AIDS: Deadly disease threatens more than homosexuals

By Renee Shape

A local physician has that Acquired Immune Deficiency Syndrome will soon become the "worst epidemic of modern man has ever known."

Dr. William Gordon, clinic physician for the San Luis Obispo Health Department, has been treating local AIDS patients for several years. While there are just twelve known cases in the county at this time, Gordon said the City of San Luis Obispo can expect many more.

"I do anticipate an increase in the number of AIDS cases here," said Gordon, adding that the Center for Disease Control has predicted that rural community will be experiencing more cases than in the past.

"And along with it," Gordon added, "there is sure to be a slow, steady and consistent increase of AIDS found in heterosexual individuals."

"This is not merely a homosexual disease and people need to realize that," said Gordon. "It's foolish to believe that it's a disease of the lower classes, or that there aren't the same problems here, but we're sure that there is a problem and it's widespread."

"It's a common misconception that AIDS is a disease of the lower classes, or that there aren't the same problems here," said Gordon. "We're sure that there is a problem and it's widespread."
**You can’t teach an old dog new tricks**

By Renee Shupe and Kevin Cannon

Most people teach their dogs new tricks, but not necessarily their old ones. Others teach them to be watchdogs and bark at intruders. Richard Natale, electronic engineering junior, has taught his dog Rover to do both.

Rover...While sitting in the garage by a large roll of silver tape, I threw the garbage, he brings it back. It is a command that he has learned in three different ways.

Others teach their watchdogs to bark at intruders. Others teach them to be faithful servants who bring home the trash and eat old watermelon finds. Some dogs beg for scraps, my dog just helps himself. Every night the garbage becomes a buffet. "Ooh, the chicken scraps look scrumptious. Aah, the tuna casserole smells absolutely divine. Excuse me, how’s the health today? Is it fresh?"

Just to spite me, Rover invented his own version of fetch.

Realizing that I wasn’t very effective as a teacher, I decided to check out a book on dog training, but I couldn’t get him to read it. The librarian recommended a book called ‘Come On Fetch’ by Mental and Emotional Status, I realized psychoanalysis was a little too much of a read. At least I wouldn’t have any trouble getting Rover to us on the couch. I finally settled on one called ‘Good Dog Bad Dog’ even though it sounded like an AIC Gravy Train digs through the on the newspaper. Unfortunately...

Earthquake strikes Guatemala

WASHINGTON (AP) — An earthquake with an estimated magnitude of 5.0 on the Richter scale hit Guatemala Wednesday morning, the U.S. Geological Survey reported.

The earthquake occurred at 11:38 a.m. EDT and was centered near the Pacific coast, about 80 miles southeast of Guatemalan City, according to USGS spokesperson Donovart Kelly.

The earthquake, which has a long history of earthquakes, experienced a slightly smaller earthquake of 4.2 on Oct. 11 that caused considerable damage.

Mexican hospital to be repaired

MEXICO CITY (AP) — The General Hospital, one of where one hospital and the residents' quarters collapsed, will be reopened as soon as damage can be repaired, President Miguel de la Madrid told doctors and other employees.

The president met with representatives of 3,000 protesters outside the government facility and holding protests.

Hospital employees have been holding clinics on their own outside the government facility and holding protests.

More faculty office space needed

By Katie Britain

Two faculty members sharing one office may be an inconvenience of the past for the school of Science and Mathematics. If a request for new office buildings is adopted in the 1986-87 California State University system budget.

Cal Poly adopted a policy of one person per office in the early 1970s, yet more than 30 percent of faculty are still in multiple station offices, said Executive Dean Doug Gerard.

"The problem we face is that a lot of buildings were originally designed for multiple station rooms," said Gerard.

He said 434 faculty still share 217 rooms.

Even though the project for the School of Science and Mathematics is included in the Capital Outlay projects, it is still far down on the priority list, said Gerard.

The project, called Faculty Office, is still in its first phase.

The request is in for it to be sent to the State Department of Finance to have the project included in the governor's budget in Sacramento.

"We won't know until the budget is released around Jan. 10, 1986 if the project will be adopted or not," said Gerard.

If the request for the School of Science and Mathematics is adopted, it will be a precedent for single office facilities for all the CSU campuses because of the difficulties posed by providing the space, said Gerard.

