Surf’s up in Pismo for the Budweiser Open

By Anthony Lopez

Richie Collins rides a wave on his way to placing fourth in the Budweiser Open this weekend.

For the first time ever a professional surfing tournament was held at the Pismo Pier during Memorial Day weekend.

The $7,000 Budweiser Open was the ninth stop of a 15-city tour of the Professional Surfing Association of America.

Strong offshore winds and small waves didn’t distract more than 100 participants from competing for the prize money. Some of the nation’s top surfers and several local stand-outs headed the competition.

The big winner was Chris Frohoff from Hermosa Beach. Frohoff collected the $1,700 first place check and a trophy. During the finals heat he surfed about 100 yards away from the other three finalists. “That was strategy,” he said. “I thought the lefts were holding up longer over there and it worked out for me in the earlier heats.”

Frohoff said the windy conditions and the small surf didn’t bother him. “I’m a goofy foot (right foot forward) and the way the waves broke left was suited for me. I’m used to these kind of conditions.”

Central Coast entrants didn’t perform so well. Arroyo Grande’s Simon Mason made it to the quarterfinals but settled for a ninth place finish. Former Carucos resident John Parmenter was eliminated on the first day of competition and had this to say about it: “Every tournament I end up in the most competitive heats. I was the best out there but I guess the judges didn’t see it that way.”

Other disappointments included No. 1-ranked Mike Lambers, who failed to make the quarterfinals cut on Saturday.

Contest director Greg Marter said, “The PSAA was forming three years ago. It’s a new tour; relative to all other sports we’re quite a new thing. I really feel the snowball effect is starting to happen.”

Surfing’s definitely had an image problem to overcome — the surfer bum image — but I think it’s making a change for the better.”

A crowd of about 500 showed up for the Budweiser Open. Bill Sullivan, public relations director for PSAA, said the contest was a success.

“I hope it continues to improve,” said Sullivan. “Surfing’s up in Pismo for the Budweiser Open. Bill Sullivan, public relations director for PSAA, said the contest was a success.

“I hope it continues to improve,” said Sullivan. “This is a good area for surfing and I’d say we’ll be back.”

Poly rents 3,200-acre ranch

By Stewart McKenzie

Two Cal Poly students founded U-Bru, a company that sells in-home beer making kits. See PULSE, page 5

The charm of fishing is that it is the pursuit of what is elusive but attainable, a perpetual series of occasions for hope.

— John Buchan
Dispensing morals

Before the Student Senate approved on-campus condom dispensers last week, lively debate ensued when several senators and ASI President Kevin Swanson insisted that the vending machines would promote promiscuity. It just might be true that the availability of condoms is enough to provoke heated carnal passions. But steamy movies, a few beers and old-fashioned love also have been known to have that effect.

There are no statistics to prove that the availability of condoms on college campuses promotes promiscuity, but it is a documented fact that the use of condoms can prevent the spread of AIDS.

By arguing that the approval of on-campus condom dispensers is "public support for promiscuity," Swanson and some senators took it upon themselves to decide our moral values. But the issue is not one of morality; it is one of life and death.

If condoms do promote promiscuity, it is just a price we have to pay to save the lives of many.

The return of Engineering West

It will be pleasant to return in September and see Engineering West restored. Repair of the building, which was gutted during last year's Poly Royal, will begin in June and should be completed by fall quarter. Not only will the campus regain much of its attractiveness, students and faculty also will gain valuable classrooms and facilities.

LETTERS TO THE EDITOR

Rejection rate cannot be blamed on women

Editor — C’mon Bob! Why blame us women for your strike-out record? I find it really hard to believe that 40 percent of the females at Cal Poly are lesbian. Even so, you are simply blaming the fact that you’ve been rejected — repeatedly. Wake up and smell the coffee. There are plenty of fun, intelligent, prospective girls to date in SLO. Trust me, it’s only a matter of time before the women in Santa Barbara discover what a narrow-minded, immature little boy you really are.

And about having your degree that says B.S., you are the one who spent at least four years getting it. I guess that makes you a D.S. for not appreciating it.

SHELBY TOCHER

Some tips for dating at Cal Poly State U.

Editor — Well R.H., sounds like a problem. Perhaps I can help with a few tips. First, when at a social establishment, introduce yourself as being Sparky. This way, women may assume you wear the upper echelon. Second, always order a Corona (with a lime). This shows that you know what is hip. Third, if all else fails, go ugly early before you wait too long, they may already be claimed.

