More research time needed

Rec/sports center vote may be put off

By Marc Meredith

The University Union Advisory Board discussed Thursday the possibility of postponing the student referendum on the new recreation/sports facility from this quarter until the beginning of winter quarter.

The board also discussed a proposal to lease office space in the rec/sports facility to the Foundation as a means of offsetting the cost of the building to students.

John Rembao, research coordinator for the project, told the board it was going to require extra time, because of the complexity of the issues, to give the board the complete capital, programming and operation costs that were requested.

He said the reason for the postponement of the referendum is that the board needs the entire student body involved in the selection of the final facility. Having a vote on the facilities this quarter probably would not give students time to study the various issues because of the extra research time the board is going to require.

Rembao said the board shouldn't want students to feel rushed this time on their facility and he thinks everything should be hashed out now and then have the final three or four facility proposals presented to the student body around the end of January for a decision.

The board decided to vote on the postponement proposal at their next meeting, giving members time to study the issue.

In addition to postponement of the referendum, the board was told by Steve Adams, associate business affairs director for ANI, that the Foundation needs more office space than is available in its present University Union space.

He said Al Amaral, Foundation executive director, approached him about the possibility of leasing office space in the rec/sports facility from this quarter until the beginning of winter quarter.

Approval was given by President Warren Baker last week for an arts festival to be held next summer at Cal Poly that will draw students from all Cal State Universities campuses.

The Summer Arts Festival will attract top students and professors in arts and humanities from the Cal State system, guest lecturers and nationally and internationally known guest artists, said Stephen Krauss, director of the Center for the Arts.

According to Krauss, demand for arts from each of the Cal State schools met in the past, with the most recent being the Cal Poly Summer Festival.

The festival is expected to begin on July 20, run through the first two weeks of August, and then end of the festival.

The board Wednesday gave Krauss the budget to cover the first 100 days of the festival. Krauss said he plans to extend the festival another 100 days.

Why can't the United States use its superpower status for peace instead of violence?

retaliation against terrorism. Possibly 60 people were killed in the attack, including 12 Tunisians.

Reagan changed face and condemned all such violence in a weekly radio address from Camp David on Saturday. He called all such action "abhorrent" and "useless."

Israelis defended their attack on the grounds that several citizens had been killed by the PLO. Since their at­
tack, several more Israelis have been killed in terrorist ac­
vity, bringing the number of victims to 16 this year.

Unfortunately, terrorism is taking hold in the conflict­
torn Middle East; many groups seem to have no other way to voice their feelings.

The Israeli government has come out against the United States' failure to veto a United Nations Security Council resolution condemning the Israelis for the attack. They say it will give the green light to all groups contemplating ter­
rorist attacks of their own.

The situation is very tense; many factions are fighting for the control of the historically torn region, with no real end in sight. Continued terrorist activity will not do any­
thing to relieve tensions.

The United States depends upon our alliance with Israel to protect our interests in the area and at the same time must be sensitive to world opinion. It is a difficult position to be put into by armed terrorists, but one that we have done very little to stop. The U.S. position in the past has been one of revenge, and strong-arm tactics to subdue the ag­
gressors. It hasn't worked.

Maybe it is time for the United States to use its "super­
power" status to seek and promote peace in the region.

Fleeting one's muscles doesn't always do the trick.

Talks have been attempted and have failed, but that doesn't mean additional dialogue should not be promoted. The United States and President Reagan should do everything in their power to seek for peace in the Middle East.

After all, just like children, the groups involved will con­
tinue in their attempts to get in the last word, or kill.
Kidnappers say hostage killed
BEIRUT, Lebanon (AP) — Kidnappers said in a statement published Friday they had killed American diplomat William Buckley in revenge for alleged U.S. complicity in Israel's bombing of the PLO headquarters in Tunisia.

There was no independent confirmation the American had been killed.

The kidnappers said Buckley's body would be put "at the disposal" of the families of the people killed in the air raid in Tunisia.

