Parking fees are going to increase 60 percent next year

CSU Trustees approve systemwide hike; Poly drivers to pay $36

By Marty Neideffer

Beginning next fall quarter Cal Poly students and staff will be paying more to park their cars on campus. The California State University Board of Trustees has approved an across-the-board parking increase for all CSU schools. The new plan will set up a different parking fee for each campus, based on the number of multilevel parking structure spaces it has.

By Marty Neideffer

The fee will range from $12 to $14 per month under the new plan. Campuses with predominately multilevel parking facilities, such as San Francisco State and San Jose State will pay the highest fees.

Campuses with limited structural parking, such as Chico State, San Diego State and Cal State Los Angeles, will be paying the lowest fee of $12 per month.

Parking stickers will now cost $36 per quarter for Cal Poly students and staff — an increase of $13.50.

The Trustees approved the plan on the recommendation of a special task force that has been studying the campus parking issue systemwide since January. John Sweaney, a CSU trustee and a Cal Poly staff writer, said the fee increase was necessary to pay for existing parking structures throughout the state.

"The money to pay for these structures comes from several other alternatives, including a flat fee increase to $14 per month for all CSU campuses," said Sweaney.

He added that the money from all campuses goes into one fund and is apportioned according to need, with schools that have parking structures receiving the bulk.

The trustees chose this plan after considering several other alternatives, including parking structures throughout the state.

"This type of differential is fair since parking structures are six or seven times more expensive to build than surface lots," said Hillyard.

Parking stickers will now cost $36 per quarter for Cal Poly students and staff — an increase of $13.50.

Fraternity council puts Delta Tau on probation for party violations

By James Welch

Delta Tau fraternity has been placed on probation and fined by the Intrafraternity Council for a party it held on Aug. 22. Probation, which will last for nine months, means the fraternity will be closely watched by the IFC. The fine is the maximum allowed under IFC policy — $2 per member.

The fraternity must also complete 180 hours of community service to the city.

In an IFC judicial panel hearing, Delta Tau was found in violation of rules two and four of the IFC party policy and guilty of irresponsible community and Greek behavior.

The judicial panel consists of the IFC executive board and the presidents of each fraternity.

Rule two of the policy states there are to be no "open" parties given by fraternities. All parties are to be by invitation only. Rule four prohibits the advertising of any social function through newspapers, posters, fliers, etc.

The city issued an unlawful assembly violation the night of the party.

Delta Tau President Jeff Tolle said the probation was necessary and acceptable. Tolle was IFC president last year and said he realizes these steps must be taken occasionally.

"We've been changing the way we run our parties, even before the probation," Tolle said. "We've tightened up security. It's still fun inside, but quiet outside."

IFC President Tom Bongi said he is confident the IFC is capable of policing themselves and doesn't foresee any negative actions on the part of the city.

"Delta Tau was very cooperative," said Bongi. "They know they screwed up and they were more than willing to rectify the situation."
Senators exist to debate and argue, but they also vote

W

hen I talk to most students on campus and I mention the ASI, they seem to think that I mean the Student Senate. Usually that’s what I do mean, so I get communications guns aren’t really that noticeable. I’d like to make it clear that there is far more to the ASI than just the Student Senate, but even though the senate is the most visible branch of the ASL, not many people understand it.

The theory behind the Student Senate is that the student body should have some group to represent them when decisions are made that affect them. That seems fairly basic and obvious. The problem with this idea is implemented on this campus is that it is different from most other campuses. The way we’re different stems mainly from the way our student senators find out just what is the collective mind of the student body.

Accepting the mind

The Theory (capital “T”) if you please goes like this: Most students who are interested in what goes on on campus are involved in more than just their classes, e.g. they join clubs. Each club directly associated with the Student Government is a representative to that school’s student council to make their interests known to the council. For example, the Poly Phase club is associated with the School of Engineering, so they get to send a representative to the engineering student council. On the other hand, Poly Christian Fellowship is not associated with any school, so they are not represented on any of the school councils.

Each student council is made up of club representatives, officers (elected by the council), and the school’s student senators (elected by students of the school as a whole). Student senators are supposed to be the bridge, the gripes, complaints, suggestions and ideas of the other councilmembers and develop that input into policy. The senators are also supposed to take policies that arise in the senate back to their councils so club representatives can take these policies back to their clubs. The clubs then render a decision and return to the council to tell what they have learned. A vote in the council is taken, and the senators “consider” the outcome of the vote.

The reason I say “consider” is that the senators are under no obligation to vote the way their councils tell them to. There’s a good reason for this: Facts may arise during a senate meeting which dramatically change the way a senator views an issue.

No, I’m not making this up. That’s really how it’s supposed to work.

So after the senators find out what is on the collective mind of the student body, what do they do?