R.H., realize that I’m just kidding you about going ugly. Just relax and enjoy your stay here at Cal Poly State.

B. DUBROIDGE

Life as Poly male like being stranded at sea

Editor — We find it hard to believe that 40 percent of the female population at Cal Poly is lesbian. This figure seems a bit high. We do, however, agree that there is a serious lack of social dating and this would offer a plausible explanation.

We also find it difficult to believe that an academically stressful environment would be the cause. In this to say that females are wimps and cannot handle life at the big university?

Of course not. What exactly is the problem then? We suppose being a male at Cal Poly is somewhat like being stranded in the middle of the ocean with water all around but not being able to drink a take. In daily conversation with males, we have found that Bob’s situation is certainly not a unique one; unfortunately, not all of us are able to commune frequently to Santa Barbara. We guess we’ll have to crack another beer.

RICK VAN LYCK

Alcohol the alternative to nonexistent dating

Editor — It is about time someone came forward to present a topic of concern. I attended two other universities before transferring to Poly. People drank, but there was less emphasis on quantity. My dorm had 27 alcohol violations my first quarter here. Every year, more bars seem to appear in town, but the campus and town restrict alcohol — or do they?

As far as dating at Poly is concerned, it’s practically nonexistent. Walking on campus, the signs of suspicion and stress tell the tale of the atmosphere here. To me, alcohol seems to be the alternative to dating.

Come on people! Open up and just be yourselves. Many are missing out on an important part of going to college!

T. BURKE

Letter on social life an accurate description

Editor — I would like to commend R.H. Bohl for his insightful and relatively concise depiction of Cal Poly’s social scene. I can’t confirm his statistic of a 40 percent lesbian rate at this school but I wouldn’t be shocked. The females not included in this statistic must have taken Rejection 313 with its central theme, “You are a nice guy, but...” It is sad to see that guys without Greek letters, Corona Beach Club shirts or fancy cars must resort to excessive drinking to enjoy their college experience.

JOHN E. BLANE

Captains are responsible for attack on the Stark

Editor — Obviously, you have never served aboard a frigate. To captain a frigate you have to be a career man. USS Stark never dawned on the crew and captain is a fallacy, especially when the ship was in or near a war zone, where she was ever so vulnerable to attack.

Officers and crew were standing watch 24 hours a day, with all electronic surveillance systems in operating mode. The standing watch knew beforehand that a hostile aircraft had its fire-control system locked onto the ship. This is a known fact.

The question the American public should ask is why the weapon systems were not activated. The commanding officer should be held fully accountable for his explanation. “We just weren’t ready,” is not justifiable.

With past sea experience as a gunner’s mate aboard such a warship, I can’t understand how such a mistake could have happened.

Either the weapon systems malfunctioned or someone erred. Steaming in a troubled area isn’t a pleasure cruise and constant combat readiness is essential. A hostile aircraft usually doesn’t signal its intentions before attack.

JOHN ASTAD

AIDS, not reputation, should be main concern

Editor — The narrow margin in the Student Senate’s vote to install condom dispensers on campus is a real disgrace and blight on the school’s image. The fact that 11 representatives voted against such a beneficial and necessary measure betrays the massive ignorance and narrow-minded priggishness of the student body.

When people’s moral values are so screwed up that they prefer a proper atmosphere and pristine image over practical measures, the inevitable consequence is more human suffering. In the past this just meant perpetuation of teenage pregnancy, venereal disease and child abuse. Now, however, the wage of such ignorance is death.

WILLIAM KNIGHT
Bridge could have held more

SAN FRANCISCO (AP) — The Golden Gate Bridge supported the heaviest load in its 50-year history during the weekend anniversary celebration, but the weight was far less than its design capacity, the bridge district's chief engineer said Tuesday.

"That just goes to show why it's such a great structure," said Dan Mohn. "If we were building it today, we would build it in a very similar way ... It has tremendous safety factors built in."

Bridge officials were concerned Sunday when 250,000 people jammed onto the bridge for the sunrise bash celebrating the orange landmark's birthday. The weight of the crowd at the center of the bridge even temporarily flattened out the arch of the bridge deck.

