Mountain bikes up in popularity

By Christine C. Temple

Bicyclists are cruising the peaks, barrelling through streams and racing to school with style in San Luis Obispo. And though male college students most often engage in mountain biking, women are joining the trend.

Bicycle shops throughout San Luis Obispo report large increases in sales of mountain bikes, including models used by both men and women in their 50s and 60s. Broad Street Bikes, a local supplier of mountain bikes, has sold 20 of the popular models within just the past few days.

"The first-time users will usually purchase the $240 model, while the diehard riders will pay up to $1,100 for the higher quality bikes," said employee Dave Richardson.

Richardson said he believes the popularity of the bikes is due to their durability and diversity as mountain and street bikes. Middle-aged riders prefer the design of the bikes because the handlebars are raised so there is less strain on the back, he said.

As a mode of transportation, play or exercise, mountain bikes have become so popular that up to two are stolen each week from the Cal Poly campus. Public Safety has been investigating the thefts, which have increased in the past month.

Public officials are also concerned about the dangers presented by the bike riders' activities on and off the trails. They are concerned that mountain bikes could pose a hazard to cattle, horses and hikers.

Richardson promotes Responsible Off-Road Adventure Riders. See BIKERS, page 3

Security firm hired to supervise graduation

By Anthony Lopez

For the first time in several years, the commencement committee has hired an outside security firm to supervise graduation ceremonies.

Events Management, Inc. was hired to usher and supervise the lines of marching students into the stadium and observe candidates at the line-up area. The action was taken because of the concern about alcohol and hazardous objects being taken into the stadium.

Higher salaries may attract young teachers

By Paul J. Roberts

The California Faculty Association is currently negotiating a new contract with the California State University for a 4.9 percent salary increase in an effort to attract more young professors.

The average salary of a full professor at Cal Poly is $48,500, slightly below the CSU system average of $49,077 and the comparable university average of $50,547. Cal Poly Pomona has the highest average CSU salary at $49,500.

The CFA, which has been negotiating with the CSU system for two years, hopes to raise salaries to the level of comparative universities in addition to compensating for inflation next year.

"We need to attract more qualified young professionals," said math professor Adelaide Harmon-Elliot. "Other professions are attracting these graduates because they are offering higher salaries."

Harmon-Elliot noted a former student who graduated three years ago with a bachelor's degree in mathematics and landed a job as a mathematician at Lawrence Livermore Laboratory, making almost the same salary that she makes at Cal Poly with a Ph.D. and 40 years experience.

2 claim innocence in keg theft, but police disagree

By Diane Zundel

Two Cal Poly students arrested earlier this month on suspicion of stealing a beer keg and tapper from Public Safety's squadroom claim they're innocent, while campus police say "a lot of covering up is going on."

Brian Klingsheim and Soren Archibald were arrested on April 18 for allegedly burglarizing the squadroom to retrieve a beer keg and tapper police had confiscated earlier that day from a party at Sierra Madre Hall. The two were arrested when a San Luis Obispo liquor store employee, forewarned by police, called Public Safety and said the two suspects were attempting to return the stolen items to the store's $50 deposit.

But both Klingsheim and Archibald told Mustang Daily the keg they returned to the store was not the same one that was stolen from the police squadroom.

Klingsheim said a police officer, immediately after discovering the burglary that Saturday morning, went to his room in Sierra Madre to inform him that the confiscated keg had been stolen. He said the officer told him that whoever returned the keg to the liquor store would be arrested. Klingsheim then warned ed all other Sierra Madre residents that whoever had the keg should not return it.

But Archibald, who rented the keg and tapper, realized he would not get back his deposit if he did not return the items. So he came up with a plan.

A friend of mine had an empty keg upstairs (in the dorm)," he explained. He added that they borrowed a tapper from a different friend also living in the dorm.

When the two went to the liquor store later that afternoon to return the swapped items, the police officer showed up and "accused us of burglary," said Archibald.

Klingsheim said he told the officer that the stolen keg was labeled "Michelob," while the one they were returning was a "Coors." The liquor store owner was unable to verify that it was not the stolen keg, said Archibald, because the store's employees don't write serial numbers on receipts.

