Socialist candidate offers voters a choice

By Lisa Bosio

Will Kenoyer, the Socialist Party's presidential nominee, just plans to get the message of socialism to the American people.

"The voters need to know that they have choices," Kenoyer told about 25 people at the San Luis Obispo Recreation Center last Wednesday.

Kenoyer, a 53-year-old journalist from Shelby, Mich., was named the Socialist Party candidate this year. She has recently moved to Los Angeles, where her headquarters are located. She'll remain there until the presidential election in 1988.

In her speech, Kenoyer emphasized the need for a massive restructuring of the American economy. "There is no other way to deal with the crisis in this country," she said.

Kenoyer's platform includes a heavy emphasis on economic equality and social justice. She supports increased funding for education and healthcare, as well as the elimination of poverty and inequality.

Kenoyer's campaign is centered around grassroots organizing and community action. She has been traveling across the country, speaking to groups and spreading her message.

Kenoyer's campaign is also focused on mobilizing young voters. She believes that the younger generation is ready for a new kind of leadership, one that prioritizes the needs of the working class.

Kenoyer's campaign is facing significant challenges, including a lack of resources and a lack of recognition from the mainstream media.

Despite these obstacles, Kenoyer remains optimistic about the potential for change. "We're not looking for easy victory," she said. "We're looking for a movement that can change the country for the better.

Kenoyer's campaign is currently in the early stages of organizing. She is looking for volunteers and donations to help her reach more voters and build a stronger grassroots movement.

A 15-acre hillside fire northeast of Johnson Avenue in San Luis Obispo Sunday afternoon was controlled in about three hours by city and California Division of Forestry firefighters. There were no injuries or property damage. The fire was reportedly caused by sparks ignited after a kite or model airplane became entangled in a power line.

Gilroy garlic leaves bad breath

By Scott Sarno

GILROY, CALIF. IS FAMOUS for its garlic. This small city of 20,000 people located 50 miles south of San Francisco is renowned for its garlic festival. The festival was started in 1979, and the town has been celebrating it ever since. It is a must-see event for garlic lovers and enthusiasts alike.

The festival takes place every year in early June, and it is a great opportunity for Gilroy to showcase its love for garlic and its rich agricultural heritage. It features various activities and events, including a parade, a 5K race, and of course, the garlic-covered town square.

This year, I decided to take a trip to Gilroy and attend the garlic festival. I had never been before, but I had heard so much about it and was eager to experience it for myself. The day started early, and I drove up to Gilroy from San Francisco, a little over an hour's drive. The drive was scenic, and I enjoyed the beautiful countryside.

As I arrived in Gilroy, I could smell the garlic from miles away. The air was thick with a pungent aroma that was both pleasant and overwhelming. I parked my car and walked towards the town square, where the festival was taking place.

The town square was bustling with people, and the air was filled with the sounds of music and laughter. I could see people enjoying various activities, such as garlic peeling contests, garlic pizza making, and garlic eating contests. I even saw a garlic themed radio station, which was quite unusual.

I decided to join in on the fun and took part in a garlic eating contest. The contest was intense, and I had to eat as many garlic cloves as I could in a given time limit. It was a real struggle, but I managed to make it through the first round.

At the end of the contest, I was given a prize, and I was proud to have won. I was also impressed by the creativity of the people in Gilroy, who had come up with such unique and entertaining activities.

After the contest, I decided to take a walk around the town and see some of the other activities. I came across a garlic festival museum, which showcased the history and culture of garlic. It was fascinating to learn about the various uses of garlic in culinary arts and its medicinal properties.

As I continued my walk, I noticed a garlic theme in everything around me. The buildings were painted with garlic shapes, and the streets were lined with garlic decorations. It was a garlic lover's paradise.

By the end of the day, I was exhausted but immensely satisfied. I had experienced a garlic festival like no other, and I would definitely come back again.

