Press finds home in engineering building

By Carmelita Herron

The million-dollar printing press donated to the Cal Poly graphic communication department last spring has finally found a home.

Building 40, the minority engineering building, was chosen as the temporary home for the 70-foot-long, 24-foot-wide press by university deans at the executive level and Cal Poly President Warren Baker. The high-speed, high-tech printing press was a gift from Rockwell International Corporation.

The initial proposal to house the press in the campus aeronautical was denied after it was discovered that there were inadequate gas lines available for the printer's drying system, and for financial reasons, according to Executive Dean Doug Gerard.

The proposal to move the press into the aeronautical was strongly opposed last quarter by mechanical and aeronautical engineering students who formed a petition requesting a different location in which to house the press. They feared that the installation of the press would take up needed space for students working on senior projects. Also, it was thought that the press might have interfered with current projects by the engineering department.

Because of the difficulty in finding adequate accommodations for the printing press, it had been stored in pieces at the Research Development Center on campus since April.

Gerard said that the decision to house the press in the minority engineering building was a difficult one, but was generally the best decision for all concerned. A prompt decision was needed, he said, and "it was hard for us to justify it (the press) just as PRESS, back page.

Garage to disable parking spaces

Alternative transportation downtown is encouraged

By Stacey Myers

Parking in downtown San Luis Obispo is going to get worse before it gets better.

The city has approved plans for a four-story parking garage, but during the six months it will take to build the structure, the downtown core will lose 122 parking spaces.

The $3.2 million parking structure will be built on an existing lot at the northwest corner of Palm and Morro streets, which means those spaces will be temporarily out of service while the 422-car garage is under construction.

Construction on the garage is scheduled to begin in March and be completed by late fall.

The garage will extend two to three stories above ground level, with a portion of the building being placed underground.

City and county officials are doing their best to make the temporary parking crunch as painless as possible, however. Carpooling, biking, walking and public transit are all being offered as options to driving during the construction period, said Can­dale Havens, city parking program coordinator.

"In a study done about one year ago, we deter­mined that downtown San Luis is about 900 park­ing spaces short of what we need," said Havens, who is also an engineer in the Public Works Department.

"So although this parking structure will help al­leviate that, it's going to be pretty crowded when we temporarily lose those 122 spaces," she said.

"In the meantime, we're encouraging all city and county employees to carpool or to take the bus in or­der to free up some of the spaces downtown," Karen Frees, regional ridesharing manager for the county, has been working with Havens to promote carpooling in San Luis Obispo. Frees and the County Engineering Department have ar­ranged for special parking privileges for carpools with three or more members.

"All that's required is that the primary driver fill out a form with his name, the name of his car­poolers and the license plate number of the car," she said. "That makes the carpool eligible for a special permit that allows them to park for free in certain downtown lots.

Tickets to be refunded

Lone Justice cancels show

The Lone Justice concert scheduled for Jan. 30 at Cal Poly has been canceled because of a medical emergency with the band's lead singer.

A non-cancerous polyp was found in Maria McKee's throat. Lone Justice has canceled much of its tour for this reason.

Cancellation for medical reasons is within the terms of the contract agreed to by the band and ASI Concerts, said Karen Vogel, publicity director for ASI Concerts.

Tickets will be fully refunded "beginning today at the University Union Ticket Office. Those wanting refunds must bring their tickets or some proof of purchase to get money back."

Engineering West will get facelift by the fall

By Ken Miller

The Engineering West build­ing, boarded up since August, is scheduled to be rebuilt by fall quarter.

After a fire during Poly Royal in April 1986, the building was left partially gutted and many labs and offices were damaged. The university has been working since then to get funding for reconstruction.

Executive Dean Doug Gerard said that Poly had trouble identify­ing funds for the project. "We tried to get a request for emergency funds from the state, and their response was, 'Take it out of the allocations you already have.' As a result, we couldn't start drawing up the plans until October," Gerard said.

The funds for the project came from a special repairs allocation provided by the state. Estimated cost of the project is $1 million, Gerard said.

The plans for the project were designed by Grant, Pedersen, and Phillips, an architectural firm based in Santa Barbara. The firm's fee, contingent on the final cost of the project, is estimated at $20,000, Gerard said.

