El Corral profits will be target in textbook boycott

By Mary Eddy

A group of Cal Poly professors will order textbooks for fall quarter from off-campus bookstores instead of El Corral Bookstore as a way of protesting the Foundation's decision not to divest from companies doing business in South Africa.

The Cal Poly Committee Against Apartheid, formerly called Concerned Cal Poly Faculty and Staff, has initiated the pilot program to decrease profits made at El Corral Bookstore in an effort to change the Foundation's decision not to divest.

The pilot program consists of at least three or four professors in various departments who will order textbooks at off-campus bookstores such as Bookland in downtown San Luis Obispo, instead of at the Foundation-owned El Corral Bookstore.

The program is designed to affect the profits the Foundation receives from the sale of textbooks, said Elie Axelroth, a counselor at the Counseling Center and spokesperson for the group. "Our intent is to place economic pressure on the Foundation to show this issue will not go away and that we're serious in our goal to see Cal Poly divest," said Axelroth.

Right now the only bookstore that has formally agreed to order books for the dissenting professors is Bookland on Higuera Street. "There are other bookstores who have informally agreed to it, but for right now it's just Bookland," said Axelroth.

Last week a letter was sent to Cal Poly President Warren Baker informing him of the committee's decision but Baker has not yet given the group a response. Foundation and El Corral Bookstore officials contacted Wednesday by Mustang Daily said they did not know about any action to be taken by the committee.

The group plans to expand its program and get more professors to order books off campus if the pilot is successful during fall quarter and if the Foundation still refuses to divest. "We will continue to act for as long as need be. We'll see how the pilot program works and if it isn't effective, we will increase our efforts to get faculty elsewhere to join us," said Axelroth.

"The Cal Poly Committee Against Apartheid believes students will save money by purchasing books off campus because, according to Axelroth, the Foundation prices books at El Corral above the standard list price."

Students who choose this option will receive a 20 percent discount on their lease for their inconvenience, according to Mark Kennedy, student manager of Valencia. Neither Valencia nor 61 Broad Street offer a meal plan.

Kennedy said they expect a flow of students to keep coming in to live at one of the two other complexes.

The management of Centrepointe is also suggesting Stenner Glen, a student housing complex on Foothill Boulevard similar to Centrepointe, for students who need a food service. Centrepointe will let anyone out of their contract to sign a lease with another housing complex, said Kennedy.

An employee from Stenner Glen said she received a "raised amount of phone calls, questions and students coming in" after the announcement of the change at Centrepointe. She also said students were surprised.

Student teaches kids about zoo

By Cindi Floyd

A liberal studies student is gaining valuable experience from her summer job by combining education with zoology at the Charles Paddock Zoo.

Traci Bender has been hired by the Atascadero Parks and Recreation Department to direct a summer youth day camp at the Charles Paddock Zoo. The Cal Poly senior is concentrating on education with zoology at the Charles Paddock Zoo. The Cal Poly senior is concentrating on kindergarten to sixth grade.

Bender said that the children are very receptive to the zoo experience, which includes two guided tours.

"They can feel and see things that they've never had the opportunity to do before," said Bender.

The camp meets on the grass of the Atascadero Lake Park with about 30 students ranging from kindergarten to sixth grade.

"The 11 one-week day camps are important because some kids may never see a great horned owl, baby sparrows, or a baby tortoise," said Bender. The youth camp runs five days a week from morning to evening. During the day Bender and her staff of six use the zoo as a nature resource that coordinates with the weekly themes.

The camp has crafts and special activities that center on the weekly themes. This week's theme is "birds that have feathers." At the end of the week there is a special activity that includes food. "This Friday we are going to cook potatoes in a fire. Last week we cooked hot dogs," Bender said.

The camp meets on the grass of the Atascadero Lake Park with about 30 students ranging from kindergarten to sixth grade.

The camp is a combination of the parks and recreation department wanting to have a day camp and Bender wanting to develop an educational program for the zoo. Bender has some zoo training from attending Moorpark College in Summer Mustang.
Where has all the good will gone?

BY FORBIDDEN 12 members of the United States Boxing Team from competing in the Goodwill Games in Moscow, the U.S. has given a classic for a black eye. The reason the Defense Department gave for imposing the ban is that regulations prohibit members of the military or its civilian employees from participating in "any activities determined to be political in nature or intended to benefit selectively, or profit any agency or commercial concern." This regulation ended hopes that the boxers from the United States and the Soviet Union would be able to compete in a multisport competition for the first time in 10 years.

The decision to impose the ban, which also included two team handball players and one pen-<br>challiere, was made by Secretary of Defense Caspar W. Weinberger the day the U.S. Boxing Team was scheduled to leave for Moscow. President Reagan has backed the decision of Weinberger, apparently changing his mind on the value of the U.S. and Soviet Union facing each other in athletic events. Reagan had previously said that if the United States and the Soviet Union must compete, let it be on the athletic field and not the battlefield. It seems apparent that our head of state has either changed his views or had not been sincere in the first place.

The value of the Goodwill Games is significant. At a time when President Reagan and Mikhail Gorbachev have difficulties in deciding when and where to get together, let alone make progress, a U.S.-Soviet competition in sports is a step in the right direction.