The Shiite fundamentalist group Jihad Islami, or Islamic Holy War, said the 37-year-old embassy political officer was put to death after being "tired and found guilty of involvement in American Intelligence crimes in this world."

Boy may be alive after quake
MEXICO CITY (AP) — A 9-year-old boy trapped for 12 days in the rubble from a killer earthquake called out a single word Friday, rescue workers said as they tunneled toward him.

When the workers asked the boy at 10:45 a.m. if he was there, the child responded, "Yes." When they asked for his name, he said "Ramy," he said Jorge Negrete, a coordinator of rescue efforts.

Rescuers believe the survivor is 9-year-old Luis Ramon Navarrete, who was at home in his apartment with his grandfather, Luis Maldonado, 57, when the three-story building collapsed in the Sept. 19 quake.

Meet America's Top-rated Aerospace Employer.

Talk with our representatives about why The Almanac of American Employers ranked Lockheed first overall among America's largest, successful companies. Tops among aerospace firms. And talk about career opportunities at Lockheed. And about our famed "Skunk Works" facility where we developed the SR-71 Blackbird, an aircraft so advanced, it's still the fastest, highest flying airplane in the world.

Just sign up in your placement office and mark these dates on your calendar:

Interviews — October 14 & November 12

You'll see why we're a company with a remarkable history. And a future as promising as your own.

Lockheed is an equal opportunity affirmative action employer. U.S. citizenship is required.

FREE SPINAL EXAMINATION
Through the month of October

Johnston Chiropractic Clinic Inc. is sponsoring a spinal check-up and Scoliosis Screening program as a public service. This service will include consultation, physical examination and a report of findings.

WARNING SIGNS OF SPINAL MISALIGNMENTS
• Intermittent Headaches
• Dizziness, Vertigo
• Neck, Shoulder & Arm Pain
• Low Back & Leg Pain
• Pain Between Shoulders

If you suffer from any of these warning signs call immediately to prevent possible advancing complications. This Free Spinal public service is for a limited time only, by appointment, please. Please mention ad at time of visit.

For An Appointment Call 541-2277

BPI SCAN™, The Satellite Career Network, will beam our live video teleconference to your campus on October 8, 1985. If you are a senior, undergraduate, graduate student or Ph.D. in engineering, computer science or any other technical discipline, plan to attend. You’ll learn about career opportunities at the country’s top technical organizations. The Satellite Career Network provides the informational link between technical students and their potential employers.

This year’s participating companies include: AT&T, Sperry Corporation, National Security Agency, Bell Communications Research, Naval Ocean Systems Center, Tektronix, Inc., Central Intelligence Agency, Aerojet General Corporation, U.S. Nuclear Regulatory Commission, Garrett Pneumatic Systems Division, NASA, GTE Government Systems, TRW and others.

You’ll hear about their philosophies, training and job opportunities on our large projection screens. And participate in a live question-and-answer period on our Satellite Career Network with company representatives.

If you’re a high achiever with above average grades, we strongly urge you to attend. Admission is free. Just mark October 8th on your calendar. Then come to BPI SCAN. You’ll see, hear and talk about your future with experts from the nation’s top technical organizations.

For a presentation schedule or more information, visit your placement office or call 1-800-328-4032. In Minnesota call 612-370-0550.

BPI SCAN™, Satellite Career Network

BPI SCAN’s free teleconference will be held at 10:00 AM (PDT) at Chumash Auditorium–Room 204, California Polytechnic State University

More grants being made available for faculty Poly research

By Craig Andrews

An additional $9,000 in funding will soon be available to the Cal Poly Research Committee to supplement Creative Activity-Research Effort (CARE) grants. These funds will be used to support professional development activities proposed by the Cal Poly faculty.

A memo sent Sept. 11 by Provost and the President for the Provost's Office to all faculty mentions that since the source for the $9,000 has been previously allocated, the funds will be transferred to the Research Committee.

