New liberal arts majors objected to by other dean

By Anna Cekola
Staff Writer

A recommendation against 1988-90 catalog curriculum change proposals by the School of Liberal Arts was recently made by the dean of another school and has been met with surprise by liberal arts faculty. The School of Liberal Arts has proposed two new majors and additional classes in various departments.

Harry J. Busselen, Jr., dean of the School of Professional Studies and Education, said his recommendation to Associate Vice President for Academic Affairs Glenn W. Wrin was made out of concern for the difficulty students have enrolling in general education classes.

“The School of Liberal Arts has every right to make their own decisions, but a school with such a substantial general education component must also concern itself with the rights of the students and the obligation to provide courses for all students,” Busselen said. “I’m sure the school is considering that, but the question is how much of it they are considering.”

Busselen said that after analyzing the School of Liberal Arts' curriculum changes packet, he became concerned over the availability of staffing necessary for the estimated additional 200 hours of class and two new majors.

The two majors proposed are music and philosophy. Cal Poly currently offers only minors in each department. The Academic Senate is discussing these proposals and will send its recommendations to Wrin.

In his memorandum to Irvin, Busselen stated this concern as "a loss to understand how a school which hasn’t sufficient resources to meet the GE&B (general education and breadth) program needs can submit proposals that will effect an increase in the same membrane."

In the same memorandum Busselen added, "I do not believe that any of Liberal Arts' present or anticipated faculty resources should be allocated to new courses and programs until the school provides an adequate number of sections of GE&B courses to eliminate the student backlog and to meet future student needs."

Lag in grades leaves athletic eligibility hazy

By Dan Ruthemeyer
Staff Writer

Slowness in the processing of grades at Cal Poly may result in academically ineligible athletes continuing to compete in their sports, said Cal Poly's athletic representative.

English professor Michael Wenzl said academically ineligible athletes may continue to compete for up to a month due to the slowness with which grades are processed.

"What we do is go ahead and wait until we see the grades (before determining eligibility)," he said. "We're not real comfortable with that, but that's how we do it. We act on data."

As athletic representative, one of Wenzl's duties is to monitor the eligibility of athletes and to notify the National Collegiate Athletic Association when an athlete slips below the 2.0 overall college GPA or the 2.0 GPA at Cal Poly.

Despite the possibility that ineligible athletes are being allowed to compete, Wenzl said because the university is not doing it intentionally, there is little fear that the NCAA will become concerned.

"It is the institution's responsibility to say that when we put athletes on the field we should be able to say in good faith that they are eligible," said Wenzl. "If you don't have data on which you must make a decision, how can I fault you on that?"

"I have to assume if an athlete was eligible the quarter before they will be eligible this quarter," said Wenzl. "I assume athletes will make grades. I don't take an ambush approach."

Engineering block scheduling withdrawn

By John Grennan
Staff Writer

A proposal for block scheduling of classes in the electronic and electrical engineering department was withdrawn from vote in the Academic Senate last week after being rejected by the academic curriculum committee by a vote of 8-1.

James Harris, head of the EE/EL department and proponent of the issue, withdrew his proposal after a discussion of block scheduling in the Academic Senate.

Block scheduling would have required EE/EL students to take corequisite classes in their junior year and take between 12 and 14 units per quarter in their major.

"The students and the Academic Senate didn't have the confidence the students could handle the schedule," said Harris. "We'd better prepare them for what they will face on the job or we're doing them a disservice."

Harris said he believes block scheduling would better prepare students for their futures as engineers. "Students must show the ability to handle time pressures and a work load," he said. "It's not sufficient just to have the quality."

Chairman of the engineering council and senior electrical engineering student Todd Reintart said he was very happy it didn't pass. "It creates an elitist system," he said. "It's not practical."

What Harris liked about block scheduling was that all students would be taking the same classes at the same time. "They would have the same work load and be evaluated equally," he said.

Reintart countered this argument by saying that not only would students be graded by different teachers, but there could be no guarantee of getting in classes.

Among the other reasons Reinart didn't like the idea was that it would deter people from going on co-ops, discourage outside ac-

IN QUOTES

The utterance which an adult knows to be a "lie" may well reflect a child's deepest conviction, at least at the moment it pops out.