But so far, the Goodwill Games have not been successful in meeting some of their stated goals. This is not for want of trying; the Goodwill Games have tried to be all things to all people: sports events, economic boosters, burners, and public relations spectacle. But the Goodwill Games have been beset with problems from the start and have never lived up to expectations.

In the early 1980s, the Goodwill Games were seen as a way to build relations between the United States and the Soviet Union. However, the Games have been characterized by political interventions and controversies, leading some to question their effectiveness in promoting goodwill.

The Games have faced challenges in meeting their intended goals. Despite efforts to promote peace and understanding, the Games have been mired in controversy and criticism. Some have argued that the Games were used as a political tool by the United States and the Soviet Union, while others have praised their ability to bring people together.

In conclusion, the Goodwill Games have had mixed success in promoting goodwill and understanding between the United States and the Soviet Union. While they have brought athletes from both countries together, they have also been beset with political and financial challenges. The future of the Games remains uncertain, but their potential to promote peace and understanding continues to be a central theme.
CFA reaches impasse in contract negotiations

By Vincent Aviani

The California Faculty Association has reached an im­passe in their attempt to negoti­ate a new contract.

The previous CFA contract officially expired on June 30, mak­ing void the current obliga­tions and practices of faculty members at Cal Poly and the remaining 18 campuses in the California State University system.

Negotiations for a new con­tract were scheduled to be com­pleted by the first week of July. However, because of contract disagreements between the CFA and the CSU system, a settle­ment seems to be a long way off.

“…for the Spring 1986 issue of the CFA newsletter...”

The current rank and salary arrangement is unacceptable to the CSU. Instead of linking the CSU desire to separate rank and salary.

The program is beneficial for faculty members who are in the Retirement Program. It allows the university to keep senior faculty members on staff and allows the administration time to find suitable replace­ments. In addition, the current program eases the trauma felt by many persons at retirement.

The CSU is not in favor of this program because it has become too complicated to manage.

“…for the Spring 1986 issue of the CFA newsletter...”

CFA negotiators.

The third area includes the need for a binding arbitration. That is, when a situation becomes unsolvable at the bargaining table, an arbitrator must be hired to settle the problem. Once the conflict has been ruled on, it is the purpose of binding arbitration to force management or faculty to accept the decision.

However, currently the CSU is not in favor of binding arbitration. That is, when a situation becomes unsolvable at the bargaining table, an arbitrator must be hired to settle the problem. Once the conflict has been ruled on, it is the purpose of binding arbitration to force management or faculty to accept the decision.

We’re the fastest. We’re the best. We’re the cheapest. How do we do it? PDQ* Resumes THE $39.95 ALTERNATIVE "PartyITEMS Quick Tintype 544-9789 • 2226 Beebee Street

The CSU would be the time and mone­ty or the faculty at retirement. Their decision, whatever it is, should be the final decision in a dispute,” said Elliot.

Finally, a reduction in the classload caught by each faculty member is another goal of the CFA negotiators.

The current pay rate is based on a workload of 12 weighted teaching units per quarter, which includes three classes at three units each, plus three units for advising and other duties such as committee work and research.

“…for the Spring 1986 issue of the CFA newsletter...”

The program is beneficial for faculty retirees, Elliot said. It allows the university to keep senior faculty members on staff and allows the administration time to find suitable replace­ments. In addition, the current program eases the trauma felt by many persons at retirement.

The program is beneficial for both the university and the faculty retirees, Elliot said. It allows the university to keep senior faculty members on staff and allows the administration time to find suitable replace­ments. In addition, the current program eases the trauma felt by many persons at retirement.

The previous CFA contract of­ficially expired on June 30, mak­ing void the current obliga­tions and practices of faculty members at Cal Poly and the remaining 18 campuses in the California State University system.

The CSU is not in favor of this program because it has become too complicated to manage.

The California State University Board of Trustees is backing a senate bill that is expected to generate $78 million for higher education facilities.

If approved by voters on Nov. 4, the Higher Education Facilities Bond Act would allow the issuance of $700 million in bonds to fund the construction of facilities at University of California, CSU, California Maritime Academy and community college campuses.

According to Sheila Chaffin, assistant vice chancellor of planning and development, commissions from the bond sales are expected to total $78 million and should be available for distribution to schools by January 1987.

"The Board of Trustees is 100 percent in favor of the bill and always has been," Chaffin said.

New construction, remodeling of existing buildings and equipment purchases will be considered for a share in the bond sales, said Bill Whitenect, consultant to the Senate Education Committee.

Specific guidelines for eligible projects are contained in the Budget Act of 1986 which was recently signed by Gov. George Deukmejian. Whitenect said under the Budget Act, non-instructional projects such as student activities and dormitory improvements cannot receive bond revenues.

Whitenect said funds will be distributed on a project-by-project basis and no school will be guaranteed a certain amount of money.

"This bill is supported by just about every higher education organization you can think of," Whitenect said. He said he doesn't think any group is opposing the bill.

Cal Poly Executive Dean Douglas Gerard said the university has submitted requests for a total of $3 million in architectural drawings for a new dairy science instructional center to replace the old Dairy Unit.