A taste of Americana
Inquisitive Japanese visitors quiz Cal Poly students on slang, tour Central Coast attractions and sample homecooked meals

By Lisa Bosio

KAYO KISHITANI thought visiting America would be dangerous.
"I thought people here would be walking around with guns and cars," she said.
But visiting Cal Poly has proved her wrong.

"Instead of shooting me, they smile, shake my hand and tell me a slang word," she said.

Kishitani is one of 300 Japanese students visiting San Luis Obispo this summer. The Educational Development International-Pacific English Language Institute (EDI-PELI) sponsors the Japanese students.

The idea for the program came after Jeff Bynes stumbled upon a group of lost, tired Japanese tourists 15 years ago. Bynes, then in charge of off-campus housing, invited the group to stay overnight. They accepted.

Soon after, Bynes met Rev. Yoshiaki Toeda from Japan. Both agreed there was a need for making Japanese visitors feel at home, and hungry Japanese tourists 15 years ago. Bynes' half, said he was enjoying the sun's rays when Japanese girls requested that he tell them an American slang word. Niles offered "radical."

Rich Niles, an agriculture freshman, said he was having fun in the back of the class when I asked him to talk with me. Niles offered "radical."

"I spent the next ten minutes trying to explain what that stupid word meant," he said. "But who knows. One day I might be in Japan asking them for a Japanese slang word."

Said Christine Olsen, a senior child development major: "I thought people would be walking around with pistols and guns," she said.

The creation of EDI-PELI, the Educational Development International-Pacific English Language Institute, was a dream come true.

"I thought people would be walking around with pistols and guns," she said.

A typical day for the Japanese students starts with classes in English and American culture, taught by the program instructors. Later, they may go to Montana de Oro, tour a local winery or visit Men's Colony.

They couldn't believe that they were actually talking to someone who had committed a crime," Bynes said.

Not only do the students learn the American way of life, they also get to live it. Each individual stays with an American family for a weekend — a homestay. One of the hosts was surprised that her Japanese guests liked American food.

"I was shopping and bought white rice, tofu and Top Ramen for dinner," said Angel Bosio. "When they arrived, they wanted pizza!"

TRIPLE TROUBLE

More than 1,000 endure SLO Triathlon’s test of swimming, cycling and running

By Stephanie Hill

ATHLETES, from age 9 to 74, competed Sunday in the eighth annual San Luis Obispo Triathlon, known as the triathlon with the world’s longest swimming portion.

Some participants started out as early as 7:30 a.m. — it was a staggered start — swimming half a mile (18 complete laps) in the Sinsheimer Pool before bicycling 15.3 miles. The triathlete ended with a 3.65 mile run to cross the finish line, where everyone received a medal.

“The triathlon’s philosophy is completion not competition,” said Rogers.

The courses were designed to accommodate the beginner as well as the experienced triathlete, he said.

Chris Hinshaw, a 24-year-old Cal Poly graduate, crossed the finish line first with a time of 1:05.57, which he set in 1986. Alfax Goughnour, 26, set a new course record with a time of 1:18.56. Goughnour broke the old record by a minute.

Nancy Collins, a child’s family, struck and killed a 15-year-old competitor cycling on Orcutt Road about 11:50 a.m., was making a U-turn when a car driven by David Kaplan of San Luis Obispo struck her. Seven- son, who sustained severe head injuries, was taken to French Hospital, where she was pronounced dead a few minutes after arrival.

Kaplan, who suffered minor injuries, was treated at General Hospital and released.

John Rogers, special events coordinator for the Recreation Department, said he was shocked to hear of the fatality later on that day.

“We’re terribly sorry for the girl’s family,” he said. “This is the first serious accident in the race’s history.”

Retiring English teachers honored with planted trees

By Stephanie Dias

Four trees have been planted in front of the English Building to honor retiring English professors.

“Trees are for the living and not the dead since one can come back and enjoy them,” said Mona Rosenman, English department dean. “These people have put a lot of time into the English program, especially since it’s very impacted. We felt the need to show our appreciation for their dedication to the department.”