-Gary Trudeau

Contrary to popular belief, cramming and all-nighters aren't requirements of college life. See INSIGHT, page 5.
Ticket scalpers ruin graduation's dignity

The stage is set. Hundreds of people pour in for the ceremony of the year. Tickets were depleted quickly and all remaining tickets were sold by scalpers weeks before the event. A hushed expectation settles over the crowd as the music begins.

This has all the makings of a sold-out rock concert, but it is really the ceremony that honors the culmination of years of hard work. The music is "Pomp and Circumstance" and the ceremony is commencement.

The true irony is that some audience members will have to pay upwards of $30 bucks to see through a ceremony that everyone else entered for free.

For Cal Poly students, graduation is the light at the end of the tunnel. Unfortunately, the momentous occasion is marred by the dilemma of graduation tickets.

Because of space limitations, each graduating senior is given only five tickets, and people must then decide who they want to invite their parents and both sets of grandparents, they are already short one ticket. And what about siblings or close friends? The ideal situation would be for those who are using only a couple of their tickets to pass the rest along to people who need more.

Some argue that it is a simple case of supply and demand. People who want extra tickets badly enough will pay whatever is necessary to get them. The problem with this argument is that those who desperately want extra tickets may not have the money to pay for them, especially if the prices soar toward $50 a ticket.

It's one thing to scalp tickets for a concert or a sporting event, but graduation is a once-in-a-lifetime occurrence. The ceremony itself is sometimes boring, and it gets hot wearing the cap and gown in the June sun. But it is a time for parents to take pride in the accomplishments of their children and a time for graduates to celebrate achieving a milestone in their lives. By taking advantage of this situation, scalpers of graduation tickets are demeaning the accomplishments of themselves and other graduates.

If those who sell graduation tickets think about how they would feel if the situation were reversed, maybe they would come to their senses and have a little sympathy for their fellow graduates. After all, money earned from selling tickets is quickly spent, but photographs and memories of the graduation ceremony can last a lifetime.

After all, money earned from selling tickets is quickly spent, but photographs and memories of the graduation ceremony can last a lifetime.

There are some graduates who prey on the plight of others.

*I would certainly like to know why a trigger-happy pilot decided to fire on the basis of radar signals, why there wasn't more identification.*

Howard Baker, White House chief of staff, reacting to the Iraqi attack on the USS Stark.

"It was just like in the movies. Two officers walked up to the house about 3 o'clock and said, 'Sir, we regret to inform you that your son gave his life in the line of duty.'" Robert DeAngelo, whose son was killed in the attack.

"Donna still has trouble believing it could have been one of her friends, but it had to have been one of her friends." Yet another friend of Donna Rice, who thinks an acquaintance tipped off The Miami Herald of her relationship with Gary Hart.

"Obviously we have more problems than the rest of the state put together." Los Angeles school board member Roberta Weintraub after learning that Los Angeles' high school dropout rate is tops in the state.

"We kind of felt our way through the year and that's where we lost some of our ambition." ASI vice president Stan Van Vleck on the need of job descriptions for ASI officers.

"We'd probably handle it the way we'd handle R-rated movies." John Scott of KSBY-TV on running condom ads.

"We'll do everything we can (to help) under the circumstances," University Graphic Systems.

Tipsy Taxi needs help from all campus clubs

Editor — Attention campus clubs! The Tipsy Taxi program has received from ASI $2,000 of its needed budget of $2,500. This program is not only important because it helps keep drunken people from getting behind the wheel, but it is also accessible to everyone in the community. It strengthens student-community relations in general and needs the most.

Last fall, the IFC donated money to this program, which is fantastic. But where is the community-service support from other campus organizations? The Greek community should not be the only one to provide support.

Two weeks ago the Poly Phase club donated $100, and we would like to challenge any club to join in supporting the Tipsy Taxi program, no matter how small or large the donation. Come on! DAVE BENHAM

LETTERS

Hart's fall is an issue of political stupidity

Editor — The issue of invasion of privacy by the press is a hot topic. But by criticizing the press' role in Gary Hart's downfall, you miss the hotter issue: that voters are using the press to see how a public figure handles himself politically. The press (and most everyone else) is confused by the Hart scandal because the issues being widely discussed — womenizing and political parties — are subjective issues. But political stupidity is more objective. The real issue is that Hart has proven himself to be immoral (because everyone sees sexual mores differently), the real issue is that Hart has proven himself to be unworthy of the presidency — the most politically visible office in the land.