Like any political body, they have meetings. The main Student Senate meetings are Wednesday nights at 7 p.m. in University Union Room 220. The main business takes place at the very end, when bills and resolutions are debated, argued over and voted on. Typically, resolutions are the senator’s primary means of legislating, and the senate’s only real power.

Resolutions and bureaucracy

A resolution is a document which basically states that there’s a problem and the senate feels something should be done about it. Resolutions are debated for two weeks and take a simple majority of votes to pass.

Like any political body, senators have meetings to argue and vote on bills and resolutions. This is their main method of legislation, and their only real power.

Bills and codes

A bill is a document which changes the operational codes of the ASI. Bills can be introduced for three weeks, take a two-thirds vote to pass, and sometimes be approved by the Student Senate and then referred to a general election (depending on the extent to which the operating codes are changed and whether there is a financial impact or not).

When a couple of senators tried to start an inter¬club council two years ago, this was considered a drastic change to the operational codes. Their idea was to create a council made up of representatives from clubs not affiliated with particular schools. After being passed by the senate, the bill was presented in a general election and was voted down.

When Vice President Macica Godwin and I went through the operational codes three years ago and changed the word “proxy” to “alternates” at the time it popped up, and made a few other minor clarifications, our changes were passed within the senate but never had to go to a general election because we didn’t change the intent of the codes significantly.

If you’ve read this, you should have a better understanding of just how the senate works. You should also begin to realize some of the limitations on the Student Senate and why the senate will probably not affect great changes. In my next few columns, the senate committees, the ASI executive staff, the University Union and the finance committees will be featured. For the rest of the semester, we’ll explore possible ways to make the system more responsive to real student needs.

Earl C. Ruby III is KCPR’s general manager and a former ASI senator and executive staff member.

Oil shipments will be at the bottom of the Gulf, bleeding its oil supplies coming out of the Gulf, and it will lose the wallets and our economy; again. And the Iranians will respect us deeply for our bravery and commitment.

If Reagan were to do as Congress begs and invoke the act in a moment of thought will make it clear to anyone that the act is a spineless document. No, I’m not making this up. That’s really how it’s supposed to work.

The current situation is far from ideal, but compared to the current situation in the Persian Gulf. It is too early in the game yet for the all-or-nothing black and white choice mandated by the War Powers Act.

If Reagan were to do as Congress begs and invoke the act in a moment of thought will make it clear to anyone that the act is a spineless document. No, I’m not making this up. That’s really how it’s supposed to work.

The current situation is far from ideal, but compared to the current situation in the Persian Gulf. It is too early in the game yet for the all-or-nothing black and white choice mandated by the War Powers Act. But Vietnam is a case that cannot be applied to the current situation in the Persian Gulf. It is too early in the game yet for the all-or-nothing black and white choice mandated by the War Powers Act.

‘Bolder-than-most’ attacker increases rape activity in S.D.

SAN DIEGO (AP) — A knife-wielding rapist has been linked to 11 sexual attacks in San Diego, and authorities issued a public warning after two assaults occurred in a single evening.

“We’re calling this a ‘bolder-than-most’ series because the suspect apparently isn’t afraid to take chances — for instance going into a house where a woman is not alone,” Police Sgt. Anne O’Dell said.

In more than half the cases, the rapist threatened husbands or boyfriends of victims into not interfering with the assaults, which lasted between 30 minutes and two hours, police said.

Since four attacks came in the last two months, police fear the rapist has become more active, Police Sgt. Cheryl Meyers said.

On Sunday, an intruder crawled through unlocked windows in two homes on the same block in Pacific Beach, assaulting one woman after midnight and another just before dawn.

The rapist is believed to have struck five times in east San Diego, twice in the historic neighborhood of Old Town, and four times in the oceanside neighborhood Pacific Beach since August.

The man raped six of the women, attempted to rape two and sexually assaulted three, Meyers said.

In most cases, the rapist entered through an open window during the attacks, which occurred between 11:30 p.m. and 5:30 a.m., police said.

Reagan’s trip to New Jersey to focus on Bork nomination

WASHINGTON (AP) — President Reagan, angry about the campaign used to cripple Robert H. Bork’s nomination to the Supreme Court, is complaining that opponents used tactics that have no place in the judicial process.

Despite the seemingly hopeless prospects for Bork to win confirmation, Reagan planned to talk about the nomination today during a three-stop trip to New Jersey, combining a visit to a high-tech plant, an address to the Chamber of Commerce and a Republican fund-raiser.

Originally, the focus of the day was to have been the economic expansion that has become the longest in America’s postwar history, extending 59 months since the economy pulled out of a recession in November 1982.

However, Bork’s surprise decision Friday not to abandon his apparently doomed nomination meant Reagan had to stand with his embattled candidate and fight. White House aides said Reagan would criticize the process.