Singleton on the move again

SAN FRANCISCO (AP) — Paroled rapist Larry Singleton was again in search of a home Tuesday after a jeering crowd ordered him to "get the hell out of Rodeo" and deputies escorted him away from the small Northern California town in a bullet-proof vest.

Contra Costa Sheriff's Lt. Surry Poole said he decided to move Singleton for his own safety. A vigil of a handful of people outside Singleton's apartment turned into an angry, chanting mob of about 500.

Singleton, convicted in 1979 of raping a teen-age girl, was kept on the run by angry citizens.

US officials meet with Iraqis

BAGHDAD, Iraq (AP) — Americans investigating the Iraqi attack on the USS Stark may be given defense officials Tuesday, but there was no word on whether they would be allowed to see the pilot who fired the missiles.

A diplomatic source said "everything seems to be going well" in the joint investigation of the May 17 attack on the guided-missile frigate and wounded 21.

Unconfirmed reports in the Iraqi capital Tuesday said the pilot had been beheaded, apparently for embarrassing President Saddam Hussein's government. Information Ministry officials denied it.

Jailing without bail OK'd

WASHINGTON (AP) — The Supreme Court ruled Tuesday that people accused of crimes may be jailed without bail while awaiting trial if a judge decides they are a threat to public safety.

In a 6-3 ruling hailed as a major victory by law enforcement officials, the court said jailings someone deemed dangerous does not violate the person's rights or the presumption that all are innocent until proven guilty.

Twenty-four states and the District of Columbia deny bail on the basis of a defendant's dangerousness, but those laws are not as sweeping as the federal law upheld Tuesday.

The justices used the case of two reputed Mafia leaders in New York City to reinstate a 1984 federal preventive detention law backed by the Reagan administration and attacked by civil libertarians.

Chun fires his prime minister

SEOUL, South Korea (AP) — President Chun Doo-hwan fired his prime minister and seven other Cabinet members Tuesday in an attempt to quiet outrage over the death of a student under police questioning. Critics demanded Chun's resignation.

The government contends the Jan. 14 death of dissident student Park Chung-chol was an isolated incident. It cites dismissals of officials and arrests of police officers as evidence of its refusal to condone such conduct.

Most observers agree that the dismissals will not satisfy most people, but they do not believe the former general's government will lose its grip or that much will change.

Americans shot at in Egypt

CAIRO (AP) — Gunmen pulled alongside a U.S. Embassy station wagon Tuesday, tried to force it off the road and then opened fire, blowing out the windows and slightly wounding two of the three Americans inside.

A U.S. official said the men escaped because embassy security chief Dennis L. Williams used "defensive driving measures" to get away from the other car — a U-turn on the eight-lane highway on the Nile's east bank.

It was the first attack in memory on American officials in Egypt.

Several hours afterward, an anonymous telephone caller to a Western news agency said it was the work of Egypt's Revolution, a shadowy group which has claimed responsibility for three attacks on Israeli Embassy personnel that killed two people.

Bruce Willis arrested in police fight

LOS ANGELES (AP) — "Moonlighting" star Bruce Willis was arrested for investigation of fighting with police after neighbors complained that a party was out of control at his Hollywood Hills home, police said Tuesday.

Willis, 32, who plays a wisecracking detective in the ABC-TV series, was booked with an unidentified guest for investigation of assault on a police officer, said police Sgt. Joe Bustos.

"He supposedly attacked one of the officers," Bustos said.

Drinks are in the house

The founders of U-Bru, a company that sells brew-it-yourself kits, show how ingenuity and an in-home endeavor quenched their thirst for beer.

Story by Stacey A. Myers

Photo by Mike Shoup

For some people, drinking homemade beer is a recreational pastime. For Cal Poly students Chris Croft and Chris Settevendemie, it's a business.

Croft, 26, and Settevendemie, 24, are business partners and two of the idea of U-Bru, a company that provides customers with all the supplies needed to make their own homemade beer.

Well, almost everything. "The kits give you everything you need to make two cases of beer, except time, water and bottles," said Croft. "Most of the time invested is not your own time, but just time spent waiting for the beer to be ready to drink."

His partner agreed. "After you mix the brew, pretty much all you have to do is sit back and wait," said Settevendemie.

Croft, a senior major in business administration, and Settevendemie, a junior major in biological sciences, first thought of the idea of U-Bru last fall. They were introduced to the idea of brewing their own beer by a friend who had bought a similar home brewing kit from a distributor in Southern California.