Gary Hart failed political boot camp. The public thinks he failed moral boot camp, too. GREG MCKENNEY

LOS ANGELES (AP) — The American Humane Association has been unable to substantiate allegations that trainers abused chimpanzees in the movie "Project X," and possibly killed two of the animals, a group official said Wednesday.

Game show host and animal rights activist Bob Barker said three weeks ago that he and the Society Against Vivisection were told that trainers used black-jacks or clubs to beat the animals during 81 days of filming for "Project X."

The movie, starring Matthew Broderick, is about a young Air Force pilot who saves a group of chimps from a terrible experiment.

"The American Humane Association has not found a single instance of abuse that can be substantiated," said association official Carmelita Pope. She characterized the allegations of the animal rights group "a rumor that somehow grew."

Bridge engineers honored

SAN FRANCISCO (AP) — Seven engineers who worked on the construction of the Golden Gate Bridge 50 years ago were honored Wednesday as the bridge's anniversary celebration got under way.

Later, officials cast a wreath under the bridge in memory of 10 workers who lost their lives in an accident during the last year of the bridge's construction.

The ceremony was conducted in front of a statue of Joseph Strauss, the chief engineer of the bridge project, amid the colorful flower beds trapped in the snapshots of the century.

San Jose gets a trolley car

SAN JOSE (AP) — The first operating trolley car in Santa Clara County's $421 million light-rail system made a run Tuesday.

Although the northern segment of the 20-mile line is not expected to open until December, the measure was in line with the South Korean government's promise to restrict its trade surplus with the United States this year to last year's level of $7.3 billion.

South Korea has taken various market-opening measures in recent months, cutting tariffs or lifting restrictions on foreign imports in a move to avert growing trade frictions, mainly with the United States, which takes 40 percent of its annual exports.

Speed limits change; confusion expected

(AP) — Confusion over varying 55 mph and 65 mph speed limits on the nation's interstate systems won't keep ticket-writing state troopers from etching this Memorial Day weekend permanently in the memory of many motorists.

Since Congress voted April 2 to give states the option of boosting the speed limit to 65 mph on rural interstates, 24 states have switched sections of their interstates to the higher limit and 15 are considering it. Sections of the interstates running through cities with populations over 30,000 must remain at 55 mph under the federal law.

Although states have been converting to 65 mph for almost two months, widespread confusion about the change could surface this weekend, the traditional start of the summer vacation, said Mike Right, spokesman for the American Automobile Association.

"As people begin to make their outings outside of the urban areas and cross state lines, they're going to encounter a real hopscotch of various speed laws," Right said.

The confusion has gone beyond the interstates. Nevada reports more speeding on the state's U.S. highways since it increased the speed limit to 65 mph for rural interstates in April.

"People didn't understand it applied only to the interstates and not to other roads," Nevada Transportation Director Garth Dull said.

Dull noted that Nevada has hundreds of miles of straight-as-a-shot highway through empty desert. And it was the last state to post any speed limit on outlying highways.

Ending the all-nighter: studying to take control

The best in study habits and grades requires organization and preparedness to avoid procrastination and stress

By Danielle Letenyei, staff writer

Many students are familiar with the all-night cram sessions that go hand-in-hand with midterms and finals. But, studying material from the whole quarter at three in the morning on a caffeine high is not the most effective way of studying.

Several Cal Poly experts on study habits say that procrastination is the biggest problem students have when it comes to studying. Procrastination usually results in cramming and the dreaded all-nighter.

"Cramming is the most ineffective way of studying," said Trish Stewart, a coordinator at the Learning Assistance Center. "It doesn't allow enough time to learn a lot of material."

If a student is having trouble understanding a class, the Learning Assistance Center offers tutors and seminars that can help students on specific subjects and improve studying techniques.

"The main function of this center is to work with students and their study skills," said Stewart. "We hold various seminars and have three counselors who work with students."

Time management is a way to avoid procrastination and cramming, and it is also the best study habit a student can have, according to Leslie Ramsden, a reading specialist. "Students who procrastinate find themselves with too little time to learn information and they stress out."