The officer then arrested Klingsheim and Archibald on suspicion of burglary, conspiracy, and possession of stolen property.

Average faculty salaries across the country are up 5.9 percent (6 percent at public schools), the highest increase in 15 years, according to a study by the American Association of University Professors. In comparison, Cal Poly faculty salaries rose 4.5 percent this year. Accounting for inflation, that was actually a 1.5 percent increase.

Gov. George Deukmejian has recommended 3 percent (equal to inflation) increase for the 1987-1988 year, but the increase would not begin until Jan. 1, six months after the new fiscal year begins, resulting in an actual increase of only 1.5 percent. The CFA wants a 5 percent increase.

Jocks have different problems

The reinstatement of priority registration for athletes was long overdue. Being an ex-athlete, my opinion on this matter is of the utmost importance. However, I have the perspective of one who has experienced the special problems an athlete faces while attending a school such as Cal Poly.

We all know about the hassles of going to school: getting enough of the right classes at the right times so we can graduate. The inconsistency of CAR, the unlikeliness of adding many classes (English, philosophy), and the enrollment of more students every year are hard on all students.

But as hard as those are on the average student, it is infinitely harder on the student-athlete. During the season, an athlete has a minimum of 30 hours per week of practices and games. They are often at different times on different days, effectively wiping out that block of time for the entire week.

For instance, an athlete has practice from 3 to 6 pm Monday, he can’t take a M-W-F class in the morning. As a result, there is very little flexibility in an athlete’s schedule. He can’t be late, he can’t be absent, he can’t make excuses — period.

Dorm’s dirty laundry was hung out in Daily

Editor in response to John Holquist’s letter concerning Sierra Madre’s living conditions, I’d like to say a few words about being a concerned person.

John calls himself a concerned resident. If you’re so concerned, why did you take it to me? I don’t tell you any of the stuff that you can’t do about what you think can we do about it? I don’t think it is fair to those who will be held financially responsible. How will you, John, repay your invisible damage to Sacramento? The RA staff can only act on those incidents in which people take responsibility for their actions, or can be forced to do so through the sanctioning process.

Why strike out at Paul Cousins

You call for a reduction of certain core courses. Would you like the names of the core courses? The RA staff can only act on those incidents in which people take responsibility for their actions, or can be forced to do so through the sanctioning process.

Letters must be submitted to Room 226 of the Graphic Arts Building. Letters must include the writer’s name and telephone number.
Charges brought in Contra affair

WASHINGTON (AP) — Conservative activist Carl R. "Spitz" Channell pointed to former White House aide Oliver North as a fellow conspirator on Wednesday as he pleaded guilty to the first criminal charge of the Iran-Contra affair.

Channell was formally accused of defrauding the government by telling contributors to his National Endowment for the Preservation of Liberty that their gifts would be tax deductible even though the money actually was used to provide military aid to the U.S.-backed Contra rebels in Nicaragua.

Channell pleaded guilty to a single count and agreed to cooperate in independent counsel Lawrence E. Walsh's investigation.

Walsh's formal charge, known as a criminal information, said Channell was involved with a government official, but the charge did not identify that official.

Nakasone on the bargaining trail

TOKYO (AP) — Prime Minister Yasuhiro Nakasone left for a six-day visit to the United States in hopes of easing the worst bilateral trade tension since World War II and boosting his own standing at home.

He planned a stopover in Anchorage, Alaska, and was not scheduled to reach Washington until late afternoon.

Polls show Nakasone's popularity is at its lowest level since he took office 4 1/2 years ago. The decline, to a 25 percent approval rating, is attributed to his backing of unpopular tax reforms, the worsening Japanese economy and growing friction with trading partners.

While he is in Washington, the U.S. Congress will be debating trade legislation that could further strain relations with Japan. Tokyo is already piqued at the Reagan administration's im­

Bikers

From page 1 — a new club that is trying to organize responsible riders to represent their interests when restrictions are made by local land owners.

As the interest in cycling keeps growing and expanding, Richardson hopes to impress upon public land managers and private land owners that responsible off-road cycling can continue in all accessible areas.