"We really liked the idea of making our own beer, and as we talked to our friends about it, we discovered that they liked the idea, too," said Croft. "We saw there was a market for the supplies, but there weren't any suppliers in this area. So we decided to go into business."

The idea, they said, was to act as an intermediary between wholesale suppliers and the customers who wanted to buy the supplies with which to brew their own beer.

The first step was researching the products.

"Research was the most time-consuming," said Croft. "We wanted to make sure we were getting the best product for the least amount of money.

Then came applying for credit, business licenses and resale licenses. So far, the partners estimate they have invested about $1,000 in U-Bru.

"We didn't have a lot to put in, so basically we put in everything we had," said Croft. "The major investments were time, money and space."

The main U-Bru showroom is a converted laundry room in Croft's apartment. It's where all the supplies are stored, and where customers select their choice of ingredients. Because the men wanted to operate a business out of Croft's home, they had to apply for a special city permit.

"The application for the permit had to be posted outside of my apartment for seven days, so any neighbor who objected to the business would have time to protest the application," said Croft. "The application had a typo on it, though, and instead of saying we were going to sell beer making kits, it said wanted to sell beer making kits. I don't think any of the neighbors even knew what was going on."

The next step in the business was to build up a reserve stock of supplies.

"We got the components of the kit from all over the world," said Croft. "We get things from the Bay Area, Los Angeles, Cincinnatni and England. Basically, we get together all the parts and assemble them into one package for our customers."

But if customers think they can bypass the U-Bru stage and purchase the kit's components themselves, they'd better think again.

"We had to buy a resale number in order to purchase things from our wholesalers," said Settevendemie. "Only people with resale numbers can buy from our wholesalers, not just people off the street. So we really are doing a service to our customers. We buy the components at a lower cost and centralize the whole operation."

Each home brewing kit includes a 7.5 gallon air-tight tub, a spigot, an air lock, a siphon hose, five cups of corn sugar, a choice of pre-hopped malt extract with yeast, 52 bottle caps, a bottle capper and a set of instructions.

U-Bru sells the kits for $31.95, plus tax.

So far, 50 people have purchased home brewing kits from U-Bru.

One of those customers is Rich Haupt, a 22-year-old crop science senior. Haupt lives in the same apartment complex as Croft, and one night while he was in Croft's apartment, he tasted the home brew.

"The beer was great, so I decided to try making it myself," said Haupt. "I bought my kit in January, and I've been brewing two or three times a month since then."

Haupt said the main reason he likes to make his own beer is because it's inexpensive and it tastes better than anything on the market.

"It's a great investment," he said. "You can save between $5 and $10 a case, depending on what kind of beer you regularly buy. And the home brew has a higher alcohol content."

Since the hops are in the kit is a one-time purchase, the cost of making beer drops significantly after the initial investment.

"Once you already have the kit, all you ever have to buy after that is the malt extract, corn sugar, and caps," said Croft. "That's about $10 for two cases of beer. If you work it out, that's only about $1.25 for a six-pack. And that's a bargain."

Paul Carlsgaard, 26, is also a U-Bru customer. He said the best part about brewing his own beer is that he can experiment with the flavors. "Every batch I make is different," he said. "Sometimes I use red peppers or ginger root to give it a different taste."

Other flavors suggested by U-Bru are vanilla, apple, and cinnamon.

And Carlsgaard agreed that the economics of brewing beer at home are definitely a plus.

"If you're a beer drinker, you can make your own beer for one-tenth of the price you pay in the store," he said. "And no matter what brand you buy, when you make it yourself, you can make it better."

"It's a novelty thing as well as a cheap hobby," he said. "Hell, I've spent $30 on wine before."

The quality of the home brew's taste is of utmost concern to the proprietors of U-Bru.

"These kits are convenient and cheap, but if the taste isn't great, it doesn't matter how cheap they are," said Croft.

And, he said, the kits are ideal for Cal Poly students.

"The Cal Poly market is interested in cost, ease and taste," said Croft. "First of all, these kits are inexpensive and easy to use. Second, storage of the brew doesn't have to be a problem because it doesn't have to be kept cold all the time — just until you're ready to drink it. And third, the brew tastes great and it's something you can be proud of because you made it yourself."

And since the home brewing kit is a mixture of food products, it can be sold to customers under 21 years of age.