In addition, $4.5 million has been requested for remodeling plans for Engineering East. Plans are to include the rehabilitation of 11 laboratory rooms that were designed in the 1950s. Gerard termed both the Engineering East labs and the old Dairy Unit "obsolete."

Because commissions from the bond sales will also be available for use on 1987-88 budgets, Gerard said funds will probably be requested for parts of the rec facility construction.

Funds for capital outlays such as these were previously acquired from pipeline oil revenues. Whitenect said this bill was devised when 1986 estimated oil revenues dropped from $425 million to $90 million because of the decrease in oil prices.

By Gwen Dawkins

When Ty Conlan was asked to test machine efficiency at the Sonoma Pacific Company, he found out where the problems were, designed a program to increase efficiency and then produced the necessary mechanisms to make the program work.

When Cheryl Ann Reeves was hired by IBM to work in its programming department, she was whisked from sunny California to the dead of winter in Rochester, Minnesota, leaving behind her parents, boyfriend and friends.

These may seem like the activities of established career-oriented people on the upwardly mobile scale, but they're actually Cal Poly students who recently took part in the Cooperative Education Program.

The program is designed to give students on-the-job training before they graduate. Students who participate are given an edge over students without any experience because they have already learned job skills.

Assistant Director of Cooperative Education Pat Howard estimates there are about 300 students currently involved in co-ops. Corporations such as XEROX, IBM, Disneyland, Robinson's and McDonnell-Douglas are among hundreds of those who train students through the co-op program.

Howard said students gain a real sense of development and confidence through participation in the program. She said employers benefit as well because they are given control over students to train them and evaluate their abilities, which often leads to hiring students upon graduation.

Howard said that recently a student was hired by a company for six months on a co-op. If the company had advertised for the job it would have required someone with at least two years experience. The company felt the student's extensive training gave her an advantageous edge, Howard said.

Reeves, a business senior, said she would recommend a co-op to anyone, particularly out-of-state co-ops, "You mature so much on a co-op. You not only learn how to develop skills it will help you in your career, you also learn to rely on yourself. It's very valuable because mom and dad or your boyfriend aren't there to do things for you. You have to do it."

"The work I did for IBM was real work, not 'go-for' work. When I made a suggestion, they really listened. Several of my ideas were even implemented. And they really stressed to me that they wanted me to do valuable work and not just what someone else didn't want to do."

Conlan, an agricultural engineering major, arranged his own co-op. He was already familiar with the company he wanted to work for. He sent his resume and suggested the idea to the company and got the approval of the co-op office. Conlan said he had a lot of go-for work to do but didn't look at it as a negative aspect. "When you first start out on a job, your employer doesn't really know what you're capable of. So one way to find out is to give you a variety of things to work on. The company I worked for was small, probably with less than 100 employees. Everyone that worked there had to do a certain amount of go-for work."

Conlan is glad he had the opportunity because it was highly educational and helpful.

However, he regrets that his co-op paid substantially less than 100 employees. Everyone that worked there had to do a certain amount of go-for work."
It seems unimaginable now, but almost a year ago to this day Cal Poly and much of San Luis Obispo County was surrounded by flames.

The Las Pilitas fire had virtually enveloped the city after firefighters had spent a week fighting the blaze, which investigators now say probably started when car exhaust ignited parched roadside grass.

Cal Poly was shut down and students watched from their dorms, apartments or the roofs of houses as the fire raced down the hills northeast of Johnson Avenue.

By the morning of the fire's eighth day, residents were given many reasons to be nervous. The air had become thickened with smoke and a steady rain of falling ash created a hazardous nuisance. The weather and the winds had conspired against the firefighters, who had hoped to stop the fire's advance with a 50-foot wide firebreak in the hills northeast of town. Instead, the much-needed night fog hadn't moved in and winds had picked up to 60 mph.

Sections of San Luis Obispo were evacuated and radio stations played matchmaker for people offering shelter to homeless families, horses and farm animals displaced by the 45,000-acre blaze.

Helicopters carrying huge buckets of water and fire-retardant chemicals tried dousing the flames as they moved down the hill toward Marsh Street. At least 200 firefighters were at the bottom of the hill, a last vanguard between the flames and several homes. For a time, it seemed they were losing the battle. Students who had hiked past the Poly "P" to a ridge overlooking the fire muttered hope that the helicopters and men could prevent the flames from reaching the city or jumping Highway 101.

Somehow, their hopes became reality — the flames were within 200 feet of an expensive ranch home when the wind shifted, blowing the fire back up the hill and extinguishing it amidst already burned weeds.

But the fight continued and reinforcements were called in to fight new fires caused by a lightning storm. Yosemite Hall was used as lodging and command post for many of the 2,000 firefighters who came from throughout the state. Parking lots across from the dorms were filled with fire trucks from distant counties.

The firefighters were tired, having spent the early summer battling blazes in Big Sur and the Los Padres National Forest. They spoke of fighting the fire "for 48 hours straight. No sleep, just blinding smoke." They also said that the Las Pilitas was the biggest fire they'd ever seen, one that shifted and defied firebreaks "as if it had a mind of its own.