Ramsden said that the belief in "test anxiety" and feels that as a student’s knowledge increases, anxiety decreases. "The more prepared you are the less stressed out you will be."

Ramsden teaches a class on efficient reading (ED 125). The class covers all aspects of study habits and the most efficient ways of studying. Topics such as speed reading, reading study methods and effective note-taking are included as equally important to the study process.

One note-taking method taught in Ramsden’s class is the Cornell System Format. What this format entails is going through notes after class, pulling out the key points and phrases and putting them in the left hand margin.

Ramsden also suggested underlining or highlighting notes to emphasize key points. She said students should use a pencil to underline because it’s erasable and isn’t as distracting as the colorful pens.

"A study that was done on the effectiveness of underlining showed that students who underlined an average amount and less got higher scores on their exam than those who underlined more than the average," said Ramsden. She also said when students are buying used books they should buy one with the least amount of marks so they aren’t studying what someone else thought was important.

"Cramming is the most ineffective way of studying. It doesn’t allow time to learn a lot of material."

— Trish Stewart

A rapid reader’s involved with the text. Choppy reading leaves too much time for daydreaming.

— Leslie Ramsden

Ramsden said that speed reading and students’ reading rates can affect their ability to study. "A rapid reader is involved with the text," she said. "Choppy reading leaves too much time for daydreaming."

Ramsden mentioned a number of effective study skills that students should use:

- Develop a time management schedule
- Recite out loud while studying
- Use flash cards, outlining techniques, and mapping techniques (drawing a picture to visualize material)
- Use mnemonics (acronyms) and rhyme association
- Study with a partner (if both are prepared but the partner knows less)
- Talk to the professor if unsure of the material

Ramsden said that speed reading and test, said Stewart.

"I would recommend that, at the end of the week, students consolidate all the information they got from the lectures that week," said Stewart.

In the past students have looked for the "easy way" to pass exams without taking the time to study. One such tactic is to listen to a tape of notes while sleeping. "Listening to a tape of the lecture while asleep will not help you pass your test," advised Ramsden.

On Scantron tests, another common but erroneous tactic is choosing "B" when all else fails. Stewart said that such test-taking myths are not recommended. "Preparing will give much better results," she said.
AIDS: feared more than war

Although Poly students say the spread of AIDS frightens them more than does the threat of nuclear war, their actions do not seem to show it may have three ladies who he sleeps with to realize that it's risky behavior.

In "The Year of Loving Dangerously," an article on changing sexual behavior that appeared in the April edition of Newsweek On Campus, a Georgetown University senior is quoted as saying, "I don't think that people are aware that victims could possibly be white, Protestant or Catholic, middle or upper class. It's always the others."

Survey results showed that Cal Poly students may be communicating more effectively with new partners, however, in an effort to practice safe sex. Nearly half of those surveyed who are sexually active reported discussing sexually transmitted disease/condom use before intercourse with a new partner.

Oscar nominee, costumer tell what showbiz is really like

By Monica Fiscalini

One might not expect an Academy Award nominee and the women's costume designer from "Moonlighting" to begin their talk to a roomful of Cal Poly students with Snicker's bars in their mouths, but they did.

Snyder's college roommate supplied frozen Snickers on a stick and Diet Cokes, which Harper called "the breakfast of champions." The friends, who met on the television mini-series "Celebrity," didn't put on airs as they answered questions from students. The students weren't interested in whether Bruce Willis and Cybil Shepherd are off-stage lovers. They didn't ask Harper, "What is Diane Keaton really like?"

Students wanted to know what the business is really like and what it takes to make it.

Harper is a believer in perseverance. "As long as you have the courage to keep going, there's something will happen," she said.

In 1980, while living in Dallas, Harper allowed herself three years of concentrated effort to make it. Harper got her degree in theater in 1972 and after working in community theater, bilingual children's theater, regional theater and commercials, she made her film debut in "Tender Mercies" opposite Robert Duvall.

Snyder's costuming experiences began at Cal Poly between 1971 and 1975. She was the in-house costumer for three years, while pursuing her degree in speech communication. She said she didn't realize at that time that costuming would be her career.

She went on to the largest costume house in the world, Western Costume Company, where she worked with Edith Head and other Oscar-winning costumers. Snyder was the costumer for several mini-series, "Poltergeist" and "The Day After."