Chris Perez, an employee for the firm, said the building design has changed a bit. "Before the fire, on the lower floor, there were portable partitions, but now there are permanent partitions. Also, the classrooms will be differ­ent sizes and shapes. Before the fire there were four, but now there are five," she said.

The plans were submitted to the Chancellor's Office in December, but at the end of that month Perez was asked to change a wall, so the plans had to be drawn up again.

The deadline for completion and approval of the new plans is unknown. "I don't have the See BUILDING, back page.

A deaf husband and a blind wife are always a happy couple.

— Danish proverb
Editorial

Line of compromise

In November a couple of legislative moves touched on a growing concern over the illegal alien issue: the majority of California voters said they wanted English to be the official language of the state, and President Reagan signed a bill giving amnesty to Mexicans who have held uninter-
rupted residence in the United States since 1982.

For years American employers have complained about the presence of large illegal alien populations with little opposition other than from a U.S. labor force that loses work because of cheap Mexican labor. But with a Mexican population now permeating the fringes of American social, political, and educational life, cries of concern now emanate from more and more U.S. citi-
zens, albeit the cries are late in coming.

Although the November vote voiced California opposition to the Mexican influx, the President's signature and Congress' approval of the amnesty bill mean the federal government is finally beginning to face the situation. The problem of illegal immigration, if it may be called a problem, isn't going to disappear. It's projected that by the year 2000, Mexico City will double its current population of roughly 75 million and become the largest city in the world. At the same time half of California will be of Mexican de-
scent. Unless the U.S. Armed Forces take on the role of border patrol, Californians and residents of other states feeling the Mexican presence will have to attack the problem at the same time they are cooperating with it.

Few Californians, though, will want to go into the business of interpreter or educational, social or political in-
terruption policies that will be needed in proportion to the Mexican influx if the problem is to be alleviated at all.

Certainly the argument may be made that programs aimed at integration into the American system will make Mexicans as more attractive a place to run. But even now, in the absence of such programs, they come in hordes. Deny-
ing Mexicans the access to economic opportunity that we enjoy only causes frustration on both sides of the border and accomplishes nothing.

Atheistic humanism

The root of social ills

Editor — The Mustang Daily editorial board are often mentioned the trouble and bloodshed caused by religious factions, citing Northern Ireland, Iran and Lebanon as examples. Accompanied with their usual myopic insights, they have overlooked the deeper issue, which when noted, destroys their thesis and reverts their criticisms onto themselves.

On a worldview basis, and as a historical fact, atheism has been a remarkably ragged record. The millions and millions of human be-
ing who have been sacrificed to the gods of liberal humanism are con-
veniently overlooked by our "anti-
religious"ativists.

The blood and innhumanity pro-
duced by the atheistic religions of our century is a major embar-
57assment to the humanistic elite, whose theories, when made into policies, regard human liity mainly in the light of expedience and economics.

What has the religion of atheistic humanism given us in this century? In Germany we find the Nazi killers taking their evolutionary theory to its logical conclusions. In China, Russia, Poland, Ethiopia, Afghanistan and Cambodia, we see the nightmare of Marxist-Leninist doctrine, which has through over-
work, starvation, torture and execu-
tion yielded hundreds of millions of people. In America, we have abortion and infanticide — the sin and horror of treating the murder of one's own children as something compared to how a wart taken off a finger. What an incredible thing "pro-
gress" is: an evolution of evil, or a

confusion as to what is bitter and what is sweet, what is love and what is poison, what is life and what is death.

BRENT MURDOCK

Political literacy is key to understanding

Editor — I suspect even Brian Carstens was surprised by the stu-
pidity of his conclusion (Letters, Jan. 16) that ignorance is bliss. To be fair, it's easy to mistake symp-
toms of problems for causes of problems. Obviously, the fact that African children have a name or a "buzzword" for a type of torture is a symptom of — and not the cause of — their being tortured. Just as obvi-
ously, you can live with a com-
puter (or a government) without knowing all the buzzwords, but if a programmer (or citizen) ever has to change the machine to meet chang-
ing needs, he must know the words it uses. While it is a tragedy that few American youths read the news, it will be a disaster if they can't find meaning in its words.