Gordon Curson, Arthur Franke- sche, Robert Glen Lim, and Dave Rollings were the professors honored this year. Rollings will retire at the end of summer quarter and Lim will retire next year.

Rosenman said this was the second year the trees have been planted for retiring English professors and the department would like to continue the tradition. “We’re all environmentalists here,” she said.

Nancy Collins, a child development major, disagrees with planting trees for the living. “It seems absurd to have monuments for the living,” she said. “If each department starts planting trees for every professor who retires, Cal Poly would eventually become a forest.”

Mike Escobedo, a biological sciences major, claimed he liked the lawn area before the trees were planted. “I think they should have planted them in the middle of the English and Agriculture buildings,” he said.

Business major Tracy Fletcher showed little concern for the situation saying, “What trees?”

Early next month and the "546" phone system installed by Pacific Bell will change to "756." Callers to the university will be able to get through by calling 546-0111 or via computer. The new system is not a capital purchase; instead, it will appear on the school's phone bill as just another charge. Cal Poly pays about $49,000 per year to Pacific Bell for phone service, in addition to a $25,000 refund for the recall of phones. But the university is also burning about $250,000 worth of phones, which will cut the monthly bill by about $10,000.

SAN LUIS OBISPO'S

FARMERS' MARKET

Small barbeque becomes tourist attraction

By Stephanie Hill

One Thursday evening six years ago, Higuera Street in downtown San Luis Obispo was closed off to accommodate a rib cook-off. Now Higuera Street is closed off every Thursday evening for Farmers' Market.

The market has become a great public relations campaign for San Luis Obispo. Bus tours from throughout the state put Farmers' Market high on their list of activities, and tourists stop by for a taste of SLO town. The market also has received a great deal of publicity outside the area, including write-ups in magazines such as Sunset.

Farmers' Market began after local merchants complained about teenagers cruising up and down Higuera disrupting shoppers, especially senior citizens. The city's Business Improvement Association (BIA) compromised with the merchants, closing off Higuera on Thursday evenings. This, the BIA hoped, would increase sales and provide a relaxed atmosphere.

"The experiment turned out quite disappointing because there were no exciting activities to draw customers," said Dodie Williams, the BIA's administrator.

Because of the success of the rib cook-off a few weeks earlier, the BIA decided to give restaurants the chance to sell food on the sidewalks. McLintock's, Old Country Deli and the Cigar Factory were the first to participate, said Williams. Seven rib restaurants now take part, offering items from tri-tip sandwiches to marinated shrimp kabobs.

Local farmers also wanted a piece of the action. The BIA allowed only local farmers to set up shop along the 900 block of Higuera. The farmers now extend well into the 800 block and sometimes in the summer, they hit the end of the 600 block with their added harvest.

"Leaf crops, dried fruit and nuts can be found all the time," said Peter Jankay, director of the farmer's side of the market, "while strawberries, grapes and citrus fruits are available at different seasons."

Because of the success of the rib cook-off a few weeks earlier, the BIA decided to give restaurants the chance to sell food on the sidewalks.

W ith the addition of ribs and farmers, crowds began to enjoy the small-town atmosphere that San Luis Obispo provided.

Because of the extra hour of daylight in the summer, the market also offers live entertainment. The BIA sponsors entertainers from jazz bands to aerobic dance groups. More family features have also been added this summer, including a new mascot.

"Be sure not to miss Downtown Brown, a big brown bear passing out balloons and candy for the kids," said Williams. "Thursday nights are a total community event."

Next week: the outlook for Farmers' Market.

SLO County shares statewide jail overcrowding problem

By Craig Claver

LIKE A PERSON suffering from a disease without a cure, San Luis Obispo County — not unlike many other counties in the state and across the nation — is suffering from the widespread problem of jail overcrowding. The problem can often escalate until it is out of control, and drastic measures must be taken. But for San Luis Obispo County the situation may be in remission.