On Wednesday the Research Committee received a memo from Research Development indicating that overhead funds accumulated within the program and now those funds will be split on CARE and other grants. About $15,000 will be allocated for CARE grants, in addition to the usual $30,000 to $40,000 which will go to individual departments for assignments to specific projects, and Bob Lucas, director of Research Development.

The additional funds for research and development is a relatively new concept to Cal Poly. Under the previous policy, funds not used by the Foundation were distributed to the university 25 percent to the Research Committee and 75 percent to the dean of schools originating projects.

But under the new policy which went into effect July 1984, these allocations will be frozen for three years. Any overhead beyond these base allocations will be distributed in this manner: 25 percent to the individual project director; 25 percent to the department to promote sponsorship; 25 percent to the sponsoring unit or department; and 25 percent to the Provost's office.

Thus, overhead revenues can now be shared directly with the faculty to promote their professional development activities. "The situation has been getting better for the past two years," said Lucas. He said the CSU system is turning toward supporting research and development. Plus, the state itself is being driven to improve the situation.

In 1983-84 there were 61 research projects with a total value of more than $2,213,000. According to a budget line item as specified in the contract, as well as the assignment of funds from the 1985-86 Meritorious and Performance Promise Program (MPPP). In addition, the proposal calls for $1 million of newly-appropriated money, effective July 1, 1986.

Grants.

Six years ago only 27 faculty members received 39 grants. Two years ago 47 faculty members shared 61 grants. During the past five years, the total dollar value of grant awards during the past five year period more than doubled the amount during the 1975-80 period.

However, there are still complaints coming from Cal Poly professors. "If I'm professor doesn't have the time to necessary/research, the amount of funding down matter," said Dr. Charles Andrews, Cal Poly accounting professor and president of the local chapter of the California Faculty Association (CFA), the largest higher education faculty bargaining unit in the nation.

Today a professor is expected to teach 12 units per quarter, conduct five office hours per week and carry on other responsibilities that amount to three additional teaching units, Andrews said. This amounts to at least 44 hours of work per week. In addition, a professor must engage in professional activities in order to be considered for tenure or promotion. These activities include attending conferences of professional organizations to receive new information and proposals, research in the field and in-service work in industry. Andrews contends only a workaholic could fulfill such an obligation. "The risk is to the quality of education going to the student," he said.

The teaching load here is a heavy teaching load. There are a lot of departments that are understaffed," said Robert J. McNeil, associate professor of crop science and chairman of the Research Committee. "The nature of the heavy workload at Cal Poly is different than at other universities," said McNeil, who has taught at a community college and Land-Grant University before coming to Cal Poly.

There is a lot more personal contact with students; this includes spending time in the field, as well as formal class time, he said.

But instructors can buy their research time with part of their grant money, Lucas said. Also, the Cal Poly system is unique in that faculty can work extra-time for extra money. Thus, instructors working on a project have an option, Lucas said.

Still, the faculty is asking for more money for grants. A new proposal for the CFA contract asks for the faculty development budget line items as specified in the contract, as well as the assignment of funds from the 1985-86 Meritorious and Performance Promise Program (MPPP). In addition, the proposal calls for $1 million of newly-appropriated money, effective July 1, 1986.

WELLS FARGO STUDENT LOANS

Speedy Processing: At Wells Fargo, we're committed to rapid turnaround. Our state-of-the-art student loan system enables us to give you your loan request prompt attention and swift handling.

We Make It Simple: No additional bank forms are required, and you don't need to have a credit history or account relationship in order to qualify.

Courtier Service: Our loan representatives are ready to answer your questions. We appreciate your business, and we're anxious to make funding available with Wells Fargo Bank, personal and hassle-free.

Choose Wells Fargo: If a student loan is part of your plans for financing your education, then call your financial aid office that you want to go through Wells Fargo Bank. Soon after you mail us your application, you'll begin to see why Wells Fargo was the smart choice.