The parasites of business

DOWN TO EARTH

Jeff Kelly

In the 1980s, healthy, cash-rich companies are being regularly pursued by hostile takeovers. Often, their stock is owned by large institutional investors, such as pension funds, and is under great pressure to sell to the high bids of takeover artists and company-gobbling con-
glomerates.

As a result, many CEO's are reluctant to embark upon costly and risky long-term capital im-
provements that might not pay off dividends and displease stock-
holders, even if it would make sense in the long term. Short-
term safety has supplanted long-term enterprise in American management, resulting in the erosion of our capital base. Those companies who decide to fight takeovers usually have to borrow huge sums of money to do it. Crown Zellerbach being a recent example.

In this matter, billions of dollars are being diverted from investment capital that could be used for new technology and production, which is precisely what America needs to compete.

Manufacturing and manage-

ting, the real stuff of business, are being neglected, and the American consumer is telling American business to go to hell.

The trade deficit is devastating, but it would be far worse if not for the web of protectolastic measures that our largest cor-
porations (not just the unions) have persuaded Congress to enact in recent years.

The ultimate answer to our trade deficit does not lie in so-

cialism or protectionism. What we need in this country is a real-

ification of free enterprise — real free enterprise, as opposed to profit making. It is time to sepa-
rate the parasites from the true entrepreneurs. American in-
dustry is not made great by the Icahns, the Wolfsons or the other parasites of Wall Street. It was made great by those they feed upon, those who produced, who had an idea or product and pushed it into reality: people like Steven Jobs, who built the first Apple computer in his garage, or Howard Hughes, who built his crazy white plane and believed in it enough to fly it himself.

The modern service economy cannot exist without a healthy business class. We cannot eat the paper now be-
ing printed on Wall Street; we cannot drive it, clothe ourselves with it, build homes with it. We must recognize that a flood of real capital investment money is being diverted into the merger industry, a market that does not play the market, and they are the ultimate disaster to every in-
dustry they choose to enter. We need more companies that pro-
duce, and few companies that pro-
duce, and few companies that merely hold the producers.
Arms-drug connection claimed

MIAMI (AP) — Two federal inmates say they flew arms to the Nicaraguan Contra rebels and drugs back to the United States with the knowledge of the CIA and the Drug Enforcement Administration. "It was guns down, cocaine back," one inmate said.

A spokeswoman for the CIA denied the charge Tuesday, as have a DEA spokesman and two top leaders of the Contras fighting Nicaragua's leftist Sandinista government.

The long-standing drug allegations are under investigation by congressional committees as well as the FBI and could be taken over by the independent counsel appointed to investigate the Iran-Contra affair.

Envoy to negotiate for hostages

BEIRUT, Lebanon (AP) — Anglican Church envoy Terry Waite canceled his flight home to England on Tuesday to stay in Beirut for face-to-face negotiations with kidnappers of American hostages.

He scrubbed his midmorning departure plans after returning to his hotel from a late-night meeting with Islamic Jihad, sources close to him said.

"It looked like he has had a breakthrough," said one source, who spoke on condition of anonymity. "He will have further meetings with the captors."

Survey will evaluate advisers' handbook

By Anna Cekola

An advisers' handbook containing information on Cal Poly policies and procedures will soon be the subject of a survey by an ASI committee.

Advisers' handbook chairman Buzz James said he hopes the survey, taken by the ASI Academic Council, will establish whether or not faculty advisers use the publication, and if they find information presented correct and useful.

The handbook contains information on such topics as degree programs, grading requirements and procedures, required examinations and student services. A section dealing with financial aid and grants is one addition James said the council is considering.

"The council feels that this is a very good and thorough booklet," James said. "We want to make sure teachers and students are aware that there is such a handbook that can help get questions answered correctly."

Original material for the handbook was compiled about three years ago by ornamental horticulture professor Cheri Burns. Additional efforts to accumulate information were made by the academic council, a sub-committee of the Student Academic Commission. Upon completion, the handbook was distributed to each department with the suggestion of further duplication for all faculty advisers.