Student volunteers helped feed the weary men; others manned the communication network which linked men and machines.

But on Cuesta Grade near Santa Margarita, the night sky was still bright with Highway 101 north of the Marsh Street exit was closed and soon another fire was to close Highway 1.

San Luis Obispo had become an isolated cinder-strewn outpost, surrounded by orange light, smoke and flaming embers.

Firemen raced up and down the deserted highway with flamethrowers and water tanks, trying to either burn or douse the fire's fuel before it could use the dried underbrush to jump the highway. Highway patrolmen watched with amazement as crew leaders in asbestos suits literally walked into the flames in order to reach strategic ridges where they could view the damage and direction of the fire. Aerial fireballs were floating southwest on the wind, crossing the highway and causing another contingent of men to peer nervously into the darkness on the Cal Poly side of the road. They knew that Highway 101 was their only firebreak. If it had crossed the road, there would have been no stopping it. We could have easily lost another 50,000 acres," a fireman said later.

Many students fled Cal Poly, pleased with the unscheduled vacation but unhappy with the confusion which pervaded the situation. Students were not sure until late one night that school would be canceled the next day, and resident managers in the dorms responded with an unassuring "who knows?" when asked about evacuation plans. Students were also worried by rumors that Cal Poly President Warren Baker might declare summer quarter academically canceled if too many classes were forfeited to the emergency. However, many students chose to simply forget such concerns by going to Avila Beach or holding "evacuation parties."

Finally, the weather helped firemen control and conquer the Las Pilitas fire, which was officially declared extinguished almost two weeks after it began. Millions of dollars in damages were estimated, and some officials said $1 million was spent fighting the inferno. Miraculously, no one had died as a direct result of the blaze.

San Luis Obispo residents breathed a sigh of relief as the smoke cleared enough to actually see just how close the fire had come. For weeks after, almost every shop and office building displayed a banner saying "Thank-you Firemen!" and souvenir T-shirts proclaiming such sentiments as "I survived the Las Pilitas fire" were hot items.

Government officials say they've learned a lesson from the fire and have instituted several laws and procedures which they hope will decrease the probability of such a fire ever occurring again. Dry roadside grass is cut down more often or sprayed with herbicide. Crews work to maintain firebreaks and improve water availability. Laws requiring non-flammable roofing material on homes have been passed.

Still, gazing at the barren brown hills now surrounding San Luis Obispo, it's not hard for those who were here to remember the glowing orange flames of one year ago.
Professor wants squash at Poly

By Suzanne Carson

Upon hearing the word "squash," some people may conjure up images of members of the vegetable family. But not chemical and electronic engineering department head Jim Harris.

He is an avid squash enthusiast and participant, of the same, that is. And Harris hopes to provoke enough interest across campus to establish squash courts in the future Cal Poly rec facility.

"My goal is two-fold," Harris said. "I hope to educate faculty and students about the game, and I hope to present squash as an alternative to racquetball." By creating enough support Harris hopes to establish at least two squash courts. He is also involved in the possible conversion of racquetball courts to squash courts. "Several companies have been consulted about this matter," he said. "We won't be doing anything until we have the money to do so.

Harris was introduced to squash while pursuing his Ph.D. at Syracuse University. "The game of squash is an exciting game, and it offers a variety of advantages," Harris said. "It is social, coeducational and it is a good workout."

Currently there are no facilities in San Luis Obispo to play squash. "In the past, squash was an exclusive game reserved for those who had the money to join private clubs," he said. "However, if courts were made available, squash would catch on quickly.

"People play squash in private clubs in Los Angeles and San Francisco. It does open up some social doors..."

Harris recognizes the value of the game for students and the community. "UC San Diego has a squash club, and we should also," he added. "We should compete in squash with other schools." Harris described squash as a fast game requiring more skill than racquetball. "Squash is to racquetball as chess is to checkers," he said.

"Strategy is the name of the game in squash. It is even more important than physical prowess, which makes for fun for both men and women," Harris added.

Squash was first played in 1850 in the Fleet Prison in England. Until about 1882 it was played almost entirely in the public and private schools of England. In 1882, St. Paul's School in New Hampshire was the first to play squash in the U.S.

Squash continued to grow in popularity in the U.S., but it was not until the 1960s that squash popularity ignited.

Today squash is one of the most popular participatory sports in the U.S., Great Britain, Australia and Mexico.

Squash is similar to the four-wall game of handball, with the addition of the raquet. The ball used is made of India rubber, and is the source of the name of the game: the ball makes a "squashy" sound as it hits the wall.

Squash is a game in which shot-making and mobility are vital. It has most of the elements of the other racquet sports: the forehand and backhand strokes, serves and volleys and racquet strategies. The first player to get 15 points (with a few exceptions) wins. Courtesy to opponents is essential and adds to the enjoyment of the game.

Challenge, fun, action and a squashy sound are some of the reasons squash seems to have it all. The editors of Sports Illustrated magazine describe it as a quick, pleasant workout for beginner and expert alike. Harris agreed with this view of squash, and he hopes that Cal Poly students will have the chance to agree also.