The actual brewing process is:

See BEER, page 5
The Department of Fish and Game blames the decline on the continuing loss of habitat for the deer and the increasing numbers of predators, such as dogs. They also said that within the county sportsmen are pointing the finger at ranchers, saying they have been using electrical fences and traps to keep the deer out of their ranches. But ranchers say they protect the deer by posting “No Hunting” signs and by providing openings in fences for the deer.

California Fish and Game biologist Jim Lidburg said the deer population has begun to stabilize, although not countywide. “The Las Pilitas fire took a lot of old brush and a lot of new brush has grown.” The growth, he said, has provided more food for the deer, contributing to a higher reproductive rate. “Long term, though, we’re going to see a slight decrease due to human use,” he added.

The North County Wildlife Rescue and Treatment Center rehabilitates deer that have been injured in the county. The deer are rehabilitated for eight months under the care of Kathy Johannes and her husband Jeff, sent to the Monterey County Rehabilitation Center for further care and then set free in Monterey County.

“People start feeding the deer because they aren’t seeing as many deer as they’re used to,” Johannes said. “The Fish and Game (department) don’t destroy the deer any more because now they have us,” said Kathy Johannes. Last year 15 percent of the fawns rescued were from San Luis Obispo; this year the figure has increased to 50 percent.

“People see a Bambi,” Johannes said. “A fawn can kill a human baby and you wouldn’t even know what happened.”

The hunting season in San Luis Obispo County generally runs from the second week in August through early October, but Johannes said this has little impact on the deer population. “But, I see a lot of people not hunting who usually do, just because they aren’t seeing as many deer as they’re used to,” she said.

Johannes expects to see a decreasing number of injured fawns from the San Luis Obispo area. “They’ll be going through a shifting process moving further and further away, and through that process a number of them will die trying to get through the fencing and highways that obstruct them.”

Last year the Rescue and Treatment Center received 32 calls on injured fawns; 28 of them were rehabilitated and set free in Monterey. The other four were fatally wounded by cars.

“Deer can survive in an area within a one-half mile radius of humans and are very adaptable, but the balance often erodes. “People start feeding the deer food that isn’t nutritious and they become junkies. This leads to weaker offspring and they also forget how to provide for themselves,” Johannes said.

Deer are also a lot more dangerous than people think. If a deer is irritated or challenged he often南极en with his front feet. “People see a Bambi,” Johannes said. “A fawn can kill a human baby and you wouldn’t even know what happened.”

The San Luis Obispo Sportman Association set up a program set up to save deer. “We’ll be going through a shifting process moving further and further away, and through that process a number of them will die trying to get through the fencing and highways that obstruct them.”

“Deer should have to serve as a need if it is to exist,” Johannes said. “As the planet shrinks people just need to be more understanding.”
Many students think they could never commit eight years of their lives to military service. But there are some students who choose this way of life as an alternative to working 9 to 5.

Second Lt. Alan Moore saw a good opportunity in the Cal Poly Army ROTC. He was offered a four-year ROTC scholarship out of high school, which solved his financial concerns about college.

"The money was a good incentive," said Moore.

"Everything, including books, fees and tuition is paid by the Army ROTC," said Moore. "We also get $108 a month. It probably comes to about $10,000 for all four years."

Moore, who is graduating in June with a bachelor's degree in political science, would like to become a military intelligence officer. He has received orders to start active duty in November at Fort Huachuca in Arizona. Looking back, Moore said if given the chance he would do it all again. "The Army is a good middle ground," he said. "It's not too extreme or boring."

But Moore also has doubts about the future. "If you work for IBM and don't like it you can quit with a two-week notice," he said. "But you can't do that in the Army."

Not knowing where he could end up is also on Moore's mind. "You have to realize that if you're ready to fight, people are ready to fight against you," said Moore. "But the shock of that at the moment a registered Army dietician will make is better than what a regular dietician will do. "However, there is a lot more responsibility involved," she added.

Money is only one reason for Busch's decision to join the armed forces. "My father was in the Air Force," she said. "And going to a base is like coming home."

Busch encourages women to look into the armed services because of the increased equal opportunity now given to them. "Many jobs that were once classified have now been opened up to women," said Busch.

Aware of the negative feelings some people hold, Busch said military life is not for everyone. "It requires discipline, a willingness to serve and putting the welfare of others above your own," she said.