"One million dollars is nothing," said Andrews. "It should be ten times that."

Also, there is talk of funding from the California Lottery. "The Chancellor's Office determines where lottery money should go. We believe a certain percentage should be applied toward professional development," Andrews said.

McNeil said the extra money could certainly be used. He said crop science instructors are paid $25 per year for in-state travel, and make about six trips per year to conferences and to listen to research proposals. "If there was more money available, I'd be going to larger conferences," he said.

Also, there are many short courses offered for instructors, but fees for such programs range anywhere from $50 to $800. The courses usually last from one to seven days. "There are many of these short courses I'd have liked to attend," McNeil said.

The Research Committee report is now on its way to the Provost, and the President for further recommendations, and the new CFA contract proposals are already in Sacramento.
Heiress says brother was actually her son

By PAMELA ROTH GROSS

BOSTON (AP) — Tobacco heiress Carol Lynn Benson Kendall, who survived a car bombing that killed her mother and adopted brother, has said under oath that the dead young man was actually her son, her attorney said Sunday. Florida authorities have charged Steven Benson, Kendall's 34-year-old natural brother, with setting the blast outside the family's Naples, Fla., home because he believed he was about to be cut out of his mother's will.

“People had suspicions as to why, after having two children of her own, all of a sudden Mrs. Benson adopts a third,” Cirace said. “It wasn't discussed. I guess people just exhibited good taste.”

He said he counseled Kendall to tell the truth about Scott's birth and “answer any and all questions they ask, no matter how private or embarrassing.”

Steven Benson's trial is scheduled to begin in Naples, Fla., on Nov. 13.

Mustangs miscue prove fatal against old rival, lose 34-21

By Tim Robinson

Mustang head coach Jim Sanderson may have been a prophet. Sanderson predicted that the team that made the fewest mistakes Saturday would win. He was right — Cal Poly didn't make the fewest mistakes, and didn't win.

The Mustangs committed two of the football's most deadly sins by fumbling against the inside five, and, getting a punt blocked that was recovered by Davis on the Mustang 16-yard line. Both mistakes resulted in touchdowns and helped the Aggies to a 34-21 win.

Sanderson and his coaching staff didn't have to be mathematicians to calculate the damage.

"We had our opportunities, but we didn't capitalize. The blocked punt and the fumble led to touchdowns and twice we had the ball inside the ten and had no points to show for it," said Sanderson.

Yet even Sanderson's prophecy couldn't have predicted the events that happened before Saturday's game. Sanderson opted to start sophomore quarterback Robert Perez over junior Jeff Byars, and when word came down that the most mobile Perez was getting the nod Byars left the team.

The first snap of the game was the first of Perez's varsity career. Perez, who connected on 15 of 26 passes for 199 yards on the night, however, appeared cooked on the Mustang's opening drive. Perez seemed to start sophomore quarterback Robert Perez over junior Jeff Byars, and when word came down that the most mobile Perez was getting the nod Byars left the team.

"Winning the California Lottery takes luck, but winning two more volleyball matches requires skill and lots of determination." The Cal Poly women's volleyball team probably would've taken a 3500 winning lottery ticket Friday night, rather than playing five games with the Aztecs of San Diego State. The Mustangs and Aztecs played for two hours and 25 minutes in front of an anxious crowd of 1931, as the Lady Mustangs went on to capture the hearts of the home folks with a 15-12, 13-5, 13-15, 11-15, 15-4 victory.

Saturday night the home crowd wasn't too happy but the Mustangs' perfect record in the Pacific Coast Athletic Conference rose to 6-0, as they swept the Titans of Cal State Fullerton 15-6, 17-15, 15-6. Poly boosted their overall mark to 10-1, and would ready their attack for the upcoming National Invitational Volleyball Tournament at UCLA.

In the San Diego State match, the 70-ranked Lady Mustangs proved to be one step ahead of the 80-ranked Aztecs. With the Aztec Coach, Rudy Suwara, sending a warning during the first set, the teams knew the night would be a hot one.

