends, not saying this is what it means, not giving solutions or ideas," said Culver.

Unlike the first three reports — one on growth and urbanization in King, Monterey and San Luis Obispo counties, another on the impact of revenue sharing in San Luis Obispo County and the third on population trends in five Central Coast counties — the fourth report on the homeless in San Luis Obispo is a policy piece.

The report will research the extent of the homeless problem in San Luis Obispo by reporting the number of people involved, their age group, sex and family status. Culver said when many people think of a homeless person, they picture a man with a beard wearing an army jacket but not a mother with her children.

The report will also conclude with the policies in counties other states and if there is a program that could be duplicated in this county. Culver hopes this will be the start of more reports which could be of use to policymakers in San Luis Obispo county.

Ten Cal Poly students worked on the four reports under the direction of Culver with the help of a $2,000 grant from the San Luis Obispo County Board of Supervisors. Culver said he chose a few students whom he knew were capable of performing the research and of working independently. Those students then chose more students with whom they could work.

The Cal Poly Center for Practical Politics, a non-profit entity affiliated with the political science department, serves as a kind of umbrella conducting programs on practical solutions to political problems, was recognized by the university last fall, Culver said.

600,000 attend 8th annual Street Scene Festival in LA

LOS ANGELES (AP) — Actress Morgan Fairchild floated through the city's eighth annual Street Scene Festival as the grand marshal of a parade to kick off the final day of the weekend party.

Fairchild was accompanied by bands, drill teams, marching units, consummated characters and other celebrities.

After the 10 a.m. parade, the 13-acre Civic Center was again transformed into carnival grounds, complete with about 20 stages and hundreds of booths for food peddlers or arts and crafts displays.

Music by Jackson Browne and comedy by Richard Pryor were scheduled Sunday night.

On Saturday, more than 600,000 people were drawn to the festival to eat and listen to performers such as Stevie Wonder and Joan Rivers or watch the hundreds of break dancers and belly dancers, punk rockers, gospel singers and minstres, Stan Johnson of the city's Department of General Services said.

Witterspoon said about 15 people were arrested during the day, most of them for throwing things or violent behavior.

Chewing tobacco is America's hidden killer

Sean Marsee's smokeless death

By Dr. Gregory Connolly

Then Sean had come to her with his ugly sore. Betty took one look, her heart sank. And now Dr. Hook was saying, "I'm afraid we'll have to remove part of your tongue, Sean."

The high-school senior was silent. "Can I still run in the state track meet this weekend?" he finally asked. "And graduate next month?" Dr. Hook nodded.

On May 16, 1983, the operation was performed at the Valley View Hospital in Ada. More of Sean's tongue had to be removed than Dr. Hook had anticipated. Worse, the tumor was invasive. Once the swelling in his mouth went down, Sean agreed to see a radiation therapist.

Before therapy could begin, however, a newly swelling lymph node was found in Sean's neck, an ominous sign that the cancer had spread. Radical neck surgery would now be needed. Gently Dr. Hook recommended the severest option: removing the lower jaw on the right side as well as all lymph nodes, muscles and blood vessels except the life-sustaining carotid artery. There might be some sinking, but the chin would support the gap where he'd been and the patient would have to learn to talk with his mouth, Sean thanked them.

Miraculously, Sean snapped back. When Dr. Hook saw him that August, he showed no trace of his ordeal except the white in- cision scar. Five weeks of radiation therapy were behind him. Sean greeted his doctor with enthusiasm, plainly happy to be alive.

"He really believes his superb physical condition is going to set him apart from the rest. That's the least we should do," Dr. Hook said softly.

On June 20 Sean underwent a second operation which lasted eight hours. That same month the students and teachers at Talihina High assembled to receive his award. For the last two weeks of his life, he'd been a star performer's earlobe to his breastbone. Smiling crookedly out of the other side of his mouth, Sean thanked them. The Marseeses brought Sean home for Christmas. Even then, he remained optimistic, until the day in January when he found lumps in the left side of his neck. Later, Betty answered when the hospital phoned the results of another biopsy. Sean knew the news was bad by her silent tears as she listened. When she hung up, he was in her arms, and for the first time since the awful nightmare started, grit-tough Sean Marsee began to sob.

After several minutes, he straightened and said, "Don't worry. I'm going to be fine." Like the winning runner he was, he still had faith in his finishing kick.