Snyder said there are still people who would like to costume, but right now she is content to outfit Shepherd's soapy nighttime figure. She said often four to 10 of the same "Moonlighting" costumes have to be made. They go to the ABC Circle Film wardrobe department after being worn only once. The costumes are lucky, extras will wear them someday.

Harper works in theater, film and television and discussed aspects of all three without really citing a preference. "I like the luxury of a feature film," she said, pointing out that while she had the script for "Crimes of the Heart" four months before shooting began, when she did an "L.A. Law" episode, she received the script the night before.

She also shared some "war stories" from her theater experience, including flubbing lines. "That's what makes it fun," she said.

Harper explained how she prepares for a role, whether on screen or stage. Using her script as her Bible she uses such "Acting 101" exercises as "emptying the mental wastebasket," to build her character in her mind.

Neither Harper nor Snyder were afraid to express political opinions to the audience of students, but Harper said she isn't ready to use her fame for political causes.

"Whether I have a right as an actress to get up and use it as a podium is a debatable subject. Unless I had a lot more knowledge than I do," she said she wouldn't use her status. "Although it has never stopped an actor from being president, lack of knowledge." After the formal discussion, Snyder said she thinks Cal Poly needs to have a major in theater, calling it a very viable thing. She dreamed of it when she attended Cal Poly and thinks Cal Poly has the best facilities because it would be small enough for everyone to get involved. "I wish it would happen," she said.

One Step Beyond the Ordinary

By Monica Fiscalini

From page 1

ing. "I can't function in the morning," said the freshman computer science major. "My friends can vouch for that.").

Steve Avery, a junior in graphic communication, does his studying as part of a small goal he has here. "I'd like to graduate by the year 2000," he said.

Goodness, how much studying do people have to do? Most people talked to average about two to three hours a night, depending on the major.

Avery described how he studies: "A little bit of this, and a little bit of that. But not much really. I can't function in the morning. " I can't function in the morning."

"I've only taken small breaks every once in a while so I don't go nuts."

His breaks may constitute ordering take-out delicacies such as pizza or Chinese food, talking to friends, or playing his stereo for a little bit of this, and a little bit of that. But not much really. I can't function in the morning."

Said senior Cynthia Nunes, "When you're a senior you do boring things, especially when your boyfriend is out of town."

Council to welcome arts program

By Dawn J. Jackson
Staff Writer

The San Luis Obispo City Council voted Tuesday to welcome students and professional artists of the University of California State University Summer Arts Program to San Luis Obispo.

"I would like to make a motion that the city fully cooperate and participate in hospitality efforts for the program through a banner, a proclamation and an opening ceremony," said council member Penny Rappa.

The council passed the motion unanimously, minutes after voting 3-2 to deny the original unanimous, minutes after voting 3-2 to deny the original

Tourism doubles SLO's income

By Jenny Lampman
Staff Writer

San Luis Obispo used to generate its income from cattle, horses and lettuce. But within the past few years the sights of Hearst Castle and the Pismo Beach area are attracting tourists from such as the San Luis Obispo Criterium have helped to move to more income.

According to figures released by the San Luis Obispo Chamber of Commerce, almost a third of a billion dollars was spent by tourists in San Luis Obispo and the surrounding area in 1985.

"People are becoming more mobile because of cheaper gas. They're traveling within the state because of the threat of terrorism overseas, and people out of state are flying into San Francisco, renting a car and then taking them down the coast to Los Angeles and then flying to San Luis Obispo," said director of communications at the Chamber of Commerce.

The city of San Luis Obispo has also started an extensive advertising program. Eight communities within the county have banded together to pool money for advertising the benefits of visiting San Luis Obispo. Articles such as the ones in San Luis Obispo and the surrounding area have resulted from this effort. The Chamber of Commerce has also been admitted to the public relations agency for the city, sending press releases statewide of the activities going on within the city.

Cal Poly will host the program, which is a series of one-to-four week sessions in writing, dance, music, film and video, drama and visual arts. Participants will work with professional artists and perform for the public in the evenings.

About 500 students and 140 artists/teachers will be attending the summer arts program. Bessie Swanson, associate dean for the School of Liberal Arts, spoke on behalf of the committee. She said the group wants to welcome the visitors and make them feel at home in San Luis Obispo. They would use the money to buy a banner, publicize some shows and host receptions after performances.