Army Maj. Lawrence Stayton said the eight-year commitment gives many people reason for thought. "For someone who is 18 years old, you're talking a commitment that equals about half their life," he said.

The ROTC program offers travel, excitement, money and a chance at a constantly changing job. "Everyone has a hot button," said Stayton. "If I try to find it and press it." But he said the cadets themselves are the best recruiters.

"We have 85 cadets at Poly," said Stayton. "We recruit from across the board and have majors ranging from ornamental horticulture to electrical engineering."

In addition to those students who choose ROTC, there are others who go to recruiting stations. Michael Cantaloub decided to look into what the Navy had to offer. This June Cantaloub will comply with his orders to finish school and receive his bachelor's degree in chemistry.

Cantaloub is part of a special program called the Navy Nuclear Power Officer Candidate Program, which is open to those with one year left of school. "I took a chance now that I knew wouldn't be available to me later," he said. The Navy offered him more experience and greater potential for advancement after he was done with his eight-year commitment.

Still a bit skeptical about military life, Cantaloub said he thinks there will always be doubts. "The loss of control in my personal life and the permission part of the military bothers me," he said. "It took me nine months to make a decision."

But Cantaloub feels he has made a good choice. "All the benefits are great and I get $1,200 a month while I'm in school," he said. "They even gave me a $4,000 bonus contingent upon me passing nuclear engineering school."

After graduation Cantaloub will go to Rhode Island to attend Officers' Candidate School for 16 weeks followed by nuclear engineering school in Florida for about seven months. With this completed, he will be ready to learn how to run reactors in Nuclear Prototype School.

"The rest of my service will be spent on nuclear submarines or carriers," said Cantaloub.

The recent attack of the USS Stark started Cantaloub thinking about the risk of his chosen profession. "If they don't shoot me, I'll melt."

For Cantaloub, the jeopardy of the job has to be considered. "It's always at the back of your head," he said. But for many like Cantaloub, the experience and possibilities the services can provide outweigh the potential negative consequences.
**BEER**

From page 5

simple and quick, said Croft. First, the extract mixture, one gallon of water and corn sugar are mixed together and simmered on the stove for about 15 minutes. That mixture is then added to the remaining four gallons of water, put into the fermentation tub with yeast and allowed to ferment for one week. After that time, the brew is mixed with an additional amount of sugar and water. To prime. Priming the brew gives it a small amount of naturally occurring carbonation. The brew is then bottled and capped.

"This is a goof-proof recipe," said Croft. It eliminates all the variables that sometimes make home brew not so good. You don't have to worry about temperatures or the correct proportion of ingredients. You just mix it and wait.

U-Bru also sells raw malt and hops for the more adventurous home brewer.

"But that's more for experienced brewers, for people who want a challenge," said Settevendemie.

**MINORS**

From page 1

position wasn't based on the potential for an increase in impacted classes, but the actual program outlined in the proposal. Despite the recommendation, the senate approved the certificate program Tuesday.

Of the 10 classes that make up the program, eight are currently offered in the English, speech communication, computer science, and graphic communications departments. Although the program will probably draw many students, there will be no additional funding; therefore no additional classes will be offered and there will be a higher chance of impacted English classes.

English department head Mona Rosenman said that other departments should allocate funds to the English department to help support this program and other general education classes, instead of complaining about the impacted condition of the department.

After approval from the Academic Senate, catalog changes must be approved by the administration and in some cases the California State University Chancellor's Office. The Academic Senate also recently approved minors in biotechnology and Pacific Rim studies.

Pacific Rim studies will be a cross-disciplinary program of language, political science, anthropology, sociology and political science classes on Latin American and Asian countries. A newly-proposed women's studies minor will also be cross-disciplinary, if approved. These programs will not threaten any other general education classes, they are spread out among several departments.

Last fall an international relations minor was offered through the political science department and has been very popular. The program is essentially a modification of a political science concentration that already existed and has drawn more students than expected.

Then the program is not impacted, it is "unofficially limited," according to political science professor Randal Cruckshanks. "The program has not added anything to our burden," he said. "It was an idea whose time has come: it will fulfill a need for students who want to work abroad, who can become familiar with foreign needs!"
Men finish seventh at nationals

By Dan Ruthemeyer

Picking up seven All-America honors, including two by hurdler Dave Johnson, the men's track team gained its highest finish since 1983 at the NCAA Division II National Championships in Cape Girardeau, Mo.