Responsible Off-Road Adventure Riders was founded so all mountain cyclists can get together and have a good time. Richardson said large groups in trail riding are not feasible because of safety reasons, but added it's important for people with the same interests to get together socially.

College students and local res­idents can get together in small groups to ride. "This is one area where locals and college stu­dents cross the line," said Dorothy McLaughlin, an employee at Ken's Bicycle Shop. Workers at the shops organize trips that can consist of up to six people almost every weekend.

The last trip taken by the group from Ken's Bicycle Shop included only 45 minutes on pavement out of the entire seven-hour trip.

Popular spots range from Lake Lopez to San Luis Moun­tain. Anywhere with dirt, water and a slope can provide much fun for off-road lovers.

Clubs on campus are making an effort to change the image of off-road biking by appealing to the public with a safety motto. He is now attempting to change the public's feelings regarding the sport and to or­ganize teams to compete within the county.

Russian human rights lacking

WASHINGTON (AP) — Even though Soviet leader Mikhail Gorbachev has instituted some "almost revolutionary" liberalizing measures, he remains committed to preserving a totalitarian police state, the State Department’s human rights chief says.

Richard Schifter made those observations in an interview this week after conferring with a number of Soviets, including government officials and dissidents, while accompanying Secretary of State George P. Shultz to Moscow earlier this month.

Schifter, assistant secretary of state for human rights, said the most striking change is the way Soviet citizens are now permitted to criticize local officials, police, factory managers and others in the economic sector.

GRADUATION

From page 1 that if it plans to have security people taking alcohol and other objects from candidates, it will have better results if arrangements are made to return whatever is taken. At that point committee members mentioned to Inkley that labeling bottles and setting up a return station would be too confusing and time consuming.

"One of the reasons for the stricter regulations is not to suppress self-expression, it's just that things have gotten out of hand," explained committee member Roger Osbaldeston. "It seems like it (the graduation ceremony) is a free-for-all now, and it's getting to be a ridiculous situation, a travesty and a joke."

Committee member Art DeKleine said all candidates should read the pamphlet entitled "Getting Ready For Graduation," which will tell them what they need to know about ceremonies.

While on the subject of informing candidates on do's and don'ts for the commencement, Coats said, "Each candidate will receive an individual letter from the Dean of Students, con- gratulating them and asking them to observe acceptable rules of conduct and maintain the academic spirit of the whole activ- ity."

After the meeting Inkley said "I understand both sides, but the problem is not as bad as it (the committee) makes it out to be. Students have mixed feelings. Some want to be traditional, others want to be festive and loud. As far as alcohol — it's the school rule. Despite what people think, they should abide by the rules."

Gorbachev has instituted some liberalizing measures, but remains committed to preserving a totalitarian police state, the State Department's human rights chief says.

Richard Schifter made those observations in an interview this week after conferring with a number of Soviets, including government officials and dissidents, while accompanying Secretary of State George P. Shultz to Moscow earlier this month.

Schifter, assistant secretary of state for human rights, said the most striking change is the way Soviet citizens are now permitted to criticize local officials, police, factory managers and others in the economic sector.

SALARIES

From page 1 the 6.9 percent to meet inflation and bring the CSU up to com- parable university standards.

Despite increases, faculty members have lost more than 10 percent of their purchasing power since 1970. The 6.9 percent increase that would eliminate the faculty salary lag will add an additional $49 million to the state education budget, if approved. CSU and CFA repre- sentatives have been negotiating with an arbitrator for a contract settlement and now have 10 days left to reach an agreement, al- though the CSU is not bound to make a decision.

Last year the CFA and the CSU agreed to the Faculty Early Retirement Program. Under FERP, a professor can retire at 55, collect retirement pay and teach part time for additional pay. This program will create more openings for younger pro- fessors.

A new study conducted by Oklahoma State University indi- cates widespread salary disparities between different disciplines. The survey of 80 state colleges and universities found that professors in engineering are earning an average of $45,216 and visual arts professors are averaging $32,185.