The last two weeks of Sean's life, his adjustible hospital bed dominated the trailer's living room. Coach Dr. Gregory Connolly

Homeless issue among problems to be addressed

By Margaret Barrett

Published five or six reports a year that would be of interest to local law makers and members of the community is the goal of a professor working for the Cal Poly Center for Practical Politics.

John Culver is the political science department head who has supervised three of four science department— not giving solutions or ideas," said Culver. "Emerging evidence on these trends, the Cal Poly Center for Practical Politics.

professor working for the Cal Poly

Center for Practical Politics. Culver hopes this will be the start of more reports which could be of use to policymakers in San Luis Obispo county.

Ten Cal Poly students worked on the four reports under the direction of Culver with the help of a $2,000 grant from the San Luis Obispo County Board of Supervisors. Culver said he chose a few students whom he knew were capable of performing the research and of working independently. These students then chose more students with whom they could work.

The Cal Poly Center for Practical Politics, a non-profit entity affiliated with the political science department, serves as a kind of umbrella conducting programs on practical solutions to political problems, was recognized by the university last fall, Culver said.

600,000 attend 8th annual Street Scene Festival in LA

LOS ANGELES (AP) — Actress Morgan Fairchild floated through the city's eighth annual Street Scene Festival as the grand marshal of a parade to kick off the final day of the weekend party.

Fairchild was accompanied by bands, drill teams, marching units, costumed characters and other celebrities.

After the 10 a.m. parade, the 13-acre Civic Center was again transformed into carnival grounds, complete with about 20 stages and hundreds of booths for food, peddlers or arts and crafts displays.

Music by Jackson Browne and comedy by Richard Pryor were scheduled Sunday night.

On Saturday, more than 600,000 people were drawn to the festival to get and listen to performers such as Stevie Wonder and Joan Rivers or watch the hundreds of break dancers and belly dancers, punk rockers, gospel singers and mimes, Stan Johnson of the city's Department of General Services said.

Waterspoon said about 15 people were arrested during the day, most of them for throwing things or violent behavior.
Chewing tobacco is America's hidden killer

Sean Marsee's smokeless death

The angry red spot with its hard white core was the size of a half-dollar. It belonged, thought Dr. Carl Hook, in the mouth of a 75-year-old who had been dipping snuff since the age of three, nor on the tongue of the high-school boy who sat across from him.

"I'm sorry, Sean," said the Ada, Okla., throat specialist. "It doesn't look good. We'll have to do a biopsy."

Sean Marsee was stunned. He didn't smoke or drink. You couldn't and win 28 medals running anchor leg on the 400-meter relay. A tapered five-foot five, 130 pounds, Sean had always taken excellent care of his body: watching his diet, lifting weights, running five miles a day six months of the year.

Now this. How could it be? True, he was never without a dip. He used up a can of snuff, a type of smokeless tobacco, every day and a half, holding it in his mouth to get a nicotine jolt without smoking. It was popular among high-school athletes who didn't want to break training. "But I didn't know snuff could be that bad for you," Sean said. "No warning label or anything."

"But I didn't know snuff could be that bad for you," Sean said. "No warning label or anything."

The high-school senior was silent. "Can I still run in the state track meet this weekend?"

"I finally asked. "And graduate next month?"

Dr. Hook nodded.

On May 16, 1983, the operation was performed at the Valley View Hospital in Ada. More of Sean's tongue had to be removed than Dr. Hook had anticipated. Worse, the tumor biopsy was positive. Once the swelling in his mouth went down, Sean agreed to see a radiation therapist.

Before therapy could begin, however, a newly swollen lymph node was found in Sean's neck, an ominous sign that the cancer had spread. Radical neck surgery would now be needed. Gently Dr. Hook recommended the serious option: removing the lower jaw on the right side as well as all lymph nodes, muscles and blood vessels except the life-sustaining carotid artery. There might be some stitching, but the chin would support the general planes of the face.

Betty Marsee began to cry. "Will he be able to eat?"

"Yes, but he'll be eating a lot of water," Dr. Hook said softly. "But the rest; that's the least we should do."

On June 20 Sean underwent a second operation which lasted eight hours. That same month 150 students and teachers at Tallahoma High assembled to honor their most outstanding athlete. Sean could not be there. Dr. Hook recommended the severest option: removing the lower jaw on the right side as well as all lymph nodes, muscles and blood vessels except the life-sustaining carotid artery. There might be some stitching, but the chin would support the general planes of the face.