Squash is one of the most popular sports in the U.S.

Jim Harris shows his squash equipment.

NOTABLES

Kudos to the following Cal Poly students, faculty and staff for their achievements:

STAFF — A Cal Poly supervising custodian was among 63 state employees who were honored for their outstanding efforts in employee safety in a ceremony held at the State Capitol in Sacramento.

Juanita Esmond was recognized during the sixtieth annual Governor's Employee Safety Awards Ceremony.

ACCOUNTING — John Robison, a Cal Poly accounting professor, has been awarded the Distinguished Teacher of the Year from the School of Business.

Business students, in a poll completed during spring quarter, selected Robison for the honor. The $500 award is given to the professor who shows a high level of excellence in the classroom.

Robison teaches advanced tax accounting and has been at Cal Poly since 1985.

ANIMAL SCIENCE — The head of the animal science department is among a select group of American scientists who have been named Fellows of the Association for the Advancement of Science.

John Algeo was recognized for his leadership in research, interpretation and utilization of nutrition, physiology and animal science in advancing animal and food production methods for the benefit of people.
Polys learn by doing philosophy impresses many big employers

By Suzanne Carson

"We have had tremendous success with Cal Poly graduates," said Scott Gardner, a personnel manager for Rockwell International. "We feel that from Cal Poly's learn by doing philosophy, they have the hiring advantage." Because Cal Poly students are consistently strong in their consistent hiring patterns of Cal Poly graduates.

"We attribute the hands-on training before graduation as a strong indication as to why Cal Poly students are consistently hired and retained with our company," Gardner said.

Lockheed, IBM, Hewlett-Packard and others can be added to the list with Rockwell International. "We have over 500 companies recruiting on campus each year, and most are repeaters," said Shel Burrell, associate director of the Placement Center. "All of these companies have Cal Poly graduates at the top of their hiring lists."

Burrell discovered from a Hewlett-Packard representative that places importance on the high level of training Cal Poly graduates receive. Cal Poly graduates receive the third highest hiring position with Lockheed behind Cal State Berkeley and San Jose State.

Technical degree holders are not the only graduates who are at an advantage because of practical training. "We have representatives from almost every field of employment recruiting Cal Poly students for their education and experience," Burrell said.

Macy's, Kohl's, Bullocks and Traveller's Insurance Co. are some additional companies that frequently return to recruit Cal Poly students. "These companies emphasize some sort of work experience which makes Cal Poly graduates very employable," Burrell said. "Because Cal Poly students have previously performed in a practical capacity, they have the hiring advantage."

Lab classes are another factor which Burrell attributes to the success of Cal Poly graduates. "Employers recognize that students are required within all majors to take lab classes which are held to small sizes which affords greater training," Burrell said.

Burrell also encourages additional work experiences. "Co-op, part-time work and summer jobs are all valuable for listing on a resume," Burrell said. "Employers often cite senior projects as work experience contributing to the hiring decision."

"It would be advantageous for students to thoughtfully choose and complete a senior project related to the field in which they hope to pursue."

Cal Poly graduates hold the third highest hiring position with Lockheed behind Cal State Berkeley and San Jose State.

Horseshoe tossing is for everyone

By Pamela Varma
Staff Writer

Contrary to popular belief, pitching horseshoes is not just for senior citizens or company picnics. It’s a game of accuracy and concentration. And it’s exciting.

Staff Writer

Horseshoe tossing is for everyone

By Pamela Varma
Staff Writer

Contrary to popular belief, pitching horseshoes is not just for senior citizens or company picnics. It’s a game of accuracy and concentration. And it’s exciting.

Horseshoe Pitchers Club.

“Horseshoes is for any and everybody, but it’s not as easy as it looks,” he said. In fact, he said, some doctors on the East Coast have selected the game as one of the best exercises for people recovering from heart transplants.

“You have to use your head, really concentrate,” he said. “You’re walking back and forth; you’re bending and stooping and using your back muscles.”

But are there really rules and strategies to follow? Indeed there are. A ringer, when the horseshoe lands around the peg that sits 40 feet away, is comparable to a golfer’s hole-in-one and is worth three points. One point is awarded for each pitch that lands within six inches of the peg.

Harris has been pitching horseshoes since the early 1950s when the then-current world champion gave a demonstration at his high school. The blindfolded champion struck matches strapped around the peg from 40 feet away.

“A young man was a student there, and the school principal told them to pitch at the apple,” Harris said. “I couldn’t do it. The apple was a little too far away. But I could pitch fairly well.”

From that day on, Harris has been pitching horseshoes. He now hits ringers almost 50 percent of the time.

Practice makes all the difference in pitching horseshoes. Harris was able to throw ringers about 28 percent of the time in May, when he began pitching nearly 300 shoes a night to practice for the upcoming world championships. He now hits ringers almost 50 percent of the time.

How much time does it take to become proficient? “Ask my wife,” Harris joked. More seriously he said, “Horseshoes are always on my mind, especially now that the tournament is coming up. I want to get in as much practice as I can. It’s just like bowling; if you bowl one night a week it really doesn’t do you any good.”