Poly spiker Lynn Keoler led the Mustang attack with 21 kills, but setter DeDe Bodnar carried the team's momentum with her take charge attitude and five big assists, two of which landed just in bounds to end game one. The Mustangs shifted into high gear for the second game, as Bodnar again served up the final 15th point to the Aztec's five.

Coach Suwara strategically turned to his bench for some added Aztec power, and the San Diego team responded with two impressive wins in the third and fourth games. Aztec spiker Renee Pankopf kept the Mustangs awake with her effective jump serve, while Stacey Sliender captured the crowd's attention by scoring all three of her kills in the rally that put the Aztecs' victory in the books.

"The home crowd is great to have, but the distractions seem to decrease our level of play," said Cal Poly Head Coach Mike Wilson. "We've only had one good game of home, and that's, not a strong plus."

The 0th and final game against the Aztecs brought Poly back to the future, as the Mustangs did not look back and held together for a crucial PCAA win.

"We knew San Diego was good with their serving and middle blocking, but their total defense came on and made our team finally realize we had to pull it off," said Carol Tschasar, Poly's 4-1 middle blocker.

The Mustangs did pull it off, as Ellen Bugalski ended the night with 19 kills in 30 attempts, Kelly Strand rocketed 18 kills out of 34 and Tschasar recorded 19 kills on 39 tries, with four stuffs to lead all the blockers.

Saturday night was a different story, as the Poly spikers took case of business in three straight sets to hail over the Titans of Cal State Fullerton in a quick match before the Cal Poly football game.

Quick sets and plenty of kills enabled the Mustangs to bring their team together to play some smooth volleyball in the early evening. The first set presented no problems, but the second game went back and forth in an array of sideouts as Fullerton challenged Poly with a 14-13 tie. The Lady Mustangs kept their composure and rose to a 15-13 win. The third set was no struggle as the Mustangs relied on their rocked down the Titans 15-6.

"Our motivation level was zero, and the enthusiasm was minimal," said Tschasar. "I don't know if it was because the match was earlier than usual or because of the football game, but we didn't ater Fuller on -- we just won."

Keoler and Bugalski formed a rocket force of their own with 14 kills each in the night, while Tschasar triggered 11 kills and Strand with 10 kills and nine defensive digs. Vera Pendergast came on with nine kills, while teammates Bodnar and Keoler each had seven digs.

This week the Mustangs are working toward the National Invitational Volleyball Tournament which starts Thursday at Pauley Pavilion on the UCLA campus. Thirteen nationally ranked teams will gather in Westwood for the NIVT, and Cal Poly is paired with the University of Oregon, Lamar and Poly's retent foes of San Diego State. Other volleyball favorites in the tournament are UCLA, the University of Hawaii and three-time NIVT title winner, University of the Pacific.
Women’s soccer maintains perfect record

By Lin Blair

Practice makes perfect, and once again it is the hardworking determination that has brought the Cal Poly Women’s Soccer Club to a perfect 3-0 record.

Cal Poly came out hard in the first half to take control and ultimately gain a 2-1 league victory over the visiting San Diego State Aztecs Saturday at Cuesta College.

"The girls came storming out and we took control from the start — much better than last week," said J.J. LeGate, coach for Cal Poly. The Lady Mustangs controlled the Aztecs with a hard pressing offensive attack, a strong physical defense and some excellent play from their goalie, Liz Pawek, who is improving game after game, said LeGate.

The first goal of the game came from Cal Poly’s Susie Johansson.

Johansson, who saw the ball being battered around in front of the Aztec goal, took charge, saw the hole open and blew the ball back through the net for the Mustangs.

"I knew it was mine right when I saw it," said Johansson about her goal.

According to Scott Steinmatz, also a coach for Cal Poly, "Susie's shot was a clear demonstration of her thinking before the play happened."