Brigance visited often, sometimes with a check from Talihina-area residents, teachers and classmates who knew how hard-pressed the Marsees must be.

Almost to the end, Sean insisted on caring for himself, packing his wound and cleaning and reinserting his breathing lube several times a day.

One day Sean confessed to Betty that he still craved snuff. "I catch myself thinking," he said, "I just reach over and have a dip." Then he added that he wished he could visit the high-school locker room to show the athletes "what you look like when you use it." His appearance, he knew, would be persuasive. A classmate who had come to see him fainted dead away.

Emory on Feb. 25, 1984, Sean smiled a tired smile at his sister Marian and flashed an index finger skyward. An hour later he died.

Last February, Betty Marsee was among 54 witnesses who testified at a Massachusetts Public Health Department hearing on whether to label snuff a hazardous substance. According to Stephen Hecht, an organic chemist with the American Health Foundation, a dip of snuff delivers roughly the same amount of nicotine as a cigarette and ten times the nitrosamines.

There are now 6 million to 10 million consumers of snuff, and sales are rising 8 percent annually. "The more I dipped, the more I liked it," said Paul Hughes, 18, a six-foot football co-captain from North Easton, Mass. "Makes you feel — you know, calms you down. When I tried to stop, I couldn't."

Scientific witnesses for the Smokeless Tobacco Council argued that no undisputed scientific evidence exists proving its product causes any human disease or is clinically addictive. Nitrosamines have produced cancer in some laboratory animals, but have not been shown to cause cancer in any human being, they pointed out.

See TOBACCO, page 11
TOBACCO

From page 10

But representatives of the American Cancer Society, American Lung Association, American Dental Association, the U.S. Addiction Research Center and the Centers for Disease Control concluded researchers from the National Cancer Institute in condemning the practice of dipping. Concluded Assistant Surgeon General Robert Mecklesburg, chief dental officer of the U.S. Public Health Service: "Why should a chemical time bomb be ticked without warning in the mouths of children?"

Health scientist Elbert Glover recently performed University of Minnesota dental University recently conducted two quit-smokeless-toxic clinics in which only one of 41 participants did not return to go for more than four hours without the use of smokeless tobacco. "This, to me," Glover says, "means that smokeless can be highly addictive."

General to conduct a comprehensive review of existing scientific evidence on health effects before taking action. Dr. Gregory Connolly, director of dental health for the Massachusetts Department of Public Health, concluded that "we don't know how much oral cancer is caused by snuff. But we do know that each year we have about 20,000 new cases of oral cancer and 9,000 deaths in this country. Tobacco of one kind or another is believed to account for about 70 percent of it. According to the National Cancer Institute if you use snuff regularly you increase your risk fourfold."

Shortly before his death, Sean Marsel told his mother there must be a reason. "Keeping other kids from dying...that's Sean's legacy."

Women's soccer wins; men drop close contest

Women defeat UC San Diego 2-0 in soccer season opener

By Lisa Blair

The Cal Poly women's soccer club is looking forward to a new season filled with emphasis, as hard work and loyal practice have created an optimistic attitude for 1985.

"We are a dedicated and strong team, and we will provide us with our best year yet," said Jennifer Drumm, the club's president.

The team has a host of newcomers out on the field, and added to the returning eleven girls, the 1985 club will be strong and young, said Drumm.

The Lady Mustangs have already shown their strength and ability in the first match of the season. Last Saturday, the Mustangs kicked off with a 2-0 victory over the University of San Diego, and with the help of senior Susie Johannson leading the Cal Poly scoring attack, Poly came away with a 2-0 victory over a USD powerhouse.

Johannson scored the first goal of the game on a solo shot, and the second and final goal of the game came on another kick by Johannson, which deflected off another player and into the goal. When it was all over, Johannson's second goal of the day, clean, doesn't have to be the win for the Lady Mustangs.

"This was a big win for us, because we barely beat the USD team last Friday," said Drumm.

"Since their first victory, the Poly kickers haven't had to worry about being out of practice, as the team has been working through an extensive workout and conditioning program," said Drumm.

"The team supports itself as we get no money from the school..." - Jennifer Drumm

The team supports itself as we get no money from the school — we are out there because we love the sport," said Drumm.

Since the team is not a recognized sport, their home games are played at Cuesta College. Some of the players said that they aren't too happy to play off campus this year because the amount of sponsorships will decrease.

"We do so much hard work, it would be nice if we would be recognized for our efforts," said one player.