"I've been here eight years, and 99 percent of that time the jail has been overcrowded," said Senior Corrections Officer James Currie. "We hit our peak (for overcrowding) about six or eight months ago. The problem has been relieved, but we're still overcrowded."

With 275 inmates housed in facilities built for 226, space is limited and often cramped. At one time, as many as 18 to 20 inmates fill the eight-person cells, with many others forced to sleep on mattresses on the floor.

One of the jail's most critical shortcomings involves maximum security cells. Among all cells, 22 to 25 are designated as maximum security. Jail officials say those cells are constantly filled. No inmates are being housed outside the county, a costly alternative for many other jails. The county does so only in extreme circumstances. Inmates usually serve terms shorter than one year. Exceptions are prisoners serving consecutive one-year sentences.

Earlier this month, an inmate's claim of cruel and unusual punishment forced Superior Court Judge Harry E. Woolpert to tour the jail. A writ, filed in December by Public Defender Sylvia Stewart on behalf of inmate Kenneth Bjorn, asked that Bjorn be released because of the overcrowded conditions. Despite slight overcrowding, Woolpert approved the facility's conditions. As many as 11 inmates filled some cells, but Woolpert said the court would not intercede unless conditions became substantially worse.

Woolpert was quoted by The County Telegram-Tribune as saying, "I find the San Luis Obispo County Jail passes muster."

With the opening of a new minimum security, or "honor farm," barracks last June, space was provided for another 40 inmates who are involved in various work programs throughout the county.

"The inmates that go to the honor farm are carefully screened," said Currie. "We estimate the risk of escape and also other suitability problems such as medical problems..."

More relief may be in sight. The future of a new jail that would operate in conjunction with the current facility and house as many as 200 to 280 inmates is still in the planning stage.

And recent approval by the county to hire six new jailers will raise the number of jailers to 52.

So overcrowding in the county jail has levied off and a new facility may provide some added relief. But until a permanent solution is found, the problem may recur and plague authorities indefinitely.

CSU professors make more money than many realize

By Barbara Cunningham

Teaching, they say, is not a very profitable profession. But at Cal Poly and other California State University campuses, teaching may be more profitable than one may think.

How much does that teacher who assigns four hours of homework a night make? That depends. There are five academic ranks for professors, five for lecturers, four for coaches and four for librarians.

Salaries for instructors can range from that of a lecturer, who receive $19,956, to that of full-time professors, who receive $49,548. Specialized faculty can have salaries as high as $53,508.

According to the July 1987 faculty salary schedule, there are 20 different steps in the CSU pay scale. Instructors' place on the scale depends on the level at which each is hired and the length of their contract.

For example, an instructor hired as a lecturer "A" on a 10-month contract receives $23,616 for the first year. That individual does have the ability, by meeting department standards, to raise pay annually for four years, ultimately reaching a yearly $28,296.

The lecturer maintains that level of pay as long as he is employed by the university in the same teaching position. If he wishes a pay increase (other than the normal cost-of-living raise), he must leave his present position, apply for a new higher-paying position and go through the interviewing process.

The education and experience requirements for each level of instructor are set by each department. There are no set standards throughout the university.

Some departments that are considered specialized offer slightly higher pay scales. An assistant professor hired in aeronautical engineering or business administration has the potential to start with a salary of $31,488; the same position in liberal studies begins at $25,812.

Still think the teaching profession sounds bad? Instructors also receive dental, vision and health plans ... and one of the longest vacations possible.

Grant helps poor pay bills

By Brooks Watson

MORE THAN $25,000 in emergency housing and energy bill assistance is now available to low-income individuals and possibly students. The money administered by the San Luis Obispo Economic Opportunity Corp (EOC), is part of a Federal Emergency Management Agency (FEMA) funds to be used with first-time rent payments, mortgage payments, back rents and unpaid energy bills. Only low-income individuals or families which have exhausted all other money of aid will qualify for the program.