Bork nomination to the Supreme Court, is complaining that opponents used tactics that have no place in the judicial process.

In his only comment on the matter Monday, Reagan said he would like to see the Senate this week on the matter, Reagan said he would like to see the Senate this week on the Bork nomination.

In a related development in Geneva, U.S. senators who met with Soviet arms negotiators said Monday they believed U.S.-Soviet differences on West German Pershing 1A missiles would soon be resolved.

On Friday, the Soviets demanded that the 72 West German Pershing 1A missiles, equipped with U.S. nuclear warheads, be included in a U.S.-Soviet treaty on medium-range nuclear missiles, according to a Soviet diplomatic source.

Washington has refused to negotiate the status of the missiles.

You’d think any dictionary would have all the words in this newspaper.

In fact, only this dictionary does.

Surprising? Not really. Not when you consider the cultural explosion that occurred in the past twenty years. Our language has been enriched dramatically — by thousands upon thousands of vital new words.

And there’s only one source where you’ll find virtually all of them. The Random House Dictionary of the English Language: Second Edition Unabridged.

“Im unstated in its merits.” — James A. Michener

• Over 50,000 new words and 7,500 new definitions.

• Edited in cooperation with 400 subject experts.

• 75,000 sample phrases — and worlds, too.

The first new unabridged dictionary in 21 years.

Military science class offers ‘breath of fresh air’ to all

By Heidi Linkenbach, Staff Writer

You don’t have to enlist in the Army to be all you can be anymore. Students enrolled in a military science class are learning to survive on a mountain, exemplifying the Air Force’s “learn by doing” motto uniquely.

The class, open to students of all majors and abilities, was designed to teach students basic mountain climbing, including skills that would increase the chances of survival should a student ever be stranded in a desperate situation.

The class is taught by Master Sgt. David Stanley, the principle drill instructor/operations sergeant for Cal Poly’s ROTC program, is responsible for planning locations, teaching weapons and other equipment and providing medical aid for ROTC drills.

It has been rising mountain survival at Cal Poly for two years.

“When I first started teaching the course, I felt I needed for change, and felt that the students’ viewpoints were more important than mine,” said Stanley. He had students evaluate the class and through their comments and suggestions, he developed the course into what it is today.

Originally designed for 20 students, the class’ popularity has skyrocketed. This quarter’s class has 70 students, including 13 females.

Stanley offered an explanation for the course’s popularity. “There is quite a bit of hands-on experience. We teach skills you don’t have to be in a survival course to use,” he said. “The reason there are so few females enrolled is because we don’t realize that it is for them. And also, many are scared because they don’t know why the course is about.

By the same token, only 15 out of 90 ROTC cadets at Cal Poly are women.

It was fun because even if you fall, you’re not going to go anywhere — you’re hooked in."

—Theresa McElhaney

Stanley advises his group to bring plenty of drinking water, a granola bar and camps to capture the breathtaking sites.

He called this his confidence-building lab because of the effort required to reach the summit. Students seem to enjoy it also.

“You make walking boring!” one student told Stanley. Another student came up to Stanley after the hike and shook his hand fervently, thanking him for the experience and the confidence he built.

Rappelling is the third lab. Here, as in previous labs, the rule applies — “If you don’t feel comfortable doing something, you don’t have to do it.”

Students are not penalized for not rappelling.

However, Stanley said he hardly ever this problem. Usually, he said most can’t catch enough, and want to keep doing it. He keeps up telling people, “This is your chance.”

The rappelling lab is off the Architecture Building. Students get their first feel for the sport by practicing on a wooden wall. They walk the first time down to get comfortable with the position and build confidence.

The second time down, they may bound down a little bit. By the third time, they’re all very ready to -- challenge higher.

After leaving the wooden wall, they advance to the mover tower of the Architecture Building, where they use the same format as before. Each student gets three or four opportunities on each wall.

If students want to do more rappelling after the lab, Stanley tells them to join the RECONDO Club. RECONDO is a military science-sponsored club, open to civilians, that rappels from the San Luis Obispo SWAT tower on weekends.

Another opportunity students have to rappel is Adventure Day. Sponsored by the military science department, Adventure Day is an all-day free to the public where they can participate in a rappelling event and an orienteering event, which requires a two-person team to locate a point in Poly Canyon with only a map and compass.

Stanley also teaches a wilderness survival class offered winter quarter. The course is similar in format to the mountain survival class, but covers different topics.

In the first lab, students build traps and snares in Poly Canyon. “This goes back to the beginning of man,” said Stanley. Students are in four-man teams. Given only a knife, they must make a trap and then dismantle it.

The second lab involves killing, skinning, gutting and cooking rabbits, chickens and snakes. “People have actually reverted to doing it the wilderness because they couldn’t kill a rabbit,” Stanley said.