As a precedent-setting project the request may not move along as rapidly as the school would like, but Cal Poly is still optimistic and committed to its eventual success, he said.

"President Baker is committed to doing whatever he can as rapidly as he can to change this condition so that all faculty will have private office space," said Gerard.

A ‘terrifying’ disease

AIDS anti-viral drug to be tested in U.S.

AIDS Tests Planned

AIDS Victims

AIDS Epidemic.

AIDS Tests for Food Handlers

AIDS and its many victims

The terrifying reality of AIDS is discussed daily in newspapers, on television and over the radio, yet many are not even aware of the ways in which it is transmitted, its symptoms or preventive measures that can be taken.

As the name implies, AIDS is not a specific disease. It is a syndrome — an immunodeficiency that is acquired (some can be inherited). This makes the body susceptible to a variety of cancers and other illnesses.

As defined by the Center for Disease Control, AIDS is the appearance in an otherwise healthy individual of a major opportunistic condition. Two of the most common illnesses AIDS patients contract are Kaposi’s sarcoma, a form of cancer that causes pink, brown or purple skin blotches, and pneumocystis carinii pneumonia, a parasitic infection of the lungs. Both of these diseases have been relatively mild and infrequent in the past, but in conjunction with AIDS they have turned into fatal conditions.

It is important to realize that AIDS patients do not die of their immune deficiency, but of the infections that result.

The AIDS virus is spread through direct exchange of body fluids, primarily blood and semen. This makes sexual intercourse the most common way for the disease to be transmitted, with the risk being directly related to the number of sexual partners a person has and the frequency of contact. This is true for both homosexual and heterosexual transmission of AIDS, but homosexual practices which sometimes involve multiple partners and the exchange of blood as well as semen have spread AIDS rapidly. At this time homosexual and bisexual men account for approximately 73 percent of all reported AIDS cases.

Other than sexual intercourse, AIDS is transmitted through the blood.

AIDS

From page 1

members, Provost Tomlinson Fort said they were well needed. "There is general agreement that the university needed to consider beforehand how it would respond if someone on campus were to be diagnosed as having AIDS," said Fort. "We are well aware that the problem is an issue of grave concern on campus and feel it is important to have a plan for what we're sure is going to happen sometime in the future."

In the meantime, Nash said the Health Center will work to inform the campus community about AIDS. It is estimated that by 1990 there will be more than 300,000 cases of AIDS," said Nash. "It is a constantly changing and growing disease and we all need to be well informed.

Nash said he hopes to educate the campus through an AIDS information meeting the Health Center will sponsor Nov. 13. Dr. Gordon and Jerry White, AIDS project coordinator for the Tri-counties, will both give presentations. There will also be a question and answer period.

said Nash: "Our main goal is to start the process of educating the community about AIDS. I hope this will provoke community discussion about a very serious problem."
People suffering from AIDS may notice severs, prolonged and persistent:
- Fever
- General body aches and pain
- Prolonged fatigue for no reason
- Persistent cough of more than two weeks
- Persistent diarrhea
- Loss of appetite
- Loss of weight
- Night sweats
- Red or purple spots on the skin
- Swollen lymph glands in the neck, underarm or groin
- Changes in vision

What appears clear about AIDS is that it is not transmitted through casual contact. Although the virus has been isolated from the saliva of AIDS patients, there is not a single proven case of AIDS being transmitted this way. It also is not spread through infections such as colds or flu, and it is probably safe to share a cup or a kiss with an AIDS patient. However, research shows there is no reason not to share the same classrooms, restrooms, offices, or phone booths with a person who is suffering from AIDS.

What this means is sexually active people is that the more partners they have, (especially if they are having sex with someone more than once, whether they be homosexual, heterosexual, or somewhere in between) the greater their risk of acquiring AIDS. While people with more than one sexual contact with a partner who is infected with the virus to become infected, the possibility still stands that one exposure would be enough.

It is this simple: If people have sex with partners they really don’t know well, they can’t be sure their partners have not been exposed to AIDS through previous sexual encounters. In the risk involved enough to keep a reasonable person from engaging in promiscuous activity? Unfortunately, the number of these suffering from AIDS shows that many people don’t think so.