Despite the problems the club has had with the school over status and fields, the team feels that this will be their best season.

By John Baker

Men's soccer loses to Stanford

The men's soccer team lost 2-0 Saturday night to an aggressive Stanford University team, as the Cardinals scored in the first six minutes of play.

The Mustangs spent most of the first half working off the quick Stanford attack, disallowing the Poly kickers the opportunity to apply any strong offensive thrusts. The first half proved to be the Cardinals' show, as they displayed good skills and played some pretty soccer to take a 1-0 lead at the half.

Coach Wolfgang Gartner must have given an inspirational talk during the break, as the Mustangs came out aggressively and hustled from the blow of the whistle to begin the second half. Unfortunately for Poly, the Cardinals were awarded a penalty kick in the 70th minute for being fouled in the goal box and capitalized with a 2-0 lead.

The Mustangs have created an optimistic attitude for their regular season Oct. 5 at Chapman College, and return home Oct. 11 for a match against California State University, Northridge at 7:45 p.m. in Mustang Stadium.

WELLS FARGO STUDENT LOANS

Speedy Processing: At Wells Fargo, we're committed to rapid turnaround. Our state-of-the-art student loan system enables us to give your loan request prompt attention and swift handling.

We Make It Simple: No additional bank forms are required, and you don't need to have a credit history or account relationship in order to qualify.

Courteous Customer Service: Our service representatives are ready to answer your questions. We appreciate your business and are anxious to make your dealing with Wells Fargo Bank pleasant and hassle-free.

Choose Wells Fargo: If a student loan is part of your plans for financing your education, then tell your financial aid office that you want to go through Wells Fargo Bank. Soon after you mail your application, you'll begin to see why Wells Fargo was the smart choice.

New softball coach

Poly grad takes over

By Lisa A. Hens
September 25

Two fields of interest attracted the new head coach of the Cal Poly women's softball team to her job. Becky Heidesch, who graduated with a Bachelor of Science degree in physical education from Cal Poly, wants to apply to her teaching and coaching abilities on the softball field as well as in the field of sports psychology.

"My main concern is to produce a successful team on the field by trying some of the coaching techniques that I've learned through sports psychology," said Heidesch.

The head coaching job, which was offered to Heidesch at a late date, challenged her to weigh many career pros and cons at an early time in her life.

"I wasn't prepared for this kind of a break so soon, but I feel my decision to take this team was an optimistic, yet challenging choice," said Heidesch.

Heidesch wanted this job now, and I'm going to make it work."

The challenge Heidesch refers to is the team's 1983 overall record of 37-21 and 16-4 in Division II play last season. The 1983 softball team also made it to the National Collegiate Athletic Association Regional Tournament for the first time in the history of Cal Poly.

Heidesch said, "I know the talent and the attitudes are there this season, and now I just have to channel this team's energy into the right places to go for it all."

The idea of taking over a successful team presents much promise, but also provides additional pressure, said Heidesch.

"I've been told this is the worst and the best type of coaching situation to walk into, because I will have the maturity and talent from the girls, but I will also have the pressure and stress of producing a winning team," said Heidesch.

A background of coaching high school softball and swimming has led Heidesch to move from the high school level of coaching to her present position of working at the collegiate level.

Heidesch was the head coach of the San Luis Obispo high school softball team for the past three years and has been a swimming instructor for the last five years.

"I always knew that the coaching and teaching field was the career area for me, and right now I am learning more about myself than ever before," said Heidesch.

Heidesch's career in coaching and studying is what is their program and I just want to change it from good to excellent.

"I've been told this is the worst and the best type of coaching situation to walk into, because I will have the maturity and talent from the girls, but I will also have the pressure and stress of producing a winning team," said Heidesch.

Football team drops game to Fresno
• The Cal Poly football team dropped their game Saturday 59-10 to Division I Fresno State. The Bulldogs were the consensus favorite to win the Pacific Coast Athletic Association before the season, and came out strong against the Mustangs to take a 1-3 lead at halftime. Poly’s next opponent, UC Davis, beat Santa Clara 45-25 this weekend.

Women’s volleyball team moves into first
• The women’s volleyball team took over sole possession of first place in the Pacific Coast Athletic Association after a 16-14, 10-15, 15-12, 15-10 triumph over 19th ranked Long Beach State. The win raised Poly’s conference record to 3-0, while its overall mark went to 16-14. Ellen Bugalski put down 16 kills in 33 attempts with just three errors and Vera Pendergast received her first start of the year by putting down 10 sets in 22 attempts. In a big upset Thursday night, Debbi Black had 15 kills to lead No. 9 Hawaii to a straight-set victory over top-ranked UCLA in Honolulu.