The study also found that newly-hired assistant professors are being paid more than current assistant professors, indicating that administrators are trying to attract more young people into the profession. The CSU is trying to make this possible by eliminating the faculty pay scale. This would give the CSU the flexibility to determine salaries arbitrarily, instead of using the current scale based on rank. Under this "separation of rank and salary" system, an assistant professor could be paid the same salary as a full professor.

America beneath the rising sun

in global business, the Japanese ride on top with government help

By Stacey Myers, staff writer

Japanese cars, television and radios: they're the fastest selling brands on the market. They're often more efficient, better made and less expensive, and they're taking over the American market.

In the 40 years since Japan's destruction in World War II, the island country has made astounding economic progress. Last year Japan's gross national product of $1.2 trillion was eclipsed only by the United States' $3.7 trillion. In the past 40 years, Japan's economy has grown to almost equal that of France and the United Kingdom combined.

One of the reasons for this surge in economic output is that the Japanese government is heavily involved in the country's trading activities, said Carroll McKibbin, a political science instructor who teaches a course in U.S. foreign policy.

"The Japanese government subsidizes bids to help their companies compete abroad," said McKibbin. "This doesn't happen in the United States. We regard it as unfair trade and don't want the Japanese to engage in it either."

One of the reasons the Japanese government can do this, said McKibbin, is because they don't have the high defense costs that the United States has.

"The United States almost completely stripped Japan of its military powers after World War II," he said. "We feel they should put money into defense, and yet at the same time we won't allow them to build up any substantial weaponry," he said.

But, said McKibbin, even though the United States is not in competition with Japan's trading policies, sanctions against Japan will never be implemented.

A survey conducted by the Japan Economic Planning Agency in 1986 indicated that Japanese managers believe their economy is superior to the United States. Twenty-five percent of the respondents said their technology surpassed that of their American rivals, while only 11 percent believed it was inferior.

Nearly one-third of the respondents believed they would be ahead of the United States by...

American markets need policy, coordination

American markets need policy, coordination

By Anna Cekola, staff writer

A competitive challenge has been said to bring out the best in people. But for the United States, this is easier said than done in attempting to gain back a competitive edge with the Japanese.

Increased cooperation between business, the universities and science, attitude changes and free trade are just some areas that Kenneth Walters, dean of the School of Business, believes need improving to get back into competition with Japan.

"My own philosophy is that in order to compete we can't look at improving in just two or three areas, but have to improve in something like 20 areas," Walters said. "For example, we need the best employees, best technology, best manufacturing, best products and to be the best in other areas.

One important step to getting back into competition with Japan involves establishing policy that insists on open markets and free trade, Walters said. "If we have our markets open to the Japanese or any other countries, they must have their markets open to us," Walters added. "Japanese industries have in the past developed under very protective government umbrellas."

Japanese agricultural regulations exemplify the situation of policies protecting businessmen at the expense of free trade. In the rice industry alone, the Japanese government subsidizes about $80 billion a year. Besides protecting farmers from outside trade, welfare-like systems for farmers also keep food costs high in Japan, such as $19-a-pound hamburger meat and $30 muskmelons.

While protectionist policies such as agriculture subsidies are emphasized in Japan, Walters stressed that these policies are not the answer for the United States. Again emphasizing free markets, Walters said that in order to see free trade flourish, the Japanese government would also have to stop targeting specific markets for economic superiority.

"Recently the Japanese government targeted the aerospace, telecommunication and biotechnology areas, and when they did that, they were saying 'We are going to win and take whatever policies necessary to win those markets,'" Walters said.

"When the Japanese target certain markets for supremacy, it's not free trade. In the past they targeted radio and television markets and look what happened there."

Another area Walters said needed improving in order to get back into competition with the Japanese is the relationship between business, science and universities.

"Research out of universities and laboratories must be quickly transferred into business," Walters said. "Our technology is world-class, but we are not communicating this well enough into the marketplace. The Japanese are bringing products into the marketplace faster and cheaper."

This linking of business, universities and science has also been recognized by the National Science Foundation with new policies emphasizing establishment of science and technology centers. With the main purpose of linking education and engineering research more closely, the centers would concentrate on biotechnology, social and behavioral sciences and computer and information sciences. Part of President Reagan's economic competitiveness initiative, the NSF has not yet established specific policies. And the National Science Foundation is seeking support from the government.