The EOC has been in existence for the past 20 years and is a private nonprofit organization designed to help low-income families. Receiving money from state and federal grants, the EOC has been able to provide similar health and shelter programs such as Operation Head Start. "A low-income individual is anyone that meets federal income guidelines," said EOC Affirmative Action Officer Emma Valdiviezo. "For a one-person family that's about $959 a month or less."

Valdiviezo said the purpose of this particular program will first be given to homeless women and their children to any students. "I don't feel that many students really fall into the low-income category because they are receiving money from their parents or some other outside source," said Valdiviezo. "We are poor and the homeless of our city and rural areas are therefore our main concern."

But if a student was facing immediate eviction or in trouble with overdue energy bills, the EOC would then look into the particular situation.

The Cal Poly Financial Aid office was not fully informed about the EOC program or its availability to students, but said there are students at Cal Poly falling into the low-income category as stated by the federal government. "Approximately 47 percent of our student body rely on some sort of financial aid," said Assistant Director of Financial Aid Sue O'Hallorin. "At 35 to 40 percent of our students are of red, white, and blue student and a good portion of those people do meet the federal low-income guidelines."

The EOC said that all of the program's money has already been spent over the last two years for the last 10 homeless at San Luis Obispo and the other four counties in the same fashion. Valdiviezo said she doesn't see a lot of money for aid to students unless the situation is prompt.

Financial aid offices on campuses said they would further investigate the availability of these particular funds to students and will possibly try to work with EOC officers in helping any student that meets federal low-income guidelines.

Poly purchases land to establish Costa Rican agricultural college

By Robin Galey

AFTER THREE YEARS of planning, Cal Poly and two other universities have bought a 7,200-acre farm in Costa Rica for the building site of an agricultural college for that country.

The College of Agriculture at the University of Costa Rica, the farm that will be part of a Federal Emergency more than 6,900 acres will be involved in international agriculture research and planning. The University of Costa Rica and the Bureau of Commercial and Investment Real Estate.

California hunters await opportunity to hunt mountain lions

By Herod Lowery

BEGINNING IN OCTOBER, California hunters will have a chance to hunt mountain lions for the first time since 1972, and a Cal Poly biology professor is all fired up for the hunt.

A hunter for many years, Doug Donaldson said there is tremendous sport in hunting mountain lions.

"A lot of people think mountain lions hunting is just trying to get the dogs and then just blasting them out of the tree, but it's not like that at all," said Donaldson.

"There's a lot of wildlife alive today that wouldn't be there if it wasn't for hunters. Too many people seem to be a victim of the Bambi syndrome,"

— Doug Donaldson

Donaldson.

From 1907 through 1969, there was a bounty on mountain lions, ($20 for a lion of either sex in 1907, ending with $50 for a male, $65 for a female), with no regulated season, and mountain lions could be taken at will. From 1969 until 1972, mountain lions were incorporated into the state's big-game hunting program. The Legislature banned mountain lion hunting in 1972, over concerns that there weren't enough left to be hunted. The Legislature also banned hunting of any type, which precluded groups like cattlemen's associations from establishing their own bounty programs.

Donaldson said the Legislature passed bills setting in place "tremendous political pressure" from non-hunting groups to end the hunt, and that many non-hunting groups are against all blood sports.

"These people (non-hunters') call themselves conservationists, but I don't see how you can call yourself a conservationist if you're against hunting. Hunters pay a tax on ammunition and firearms that fund wildlife pro projects. There's a lot of wildlife alive today that wouldn't be there if it wasn't for hunters. Too many people seem to be a victim of the Bambi syndrome,"

Donaldson explained that the "Bambi syndrome" is a term coined by editors of outdoorsmen's magazines (Outdoor Life, Field and Stream), and named after the 1942 Disney movie which allegedly turned many people against hunting.

"The Department of Fish and Game has a hell of a good staff. They know what they're doing. More mountain lions are shot by bow hunting that will ever be shot legally. That's what we need to worry about."