Mayor Ron Dunin said he would like to help, but he couldn’t find a way in his mind to substantiate the city giving money to this cause.

Council member Glenn Deane Dovey agreed, saying that whether the program was worth-while was not in question. The committee did not meet the criteria for a promotional coordination committee grant.

For a PCC grant, a group must be an incorporated, non-profit group and the activity must have a budget.

Council member Robert Griffin voted against denying the funds. "This could be an exciting opportunity. It could give this community a great reputation. We should go beyond the PCC and negotiate with the city staff for the funds," he said.

Council member Allen Settle also voted against the denial.

Tech writing certificate OK'd by A. Senate

By Stacey Myers
Staff Writer

Cal Poly students will be able to become certified as technical writers beginning in 1988, the Academic Senate decided Tuesday.

The Academic Senate voted to approve that the technical communication certificate be included in the 1988-1990 university catalog. The certificate will be offered through the English department and will require 25-27 units of advanced writing, speech, and computer science courses.

In other catalog changes, Cal Poly may be one step closer to having a bachelor's program in the philosophy department. In an unusual move, the senate did not discuss the philosophy department's proposal before moving it to a second reading.

Earlier, the senate's curriculum committee had approved the addition of a philosophy major, saying the program was "too weak" and that there weren't enough potential philosophy majors to justify the program. The senate will vote on that proposal at its next meeting, May 26.

The approval of the technical communication certificate will be advantageous for all Cal Poly students, said Susan Currier, an associate professor in the English department. She said the program was designed to give Cal Poly graduates a specific advantage in the job market.

"Our English majors face job competition from students from other universities with these certificates," she said. "Now our graduates will be able to go out there and say 'Not only am I an engineer, I'm a professional writer.' We are a polytechnic university; we are the best place to offer this program.'

Currier emphasized the technical writing certificate will be a compact program address- ing only technical writing issues.

"This will be a program for technical majors who want to develop their communication skills without studying Chemistry," she said.

How the English department will staff the new program when students are already waiting in line for general education courses was a point of dispute for some senators. Currier pointed out that the philosophy department should be getting more instructors.

"We (the English department) have not been allocated the amount of teachers the program is earning," she said. "And if all you want us to teach is (general education and breadth), then we've got a problem."
From page 1

Clifton E. Swanson, music department head, called the situation an "awkward position to play and we intend to do everything we possibly can to help the student-athletes." Ericson declined comment on Wenzl's criticism, saying: "I may be astounded and perplexed by the amount of work that needs to be done, but I am not assured and perplexed by the possibility that we have not been doing enough." Swanson said his response memo expressed concerns involving the two points: "Busselen is objecting to adding and improving liberal arts departments without any understanding about how staffing is being worked, and without any support of the precise," Swanson said. "He is also treating the school as a service department to the university when we have our own department to work with. Denying the flexibility to improve our programs is of no place.

Additional courses proposed by the music department, Swanson said, are experimental courses already offered and wouldn't require extra staffing. "Just because someone proposes courses does not mean that extra instructors would be hired." Busselen also sent a copy of the memorandum directly to Jon M. Ericson, Cal Poly's vice president for academic affairs, and to the faculty in the School of Liberal Arts. Ericson asked all department heads within the School of Liberal Arts to respond in writing to Busselen's recommendations, adding to the informational process involved in making curriculum changes. "Faculty initiate curriculum changes and these changes are made in subject matter that faculty feel are most important to be added," Ericson said. "Faculty are thoughtful of their disciplines and changes are made after thorough thinking about what's best for students in each discipline. Without the changes requested, the professional judgment of the faculty in this school would, in this two-year period, be ignored."

Without the changes requested, the professional judgment of the faculty in this school would, in this two-year period, be ignored."

In addition, Sacramento institutes a weekly check of the number of classes in which each athlete is enrolled to determine whether the athlete is carrying the required number of units. One of the few instances in which Sacramento State runs into the problem of needing grades to determine eligibility is when transfer students who set out a year of competition need to have their academic eligibility checked. In this case, said Olmstead, athletic representative for Sacramento State, said instructors of student-athletes are given one-sheet questionnaires during the fifth and ninth weeks of the term asking about the athlete's progress.