"We also said that attitudes must change and people must do more than just get away with minimal effort in order to compete with Japan."

"In university courses, we must teach students to do their best," Walters said. "If a student is doing just enough to get by, what kind of worker will that student become?"

Imitating Japanese management techniques, making employees a bigger part of companies and setting quality goals were other suggestions that Walters said could make the United States more competitive with the Japanese.
Former student bakes profits

Local muffin business on the rise

By Carol J. Vance

The owner of SLO Baked Muffins will soon open a bakery in San Luis Obispo, along with selling her muffins wholesale.

Sheri Herzog's new shop will be located in the Foothill Plaza Shopping Center and will open in approximately two weeks. A grand opening date has not been set because of setbacks with the city building department.

A former dietetics student, Herzog, 22, attended Cal Poly for two years before dropping out to start her muffin business.

She said she hopes to own a restaurant someday and this is just a stepping stone.

"It's a fun adventure," she said. "I don't consider myself successful yet; I still have a long way to go."

Herzog came up with the idea of selling muffins two years ago when the Bakery Cafe on Broad Street was having problems with its muffin recipe. She said she developed a recipe and tried to sell it to the cafe but the owners wouldn't buy it.

That's when she got the idea of making the muffins herself and selling them wholesale.

Some of the places SLO Baked Muffins are sold are Cal Poly's Julian's, Cuesta College, The Bagel Shop, Linnaea's Cafe, Rudolph's Coffee and Tea Co., The Spirit, Blazing Blenders, Muzio’s Grocery and Gootschalks.

Herzog and her one employee make approximately 60 dozen muffins per day. They also make scones and cakes.

Herzog's routine consists of starting muffin preparation about midnight. She and other employees bake, cool, wrap, and label the muffins. Then they load them in a van and deliver them. The process is completed by 11 a.m.

The original recipe Herzog developed has changed some, making the muffins moister. Herzog said she is continually working on new recipes. "Some recipes work and some don't, but I keep trying new ones."

She tried making chocolate muffins with peanut butter in the middle once but "they were a total disaster."

Herzog started SLO Baked Muffins in Baywood Park in a small shop with less than 300 square feet, sharing the space with a cookie company. "They made their cookies during the day and I made my muffins at night," she said.

"I bought the oven at an auction down south so it wasn't too big of an investment to set me back at the beginning."

JAPAN

From page 5

1990. And almost none thought they would be behind America.

John McKinstry, a Cal Poly social science professor, said one of the reasons for this confidence is the loyalty Japanese workers have for their companies.

"Companies in Japan really take in their employees — they're like family to each other," said McKinstry. "Any job in Japan is a very secure job. When times are tough, they just don't lightly dismiss their employees. They look to alternatives such as salary cuts, fewer bonuses and other ways to keep their employees in lean times," he said.

Like McKibbin, McKinstry believes the United States won't impose economic protection tactics against Japan. 

"Any sanctions will hurt us as much as them," he said. "In terms of international trade, there's no question the Japanese trade tactics are unfair. I just hope we wait this situation out. That's asking the United States to be almost inconsiderately patient, but I hope we can do it. Trade wars can be a very nasty game."

New phone service intends to cover the bizarre

By Jon Bachman

When James Maxwell tuned in his television earlier this week and saw the story of a gunman accused of slaying six people in two shopping centers in Palm Bay, Fla., he didn't realize the effect the story would have on his life.

Today, the 36-year-old biology major is trying to get an office on the Cal Poly campus to give people in the United States a place they can call to find out more information about bizarre happenings. He said he's had great support for the idea from Cal Poly administrators, but it's still in the planning stages.

"It just struck me when I watched the news that night, that nothing really exists where, when crazy unexpected types of things happen in life, people can pick up a phone and find out more about it," Maxwell said. "There's so much that really helps on the spot!"

Details of the strange events Maxwell hopes to cover will reach Cal Poly through the general public. "Once an involved public becomes aware of something, the information will start pouring in. Once we have an office and a little support, you'll find people will pour in with information and suggestions on how to do it," he added.

