Minimum wage increases;
tipped workers raise less for Christmas

By Donna Taylor
Staff Writer

Minimum wage workers received an $1,000 yearly raise for Christmas, but tipped employees' stockings weren't nearly as full.

The state Industrial Welfare Commission voted Dec. 18 to raise the minimum wage to $4.25 per hour, but included a sub-minimum wage of $3.50 for all tipped workers whose tips amount to at least $60 per month. All employers must comply to the raise, which now gives California the highest minimum wage in the nation, by July 1.

"I think it's safe to say we are very excited about the substantial increase," said Ray Spencer, chairman of the California Stair Student Association. "Not since 1981 has the $3.50 minimum been touched, and yet the cost of living has gone up steadily."

However, Spencer said the CSSA is against the sub-minimum wage of $3.50, and said the issue was not addressed adequately by the IWC.

Kathy Higgins, a Cal Poly social science junior and waitress at Angelo's Italian Restaurant, agreed.

"We work as hard if not harder than everyone else who gets the $60 a month, said the $60 a month requirement set by the IWC is "ridiculously low."

"I can make that on a single weekend night," said Mills, previously unaware of the IWC decision. "It is unfair to give everyone a 30-cent raise and tipped employees only a 15-cent raise."

The Cal Poly Foundation, which employs up to 1000 students at a time, is pleased with the increase to $4.25.

"Most of our student employees make below minimum wage already," said Foundation Director Al Amaral. "We've had a problem in recruiting students to work in the past, so I think the raise will encourage more to seek work with us."

Amaral said although the increase might indicate that budgets will be tighter, he does not contemplate laying off any students because of it.

In September, the IWC proposed a $3.50 minimum wage which the Foundation would have opposed even more strongly.

So it's a new quarter — big deal?

Let's change habits, not the ecology

The Department of the Interior is at it again. They're back again with a revised plan to develop California's coastline for oil production.

A new report prepared as part of a national energy plan calls for oil production off the coast of Northern California near Mendocino and Humboldt counties. This is eight times the number of rigs off the Wyoming coast, where the increase is the result of new drilling in Central California, which has "similar geologic formations." Other estimates say there isn't enough oil out there to feed California for a week.

The report stated that it will not be possible to know what's out there until drilling takes place. In other words, the Department of Interior is saying let's build 24 rigs, then find out what we got. Sorry.

The millions that will take to retrieve the coastline's small reserves can be much better spent in researching alternatives. Alcohol fuels have been proven time and again to be cheaper, safer, and more efficient than any other alternative.

Native fish slowly perish

Editor:

Last quarter, I walked down to Siskiyou Creek to take a look for my senior project subject, Lampetra tridentatus, or the salmon lamprey, along and sifting through the creek, but all I could find was an eel. I was there for four hours before I drove off. I drank only ice water. This surely should have been enough time and liquid to top up my system. I thought I was pretty smart, thinking that I did that I did not need—do not drive drunk.

I turned in too early and came out wide, and as I got off the shoulder of the road, I realized that I was waiting for me. I took the tree in the right rear corner at probably 40 mph and started spinning, don't know how many times I spun, but I came to rest tangled up in a barbed-wire fence halfway in a field. My car was strewn in pieces as far as the eye could see. Chunks of road sign were thrown thirty yards from me. I was fine.

The car's huge glass hatchback distinguated, the windshield shattered with glass in the front wheels now pointed in different directions. Hardly a single body panel went unscatched. By the grace of some higher being, however, the human lives involved were spared.

I was arrested for three—beer limit when I drove to bars and parties. I figured beyond that I would lose a license to drive, as I'm assuming exceeding the magic .10 blood-alcohol level. By the time I saw that sight I didn't think I was over the legal limit, yet I still screwed up.

But the fact is that any amount of alcohol intake, like any drug, puts you at risk. Just look at the Ohio River and the states of Pennsylvania, Ohio and West Virginia today.

Our delicate offshore wildlife stands to lose the most. We should let these continental shelf creatures keep their habitat and look for energy elsewhere. Although wildlife can disappear forever, energy never dies—it only changes forms.

Firefighters report swastika in office after racial scuffle

SAN FRANCISCO (AP) — Two minority firefighters reported finding a black wooden swastika in their office at a station that was the site of an inter-racial scuffle last summer.