AIDS symptoms and precautions

- Reduced the number of different sexual partners
- Avoid sexual activity with those known to have AIDS or the AIDS virus
- Avoid sharing needles — if you must use intravenous drugs use fresh needles or syringes each time
- Don’t share razors, toothbrushes or chewing gum
- Get proper amounts of sleep and exercises
- Avoid unsafe sexual practices such as rimming (oral-anal contact), fisting, blood contact, or anal intercourse without a condom
- Do not donate blood, semen or body organs
- Use condoms to decrease risk of transmission
- Have medical evaluations twice a year
- Look for signs of AIDS: Tiredness, weight loss

Rock Hudson’s will to be filed next week

LOS ANGELES (AP) — The court-appointed administrator of Rock Hudson’s estate said Wednesday he would soon file the will of the screen idol who died after a battle with AIDS.

Superior Court Commissioner Robert Blaylock signed a petition Tuesday authorizing administration of the estate. Sheft said the will would be filed next week.

“I was Rock Hudson’s business manager for years,” Sheft said Wednesday in a telephone interview from New York. Sheft declined Wednesday to estimate the value of the estate or comments on its distribution, but the petition filed Tuesday by Blaylock will name Sheft as the estate’s executor and S. T. Tomlinson, a New York stockbroker, as co-executor.

Rock Hudson AIDS Foundation

Sheft declined Wednesday to elaborate on the petition Tuesday.

Before his death, Hudson donated $25,000 to create the Rock Hudson AIDS Foundation to benefit research for the incurable illness that destroys the body’s immune system and leaves the victim vulnerable to diseases. Sheft said the will would conform to the wishes of Howard Stone, Hudson’s business manager for years. Stone’s will specifies much of the estate is tied up in “extremely volatile” stocks that fluctuate widely in value and require careful monitoring. Blaylock granted Sheft authority to sell such stocks as needed.

The petition also names Sheft as executor of the estate and trustee of a trust set up in 1974.

Today 400,000 to one million Americans are carrying the AIDS virus. The number of people who actually acquire the disease is not known, but estimates range from five to 25 percent. It was recently predicted in the Journal of the American Medical Association that there will be more than 40,000 cases of AIDS in two years.

One particularly frightening aspect of AIDS is the long incubation period, which usually ranges from two years, but can last much longer. During this time there are no indication that they may be suffering from AIDS, and not until the disease progresses do symptoms become apparent.

This crowd knows which Pizza is Best!

Did you know Woodstock’s offers:

Report says 6,000 dead from quake

MEXICO CITY (AP) - The September earthquakes that devastated large areas of Mexico's capital killed 6,000 people, injured 30,000 more and caused about $4 billion in property damage, a United Nations commission says.

Another 2,000 people are still missing and presumably dead, buried in rubble. The report by the Economic Commission for Latin America was prepared by ECLAC experts in close consultation with Mexican authorities and made public this week.

Mexican newspapers described it as "the most authoritative survey so far of the damages caused by an earthquake that measured 8.1 on the open-ended Richter scale Sept. 19, and 7.7 more aftershocks in the week that followed, including one of 7.3 on Sept. 20."

A total of 3,130 "major buildings" were destroyed or damaged in Mexico City, about 125 of them housing government agencies, the report said.

Some 30,000 housing units were destroyed and another 60,000 were damaged, as grabbing an existing housing deficit estimated by government sources at 3 million units, the report said.

"The shock caused considerable damage to housing, health and education, with high financial costs, aside from damage impossible to assess to cultural buildings, were felt to 20 million people," the report said.

The earthquake caused considerable damage to housing, health and education, with high financial costs, aside from damage impossible to assess to cultural monuments, whose value is incalculable," the report said.

The report said the earthquakes seriously affected an area of 120,000 square miles, were felt by close to 20 million people, while about 100,000 persons suffered property damage. An estimated 50,000 people were left homeless and forced to live in temporary shelters.

The earthquake caused considerable damage to housing, health and education, with high financial costs, aside from damage impossible to assess to cultural monuments, whose value is incalculable," the report said.
Fitness center proposal made

By Rebecca Barner

Although the future of the bowling alley is still undecided, a group of Cal Poly students will present a proposal for its replacement to the University Union Advisory Board today.

President Warren Baker is currently awaiting a recommendation from Dean of Students Russ Brown before he makes a decision on the removal of the bowling alley. Brown estimates that he will complete his recommendation and he and Baker will have a decision by the beginning of next week.