Steinmatz gave high words of praise to his senior starter Johansson who as he said, "Stood out as the field general for the offensive attack."

Poly kicker Kelly Cook scored a goal in the first half, which was to be the winning goal. Cook scored the goal on a play where she simply beat the Aztec goalie to the ball in front of the net. Cook’s goal gave the Lady Mustangs a strong 2-0 lead going into the second half.

With the Aztecs pressing hard in the second half to make a comeback at the Mustangs, Poly controlled almost every Aztec attempt. In the middle of the second half, Poly's defense broke down and a San Diego State player was able to fire an untouched shot into the Cal Poly goal.

The two Cal Poly coaches agreed it was a play where too many loose players for SDSU were around Cal Poly's goal, thus allowing them to take a shot before the girls could defend against it.

"The mistake will be seldom repeated ... if ever again," said Coach Steinmatz.

According to the Poly coaches, the victory was once again aided by the Lady Mustangs’ excellent physical condition. "The end fell down to conditioning," said Steinmatz, who pinpointed Cal Poly's good physical conditioning as being the key to holding off the Aztecs in the second half.

Steinmatz said even though there were different girls playing the left ends and right halfback positions, the girls were consistent all day long at these spots. He also said the outside halfbacks did a good job for Poly.

One strong standout for the Mustangs was goalie, Liz Pawek, who as Coach LeGate said was, "Tremendous at the goal."

The Lady Mustang soccer club is boasting a perfect league record and will be on the road next weekend to keep the ball rolling.

One dark spot in Saturday’s victory was an injury to Poly’s own Kristin Sandberg who had to be carried off the field with a badly twisted ankle near the close of the game.

GET INTO THE FITNESS PICTURE AT THE YMCA.

College Students. Now before October 15th, you can join the San Luis Obispo County YMCA for only $160. Your "school year" membership will expire on July 1, 1986. That's at least 8 months of full YMCA services. Longer if you act soon. Join today for the greatest value! You must pay in full and present a current college I.D. when joining. Stop by today and remember, your weekly cost is only $40. The San Luis Obispo County YMCA is easy on your budget.

Your membership includes:

• 7 Racquetball/Handball Courts • 13 Station Nautilus Gym • Universal & Free Weights • Aerobics Classes • Redwood Sauna • Whirlpool Spa • Basketball • Volleyball • Lap Swimming

Come on down and get SLOPPY at OSOS ST. SUBS
by John Baker

Antonio Walker is playing soccer a long way from home — 8,868 miles, to exact. He is from Santiago, Chile.

The orange-haired 23-year-old came to America and San Luis Obispo in June 1984. "I didn't know anybody here and I couldn't speak any English," said Walker. "The teacher who picked me up at the airport thought I could understand English because he talked to me the whole way into town. All I could do was nod my head and pretend to understand."

"He took me to my apartment, helped me move in, and then told me that I had class the next morning at nine o'clock. I felt very alone." Walker spent the next three months at the Pacific Language Institute learning English and he spent the following three months augmenting his time at the Institute with two classes at Cal Poly.

Walker comes from a big family: seven brothers and one sister. Three of his brothers go to school on the East Coast. He realized after two years at a technical school that he wanted more from life than working in a shop 40 hours a week, so he asked his father, a lawyer, if he could go to college in America.

"I wanted to study fruit science because fruit production is a large business in my country," he said. "Ninety percent of the fruit produced in Chile is exported to the U.S. and therefore there is much involvement for Americans. Going to school in America would enable me to learn fruit science and English and about Americans."

"I chose Cal Poly because it was one of the best agriculture schools in America," Walker said. "My father was glad that I wanted to further my education but he told me to be wary about America. 'Please don't get married over there,' he told me before I left."

Walker is impressed by the facilities offered by the agriculture department. "At the University of Santiago we have very good study programs but there is no hands-on training," said Walker. "Being able to actually see the trees and work with them yourself makes learning so much easier. A picture in a book is one thing but seeing the tree is another."