"Both of them were trembling, shaking," Lt. Bob Demmons, president of the city's Black Firefighters Association, said Tuesday after the discovery at Station 13 in the Financial District.

Inspector Walter Barzine, who is black, and inspector David Sait, who is Asian, found the swastika on Monday when they returned to their office after an absence of about three hours, Demmons said.

"Barzine was highly agitated and so was Dave. It took an effort to keep Barzine from going down to the firehouse," he said.

Sexual harassment reported in city government survey

LOS ANGELES (AP) — More than a third of female city government employees said they have been sexually harassed on the job, and most said they believe filing a complaint would do more harm than good.

The survey, by the city's Commission on the Status of Women, found that 70 percent of the women believe lodging complaints about harassment would not help them, and 63 percent felt it might only reap retaliation.

As a result of the findings, the commission has drafted a policy that clearly defines what constitutes acts of sexual harassment.

Under the revised policy, lettering gestures, the passing of obscene notes, and both offering or denying promotions on the basis of response to sexual advances all would be considered forms of sexual harassment.

King Harbor Marina officials want 10-year-old girl removed

REDONDO BEACH (AP) — Marina officials have told Lou DeAndrea to shape up — and ship out his 10-year-old daughter.

Freckle-faced Christina DeAndrea has lived with her 40-year-old father on a 38-foot pleasure boat named "Little Christina" for the past five years. She does her homework in her cabin and goes to school on shore.

While DeAndrea's neighbors say he is an ideal slip-mate, marina owner-operator Les Guthrie called DeAndrea the "bully" of the slip.

Ban on Florida's citrus fruit is unnecessary, expert says

LAKELAND, Fla. (AP) — A leading citrus canker expert in Florida says a ban on fresh fruit shipments to other citrus states is unnecessary and a recent decision to keep the ban is not scientifically justifiable.

Tim Gottwald, a U.S. Department of Agriculture research scientist in Orlando, criticized the department for withdrawing a proposal that would have once again allowed Florida fresh fruit into other citrus states.

Gottwald also told The Ledger of Lakeland the disease that led to the destruction of about 20 million nursery trees since 1984 is not canker, but a less harmful plant disease.

Research indicates the disease would not threaten the Florida citrus industry or spread to other states, he said.

"For lack of a better name now, we are starting to call it citrus bacterial spot," he said.

China approves construction of Hong Kong nuclear plant

BEIJING (AP) — China's nuclear power authorities issued a construction permit Wednesday for a plant that has drawn sharp opposition because of its proximity to Hong Kong and safety concerns.

The National Nuclear Safety Administration granted the permit to the Daya Bay nuclear power plant after a six-month study concluded the design mirrors Chinese and French safety standards.

Two French-made 900,000-kilowatt pressurized water reactors are to be built at the site in China's southeastern province, 36 miles north of Hong Kong.

Residents in Hong Kong, which will receive an estimated 7 percent of the plant's electricity after it is completed in 1992, have campaigned against the plant, saying it is too close to the city and there are too many doubts about China's nuclear technology.

S. Korean opposition leader not allowed to resign position

SEOUL, South Korea (AP) — Kim Young-sam retained his leadership of the main opposition party Wednesday after offering to resign over his defeat in last month's presidential election.

A special convention of the Reunification Democratic Party rejected Kim's offer to resign as party president by a vote of 819 to 76.

"Kim Young-sam! Kim Young-sam!" chanted supporting supporters as Kim, with a laurel of flowers around his neck, flashed victory signs.

The opposition leader assured supporters of an "unswerving" victory in legislative elections, but the mood appeared somewhat subdued in light of Kim's defeat in the nation's first direct presidential race in 16 years.
MAIL BAG 

The Mustang Daily welcomes reader comments and welcomes all letters of at least 100 words. Mail should be addressed to: Mustang Daily, Mustang Mailbag, 1067 N. Third St., San Luis Obispo, CA 93407. Mailbag letters are subject to editing. Please include phone number and e-mail address. Deadline for mailbag is Friday at 5 p.m. Deadline for Letters to the Editor is published daily except weekends/holidays. Deadline is 5 p.m. on weekdays. Deadline is 1 p.m. on Fridays. Deadline is 12 p.m. on Sundays.