The San Luis Obispo Horseshoe Pitchers Club is currently 38 members strong and boasts class B world champion Jesse Gonzales as a member. The club meets every Thursday night at the horseshoe pits in Santa Rosa Park. Harris and Gonzales began the club in 1968.

Harris has been in five state and national competitions. He has won first place in five state championships. He now hits ringers about 28 percent of the time in May, when he began pitching nearly 300 shoes a night to practice for the upcoming world championships. He now hits ringers almost 50 percent of the time.

Harris has been pitching horseshoes since the early 1950s when the then-current world champion gave a demonstration at his high school. The blindfolded champion struck matches strapped around the peg from 40 feet away.

“After the show it was luncheon and he was teaching all of us kids how to pitch,” he said. “I’ve been pitching them ever since.”

Harris said he is considering allowing Cal Poly students join the club at the park one evening free of charge. If they wish to return, students could then pay the annual $5 dues. He said there is great hope for beginning a chapter of the club at Cal Poly.

As for getting horseshoe pitching in something as large as the Olympics or Goodwill Games, Harris said he sees the chance as remote, but it depends on how well the game is promoted on the local level.

“This is an old sport that’s coming back to life and we’re trying to regenerate interest,” he said. “Horseshoes is for the public.”

Bill Harris demonstrates his winning style.

Local immigrants remember voyage to America

By Gwen Dawkins

The journey to America was long and eventful for Gordon Curzon and Elsie Claycomb, two Central Coast residents whose memories of their first experiences in America are cherished to this day.

Gordon Curzon is one such immigrant. Curzon came to America from England with his mother and uncle aboard the S.S. President Adams on Sept. 22, 1922. Their 10-day voyage across the Atlantic landed them in New York Harbor, the first foothold on "the land of opportunity."

They were steerage class, the section of the ship occupied by passengers paying the lowest fare. Their quarters, well below the ship's decks, were equipped with two small bunks. A wash basin was located down the hall for passengers to share. There were no portholes to brighten the darkness or to offer fresh air to relieve the concentrated stench.

"I do remember seeing the Statue of Liberty. It was so thrilling. Everyone rushed to the side of the ship to see the statue. I thought it was a very beautiful and an unusual thing to be in the harbor. I'm sure I would have appreciated it much more if I had been older. But at that age I didn't think there was any reason to pay special attention," Curzon said.

Curzon agreed. "I remember seeing the statue, but at that time I didn't pick up any feelings in me." Curzon remembers things such as sailors hoisting him up to his mother's balcony overlooking the side of the ship as dolphins raced by below. His first recollection once arriving in America is of a little purple can with a gold handle given to him by his mother. "I don't know why she gave me a can of all things, but I'll always remember that little purple can," said Curzon.

"Even if it was something to eat," Curzon said, "I brought my parents over at age four." Curzon said those who emigrated to the United States were the young adults because they were the ones with the courage to make a new life in a new land.

Elsie Claycomb, 90, of Avila Beach, was the only Central Coast resident who was able to attend the affair. She was nine years old when she and her mother set sail from England to America. Her father had recently died and her mother decided the move was just what they needed. In January 1905 they began a long, rough six-week voyage.

"I don't really remember much about the trip," she said. "I was very young at the time and I didn't really pay much attention to what was going on around me. The sea was very rough and I was seasick almost the entire trip. My mother said the only thing I could keep down was ginger ale."

But perhaps because Curzon was only four at the time, he remembers mostly the good times of his voyage and early years in the United States. In an attempt to recall those times with others who shared the experience, Curzon held a party at his home on the Fourth of July. He invited everyone now living on the Central Coast who had passed through Ellis Island.

"The reason I had the party was because I wanted to recognize the people that brought us over — our parents," said Curzon. "I can't take the credit. But I know and say I brought my parents over at age four."

Curzon said those who emigrated to the United States were the young adults because they were the ones with the courage to make a new life in a new land.

Neither Curzon nor Claycomb remember much about Ellis Island other than that it was just a big building. Claycomb and her mother had to spend the night there before they were claimed by her uncle who was coming from Connecticut. She remembers being fed black bread for dinner. Curzon passed through Ellis Island in a short time and boarded a train to Cleveland to live with relatives.

Claycomb said she doesn't think about those days very much anymore, except during the Fourth of July. Curzon, however, wants to keep those memories alive to pass on to his children.
Group formed to improve county planning

By Kristin Roncarati
Staff Writer

City and county leaders are working together to better the living and working conditions for Central Coast residents.

At a public conference held Monday morning, city and county officials met to formalize in words and writing an organization which hopes to bring about changes needed in the area.

VISION 2000 Associates, the formal title of the organization, has been in the planning stages for the past 14 months. The group is an incorporated nonprofit, public interest organization.

Carl Hyten, member of the San Luis Obispo Board of Supervisors and member of the VISION 2000 steering committee, summed up the idea behind forming the group: to collect socioeconomic data for use in making public policy decisions affecting the Central Coast, such as jobs, transportation, industry and use of natural resources.

The idea for the program originated from a 1985 study titled, "A Study of the Job Generation Process in San Luis Obispo County," which concluded that several areas need attention, such as below average wages, transportation and a lack of countycwide planning.