Donald M. Coats, president's representative on the Student Academic Commission, said the handbook is probably being used by most advisers. "It's important that the university have some kind of guide with all regulations and policies pertaining to students," Coats said.

"This will enable all students to get across-the-board answers."

James also stressed the importance of the handbook as a uniform source of quick reference for advisers and students.

With distribution of the survey planned for next month, James hopes to have tallied results by the end of winter quarter.

The city encourages downtown workers to carpool.

"We don't think there's a need to extend the bus system," said Knofler. "Right now the buses operate from 7 a.m. to 7 p.m. and they are hardly ever full. And 90 percent of the people in San Luis Obispo live within a five-minute walk to a bus stop. The service is already there — it's just a matter of getting people to use it."

No matter how much the city tries to help, though, downtown workers say the parking shortage will definitely cause problems.

Karyn Serpa, 19, is an agricultural management student who works as a salesperson at Punjab. She drives to work now, but said that when the Palm Street parking lot closes for construction, she'll ask her roommates to drive her instead.

"I leave for work at least 30 minutes before my shift," she said, "and I still end up parking blocks away and just barely making it to work on time. When they begin construction on that garage, it'll be even worse."

Kim McCurdy, 25, is a Cuesta College student who works at Hudson's Grill. But for her, asking a friend to take her to work isn't a reasonable alternative to driving herself.

"I live out in Los Osos," she said. "I'm not sure what I'll do if parking downtown gets any worse. I guess I'll have to put a bike rack on my car and drive part of the way to work, park somewhere, and then ride my bike the rest of the way."

Although parking downtown may seem impossible, Frees said the problems in San Luis Obispo are minor when compared to those in other areas.

"We don't have the same transportation problems that counties like Sacramento have, but we do have our problems," she said. "And we can avoid a lot of the long-term problems by taking preventative measures now, like by making public transit and ridesharing a part of our daily lives."

"My personal opinion is that anything we can do to avoid driving downtown will help, because if you think parking is bad now, it's going to be really bad when we lose those 122 spaces," said Frees.

**Islamic religion and architecture are related**

By Diane Zundel

The Islamic religion, like its architecture, exists to fulfill man's desire for placement and order in the universe, a religious studies professor said Thursday.

Juan E. Campos, a native of Bogota, Colombia, who currently teaches at the University of Santa Barbara, was the first speaker in a series of lectures entitled, "Islam and Contemporary America." The program is being sponsored by the School of Liberal Arts and the philosophy department through a California Council for the Humanities grant.

Campos's talk in a packed room in the University Union focused on "Architecture and the Islamic Language of Space: When the Near East Meets the Far West." He emphasized that contrary to what Americans think, Islam is not only a religion, but an entire way of life. And this way of life can be compared to architecture because "to build is to dwell and to think."

"Building serves to teach us who we are, where we are, and what we are in. Religion, like architecture, is construed through our existence here on earth. An intersection exists between architecture and religion. They both provide placement and order in the world," said Campo.

He showed slides of mosques, which are Moslem houses of worship, to demonstrate the important cross between Islamic religion and architecture. The mosques ranged from simple to monumental in structure, but they all had several religious features in common.

He also showed slides of mosques in various regions of the world. He explained that many Westerners believe Islam is a religion of Arabs only, but actually the "Islamic world encompasses a universe." Only one in four Moslems is an Arab, he said; the largest Islamic populations exist in Indonesia, India, Turkey and the Soviet Union.

"The Islamic architecture is like the religion itself — forms can be carried from one region to another and they can be adaptable," Campos said as he showed a slide of a mosque in China.

He said Islamic architecture has also been absorbed in the west, as shown by slides of the Santa Barbara courthouse with its Islamic style roof and exotic tiles imported from North Africa, and of the Los Angeles Sheraton Hotel's copy of an Islamic tower.

"Islam is a world religion that adapts readily to different places," he said. But a problem that Campo called "landscapes of fear" does exist.

"This is the idea that people in the Western world think of Moslems as chaotic and belligerent. Likewise, people in Islamic countries believe that Westerners are adulterers and come from broken homes."

These cultural misconceptions are rooted in false spatial ideas; the key is to create "spatial peace," said Campo.