"What we do is go to the faculty and say, 'Can you satisfy us in writing what grade a student got in your course?'" he said. "All we can say (to instructors) is that students can be in an awkward position to play and we can ask for help.

While the time involved in processing grades affects when athletic eligibility is determined, Wenzl said it also has several other implications. "I'm in the same position as is everyone who gives (academic)senior status or any financial aid," he said. "Anyone who depends upon the school to give them in timely fashion is delayed."
Crew strong in final competition

The Cal Poly crew ended its most successful season during the weekend with a strong finish at the Pacific Coast Rowing Championships.

The 3-year-old organization entered six events in its first appearance ever at this well-known regatta and faced competition from nearly 1,300 participants from more than 30 universities.

The varsity eight took third in the Petite final behind UC Davis and Western Washington University. After coming off the line with a six-seat lead, the men battled back from a poor start, the men were able to pull it together enough to catch the Berkeley and San Diego boats by the halfway mark, but couldn’t keep up the pressure and finished in fourth.

The varsity lightweight eight men hammered stroke for stroke with a strong San Diego State team to finish in second place. After sprinting past UCLA, the Mustangs made up ground on the faltering Aztecs to miss first by one second.

“If we had 10 more meters on the race course, we would have taken them. They were physically exhausted and would not have been able to hold us off,” said Matt Hanko.

The junior varsity lightweight men took fourth in their category behind Washington State, UC Berkeley and San Diego State. After a poor start, the men were able to pull it together enough to catch the Berkeley and San Diego boats by the halfway mark, but couldn’t keep up the pressure and finished in fourth.

The novice women’s eight finished second in its final race of the season behind a quick UC Davis crew. The women finish the season ranked 14th on the West Coast in their division.

The varsity lightweight women, favored to win their event, had technical problems during their final and finished fifth overall. Their time of 7:56 was 22 seconds behind trophy winner UC Santa Barbara.

The varsity lightweight women will get a chance to avenge their loss in two weeks when they line up alongside the best college crews in the country at the Women’s National Championships, which will take place at Lake Natoma in Sacramento.

Women start well in track championships

By Jim Hawkins

The first day of the track championships in Cape Girardeau, Missouri, are over. So far Women’s coach Lance Harter has nothing to complain about.

“We’ve had a great day,” Harter said. “Everybody’s healthy and performing just great.”

In the only final of the day, junior Pauline Stehly raced to a second-place finish in the 10,000 meters with a time of 35:35.06. Stehly was the first American to finish the race, losing only to Bente Moe, an Olympian from Norway.

“Her (Stehly’s) time was a little slow, but it was a great race under the harsh conditions. She beat some tough runners,” said Harter.

According to Harter, race conditions are above the danger level in Missouri. Safety levels are dependent on a combination of temperature and humidity levels, which were surpassed on the first day of the meet.

“Humidity is really bad here. It’s going to be tough on some of our distance runners,” said Harter. “We’re going to have to be much more conservative at the start of races.”

Sharon Hanson and Laurie Johnson finished first and second respectively in their heat of the intermediate hurdles, easily out-distancing the other runners. However, Yolanda Henry, a runner for Athline Christian — the Mustangs’ main competition for the team championship — won her heat with an impressive time of 58.72, setting up a key match-up for the finals on Friday.

Teena Colebrook took second and Noreen DeBettencourt third in their heat of the 400 meters. Harter said they were “running easy” to be ready for their upcoming races.

The Mustangs also qualified their 400-meter relay team for the finals, as they turned out the fifth best time of the day with a 46.38. Abeline Christian’s relay team, ranked second, was disqualified.

The men only had two competitors involved in the first day of action. Dave Johnson won his heat of the intermediate hurdles, as he continues his bid for the national championship that eluded him last year. Erik Josephson, the other Mustang competitor, failed to make the finals in the 200-meter race.

Those who haven't done anything haven't done enough. Without Mother Earth what else is there, environmentalist Lone Wolf Circles asked about 25 people gathered at Linnaea's Garden Cafe for the second Deep Ecology Medicine Show on May 14.

Lone Wolf Circles is one of three "Earth Firsters" who has been on the road since April trying to strengthen personal convictions of closet and die-hard environmentalists.