Native fish slowly perish

Editor: Last quarter, I walked down to Sisser Creek to take a look for my senior project subject, Lampetra tridentata, or the Pacific lamprey. There was just my senior project subject, lamprey, and look for energy elsewhere. Although wildlife can disappear then import the technology to reduce our huge trade deficit. There isn't enough oil out there to feed California for a week. In other words, the Department of the Interior is saying 'Let's build 24 rigs, then look at the Ohio River and the states of Pennsylvania, Ohio and West Virginia today.

Our delicate offshore wildlife stands to lose the most. We should let these continental shelf creatures keep their habitat and look for energy elsewhere. Although wildlife can disappear forever, energy never dies — it only changes form.

Interviewee finds beef

Editor: The professionals that interview on campus at the Cal Poly Placement Center don't always know what major to ask or how to interview. I recently interviewed with a company that was offering a position in manufacturing. The job description was very specific and almost required some skills in processing machinery. I told the interviewer I had some experience in processing machinery in a tour of his facilities.

Later that month I was invited to get the position where I knew what I was doing and was ready for the atmosphere. I love working for these students who cannot display a truthfulness of any of their background. They won't be able to do well in the future and are taking jobs away from the more suited!

OPINION

Comfortably numb is no way to do your driving

Don't do it. Don't drink and drive.

I realize no amount of lecturing or commands like this will convince you to drive dry. It didn't for me. It took painful and oh-so-remembered personal experience to wake me up.

Not long before the popcorn was to be sprung and the times spread, I smashed with my Porsche — hard. I was at a friend's graduation party all afternoon. I thought I was pretty smart, but I got caught. Only four hours before I drove off, I drank one cold ice water. This surely should have been enough time and liquid to purge my system of the party's foolishness, right?

I knew the road well. The first turn is a hard left that can be taken really fast if you're per­ty. My problem was that I did not — could not — drive dry.

I turned in too early and came out wide, and as I got to my shoulder I slammed into the car and waited for me. I took the tree in the right rear corner at probably 40 mph and started spinning. I don't know how many times I spun, but I came to rest tangled up in a barbed-wire fence halfway in a field. My car was strewn in pieces as far as the eye could see. Chunks of road were shown through 20 yards. The tree had a few scratches.

The car's huge glass hatchback disintegrated, with the windshield shattered out of the four wheels now in different directions. Hardly a single body panel was untouched. But the next time you're leaning over it on a bridge or sitting next to your stale gum into it, think about where the water's going, the trees destroyed. Wouldn't it be worth it then?

The dangers from spills and contamination are clear. Just look at the Ohio River and the states of Pennsylvania, Ohio and West Virginia today.

Our delicate offshore wildlife stands to lose the most. We should let these continental shelf creatures keep their habitat and look for energy elsewhere. Although wildlife can disappear forever, energy never dies — it only changes form.

Byker Breathed

BLOOM COUNTY

Morgue Deuce at the Humane Society, Merced County, CA 95340

March 1, 2019

The body of a dog that was found dead on the streets of Bloom County was described as being approximately 6 years old and weighing around 20 pounds. The dog was described as being black and white with brown spots on its back and sides. The dog was found near a busy street and was later taken to the Bloom County Animal Shelter for processing.

The Bloom County Animal Shelter provides services for all animals in the county and is located at 1400 Bloom Street. The shelter is open to the public from 8 a.m. to 5 p.m. Monday through Friday.

The shelter offers a variety of services for pets and their owners, including adoption, spay and neuter services, and pet behavior consultations.

In addition to animal care, the Bloom County Animal Shelter also provides services for people who are facing financial or housing challenges. The shelter offers assistance with pet food and supplies, and provides resources for people who are facing eviction or other housing crises.

For more information about the Bloom County Animal Shelter, visit their website at bloomcountyanimalshelter.org. You can also connect with them on Facebook and Twitter. If you have questions or need assistance, you can contact the shelter at (555) 123-4567.
Firefighters report swastika in office after racial scuffle

SAN FRANCISCO (AP) — Two minority firefighters reported finding a black wooden swastika in their office at a station that was the site of an inter-racial scuffle last summer.

"Both of them were trembling, shaking," Lt. Bob Demmons, president of the city's Black Firefighters Association, said Tuesday after the discovery at Station 13 in the Financial District.