According to Don Koch, a wildlife biologist with the Department of Fish and Game in Sacramento, only 190 permits will be given out, chosen by computerized random selection.

A nonrefundable application fee of $5 is required initially, and if a hunter's permit is chosen, a fee of $75 is charged before the hunter actually receives the permit for one mountain lion.

The hunter license will run from Oct. 10 through Dec. 27, and like Donaldson, he is hoping to get a mountain lion hunting permit.

"They're tasty table fare, actually," said Koch.
Dry UU fountain will again flow this fall

By Michael Robles

AFTER FOUR YEARS of being completely shut off, the University Union fountain will be flowing again this fall.

A 1978 drought resulted in the fountain only being used during special events until 1983, when mechanical problems forced it to be shut down altogether. However, thanks to the combined efforts of two ASI senators and the UU, the fountain will once again be operative.

Charles Wolf, a former senator from the School of Engineering, said he was tired of seeing the fountain dry so he decided to do something about it. Wolf blamed the previous lack of action on apathy and said it was just a matter of getting people involved to get the job done. He teamed with Kathleen Hildebrand, a former senator from the School of Science and Math.

"We more or less had the same idea at the same time," Wolf said.

Wolf took the issue to the Student Senate, which recommended that action be taken. The UU then stepped in to help.

John Stipicevich, interim assistant director for maintenance and operations of the UU, turned the project over to Bretten Osterfeld, chairman of the UU Executive Committee.

"He basically said to me, 'Get it done,'" said Osterfeld.

Glenn Ritter, a 1984 Cal Poly graduate, had completed a report about the inoperative fountain for a class. Ritter submitted the report to the UU, but somehow, until recently, it was forgotten.

Osterfeld said the report was a good foundation for remedying the problem, but some slight modifications, mainly concerning costs, were made.

Ritter's report estimated the cost of equipment and installation to be at least $2,500, but the actual cost should be about $1,000, Osterfeld said. The annual fixed cost should be about the same, he said. The Cal Poly Foundation and ASI are working together to finance the project.

The fountain will be equipped with a recirculating pump so the water can be used more than once instead of going down the drain. It was originally constructed without such a pump.

Osterfeld said work to get the fountain flowing again will only take a few days.

Computer music wiz hypnotizes audiences
Cal Poly experiences Suzanne Ciani's high-tech tunes

By Scott Sarno

The two-hour concert covered 12 compositions, which Ciani calls "Waves," from her first two albums. Ciani is a performer, composer, producer, arranger and the owner of Clane/Musica, one of the leading commercial music production companies in the country.

While her last performance was 15 years ago, Ciani said she was happy to be performing again. She has seen many changes in electronic sound since her last performance, she said.

"My performance techniques have changed as completely as the technology," she said. Ciani uses a collection of high-tech equipment to create music which she calls "female" in the best sense of the word. "My music is not pink face," she said. "It is powerful and passionate, strong and loving music that expresses my femininity."

Ciani's performance was impressive, almost to the point of repose, but she said the composer's performance was a compliment when her audience fell asleep.

"My music is mellow but not limpid," she said. "It has a great respect for who we are and I've given it 100 percent of who I am."

Ciani's music does not try to appeal to any particular audience. It comes from artistic personal inspiration. Ciani called it "classically inspired."

Ciani distinguished herself as a sound design artist in the mid-1970s and since that time has earned countless credits in all areas of the music industry. Her work in television commercials earned her four Clio Awards for underscores in commercials for products such as Coca-Cola and General Electric.

Ciani's most familiar work is on Meco's "Star Wars" album, for which she received a platinum record. "I don't pay much attention to awards," said Ciani. "I never realized how many I had until we moved into a new studio and they were displayed on the wall."

Ciani became interested in the art of electronic sound while attending UC Berkeley, where she earned a master's degree in music composition. She then studied computer music at Stanford.