The Chilean adds an interesting aspect to the Mustang soccer team — famous. "In Chile the game is played differently," he said. "It is not as rough and the emphasis is put more upon skill than toughness."

"Before I came to America people told me that it would be easy for me to play soccer there because no one was any good. They were wrong. I am learning a lot about soccer here from Wolfgang, (head coach of the soccer team), and am improving my game by playing this different style of soccer," said Walker.

Get down to business faster. With the BA-35.

If there's one thing business students have always needed, this is it: an affordable, business-oriented calculator. The Texas Instruments BA-35, the Student Business Analyst.

Its built-in business formulas let you perform complicated finance, accounting and statistical functions — the ones that usually require a lot of time and a stack of reference books, like present and future value calculations, amortizations and balloon payments. The BA-35 means you spend less time calculating, and more time learning. One keystroke takes the place of many.

The calculator is just part of the package. You also get a book that follows most business courses: the Business Analyst Guidebook. Business professors helped us write it, to help you get the most out of calculator and classroom.

A powerful combination. Thank business. With the BA-35 Student Business Analyst.

ARTS
From page 1
state, there are few electives in arts and humanities. Although technical education is stressed at Cal Poly, Krauss said students "need the whole perspective."

According to Krauss, past presidents were determined to keep Cal Poly from being a liberal arts campus. He said President Baker has been "incredibly supportive" of the Center for the Arts. The festival would bring the center more into the spotlight and will be the focal point for the summer arts program, he said.

Krauss is hoping other campus organizations will cooperate and that there will be more involvement from alumni.

FACILITY
From page 1
of the Foundation obtaining 15,000 to 20,000 square feet of office space in the rec/sports facility. Adams said the Foundation offered to pay for all additional structure costs and operating costs and would take care of its own financing.

The board then discussed the proposal. Adams said moving the Foundation out of the Union would be a plus, because it would free up needed space within the union.

But, as ASI Executive Director Roger Conway pointed out, the rec/sports facility already involves two parties, the recreation office and the physical education department, and a third party would further complicate the situation.

Other discussion items at the meeting included the cancellation of the University Union's insurance by Hartford Group, the now-completed remodeling of the Copy Center and Ice Cream Parlor, and a new company, Cardillo Gulliver's Travel, in charge of the Travel Center.

Conway said that across the country insurance premiums have been soaring and there have been many cancellations on large facilities such as the union. He said in the last year the Union's premiums alone rose from $16,000 to $48,000.

The insurance company has told Conway it wishes to cancel the policy, giving the Union a grace period until June 1986 to find another carrier.

Conway said it's a tough problem to face, but it can be solved by pooling the Union's insurance needs with other California State University institutions, which are experiencing similar if not more urgent problems.

Northern Telecom
...A Rational Career Choice
The merger of computer technology and telecommunications has made our industry THE growth field for the '80s and beyond. As a dynamic company that deals in communications technology, we can offer a wealth of challenges to graduates in Engineering, Computer Science, Marketing, Finance/Accounting, Business Systems and Human Resources. With facilities in 14 major U.S. cities, we can probably match your desires with an area that offers the climate and amenities you want.

Since we believe in promotion based on achievement, you can set your own pace for advancement. We offer industry-competitive compensation and our benefit program ranks among the best in the industry. Talk to our recruiter during his or her next visit to your campus. We will be happy to answer all of your questions about locations, project assignments, and our projected growth.

See your placement office to schedule an interview with our division representative from Digital Switching Systems on campus October 17.

Last survivor of septuplets leaves hospital

ORANGE (AP) — The last of three surviving Frustaci septuplets, blue-eyed and dark-haired Stephen Earl, on Friday left the hospital where he was born last May — 12 weeks premature and weighing less than two pounds.

"It is a very special day because all the babies are going home, and that's where babies belong," said Dr. Carrie Worringer, head of the four-doctor team that cared for the babies at Children's Hospital of Orange.