Inspector Walter Batiste, who is black, and inspector David San, who is Asian, found the swastika on Monday when they returned to their office after an absence of about three hours, Demmons said.

"Batiste was highly agitated and so was Dave. It took an effort to keep Batiste from going down to the firehouse," he said.

Council postpones condominium decision

Opponents say new homes to cause congestion, more parking problems

By Shelly Evans
staff writer

The San Luis Obispo City Council opened 1988 on Tuesday night by granting continuances on two major agenda items, the Laguna Hills subdivision and a zoning regulations amendment.

Developer Rick Webster’s 27-unit residential condominium complex at 786 Mirada Drive was granted a continuance with recommendations until the Feb. 16 meeting.

Public testimony sparked controversy when Bob and Virginia Kleith, who live across from Mirada Drive, voiced their opposition.

"This complex would create a congested condo area in our neighborhood," said Bob Kleith. "Zoning permits 8,000-foot lots which would allow for only 16 lots — not 27."

Virginia Kleith said, "This project is not consistent with our neighborhood character."

The condominium project did receive support from other neighbors.

Paul and Jesse Tuttle, whose front yard overlooks the project, commended the Laguna Hills developer for working well with the neighbors.

The Noise Boys

By Diane Wright

The San Luis Obispo Police Department has a noise control measuring device it sometimes uses to determine if a citation should be issued for a noise control violation.

Stephen Seybold, crime prevention coordinator for the San Luis Obispo Police Department, said that in 1980, the San Luis Obispo City Council directed the department to come up with some kind of a measuring device to be used in situations where the noise violation was questionable.

The measuring device is commonly referred to as the "meter" or the "box." It measures noise in decibels.

At approximately 3:30 on a Monday afternoon, the box registered traffic noise outside the SLO Police Department at 65 decibels, pointed toward Walnut Street, and 75 decibels pointed toward Santa Rosa. Seybold said sirens for ambulances and police cars usually register at around 110 decibels. A siren about a block away registered at 90 decibels.

Tom Bongi, president of the Interfraternity Council, said Delta Tau fraternity owns a noise control measuring device. Bongi said he used the device at parties at Delta Tau and Phi Kappa Psi.

"We would walk around the property line 50 feet away and we found out we were under the limit almost all the time when we kept everyone inside and the doors closed," Bongi said. He added that "it was something to show we are trying."

Seybold said the decibel limit set by the noise control ordinance are very low. "Fifty decibels at 50 feet is very low," he said. Seybold said the ordinance is coming up for review and he expects the limit to be lowered more.

By Diane Wright

The San Luis Obispo Police Department has a noise control measuring device it sometimes uses to determine if a citation should be issued for a noise control violation.

Stephen Seybold, crime prevention coordinator for the San Luis Obispo Police Department, said that in 1980, the San Luis Obispo City Council directed the department to come up with some kind of a measuring device to be used in situations where the noise violation was questionable.

The measuring device is commonly referred to as the "meter" or the "box." It measures noise in decibels.

At approximately 3:30 on a Monday afternoon, the box registered traffic noise outside the SLO Police Department at 65 decibels, pointed toward Walnut Street, and 75 decibels pointed toward Santa Rosa. Seybold said sirens for ambulances and police cars usually register at around 110 decibels. A siren about a block away registered at 90 decibels.

Tom Bongi, president of the Interfraternity Council, said Delta Tau fraternity owns a noise control measuring device. Bongi said he used the device at parties at Delta Tau and Phi Kappa Psi.

"We would walk around the property line 50 feet away and we found out we were under the limit almost all the time when we kept everyone inside and the doors closed," Bongi said. He added that "it was something to show we are trying."

Seybold said the decibel limit set by the noise control ordinance are very low. "Fifty decibels at 50 feet is very low," he said. Seybold said the ordinance is coming up for review and he expects the limit to be lowered more.

"I meet weekly with the police chief," said Bongi. "We are trying to work with them and not against them," he said. Bongi added all fraternity presidents have participated in the ride-along program with the SLO Police Department.

"The meter is used in shabby cases when it is a matter of opinion if it is a violation," said Seybold. Seybold said the decibel meter is rarely used.