This is done by creating a balance between private life and life in a changing and pluralistic world, he said.

Campos attended the University of Southern California and received his doctorate in the history of religions at the University of Chicago.

The "Islam and Contemporary America" series, which runs through March 5, will include four other scholars of Islam, comparative religion and Middle Eastern history and politics.
Women shake off fouls to post win

By Elmer Ramos

CARSON — It may have only been halftime, but Cal Poly basketball coach Jill Orrock had good reason to be concerned. With her team clinging to a tenacious three-point lead over Cal State Dominguez Hills Saturday, four of her five starters were in foul trouble and her key reserve was slowed by a knee injury.

Instead of telling her foul-stricken starters to play less aggressively, however, she told them to maintain the attack. The strategy paid off. The Lady Mustangs exploded offensively in the second half and whipped the Lady Toros, 72-49.

“Tina Tulemosa, Kim Lackore, Sherrie Alteberry and Sherinne Barlow all had three fouls when the first half ended. Despite their shaky status, the quartet combined for 40 points and 18 rebounds to boost Poly to victory.

It was the gutty play of Janet Jorgensen, however, that made the difference. Although she was still hobbling from a sprained knee she sustained last month, the senior forward came off the bench to rally her teammates. She scored 13 of her 17 points in the second half and finished with a game-high 15 rebounds.

The game was barely six minutes old when Tulemosa became the first Lady Mustang to pick up her third foul. Tulemosa was replaced by Jorgensen, who joined Alteberry in rallying Poly from a 9-2 deficit in the first half and finished with a game-high 15 rebounds.

“Instead of telling her foul-troubled starters to play less aggressively, Jill said Orrock.

The Dominguez Hills contest was another nailbiter. In the end, it became a showdown between the Mustangs’ best free throw shooter, felt the pressure to sink both shots.

“Tina Tulemosa, Kim Lackore, Sherrie Alteberry and Sherinne Barlow all had three fouls when the first half ended. Despite their shaky status, the quartet combined for 40 points and 18 rebounds to boost Poly to victory.

With Poly ahead, 59-56, and 17 seconds left in the second overtime, the Mustangs’ Mark Otta was fouled and sent to the free throw line. Otta, arguably Poly’s best free throw shooter, felt the pressure to sink both shots.

“I was nervous,” Otta said. “I knew we wouldn’t be safe with a three-point lead, especially when they have guys who can shoot that three-point shot.”

Otta, playing before numerous friends and relatives, buried both shots to give the Mustangs a five-point cushion. However, Dominguez Hills’ John Nojima came right back and sank a three-pointer to trim Poly’s lead to 61-59 with 10 seconds left.

Dominguez Hills then called a timeout to set up their defense.

Toro coach Dave Yaniel said he told his team to deny the Mustangs the inbounds pass. If Poly did get the ball in, the Toros were instructed to foul the ballhandler immediately. They failed to execute either plan.

Sean Chambers broke free to catch the inbounds pass. But before the Toros could foul him, he had passed the ball. What followed was a frantic game of keep away. The ball moved down the court like a hot potato and ended up in Errol Talley's hands.

With a defender in his face, Talley nailed a baseline jumper that failed to execute either plan. With a defender in his face, the court like a hot potato and the ball ended up in Errol Talley's hands.

One of the conference's most productive guards, Talley had passed the ball. What followed was a frantic game of keep away. The ball moved down the court like a hot potato and ended up in Errol Talley's hands.

By holding William Alexander, one of the conference's most prolific scorers, to eight points, the Mustangs were able to keep the lead most of the game. Alexander fouled out with four minutes left in regulation.

"Taking him (Alexander) out makes us weaker, but we expect the other guys to step in," said Yaniel. "You have to give Cal Poly credit for that; they put Alexander in the position he was in.''

"We felt we had to take away their inside game first," said Beason. "They got a lot of uncontested outside shots, but our front-line guys denied their inside game."

Poly came within millimeters of winning the game in regulation. With the score tied and three seconds left, Mark Shively intercepted a pass underneath the Dominguez Hills basket. His blind shot from over eighty feet away hit the rim but did not rebound.