Maxwell said he hopes for the office would include another person, a phone number to call in the city and a 30-day calling allotment on long distance phones. Where the office will be located still is unknown. "The office can go anywhere, but the credit goes to having been born out of Cal Poly," Maxwell said. "Cal Poly has taught me a lot, and it will be the center of this if I have my way."

Thursday evening Maxwell is holding a meeting at 7 p.m. at 3860 S. Higuera for anyone interested in helping with the project. He said so far he has a lot of volunteers who are willing to help.

"I've got about a dozen people involved right now. That includes the sheriff in Palm Bay, Fla., and Stan Bernstein from Cal Poly (Public Affairs)."

Maxwell pointed out that he wants this to be something that people at Cal Poly can look back on in a year and be proud the idea originated in San Luis Obispo.

If his idea gets off the ground, Maxwell said he'll take time off from his job at Atascadero State Hospital to pursue the project. He realizes, though, that it's not a guaranteed success. "If it flops it flops," Maxwell said. "But if it works, Cal Poly has a neat little federal thing."

Johannesburg police raid black union headquarters

JOHANNESBURG, South Africa (AP) — Riot police surrounded a black union headquarters Wednesday while officers went through the 11-story building with masked witnesses, apparently to make arrests for the killing of four railway workers.

The state-run South African Broadcasting Corp. reported on its television news that at least 11 people were detained after police searched the downtown building while it was cordoned off late into the evening. It gave no details.

More than 75 policemen, wearing plastic-visored helmets and tear gas canisters slung over their shoulders, stood guard with shortguns, pistols, dogs and whips in front of barricades of police cars and iron gates.

Officers used dogs to repeatedly push back hundreds of pedestrians and journalists trying to observe the entrance to the building, headquarters of the Congress of South African Trade Unions (COSATU) and its affiliates.

Maxwell, the 36-year-old biology major, is trying to get an office on the Cal Poly campus so people can call to find out more information about bizarre happenings. He said he's had great support for the idea from Cal Poly administrators, but it's still in the planning stages.

"It just struck me when I watched the news that night, that nothing really exists where, when crazy unexpected types of things happen in life, people can pick up a phone and find out more about it," Maxwell said. "There's so much that really helps on the spot!"

Details of the strange events Maxwell hopes to cover will reach Cal Poly through the general public. "Once an involved public becomes aware of something, the information will start pouring in. Once we have an office and a little support, you'll find people will pour in with information and suggestions on how to do it," he added.

Maxwell said he hopes for the office would include another person, a phone number to call in the city and a 30-day calling allotment on long distance phones. Where the office will be located still is unknown. "The office can go anywhere, but the credit goes to having been born out of Cal Poly," Maxwell said. "Cal Poly has taught me a lot, and it will be the center of this if I have my way."

Thursday evening Maxwell is holding a meeting at 7 p.m. at 3860 S. Higuera for anyone interested in helping with the project. He said so far he has a lot of volunteers who are willing to help.

"I've got about a dozen people involved right now. That includes the sheriff in Palm Bay, Fla., and Stan Bernstein from Cal Poly (Public Affairs)."

Maxwell pointed out that he wants this to be something that people at Cal Poly can look back on in a year and be proud the idea originated in San Luis Obispo.

If his idea gets off the ground, Maxwell said he'll take time off from his job at Atascadero State Hospital to pursue the project. He realizes, though, that it's not a guaranteed success. "If it flops it flops," Maxwell said. "But if it works, Cal Poly has a neat little federal thing."

Cal Poly eighth in line for asbestos cleanup

By Jenny Lampman

The next asbestos cleanup for the Cal Poly campus won't occur until next Christmas or the following summer, according to Plant Operations.

A budget for an $8 million asbestos cleanup for the CSU system has been approved by the state assembly and will be sent to the senate in a few weeks.

"We have our fingers crossed that it will pass," said JoAnne Betti, Plant Operations specialist for the CSU system.

If the budget is approved, cleanup will occur according to a priority list that was established by the CSU system. The Cal Poly campus has eighth priority out of the 19 CSU campuses.