The question of whether the bowling alley should be removed and replaced with a fitness center surfaced last February when Roger Conway, executive director of the University Union, said.

"It was then decided that bowling alley space might be utilized in a more efficient way," Conway said. A survey of students conducted by an interior design class revealed there was a definite need for more recreational space on campus and for more recreation and meeting space.

"However, the need that kept coming up the strongest was the need for recreational space," said Conway. From there it was decided to explore the possibility of using student labor to renovate the facility, said Conway. The dean of the School of Architecture and Environmental Design was contacted and an informal board was set up with associate architecture professor Ken Kilbourn named as project coordinator.

Actual work on a fitness center proposal began at the beginning of this quarter when a class of fourth-year architecture students drew up a design for the center. Currently, a group of third-year architecture students are working on the construction documents while two construction management students are working on the time, labor and material estimates.

"We've gone ahead with our fingers crossed that the project will work."

**MUSTANG DAILY**

By Gregg Schroeder

Visitors to San Luis Obispo County may some day be able to catch a glimpse of a way of life that has almost been forgotten — and view the Pacific Ocean in much the same way men did almost a century ago.

The Port San Luis Lighthouse, which has rested on a rocky point north of the port since 1890, has recently come to the attention of local historical interests as a possible future location for various public uses.

Cal Poly history professor Dan Krieger said the lighthouse, which may soon be acquired by the Port San Luis Harbor Commission, has great historical significance. "The lighthouse stands for the whole transportation network of the Central Coast," Krieger said.

Since the 1800s, ships have docked at Port San Luis first to load agriculture products and later for oil. Goods were brought to the port from all over the Central Coast by a narrow-gauge railway that linked the sea with San Luis Obispo and cities to the south as far as Santa Maria and Los Olivos. Krieger, who is a San Luis Obispo County Land Conservancy trustee and member of the County Historical Society, said the beacon at Port San Luis continues to serve vessels that include medium-size oil tankers.

This light, however, is not from the original lantern that guided 19th century sea captains safely into port. The Coast Guard installed a new, fully-automatic light near the lighthouse in the 1970s, thus relieving the need for a live-in keeper. The original French-made lens — which was used with a kerosene lamp — is now on display in the County Historical Museum.

Because the light is now automated, the seven-room lighthouse stands unused. The structures on the rocky point, which include the Victorian lighthouse and military-style buildings constructed in the 1950s and '60s, have fallen victim to deterioration and vandalism. In 1981, Coast Guardsman Steve Hamilton lad an effort to repair the damage with the help of the California Conservation Corps, the Port San Luis Harbor District and a group of private individuals, according to Krieger. Currently, caretakers live in the lighthouse, but preservation efforts have halted.

The Coast Guard has declined the old lighthouse as surplus property and will sell it and the surrounding 30 acres of property, Krieger said, adding that the Harbor Commission may try to purchase it. If this happens, the development of the lighthouse could take several different courses.

Krieger said one possibility is for the Harbor Commission to lease the facility to the Land Conservancy.

John Ashbaugh, planning consultant for the Land Conservancy, said his organization would like to restore the lighthouse for public use. He said the most likely possibility is for the original lighthouse structure to be restored as a museum, but the newer buildings are "up-for grabs." Ashbaugh said many suggestions for the facility are being considered, including creating a marine biology education center, a youth hostel, a bed and breakfast inn or a restaurant.

Krieger said, however, gaining title to the property is only one of the obstacles to overcome before the lighthouse can be put into new service. He said it would be impossible to open a bed and breakfast inn or a restaurant on the point until serious water problems are solved. Currently, the only source of drinkable water is rain water collected in cisterns.

Another problem to solve is access to the point. Because the land access to the lighthouse is through private property, Ashbaugh said the only feasible way to get to the point is by sea. A wharf, removed for safety reasons in 1975, could be rebuilt to accommodate boats from nearby ports.

Then there is the question of funding. Ashbaugh estimated the cost of acquiring the property and restoring it at $750,000, with another $250,000 for the new dock. Ashbaugh hopes much of the money will be donated. Last weekend, the Land Conservancy and radio station KCBX hosted one-hour harbor cruises to raise money for a preservation feasibility study and to allow passengers an ocean-side view of the lighthouse.