In the first overtime, Poly's Jeff Gray and Dominguez Hills' Vico Nomaeza led the game with 14 points each. The backcourt duo took a total of 23 shots — 21 of them from behind the three-point line.

By losing only their second home game this season, Dominguez Hills dropped to 12-4 overall and 2-1 in the conference.

The Mustangs, who have knocked off two strong CCAA teams on consecutive weeks, will face another big challenge Friday when they host 12-3 UC Riverside at 8 p.m.

Wrestlers take one of three on trip to Utah

By Dan Ruthemeyer

After winning four straight dual matches and the Pac-10 Tournament, the Cal Poly wrestling team was humbled last week as it lost two of three matches in Utah.

The Mustangs lost on Thursday to Brigham Young University, 29-12, before traveling to Logan, Utah for matches against Utah State and Weber State.

Cal Poly was able to knock off Weber State, 24-15, with strong matches from its middle weight wrestlers, but was upended by Pac-10 foe Utah State, 36-13.

The big wins against Weber State came from 158-pound Malcolm Boykin, 167-pound Eric Osborne and 177-pound Anthony Romero. While Boykin and Romero won by 11 and seven points respectively, Osborne dominated his match against Weber State's Eric Burton for a 22-6 decision.

Osborne, taking all of his last eight matches, is 19-2 on the year and is ranked fifth nationally in his weight class.

Against Utah State, the Mustangs got a strong performance from 118-pound John Galkowski, who took a 12-4 decision from Craig Stauffer.

Osborne and Romero also picked up wins to go two-for-two on the day. Both of their wins were decisive as Osborne defeated Glenn Amador 12-3 and Romero took a 14-1 decision from Ted Castro.

The Mustangs will be back in action tonight when they face Stanford at 7 in the Main Gym. They will also wrestle at home at 8 p.m. on Thursday against San Francisco State.

BUILDING
From page 1
authority to divulge the schedule of the other than to say that the building should be built by September," Perez said.
According to Gerard, the plans are in the Chancellor's Office right now awaiting approval. "They'll clear them within a week to 10 days, because they know how badly we need it done."
Other Cal Poly staff members, particularly the professors who have been relocated as a result of the fire, agree that the building needs to be reconstructed as soon as possible.
Mike Borwin, head of the architectural engineering department, is less than happy about his situation. He currently has an office in the air conditioning building, which, according to him, "was condemned years ago."
"No one seemed to be concerned about our problem," Borwin said. "We had to find everything ourselves. As a result, we got stuff that no one else wanted. You can't vacuum the floors, because the bed would be sucked up. To some degree, I feel like we were treated like orphans."
Gerard said that as soon as the plans are cleared, construction of the building will be up for competitive bidding.

PRESS
From page 1
sitting around."
Dean of Engineering Duane Bruley said that moving the press into the minority engineering building will interfere with the current Computer Integrated Manufacturing (CIM) project that is being developed there.
Bruley explained that the CIM project is part of a $30 million effort by the engineering department to advance student learning and research. "CIM is a high priority, integrated system within the department. We have already had sizable contributions to CIM and the printing press could hinder the expansion of this project within the building," he said.
According to Gerard, the press requires approximately two-thirds of the entire space; the other third is reserved for engineering projects.
Gerard said the press will be allowed to operate within the minority engineering building for a maximum of three years. He said the press was moved into the building with the understanding that the graphic communication department would secure funds to construct a separate building to house the press.
Harvey Levenson, graphic communication department head, said the department is already working to raise approximately $1.2 million needed for a building. Levenson added that he would feel the same way if they moved one of their projects onto our facilities."

More rules needed for train safety
WASHINGTON (AP) Senators called Tuesday for more drug testing of train operators and new authority for federal regulators to handle what an official described as widespread tampering with automatic safety devices on trains.
Both drug use and equipment tampering have been implicated in the Jan. 4 collision of an Amtrak passenger train and three Conrail freight locomotives near Baltimore in the worst accident in Amtrak's history.
Top Amtrak officials put the blame directly on the Conrail crewmen.
Federal railroad officials, appearing at the first in a series of congressional hearings prompted by the Amtrak accident, said the government is severely limited in what it can do at present.