Last summer a full assessment was taken of the asbestos condition at the Cal Poly campus and the buildings were prioritized. The amount of asbestos in a building is rated on a scale from one to seven, with seven as the highest. "Most of our buildings were rated as a five," said Ed Naretto, head of Plant Operations. "The Physical Education Building was the highest with a six."

Don Van Acker, a Public Safety officer, said, "Our campus is loaded with it (asbestos) because we have steam pipes going into every building."

"The PE Building has a large number of pipes. The exposed pipes are what we're concerned about," Van Acker said. "Our other major concern is with the workers in the area."

Naretto said that warning signs have been placed in the areas containing asbestos. "We told all our people working to presume asbestos is in the area."

Don Van Acker, a Public Safety officer, said, "Our campus is loaded with it (asbestos) because we have steam pipes going into every building."

"The PE Building has a large number of pipes. The exposed pipes are what we're concerned about," Van Acker said. "Our other major concern is with the workers in the area."

Naretto said that warning signs have been placed in the areas containing asbestos. "We told all our people working to presume asbestos is in the area."

Last summer $15,000 was spent cleaning up the asbestos. "We did a cleanup but not a removal of the asbestos. We sealed the areas that were bad," Naretto said.

The California Occupational Safety and Health Administration, a state agency that handles health and safety concerns, issued Cal Poly a citation for asbestos violations in December 1985. The citation said that a pile of debris in the utility tower under the Science Building was not cleaned up promptly. Asbestos debris was again found in the area after the deadline for the cleanup had passed.

Asbestos is a naturally occurring group of minerals composed of tiny, easily inhaled fibers. These fibers are flexible, fire-resistant, and virtually indestructible — qualities that have made asbestos very useful commercially. Asbestos fibers are used in heat and acoustic insulation, fire proofing, and roofing and flooring.

If asbestos fibers are inhaled or swallowed, they can have serious negative effects on health, which may not appear until 15 to 40 years later. It can cause scarring of the lungs which leads to breathing problems and heart failure. It can also cause cancer of the lungs, stomach, intestines and abdomen lining.

The School of Architecture and Environmental Design is presenting guest speaker Michael Rotondi of the architectural firm MORPHOSIS: Mayne-Rotondi tonight at 7:30 in the Architecture Gallery. He will discuss five national award-winning projects and other current works by his firm. The lecture will be followed by a reception.

*Kristen Jones, a senior materials engineer for Rockendyne, will speak on "Material Use on the Space Shuttle Main Engine" today at 11 a.m. in Room E-26 of the Science Building. The speech is the first in a series presented by the metallurgical engineering department on "Young Women in Non-Traditional Roles - Engineers."

*Dr. Marybeth Webster, an educational and community psychologist, will present a slide show on the women of America today at noon in Room 220 of the University Union. "Ordinary women reveal in their own voices their motives for becoming active in planet-healing work," The Multi-Cultural Center and Students for Social Responsibility are co-sponsoring.

*AAS Outings is holding a workshop on improving basic leadership and communication skills today at 11 a.m. in the University Union Craft Center Gallery.

*Prof. George Spindler, Stanford professor of anthropology and education, will discuss "The Cultural Factor in Educational Progresses" tonight at 7 in Room 286 of the Fisher Science Building. The lecture is part of the Innovative Teacher Education Lecture Series, sponsored by the Teacher Education Institute and the School of Professional Studies and Education.

*SFCLE must be received by noon two days prior to the event.

Bush heckled by protesters at university

MINNEAPOLIS (AP) — Hecklers shouted "Sieg Heil" during a speech by Vice President George Bush, who defended the protesters' right to dissent.

Dunant demonstrators called Bush a "baby killer" and "Nazi" during his 30-minute speech to 4,800 people at the University of Minnesota.

A group at the rear of the auditorium gave Bush a Hitler salute and yelled, "Sieg Heil."

Police ripped away a banner draped over the balcony guardrail that read "Bush for president!" and was emblazoned with two swastikas, symbol of the Nazi Party.

Bush is considered the frontrunner for the 1988 Republican presidential nomination.