The study was conducted by TEC Associates for the Private Industry Council, a nonprofit group which implements on-the-job training programs for local businesses. Following the study, the Private Industry Council gave a report to city organizations affected by the study, including the San Luis Obispo Chamber of Commerce.

Roger Elkin, executive director for Private Industry Council and also a member of VISION 2000 steering committee, said the report concluded there was a lack of decision making in certain areas. In January, 160 leaders from business, the community and government attended a VISION 2000 conference to discuss problems addressed in the report.

Elkin said that following the conference, the steering committee began forming a nonprofit organization which would develop accurate, up-to-date and ongoing information for use in making countywide strategies. They want everyone to have a broad overview of what is going on in the county, said Elkin.

If VISION 2000 is successful, committee members would eventually like to see an annual Central Coast conference for the discussion of other problem areas.

The organization stressed enthusiasm for the project at both the city and county level. "This is the first time there has been cooperation on this scale," said Hyten, calling the press conference a "truly historic day."

The press conference was held at TRW. Company executive Gerald Cross explained the name of the group represents looking toward the 20th century together.

"We are bringing together private and public sectors to meet and see where our common interests are," said Cross.

The group plans to install a detailed database system to collect and store demographic, economic and land use information.

Robert Griffin, a member of both the steering committee and the San Luis Obispo City Council, said later in an interview that the committee has not yet decided where the database system will be housed. However, it might be possible to use the Cal Poly School of Business as the home base for the system.

Griffin said that having the system housed at Cal Poly would be beneficial to the school. If the School of Business was chosen as the home for the system, its job would be to "collect and manage" the information. Griffin stressed that the idea of having Cal Poly as the home base was strictly conceptual and other possibilities will be discussed.

Elkin said it would be important for the organization to utilize educational resources such as Cal Poly and Cuesta College.

Elkin said VISION 2000 is an "assertive step where we want to be in the future."

Griffin summed up the purpose of VISION 2000 Associates in this way: "It represents the first concerted effort by private and public sectors to solve some of our problems by building trends, sharing information and sharing options... It is a hope that better public and private decisions will come about as a result of VISION 2000."

Dancers to teach class in program

By Lynnette Ward
Staff Writer

The Lar Lubovitch Dance Company will bring contemporary dance to life at the Cal Poly Theatre in a single performance.

The company comes to Cal Poly as part of the CSU Summer Arts Program. In addition to their performance, the company is teaching classes throughout the week to students enrolled in the program.

"My company does have a reputation for fine teaching," said Lubovitch. They teach an annual course in New York, and provide lecture demonstrations and master classes along with performances at universities throughout the country. "Modern dance is aligned with education in America.

He explained that choosing music to dance to is a process which takes time and effort. "I have to try to find music that sets my imagination in motion. The creative process is the heart."

Friday's performance will include choreographer to Mozart's Concerto No. 622, a Brahms symphony and "Big Shoulders," a score about architecture. All these have been highly acclaimed in reviews around the country.

The New York-based company was formed almost 19 years ago. Lubovitch, 43, has been dancing for 25 years. He started as a gymnast and began dancing while attending the University of Iowa. Now Lubovitch acts as choreographer and director of the 12-member company of professional dancers.

The company tours year round, but is in New York for long rehearsal periods a few times during the year. They've toured extensively throughout Southeast Asia, Europe, Canada, South America and the United States. It has been well received wherever it goes, for, as Lubovitch puts it, "Dance is the universal language."

"We dance for everybody; it's not obscure. We do a dance any one can understand. It's an audience-oriented kind of dance."

Many of the company members have been with Lubovitch for a long time, some as long as 15 years. "One can't have the ambition of making money in this kind of dance. They find their choreographer, and they don't leave," he explained. To watch the company rehearse is a clear example of the compatibility that brings it success. "Harmony is always the key, but I think there are moral underpinnings. People are sharing space, especially on the stage when the curtain goes up. It's this moral underpinning that creates a search for harmony. The dance is a search for democracy."

In terms of the future, Lubovitch hasn't thought of where to go from here, but said as long as what he's doing is rewarding he will continue.
Court ruling affects Cal Poly military veterans

By Pete Brady

Although the Supreme Court this week declared a key provision of the Gramm-Rudman law unconstitutional, funding cuts enacted under the controversial bill have already affected some Cal Poly students.

The law requires Congress to gradually reduce government spending to match government revenue or face automatic spending cuts whenever the federal budget is balanced.

Some of the first people to be directly affected by these constraints are military veterans attending Cal Poly under the "old" G.I. bill, who've found their monthly benefits decreased by up to 14 percent.

"They gave us no advance notification. They didn't even tell the vets we were in need with phone calls. What's worse, the biggest cuts will be from the vets who've been most consistent in sending notices to tell people what's going on. I guess they didn't send a message in this instance because it saved them money," said Navy veteran Ken Kirkeby.

Kirkeby's sentiments were echoed by other Cal Poly veterans who said the promise of educational benefits was one of the primary reasons they joined the military.

"The contractual agreement I made with the military was for the benefits," explained William Benajmin, a liberal studies senior who spent four years in the Navy. "It was pure hedonism that drove me to enlist and there's really no way I could have gone to school except with the G.I. bill. I work during the week and on the weekends too but that government check pays the mortgage."