As to the ultimate usage of the lighthouse and adjacent land, Krieger said a museum facility with nature trails would be more appropriate for the location than an inn.

A bed and breakfast inn "would be too fancy for what we (on the Central Coast) were — plain-spoken people," he said. Conversely, a museum could include a lighthouse library for lighthouse scholars, he said, adding that an educational facility could possibly attract grant money. The original steam fog whistles, later replaced by an air horn, are still on the property and could form the beginnings of the museum. Also, Krieger said the Historical Society has furniture that would be appropriate to the period of the lighthouse and could be put on display in the original building.

Although the society has many plans for the lighthouse, its future is uncertain. Krieger said the Harbor Commission has yet to decide whether or not to purchase the property. If it does, the commission still must determine if it wants to operate the lighthouse on its own, call in advisors for assistance or turn it over to the Land Conservancy.

Although said the Land Conservancy was set up in 1984 to conserve open space, including scenic and agricultural lands, in San Luis Obispo County.

Clockwise from top — The lighthouse compound includes a collection of buildings overlooking the ocean near Port San Luis. Fishing boats are among the vessels that ply the waters near the lighthouse. John Ashbaugh of the Land Conservancy shared the history of the lighthouse on a recent fundraising harbor cruise.
Students complain about soda machine policy

By Craig Andrews

Members of two student organizations are upset because the Foundation imposes strict regulations for groups who wish to install vending machines at Cal Poly.

Furthermore, one club believes a request by Foundation Food service to install 10 vending machines at the Cal Poly Health Center, the University Union plans, and residence halls will strengthen the Foundation's dominance of vending machine space.

A request to install the additional 10 machines will go before the Foundation Board of Directors in November, said Alan B. Cusman, administrative assistant to the director of the Foundation.

Recently, the Foundation evicted the Drinkers.

While the installation of additional vending machines may please students who dislike standing in small lines, some student groups would-like to see these machines in other hands.

"I think the Foundation makes enough earnings in the various things that they do. Those little, piddling earnings they make on things like soft-drink machines should go to student clubs," said Janice Murphy, professor of industrial technology and former faculty advisor to the Industrial Technology Society. ITS is a student organization that has three vending machines.

Students groups lease machines from distributors and pay for such items (soft drink) on consignment, said Murphy. The group that leases the machines makes between $7,000 and $7,700 a year, depending on the cooperation of club members.

Next year, Cushman expects the machines to earn $11,000 in sales.

"We're not here to group the students and say 'this is our money and you can't have it,'" he said. The Foundation has several vending machines surrounding the campus to regulate the type and number of vending machines dispersed throughout from both private and club sources.

"We're providing an extra service than previous companies where we have made over areas," said Cushman.

"One of the things we don't want is a proliferation of vending machines," said Al Amaral, executive director of Foundation.

Student organizations have to go through a lengthy process to be allowed to install a vending machine on campus. Building operation manager, security officers, school dean, the executive director of Foundation and the Foundation all have to approve a site before a vending machine is installed. The process, Cushman said, is a way to prevent vandalism and machine breakage.

Murphy said vending machines provide part of the revenue needed for a club to supplement membership dues, field trips and tours. "Memberships are extremely important. I can show you business cards from graduates who were held at a direct result of those field trips," she said.

But vending machine revenues are also important for the Foundation, said Cushman. Each machine earns between $2,000 and $4,000 last year; total vending machine sales amounted to $250,000 last year, he said.

The Foundation reported that members of the Industrial Technology Society, ITS, is available 7 days a week and members of the Field TRips Society have to go through a lengthy process to be allowed to install vending machines, which results in a proliferation and vandalism.

"We can't find a reason why we can't move them back or forward, put up a sign," he said, adding, "The machines are a main income for us."

But Cushman said the location of the ITS machines is where they were supposed to be, all along. The club's machines have been in the wrong place all year, he added.

"Each new site is a whole new ball game; it has new considerations," said Al Amaral, executive director of Foundation.

Cushman said, "One of the things we don't want is a proliferation of vending machines all over the place. Some campuses look like one big snack bar."

However, Cushman said he hasn't had any requests for new vending machines during the past year. None of the vending machines agreements the Foundation has with student groups are several years old, he said.