In the third lab, students learn how to locate and prepare edible plants and how to differentiate between poisonous and edible ones. Some of the plants found in Poly Canyon can be made into string, medicine, soap and, obviously, food.

Both courses are graded on a credit/no credit basis.

Stanley has created an advanced survival course to be offered in the spring. The two survival classes will be prerequisites. Students will be able to employ skills previously learned, he said.

The class will be much smaller than the other two, open to about 20 people. Overnight labs are planned. A tentative course outline includes survival swimming, weather prediction for a night shelter and navigation by stars.

Stanley is looking forward to this course especially. He calls all his courses “a breath of fresh air for both me and the students. They’re a nice break from the academics.”
The Central American peace plan is intended to end guerrilla wars in Nicaragua, El Salvador and Guatemala. It requires cease-fires, amenities, and measures bringing greater democracies to be arranged by Nov. 1 when each nation is to report on its progress.

A peace commission is to verify compliance with the plan by Jan. 1, four months after it was signed in Guatemala City by the presidents of Costa Rica, El Salvador, Guatemala, Honduras and Nicaragua.

The Reagan administration supports both Central American governments in their efforts to construct a war with leftist guerrillas began eight years ago, administration officials have conducted the Arias plan, which would require an end to all outside support for rebels, because it does not prescribe penalties for non-compliance.

Arias has not permitted Contras to operate from Costa Rica, which is Nicaragua's southern neighbor and has no army. He proposed the peace plan after taking office in May 1989, but needed another 15 months to overcome objections, mainly from the Sandinistas in Nicaragua.

At the August meeting in Guatemala, Arias would not allow the presidents to break for a meal until they reached agreement.

Since then, Nicaragua has allowed the Roman Catholic radio station and the only opposition newspaper to reopen and the three governments facing insurrections have begun talks with their opponents.

The State Department said the choice of Arias was "well-deserved recognition for his efforts to bring peace and democracy to Central America" and "has our continued support.

On Monday, the Swedish committee chose Savamus Takigawa of Japan for the 1987 prize in medicine for his discovery on genes that control the body's immune system.

Recipients of the chemistry, physics, literature and economics prizes will be announced later.

Boaters face Pomona tonight

The Cal Poly men's soccer team may be without its leading scorer when it faces Cal Poly Pomona tonight in Mustang Stadium. Game time is 7 p.m.

Dan Campbell, who last year scored a record 21 goals and leads the Mustangs this season with six, suffered a foot injury against Cal Lutheran. It was his third 100-yard game of the season. Northridge will be in Mustang Stadium Saturday to face 11th-ranked Cal Poly.

Cal Poly's Allen Sarsula, Sean Pierce and Rene Oliver each are statistical leaders in the Western Football Conference.

Sarsula, a running back, is the conference's leading scorer with 42 points. He has scored seven touchdowns in five games. Pierce, who has connected on six of eight field goals and 18 of 23 extra points, is tops in kick scoring. He is averaging 2.2 points per game. Oliver, a defensive back, is the leader in interceptions with four. He has returned each for an average of 23.5 yards.

Also among the leaders are Tom Sullivan, Terry Cole, Kevin Emigh and Damon Shows.
CALENDAR

Wednesday

• Changing sexual attitudes on the college campus will be discussed through the CN broadcast of "Sex on Campus," Wednesday, Oct. 14 at 7 p.m. in Chumash auditorium. The event is sponsored by ASI TV programming.

• Valentine Garcia-Smith, admissions officer from UC Davis, will speak on "Admission to Vet School" Wednesday, Oct. 14 at 7 p.m. in Dexter Hall, Room 227. The event is sponsored by the veterinary science club.

Thursday

• The International Student's Plaza Show and Food Sales will be held Thursday, Oct. 15 at 11 a.m. in the University Union plaza. The event is sponsored by the Multi-Cultural Center.

• Political science professor David Dalenlski of Occidental College will speak on "Jefferson and the Constitution" Thursday, Oct. 15 at 11 a.m. in the University Union, Room 220. The event is part of the Arts and Humanities Lecture series.

• The Learning Assistance Center will be holding a summer job workshop Thursday, Oct. 15 at 11 a.m. in the Business Building, Room 204.

• The Latin American Symposium Formation Committee will be meeting Thursday, Oct. 15 at 7 p.m. in the Multi-Cultural Center — University Union, Room 217.

• Photo ID cards will be distributed Thursday, Oct. 15 from 10 a.m. to 1 p.m. in the University Union plaza.

for San Diego State's facility," Blair said, referring to the multilevel garage on that campus.

Parking fees were last increased in 1985, but Hilliard said the new increases must be in place by fall 1988 to allow construction of new parking facilities to continue.

The cost of parking projects throughout the CSU system will total $112.5 million over the next five years, with $44.3 million being spent in the 1988-89 school year.