"I met some people who got me interested in the field, which was very new at the time," said Ciani. After doing work on hundreds of underscores for commercials, film, records, television, radio and opera, Ciani enjoyed being on stage again.

"The equipment has a mind of its own so it's exciting to do a live electronic performance," she said. Ciani is working on her third album, which she expects to be released early next year.

For a complete listing of the work of Suzanne Ciani, call 544-7454.
SOCIALIST

From page 1 previous story.

"We can't punch up Democracy anywhere," she said. "I must start new.

Kenoyer said her program was "serious national health care, full employment, a balanced budget and, "calling all our military men overseas home.

"The Socialist Party advocates a classless, non-racist, feminist society in which individuals work together, both at home and in the community," she said. "Socialism is a way of life.

"I also don't have the big money or group support the others do," she said.

But Kenoyer realizes she has a tough job ahead of her. "It's going to take the American people time to seriously consider a socialist candidate," she said.

"Then again, I'm a dreamer. If I wasn't, I sure in the hell wouldn't be a socialist candidate."[1]

GEOGRAPHY

From page 1 previous story.

"People tend to regard geography as old fashioned," said Wilbert, "while in Britain and many other European countries it is considered a major discipline.

The National Geographic Society has put some of its resources into a program of geographic education. This year the organization will spend about $4 million on geography education and has already distributed more than six million free maps to school children.

With the new emphasis on geography and efforts led by the National Geographic Foundation, educators say they hope every young American can have a better understanding of the world by the time they graduate from high school.

By Jeanne Denver

THE SAN LUIS OBSIPU CIty Council voted last week to allocate $5,000 for the Poly Royal Board from the Grants-In-Aid program. Other local organizations were not as fortunate, however, with the council voting to reduce requested funding for 13 agencies and denying funding for four other agencies.

"People tend to regard geography as old fashioned," said Wilbert, "while in Britain and many other European countries it is considered a major discipline.

The National Geographic Society has put some of its resources into a program of geographic education. This year the organization will spend about $4 million on geography education and has already distributed more than six million free maps to school children.

With the new emphasis on geography and efforts led by the National Geographic Foundation, educators say they hope every young American can have a better understanding of the world by the time they graduate from high school.

Poly Royal Board receives funds

By Jeanne Denver

history.

THE SAN LUIS OBSIPU City Council voted last week to allocate $5,000 for the Poly Royal Board from the Grants-In-Aid program. Other local organizations were not as fortunate, however, with the council voting to reduce requested funding for 13 agencies and denying funding for four other agencies.

We cut some of the agencies because the council policy requires that the money given to the agencies must be justifiable in terms of assisting the city, culture or the residents," said council member Glesa Deanne Dov�y, "We prefer not to give a group money to go out and raise their own money.""The Friendship School and the San Luis Obispo Criterium were the only other agencies not to have requested funding reduced by the council.

The PCC started the Grants-In-Aid cycle for the 1987-88 fiscal year by advertising in the local media for nonprofit organizations to submit proposals for funding. Twenty-two applications were accepted and the total funding recommended by the PCC was $52,000.

On July 7, the council decided to postpone the PCC Grants-In-Aid public hearing because of the lateness of the hour. A PCC council subcommittee consisting of Dowey and council member Penny Rappa was then formed to meet with the chairperson and staff of the PCC. The subcommittee recommended that the budget be reduced to $44,900.

The budget approved for fiscal year 1987-88 is $49,770, and the remaining $4,000 will go back to the PCC budget," said Dowey.

In fiscal year 1985-86, 16 agencies received funds totalling $43,750. This fiscal year, 19 agencies received $48,595.

DEATH

From page 11.

Lt. Sabath said an investiga- tion is underway to determine whether Barcellos was driving negligently. Witnesses driving behind Barcellos said that Barcellos was not speeding or driving erratically.

Sabath said no charges have been filed, although, he added, if charges are filed they will probably be for misdemeanor involuntary manslaughter.

Cottors was a senior biological scientist.