Seybold said the meter is not routinely carried by officers on patrol. He said when a noise complaint is received at the police station, officers respond and listen to the noise approximately 50 feet away, or at the property line, whichever is closer. If the officers discern that the noise is loud at that distance, a citation can be issued without using the meter.

If the policemen at the scene are uncertain that the noise level is loud enough to warrant a citation, a call is made to the watch commander on duty at the police station. The watch commander brings the measuring device to the scene.

Lieutenant Gary Orbach of the SLO Police Department said, "In the last two months, I've been on night watch, we've only used it about half a dozen times." Orbach is working as watch commander on Thursday, Friday and Saturday nights.

"If the noise measuring device is a good tool when there is a question," said Orbach, "I think it is used when there is no question the meter is to be very accurate because it is calibrated before each use. "If a lot of times it can work to the advantage of either party," said Orbach.

Use of the box to determine noise violations is part of the noise ordinance in force in SLO since 1980. According to Seybold, the SLO City Council wanted a noise control ordinance in 1980 for two specific reasons. One reason was to eliminate excessive noise in residential areas coming from parties. The other reason was to solve a problem arising from a concert hall and a hotel built next to each other, but under different zoning rules.

A noise control ordinance developed by the Office of Noise Control of the State of California Department of Health served as a model for the formation of an SLO noise control ordinance.

Seybold said after two different surveys, the state determined that the noise levels in SLO should be classified as suburban-rural, which does not allow as high a noise level at urban classified areas. According to state guidelines, acceptable noise levels for SLO are 50-60 decibels during the day, and 40-45 decibels at night.

Seybold said these decibel levels are considered the standard for SLO, however the actual background noise level changes due to environmental conditions. A reading on the meter of 85 decibels or more 50 feet from the noise source is a violation. Seybold said if the 50-foot reading is less than 85 decibels, a second reading is taken approximately three blocks away to determine the background noise level.

Seybold said the difference of the decibel levels of the background noise at the time and the noise source determines if the noise source is in violation of the ordinance. A reading at 50 feet that is 15 decibels over the background decibel reading for one minute is a violation. A reading of 10 decibels over the background noise for five minutes or a reading of five decibels over background noise for 15 minutes is also a violation.

Seybold said it is up to the discretion of the police officer at the noise complaint location whether or not to issue a ticket. He said the attitude of the people giving the party influences that decision.

"A lot of attention is given to the fact people think that fraternities are the most frequent noise complaint, and that's not true," said Seybold. He added only 5 to 8 percent of noise complaints involve fraternity parties. "The problem is, when they throw a party, they really throw a party," said Seybold.

Seybold said a lot of noise complaints come from student parties, but the parties, and construction noise are frequently involved.

Orbach said on weekends the majority of complaints are about music being played too loud for bars. He has also received complaints about air conditioners being too loud in apartments. He also said, "If someone makes a complaint, we have to go check it out," said Orbach.

"Every time someone has a beef with their neighbors, they have a way to hang them," said Seybold. He said the public finding out about the measuring device has "become an incredible pain." Seybold said a man has complained that the mission bells were too loud and the department had to go and take readings.

Seybold said the department usually responds to 150 to 200 noise complaint calls a month. Last month police responded to 300 noise complaint calls. Seybold said 20 citations were issued and that is the most citations ever issued in one month.

"If (the noise ordinance) is totally ludicrous the way it is," said Chuck Henderson of Theta Chi fraternity. He said there are railroad tracks behind the fraternity, and the noise from trains is louder than any fraternity parties. Henderson said he was aware of the measuring device, but he said as far as he knows, it was never used at Theta Chi parties.

"We're in good with our neighbors," said Henderson. He said neighbors call him before calling police about noise complaints.

"The police used to give us a chance, but the last couple of times, they shut us down right away," said Kurt Klamp, treasurer of Alpha Epsilon Pi. He said as far as he knew, his fraternity has never received a citation.

John Nee, treasurer of Phi Kappa Psi fraternity, said the last citation his fraternity got was about two years ago. "We fought it in court and won," he said.

"I've never seen one (a noise control measuring device) used. I didn't even know they existed," said Tim Moscicki, president of Alpha Sigma. He refused to comment on problems the fraternity has had involving the noise control ordinance.