**Judge called in Hedgecock case**

**SAN DIEGO (AP) —** The trial judge in Mayor Roger Hedgecock's espionage and perjury case has been subpoenaed to testify in a hearing over allegations that a bailiff interfered with the jurors — who found Hedgecock guilty.

The bailiff accused of jury tampering, as asked for by Superior Court Judge William Todd, who has heard both of Hedgecock's trials; the first that ended with a hung jury in February and the second that ended with Hedgecock's conviction on 13 felony charges Oct. 9.

One of Hedgecock's attorneys, Mark Shaffer, said in court papers filed Tuesday that Todd should remove himself from presiding over the Nov. 4 hearing on a new trial for Hedgecock, because Todd will be called as a defense witness at the hearing.

Todd has refused comment on the subpoena or the allegations of tampering that began public a week ago.

Hedgecock attorney Oscar Goodman asked for a new trial for Hedgecock after two of the jurors who were sequestered for a and a half days of deliberations signed sworn statements saying that bailiff Al Burroughs Jr., pressured them to reach a verdict and gave them an explanation of reasonable doubt.

Pancer said he has reason to believe Burroughs and Todd discussed the jury's deliberations.

Pancer said he would ask Todd to testify about all conversations he had with Burroughs during and after deliberations and any instructions Burroughs received from Todd.

Todd will be asked whether Burroughs reported to him the names of jurors who were holding out during the deliberations, Pancer said. But Stanley Babovsky said Burroughs at one time told him he had reported the names of "reasonable doubt" jurors to Todd.

**Child's death prompts suit in San Jose**

**SAN JOSE, Calif. (AP) —** The San Jose Mercury News has been sued by the family of a 2-year-old girl who suffocated to death after allegedly slipping a plastic newspaper wrapper over his head.

The family claimed in the suit filed Tuesday in Santa Clara County Superior Court that the wrapper should have had a warning that it is dangerous to small children.

Lawrence Nickle Jr. died Monday after removing the wrapper from the newspaper on the front porch and slipping plastic over his head while his mother was in another room, said Philip J. Grigio, the family's attorney.

"By the time his mother found him, the child had put the bag over his head and had turned blue and wasn't breathing," Grigio said. "The San Jose Mercury News was lying next to him."

The coroner's autopsy found that the child died from asphyxia due to a "plastic bag over head." Grigio said.

The suit, filed by the boy's 19-year-old mother and grandparents, as well as by the child's mother and another relative, asks the parents to review the case and fire the newspaper for distributing the plastic bags without a warning.

"We've had plastic bags from being delivered on doorsteps without warnings to the parents. A child could be a deadly weapon," Grigio said.

State codes require that this, non-food plastic, be large enough to fit over a child's head, a warning to parents, he said.

Tooe Rider, Mercury News publisher, declined to comment but said he believes the newspaper did not distribute a wrapper similar to the one the child had been shown that day.

The suit also alleged the newspaper failed to take enough care to ensure it did not deliver a wrapper to a young child.

**Jury still deliberating in Miller spy hearing**

**LOS ANGELES (AP) —** While a defense and prosecution lawyers waited nearby, the jury in the Richard W. Miller espionage case deliberated for a fourth day Wednesday with no sign they're near a verdict.

The only FBI agent ever charged with espionage, could lose his job if convicted.

Defense and prosecution lawyers waited in separate offices in the federal courthouse where the 11-week trial was held. Miller was also in the building, brought from his Terminal Island prison cell to wait for the last act of a courtroom drama which began with his arrest over a year ago.

Miller's wife, Prank, who is teaching school in San Diego County, was not expected to be present when her husband's fate is determined. Because of the propriety of the law, she and the defense, a verdict could be announced within minutes after jurors reach their decision.

The six women and six men of the jury had spent a total of 13 hours discussing the case by the time they stopped Tuesday.

Miller's defense says the fired agent was a bumbling Москвы spy.

Death of koala at San Diego Zoo may halt future trips

SAN DIEGO (AP) — San Diego Zoo officials are re-evaluating travel plans for their koalas following the death of one of the bear-like creatures after trips to zoos in Memphis and Milwaukee, a spokesman said Wednesday.

The zoo sent koalas to six U.S. zoos for one-month visits this year and had planned to ship the furry marsupials to six other zoos next year.