The Mustangs, paced by Johnson and pole vaulters Steve Horvath and Hans Florine, came alive in the final day of the meet to take seventh place with 24 points. Winning the meet was Cal Poly, which tallied 127 points to 93 for second-place Los Angeles (33 pts.) and Cal State Bakersfield, which tallied 17.

Dave Johnson, center, placed sixth in the 110-meter hurdle event on Saturday.

800 meters.
In the hurdles, Sharon Hanson came up with a second- and a third-place finish. In the intermediate hurdles she placed second, set a school record and earned a berth in the Olympic trials. Her time of 58.27 would have been a meet record if it hadn't been for Abilene Christian's Yolanda Henry, who ran away with the race and three national titles.

In the high hurdles Hanson placed third, in addition to running key legs in both relay teams. By the end of the meet she had earned All-America honors in four events. Laurie Hagan placed sixth in the intermediate hurdles, and Chandler's first-place finish in the high hurdles cued out the scoring for Poly's hurdling trio.

In the field events, Celeste Paquette earned All-America honors in both the discus and shot put when she placed fourth and seventh in the events, respectively. In the high jump Julie Wiegmann placed fourth with a personal best of 5-10. Both relay teams also won All-America honors, with the 400-meter team placing fourth and the 1,600-meter team placing sixth.

New student honor society is getting good response
By John Grennan

Students with a 3.4 grade point average or better can now converge in the Golden Key National Honor Society which was recently chartered at Cal Poly.

Joan Skelly, a speech communication major, is president of the new club. "I was overwhelmed by the response," she said of the 185 charter members who forked over the $45 lifetime membership fee. "I was amazed at how many people wanted to ally themselves with an honor society."

The society is open to any full- or part-time junior or senior students in any major with cumulative GPAs of 3.4 or better. Cal Poly has approximately 750 students who meet those qualifications.

"It's given my friends an incentive to get better grades," said vice president Kimi Kingsbury. "It's a nice way to meet people from other majors."

Kingsbury said the chapter will decide upon some goals at its first meeting, Thursday in Agriculture Building Room 221. "We will probably do tutoring for students on campus and something with the California literacy program," she said.

Skelly said the society will help prepare members for what they will be doing next, such as preparing for interviews, as well as holding philanthropies and social events.

At the chartering ceremonies on May 17 the society handed out two $200 scholarships to recipients of the highest GPA in the junior and senior classes. The highest junior GPA belonged to mechanical engineering major Kendall Feng and top senior honors went to animal science major Maria Salzman.

Golden Key also named five honorary members from Cal Poly for what Kingsbury said were "high academic standards and people who are high achievers themselves." They were Philip Bailey, dean of the School of Science and Mathematics; Michael Fabb, associate professor of speech communication; Ed Mayo, history professor and chapter adviser; Alex Miller, coordinator of the Cooperative Education program; and Quintard Taylor, history professor.

PICO RIVERA (AP) — A windowsless, once-secret Ford assembly plant here is reported to house the largest secret defense industrial site in the United States — Northrop's Stealth bomber factory.

But while more than 12,000 people work at the facility 11 miles east of downtown Los Angeles, supposedly developing a bomber that is invisible to enemy radar, official word about the place is all but non-existent.

While security for the plant was described in general terms Tuesday in the Los Angeles Times, not one Northrop official or employee was identified by name.

"Defense is a tense business, and working on very highly sensitive programs make it more so. The fact that security has been so good is a tribute to the people in the program," one unidentified official said.

Officially, the aerospace giant has used the same terse phrase for the past six years to describe its work here, saying Northrop is "prime contractor for research and development of the U.S. Air Force's Advanced Technology Bomber. Details of the ATB are classified."

Security here is critical because a leak of the bomber's secret design or the material used to build it could destroy years of effort and a multimillion-dollar U.S. investment to gain a military edge over Russia.

The newspaper says the Air Force plans to buy 132 of the bombers, although the Pentagon refuses to acknowledge the existence of any Stealth program.

Nevertheless, the plane is expected to make its debut flight this year, the paper says.

Securities analysts believe Northrop derives nearly half its revenue from the Stealth program, and many aircraft industry executives suggest Northrop has encountered cost problems on the program, the newspaper said.

However, Northrop never publicly detailed a $90 million loss it reported last year on an unidentified program widely believed to have been the ATB.

Stealth plant believed to be in S. California