Frank Crest of Alpha Gamma Rho said, "We have had more increase in complaints this year than last year." He attributed the increase in complaints to public awareness of the noise ordinance. He said for the most part the police are "extremely fair with us."

Seybold advised those planning a party to invite their neighbors and try and keep it indoors with the doors and windows closed.

"He's a nice guy," Seybold said. He added if guests are throwing up or inebriated neighbors, a citation will be issued.

Orbach said the cost of citations is determined by a judge. The average cost is $85.
Artic cold wave sets temperature records nationwide

(AP) An Arctic cold wave drove across the Midwest and Northeast, homeless shelters were filled to capacity and beyond, with hundreds sleeping on couches or air mattresses on the floor. Others took shelter in subway, bus and police stations and building lobbies. "We can hold up to about 50, but it's one of those things where you can't say no," said Skip Kelley of the inner City Mission in Springfield, Ill., where the low was 5 degrees below zero.

Seventeen deaths were attributed to the weather, 11 by exposure. Power companies reported record demand, and the bitter cold meant dead car batteries, stalled vehicles, cracked pipes, delayed school openings, power outages and frostbite. Electric socks, insulated underwear and portable heaters sold like hotcakes, and zoo animals were kept inside.

The approaching winter storm belted northern Arizona and New Mexico, Utah, Colorado, Kansas, Oklahoma, Missouri, Arkansas and northern Mississippi with wind and snow. The snow and ice was expected to push through to Ohio, Georgia and West Virginia by Thursday.

The weather service in South Bend, Ind., where the temperature hit 10 below overnight, reported an unusual phenomenon called a "luminous pillar" — a vertical column of light produced at night by light being bent, or refracted, as it passes through tiny ice crystals.

Record lows were set or tied in a dozen cities Wednesday, including Chicago at minus 14 and New York at 12 degrees, but the severe weather didn't surprise National Weather Service forecasters, who said it would remain frigid for at least a few more days.

Hewlett Packard Week at Cal Poly

Monday, February 8
CAREER SYMPOSIUM 10 a.m.-3 p.m. Chumash Auditorium. Open forum to discuss HP Products, Organization and Careers.

Tuesday, February 9
INTERVIEW ORIENTATIONS — only for people who will be interviewing — if you don't have an interview, stop by and see us at the Career Symposium. 4-6 p.m. for those interviewing on Wednesday (except Summer). Staff Dining Room. 7-9 p.m. for those interviewing on Thursday + Summer. Staff Dining Room.

Wednesday, February 10
INTERVIEWS for March, June, August Grads in EL, ME, CSC, CPE, MATH/CSC, MIS, ET/EL, MENG, MSCSC & Summer. Juniors in CSC, ME, EL, MIS, CPE.

Thursday, February 11
INTERVIEWS for March, June, August Grads in EL, ME, CSC, CPE, MATH/CSC, MIS, ET/EL, MENG, MSCSC, & CO-OP.

Contact the Placement Center for full-time and summer interviews and the CO-OP office for CO-OP interviews.

Hewlett-Packard Company is an Equal Employment Opportunity Company dedicated to Affirmative Action.
Art major does it with style

Official Poly Royal poster chosen

By Marina Chang
Staff writer

Working from the theme "It's our style," Jenny Lim found her own style and is this year's winning artist for the official Poly Royal poster.

'I wanted to create something abstract and different from other symbols we've had in the past. Last year's poster moved toward a more contemporary look, but there was still a tangible figure."
— Jenny Lim

Lim, a junior applied art and design major, said the design was originally required for an illustration class. She was told to enter the contest with the only guideline being to create an image that represents the school as a whole.

Lim said she couldn't decide on one image that could do this, so she chose to limit her work to the word "style."

"I wanted to create something abstract and different from other symbols we've had in the past," Lim said. "Last year's poster moved toward a more contemporary look, but there was still a tangible figure."

Simplicity was a key concept to Lim's design. She said the word "style" represents the school as a whole and the arrows represent each school as well as graduate programs. Lim said she also used the arrows to express the many directions students travel during their stay at Cal Poly and after graduation.

Lim used red, blue and yellow pastels on a black background for her design. She said, "The colors contrast with the black to create a neon affect and the smooth red of the word 'style' and the lines create texture."