About 50 protesters, some shaking their fists and yelling, marched toward the platform at the end of a question-and-answer period but were pushed back.

"I'll even defend these people," Bush said about the demonstrators. "They have a right to do it."

Three people were arrested for blocking aisles after the speech, said Gary Wilson, chief of university police.

Bush's speech was part of the Hubert H. Humphrey Institute of Public Affairs' Carlson Lecture Series.

Strong pitching helps Mustangs to two wins

The Cal Poly baseball team got back on the winning track Monday and Tuesday, sweeping a two-game series from the Highlanders of UC Riverside.

In the pair of wins, the Mustangs got strong pitching performances from Eric Brasilen and Mark Zapelli en route to their ninth and 10th victories of the year. Cal Poly won the games by scores of 9-4 and 6-2.

Both Cal Poly pitchers picked up complete games in the contests, with Brasilen earning his sixth straight win of the season. The junior righthander is a perfect 5-0 in conference play and 7-1 overall.

Zapelli, meanwhile, is 3-4 on the year and is a winner in his last two starts. He picked up a previous win Friday in the Mustangs' 14-9 win over first-place Cal State Dominguez Hills.

Despite his sub-.500 record, Zapelli is among the conference leaders in ERA, giving up an average of 2.80 runs a game.

In addition to holding the Highlanders to below four runs in each game, the Mustang pitchers had excellent strike out to walk ratio in both outings. While Brasilen struck out 10 and walked one in his outing, Zapelli struck out nine and walked three.

"Both guys pitched extremely well," said Cal Poly coach Steve McFarland. "It was the highest strike out to walk ratio we've had all year."

In addition to receiving strong pitching, Poly got 27 hits from its offense in the two games.

Leading into the place in the first game were catcher John Oriol, who went 3-for-5 with a home run and two doubles, and outfielder Jeff Smith, who was 3-for-5, including a double and a home run.

The Mustangs used Oriol's two-run homer in the first inning to jump out to an early lead and, after letting the Highlanders tie the score in the third, went ahead for good in the fourth. From there the Mustangs got a four-run fifth inning to break the game open and added Smith's seventh-inning solo homer to put the game on ice.

In Tuesday's game, the Mustangs used three-hit performances from third baseman Scott Reaves and outfielder Rich Shepperd to compliment Zapelli's strong pitching.

Reaves picked up three hits, including two doubles, while Shepperd got two singles and a double.

As in the previous day's game, the Mustangs jumped out to the early lead, picking up three runs in the third inning. They added the balance of their scoring on a single in the fifth and two runs in the sixth.

A. Senate debates utility of setting goals for university

well-rounded curriculum. The mission statement is good, he said, but it is just too vague. "We need to crystallize the mission statement and make it more specific," he said. "We need to outline a program that will be able to handle decisions such as the future of certain programs and the disbursement of lottery funds."

But some senators disagreed with the idea of spending the time and effort to create a new and specific statement. "I have a whole binder of goals and objectives, and I don’t even know what’s in there," said Tal Scriven, philosophy department head. "Every couple of years we update them and get a few new binders, but all they do is sit there. Do we really want to waste our time writing a bunch of stuff no one will ever read?"

Pamela Miller, an associate speech communication professor, agreed with Scriven. "We will always have goals and objectives but they don’t need to be written down in order to exist," she said. "And if we do spend the time and effort to accomplish this, I want to be reasonably sure that these policies will be implemented and not just a waste of time."

The first reading of the resolution calls for the new goals and objectives to be finalized by winter 1988, but at least one senator thought that schedule was too tight. "I was a member of the original committee four years ago," said Susan Currier, an associate English professor, "and I am hugely troubled by this time line. This committee is supposed to do in two quarters what Cal Poly has never been able to do."

French responded by saying that the two-quarter schedule should stand, because giving the committee more time would be like encouraging it not to make a decision. "In these kinds of groups there’s always the tendency to want more time, more data and more discussion," he said. "That doesn’t always guarantee a better decision, said just a later one."

The resolution will be heard on second reading at the next Academic Senate meeting, May 12. At that time the senate will take action on the proposal.