"Earth First! is not necessarily an organization. It's a movement of people who feel the earth should be as much a personal conviction as anything. It's really a personal conviction you have," explained Dakota Sid, guitar player and singer for the Deep Ecology Medicine Show.

The Deep Ecology Medicine Show is a collection of poetry, music and slides illustrating the intense devotion of Lone Wolf Circles, Dakoda Sid and Walkin' Jim Stolz to saving the wilderness.

It's far from being another Sierra Club. Lone Wolf Circles described the Sierra Club as being no better than other "corporate rapists" using the earth as a resource to be exploited for personal pleasure.

"Sierra clubbers are like the others arguing about environmental matters like politics," said Dakoda Sid, "like Gary Hart's sex life," the environmentalist hissed at his audience.

The Sierra Club has been sentenced to murder, shouted Lone Wolf Circles, lampooning, "corporate rapists are spelling lions' deaths with dollar signs."

Unlike most of the Earth First! events, this one did not end with a protest and no one was arrested. "We often follow the conviction with an organized rally," said Dakoda Sid, a tall thin guitar player. "We blockaded logging trucks and bulldozers in Oregon. It's a really grassroots feeling when people go to jail for a personal conviction."

The Earth First! headquarters in New Mexico is still getting letters from those arrested in Oregon.

"It (Earth First!) is a movement and to be a movement you have to move. Intellectualism is not enough, you must feel it." Dakoda Sid growled at the audience.

By Diane Zundel

"Think of your best friend dead," said Diane Zundel, staff writer. "Now, think of your best friend drunk."

This powerful message, a warning for students who drive drunk, is one of the many posters promoting the California Highway Patrol's annual "Sober Graduation." No drinking and driving is the theme of this year's ceremony, which began in 1985.

Sober Graduation is a special awareness campaign targeting young drivers celebrating graduation nights, proms and end-of-school parties. The program is a community-wide effort involving the CHP and Cal Poly, Cuesta College and San Luis Obispo County high schools.

The highway patrol supplies posters, bumper stickers and window stickers with statements discouraging students from drinking and driving. It also provides educational guidance with filmstrips on dangers of driving drunk.

Reps from schools and members of SADD (Students Against Driving Drunk) also participate by providing activities such as written contracts requiring students not to drink and drive on graduation night, putting up displays at schools, and organizing essay contests on alcohol dangers.

Sober Graduation began in 1985, and last year the CHP noted a 14.6 percent statewide decrease in accidents involving students between the ages of 15 and 18.

Cal Poly will hire a security firm to control alcohol awareness by placing posters around campus and ads in Mustang Daily and by distributing bumper stickers. Also, the "no-alcohol" regulation during graduation ceremonies will be strictly enforced.

"We're really going to enforce it this year. We want to make people aware that graduation is coming up and it's time for celebration, but that you don't necessarily have to do it with alcohol," said Kathy Hallgren, a health educator at Cal Poly's Health Center.

Hallgren said last year's graduation ceremony "really got out of hand." Students drank alcoholic beverages they had hidden under their gowns and became so rowdy that commencement speakers could not be heard.

So in addition to promoting Sober Graduation with pre-graduation activities, Cal Poly will hire a security firm to confiscate alcohol during the ceremony.

Because there are "more noticeable arrests" of students driving while intoxicated during June, when graduation ceremonies occur, the CHP will have four extra officers on patrol each weekend night in San Luis Obispo County, said Capt. Max Van Orsdel.

He said the CHP will not pay special attention to Cal Poly on its graduation day because, unlike Poly Royal, "we've never noticed it as a problem." Read blocks in San Luis Obispo during June will not be implemented, said Van Orsdel, because the Supreme Court has yet to declare them legal.

Then he told how a group of about 40 Earth Firsters crashed a session of the New Mexico Senate last year. "We ran to the middle of the chamber, held hands and howled. And you could look up and see these senators all uptight and wearing business suits — you know they don't have a sex life," he laughed.

The show that began with melllow music and breathtaking slides of Walkin' Jim Stoltz's walk through thousands of miles of wilderness ended with the raucous howling of an audience fired by the raw, primitive poetry of Lone Wolf Circles.

The Deep Ecology Medicine Show will be on the road traveling through Washington, Oregon, California, Arizona and possibly Colorado until June 18 or until funding runs out.