McIlwain said that although many veterans expressed more anger at the way the cuts were carried out than at the actual monetary decreases, she was "not surprised" at the way the V.A. handled the matter.

"We are lucky to find out at all. We still haven't been officially notified that these cuts are taking place. In fact, I got the word from a friend who works for the V.A. regional office in Los Angeles. There's a rumor that the checks will go back up in October, but nobody can confirm it. It's like telling someone last year was the first time in seven years that benefits were cut; this year they're lowered. We were told that because of Gramm-Rudman there would be no checks waiting for veterans when they returned to school in September. So we advised them to make alternate plans so they'd have money at the beginning of school. Then we found out from another school that there were going to be September advance payments. So I called the L.A. office to make sure. They said no. I called again and they said yes. So I had to reconnect over 500 veterans," McIlwain explained.

Current problems aside, McIlwain said times have changed for veterans attending Cal Poly.

"Veterans going to school 10 years ago were better off regarding the authority of the V.A. They used to have a federal representative on campus and then they recalled him. So the vets don't get as good service. I'm a state employee and when a vet has a problem I just don't have the clout with the feds. I don't have the power. I'm just trying to administer five different programs each with different paperwork and less manpower," she said.

Veterans themselves have mixed feelings about the cuts. Some say they're angry while others say they reluctantly agree with cutting benefits in order to reduce the deficit.

"On the one hand, I don't believe that once the government gives you benefits they should take them away early — that's like reneging on an obligation. Yet, I believe the U.S. should have a balanced budget. So I have to give up some money to do my part that's what I'll do," Benjamin said.

Kirkeby doesn't view the V.A.'s actions with equal charity, however.

"One thing I don't understand is why they spend all this money on 'Star Wars' and ships, but where do they make the cuts? On people, on things they promised. If they make cuts, make them across the board," he said.

An engineering student who views his veteran's benefits as "very important," Kirkeby said the difficulty of his military service justifies his anger at their reduction.

"You're on a ship 372 feet long, with 200 people for months at a time. There's limited water, food, recreation. It taxes you mentally. I gave up a lot. Now I feel the same way as the Indians do. Like the government can make contracts of convenience and then change them whenever they want to," he explained.

But Army veteran and electronic engineering major William Proctor had different feelings.

"The way I see it, I've been collecting free money for more than five years, and I think I've gotten more than my fair share. Everybody's got to tighten their belt to help balance the budget. Really, the $40 a month didn't make much impact on me, although to guys with families the cuts might make a big difference," Proctor said.

and wished they had been told sooner of the possible conversion.

Until recently a banner on the outside wall of Centrepointe was posted that read, "Now leasing for fall" and gave a phone number.

As for the summer, Centrepointe is in its usual mode, Kennedy said. "We are in the process of getting ready for the Japanese students who will be living here for a month and a half," said Kennedy. Each summer students from Japan come to San Luis Obispo for about a month on a cultural exchange program.

After the summer residents are moved out, Centrepointe will begin the conversion to the senior citizen community.

"The city has been behind the announcement of the change from the start," said Kennedy, citing a need for senior citizen housing in San Luis Obispo. By the end of summer plans for the new senior community will be more defined, Kennedy said.

ZOO

From page 1
Santa Barbara for six months where she was in the exotic animal training and management program.

The daily tours are an "educational resource for the students to handle zoo animals," said Alan Metzler, the zoo's curator. This program is also a prototype educational program that the zoological society of the area would like to develop if the zoo can get the funds and money and having public support is the problem," said Bender.

Bender said children don't have enough experience or knowledge about animals. "I teach them about conservation, ecology and diversity," she said. An important talk is on the conservation of wild animals, such as what to do if a baby bird fell out of its nest.

Bender is also the educational chairman of the Central Coast Wildlife Rehabilitation Guild in San Luis Obispo. She said she has gained a lot of experience from the local chapter and its animals. Bender has lectured for the past five years to grade school students about being aware of animals. She stresses the importance of rehabilitating injured wildlife so they are able to return to their natural surroundings.

Bender's future goals are to help establish the educational program at the zoo through this summer camp. She sees the job as a stepping stone to becoming a zoo educational director. She would like to see this type of program continue to allow more children to learn about exotic animals and how to take care of their animals at home.

BOOKS

price. "The extra benefit to students buying books at Bookland is that they will be charging list price," she said.

The group hopes students will view the extra effort required to purchase books off campus as a positive way to change the Foundation decision about divestment. "We recognize that some students won't be happy about going elsewhere to buy books but we also think that some students will be pleased to help out and their social consciousness will be raised by their professors' decision to order their books elsewhere," said Axelroth.

Wallet reported stolen in library

A library staff member's wallet containing $195 and several credit cards was stolen from the third floor of the Robert E. Kennedy Library Monday at about 5 p.m., according to campus police.

The wallet was removed from Cathleen Matthews' purse which was under a typewriter. The wallet contained other valuable items besides the credit cards and money, such as her staff identification card and important papers. The campus police department has no suspects at this time.