But the death of a 2½-year-old male koala last week has led zoo officials to reconsider. The koala, Ayers, contracted a virus that led to pneumonia and underwent euthanasia on Oct. 15, zoo spokesman Jeff Jouett said.

San Diego was the first zoo in the country to exhibit koalas and still has the most efficient captive breeding program. The Los Angeles and San Francisco zoos also have koalas on exhibit.

The popularity of the Australian animal led San Diego Zoo officials to approve the loan of a koala to zoos in Cincinnati and Denver in 1984. The loan program was expanded this year to include travel to zoos approved as temporary hosts.

Ayers, who had traveled earlier in the year to Memphis, Tenn., and then from the Milwaukee Zoo at the end of September, was transferred to the zoo's animal hospital, where he was fed antibiotics and fluids.

If Fletcher Christian and Captain Bligh had known what being stuck in the same boat would mean, chances are neither would have set foot aboard.

And if you’re stuck in the same boat with a long distance company that doesn’t give you all the services you need, it’s easy to harbor minuscule thoughts.

But when you pick AT&T as your long distance company, you know you’re in for smooth sailing. You’ll get trouble-free, reliable service. Immediate connections—even during the busiest hours.

Guaranteed 60% and 40% discounts off our Day Rate on state-to-state calls. And operators to assist you with immediate credit for wrong numbers and collect calling.

So when you’re asked to choose a long distance company, sign aboard with AT&T. With AT&T Long Distance Service, you’ll never be left stranded.

Reach out and touch someone.

The right choice.
Poly crew wants dedication to lead to tradition

By Lisa A. Honk

While the junior-evasive oarsmen row in the early morning, 95 athletes dress their gear to take part in the Cal Poly crew club and form three teams to make up on the athletic family.

Since the third week of Kholm start until mid-March, but the intense training has just begun. The rowing season doesn't last a week, as the early morning exercise and workouts increased — the athletes themselves will really "know if they can make it on the team," said MacCoy.

One of the lighter workout sessions started with stretching and exercises in the gym, and then each team went its separate way. MacCoy said some of the women would run two sessions to exercise three. Those 12 sets and the others would switch laps, while the men worked out on the ergometers (rowing machines). The ergometers enable the crew athletes to sit and slide with the motion of rowing in a real boat.

"You don't get the real wrist action as if you were in a race," said Breton. "Now rowing one minute on the ergometer, you are going," said Breton. "Cheerful, president of the crew club." We'll go from one minute to 10 minutes later in the season.

Cheerful rowed for the crew team last year and was volunteered into the position of president this year. He described how the workouts will be 5:30 a.m. to 7 a.m., during the week and 6 a.m. on weekends.

The teams have been meeting together at 5:30 a.m. weekly and lifting weight three nights a week. "I won't cut anybody from the team because she knows herself will really know if they can make it on the team," said MacCoy.

"We worked together and put on the tournament," said Kelly Daughtery, one of the tournament coordinator.

Daughtery said students from the Rec 260 class are responsible for setting up at least one tournament, under the supervision of Stan Sjogren, who is in charge of all the recreational sports special events.

Rec sports T-shirts were awarded to the finishers, along with. good prizes donated by the Snack Basket.

An over-the-top party will be held Saturday at 10 a.m., and a contest will be held at 5:30 a.m. to determine the "most important person to the team this year..."

a.m. to 9 a.m. on Saturdays when the teams actually start rowing at their new location on Santa Margarita Lake. Workouts on the lake start Nov. 1, and two people are building a boat house at the private dock for their senior projects, said MacCoy.

"We used Upper Lake last year, but the wind factor wasn't good, so we pushed for Santa Margarita, and we're finally cleared to row," said Osterfeld.

The unique aspect of the season involved in crew is the extreme level of dedication to the sport and especially to the team. The family atmosphere surrounds the workouts and extends into the private lives of the team members.

"We work eight and four's and everybody becomes so close and driven to make each and every person work," said Osterfeld. "You get one chance to do your best in a six to ten minute race — and unlike making an error in baseball or a fake in football — you can't make up for it, cause the race is over and there's no tomorrow," said MacCoy.

Both MacCoy and Osterfeld noted how the crew team keeps up on each other's weight and always on the look out for the important parts in rowing becoming heavier and lightweight categories.