Women harriers take Aztec Invitational
• The Cal Poly women’s cross country team won the San Diego State Aztec Invitational this weekend with a total of 48 points. The closest team to Poly was the University of New Mexico in second place with a total of 106 points, while the University of California at Irvine came in sixth with 198 points.

Beason named new basketball asst.
• Cal Poly athletic director, Dr. Kendrick Walker, has announced the hiring of Steve Beason as the assistant men’s basketball coach on an emergency basis. Beason, 29, succeeds Ofeg Marshall who has resigned to accept a similar position at Westminster College in Santa Barbara. Beason will join head coach Ernie Wheeler and eight returning lettermen from last year’s team that registered a 16-11 overall record.

Kicker to lead Steelers in Monday night game

PITTSBURGH (AP) — If the Pittsburgh Steelers get a leg up on the Cincinnati Bengals on Monday night, the leg probably will be supplied by kicker Gary Anderson.

Anderson isn't perfect — but you might not be able to convince the Bengals, Houston Oilers and Cleveland Browns of that. Especially the last two National Football League seasons.

When the fourth-year kicker from Syracuse University missed a 40-yard attempt against the Houston Oilers last week, it was his first missed field goal in 23 attempts against AFC Central Division opponents. Anderson has been at his best when the Steelers have needed to be, against the teams in their own division.

Anderson professed ignorance when informed of the streak's end.

"I just go out and kick," Anderson said. "The statisticians come up with some kind of wacky numbers. I was disappointed on missing the last attempt. I just kicked underneath it."

Steelers Coach Chuck Noll hardly has been kicking himself for picking up Anderson off the waiver wire at the end of training camp in 1982. After being cut by the Buffalo Bills, Anderson has been the mark of consistency for the Steelers.

Anderson has been the AFC's leading scorer the last two seasons, kicking for 117 points in 1984, and at his present pace will become the most accurate field goal kicker in National Football League history. His career percentage of .813 (61 of 73) entering the 1983 season was the highest of any active NFL kicker.

He closed the 1984 season by making 16 of his last 18 attempts, and is three of five this season, including a 31-yard miss against the Indianapolis Colts.

Of course, Noll hopes he doesn't have to trot the former South African soccer star onto the Three Rivers Stadium artificial turf too many times Monday night. The Steelers, 2-1, struggled offensively two weeks ago in a 17-7 Monday night loss to the Cleveland Browns before righting themselves in the 20-0 victory over the Oilers.

A victory over the winless Bengals, 0-3, not only would give the Steelers a healthy start towards defending their division championship, but give them a 2-1 record in their first head-to-head meetings against their division rivals.

The Steelers' secondary must contain two of the NFL's top pass receiving threats in veteran Cris Collinsworth and rookie Eddie Brown. They gave the San Diego secondary fits last week in the Chargers' 44-41 victory, with Collinsworth catching 10 passes for 161 yards.

Bengals Coach Sam Wyche has not yet officially named his starting quarterback, but former Maryland star Boomer Esiason almost assuredly will get the nod after completing 26 of 44 passes for 320 yards and three touchdowns against the Chargers.

IPIFARUBM

FOOD

From page 1:

talked to the new committee. "There will be complaints when you're feeding the masses," said Altimus. He added that it's "fashionable" not to like food provided because "you're feeding the masses." "Some people have a right to be fed," he said.

Although it's an impossible task, Altimus hopes better communication will help diffuse some of the everyday complaints. For instance, Residence Hall Food Service representatives are eager to explain to students that food which may appear unappealing or poorly cooked is the result of factors such as cost and availability. Quite often the complaints are taken personally as if students want to see the person in charge. Altimus said students' complaints and suggestions can make a difference. He cited an example from last year when after complaints about bland food, a spice was provided with 12 of students' favorite spices.

"I try to investigate every complaint and I take any reasonable complaint to the manager of that particular food service facility," said Altimus. Sometimes the problem is out of the manager's control. For instance, "grandmas" may complain that they wish mushrooms were always on the menu; however, Food Services may not be able to provide them because of factors such as cost or availability.

The application deadline for committee representatives is Oct. 6. Students who are interested should see their resident advisor for details.