"I remember dropping a 16 pounds in three weeks because of allergies and I know if I didn't train, I wouldn't make weight," said Osterfeld.

Nine miles of push and less of running helps the rowers burn off unnecessary weight, but MacCoy said at one point he put on eight pounds at breakfast.

The eight rowers who race together are kept in line by a pitch important teammate called a coxswain. The coxswain calls out the strokes during a race, steers the boat, keeps track of the stroke and has to weigh under 130 pounds.

"I'm in control of eight guys, "MacCoy said, "I have to make sure we eat, sleep and train eight hours a day, seven days a week, because we have to be physically and mentally ready, and the other coxswains on the crew team."

The coxswain trains with the team and becomes responsible for building the coxswain into a unit which can handle a team so valuable, said Osterfeld. One other person, responsible for the dedication, is the coxswain who races at the end of each race.

"It's a tradition to throw the coxswain in the water after a victory," said MacCoy. "Since the coxswain is the only person in the race who doesn't row, he or she usually takes the blame for the win or loss — it's the manager's busiest job on the team."

Once the crew members reach a physical peak, the mental aspects of rowing take over.

"Racing is all mental — once you can break eight for six minutes in a race, the physical aspects are over," said Osterfeld. "It's certain points of analysis, like how I can climb over, but every person has to come together as a team.

The regulations now are 2,000 meters, and during those brief 6+10, is a maximum 40 percent of a rower's muscles operate without oxygen, said MacCoy.

"A rower pushes his or her body to the limit, and all together the racing involves a 10 percent physical effort and a 90 percent psychological put out," said MacCoy. "Races come down to who brain who mentally."

"Racing is a mysterious sport," said Osterfeld. "I'm in control of eight. How I handle the water, my system because if I didn't train, I couldn't row, said Osterfeld.

Faculty art works sent to exhibit established to promote the arts

By Debbie Box

In an effort to publicize the arts on Cal State University campuses, two Cal Poly professors have sent their works to a faculty exhibit held at Cal State Los Angeles.

Most of the universities nominated one representative for the show, but Cal Poly sent Art Department Head Robert Reynolds' watercolor painting and instructor Chrissa Hewitt's silver teapot.

Robert Reynolds said the CSU Chancellor's Office contacted him and the school dean for a recommendation of a faculty member for the show. The dean selected Reynolds' painting and Hewitt's teapot.

The show is a new program from CSU Chancellor W. Ann Reynolds to recognize CSU art divisions and programs. W. Ann Reynolds plans to hold the exhibit annually.

Robert Reynolds sees this art exhibit as a method to step up the awareness of visual arts.

"The greatest contribution is awareness," he said. "We'll start with that."

Robert Reynolds describes his picture as a large painting of an image in the high Sierras. Hewitt's piece is a sterling silver teapot with a rosewood handle. She started crafting the teapot in Denmark and completed it three years later.

"There were problems with the sheet of silver that caused cracking," said Hewitt. "I put it aside and came back to it. From start to finish, it would normally take three weeks working 40 hours straight through."

Hewitt has entered her art works in regional and national competitions. She works with silver, brass, bronze and copper, making boxes, containers, jewelry and teapots. She also teaches classes in each of these divisions and in advanced fabrications at Cal Poly.

Fabrication is defined by Hewitt as working from a flat sheet, from start to finish with metal, then combining wood or sheet wire.

Hewitt said she was nominated by Robert Reynolds to send in her work to the invitational exhibit. "This is the first show of this kind with a lot of different people," she said.

Robert Reynolds said he is excited about the exhibit of 27 artists from a variety of disciplines such as oil paintings, water colors, etchings, sculptures, metalsmithing, paperworks and jewelry. It's not a large show, he said, it's a compact show.

"There's a good cross representation of artists. A bit of everything," said Robert Reynolds.

"But, the important thing is everybody will be involved in the show eventually. There is no priority in selection." Originaly the exhibit was planned to circulate to the 10 CSU campus galleries. Pat Clark of the Chancellor's Office said the show will not be at Cal Poly because the university didn't request it.

University Union Galerie Director Jeanne La Barbara said the reason the show wasn't requested was that the Galerie is already booked through next year. If there is an open date Cal Poly will try to get the show.

"This is the first show of this kind with a lot of different people." — Chrissa Hewitt