Lim said she was shocked she learned she won the contest. "I was surprised simply because my design was contemporary. I expected a more conservative design to win ... an image on white paper," she said.

Lim said she owes her inspiration to the Cal Poly arts program and that old familiar motto of "learn by doing." She said that Cal Poly concentrates on applying the fine arts to commercial use rather than strictly emphasizing it by itself.

"We keep up with the times by actually working in our fields and learn theories that we can apply to the working world," she said.

Lim said the full impact of her winning the contest hasn't hit yet, but she feels deeply honored.

"I just hope the poster accomplishes for Poly Royal what it's supposed to and if it does that, then I'm pleased."

Poly Royal posters are scheduled to be printed at the end of this month and will be distributed statewide.
Sulfur dioxide keeps grapes at home

By Dianna Callesen

Table grapes with sulfur-dioxide residue levels exceeding 10 parts per million cannot be shipped into the United States according to an interim policy announced by the Environmental Protection Agency in December.

By Dianna Callesen

The policy was made last year with the intent to determine if sulfur-dioxide gas, which is not a sulfur unless mixed with water, would have any effect on the 1,001 table grape growers in California. EPA does not have enough data to establish a permanent policy because they think the policy has "everything to do with the new administration's study found that certain levels of the sulfurizing agent used on raw fruits and vegetables could cause allergic reactions in about 1 percent of the population. The allergic reactions in some cases can be fatal. Sulfur-dioxide gas is used during the storage of table grapes to control gray mold and bunch rot. Before making the interim policy, the EPA had considered the sale of any sulfur-dioxide treated grapes, which would have had a tremendous effect on the 1,001 table grape growers in California. Sulfur-dioxide gas has been used as a fungicide since the 1990s and growers have no other alternative at this time to control the mold and rot, said Bruce Obink, president of the California Table Grape Commission. "The California Table Grape Commission doesn't think the EPA should put farmers out of business just because they are unable to regulate sulfur-dioxide levels. Growers should be allowed to tag their produce as they have in the past," said Obink. Last year, growers were allowed to put tags on produce that contained sulfite residue levels exceeding 10 parts per million. This year only grapes grown and harvested before Dec. 31, 1987, may be tagged. It is unknown at this time what effect this policy will have on this year's harvest. EPA assistant administrator John Moore said he is willing to try reaching an agreement with the industry on certification procedures by mid-February so growers can prepare for the coming harvest, said Jeff Nelligan, press secretary for Congressman Bill Thomas.

Brezhnev's name stripped from city, town squares

MOSCOW (AP) — Soviet authorities stripped the name of Leonid I. Brezhnev from a city, town squares and a Moscow neighborhood Wednesday, showing their low esteem for the late leader now blamed for bureaucracy and stagnation.

Wiping Brezhnev's name off the map was the latest example of authorities stripping the name of General Secretary Mikhail Gorbachev's reform campaigns.

Leonid I. Brezhnev from a city, town squares and a Moscow neighborhood Wednesday, showed their low esteem for the late Party chief from 1964 to 1982, Brezhnev, who was Communist Party chief from 1964 to 1982, and his era have come under increasing criticism for fostering bureaucracy and stagnation.

After Brezhnev died of a heart attack on Nov. 10, 1982, 460,000 people in the Tatar region 500 miles east of Moscow, was renamed in his honor. The city, whose name means "Dugout Canoe on the Shore," is the site of the sprawling Kamaz truck plant.

Also stripped of the name Brezhnev will be Moscow's Cheryomushki District and squares in the capital and in Leningrad.

The official news agency said the decision was taken by the party Central Committee, the Presidium of the Supreme Soviet and the government, indicating it was given top-level consideration.

In September, the weekly magazine Ogonyok said dozens of residents of the city of Brezhnev had written local party officials asking for a return to its former name.

"Many consider it quite unjustified that their native city, their Naberezhnye Chech, carries the name of the former leader of the country who never visited Kamaz, a man whose name is tied to "the epoch of decay,"" Ogonyok said.

"In the 70 years of Soviet history, cities, factories and geographical features have been renamed for members of the Kremlin leadership and other national figures."

In the most celebrated example, dozens of cities were named to honor Josef V. Stalin and his lieutenants, and were rebaptized after the dictator's death in 1953.

Jerusalem (AP) — Israeli troops fired tear gas and rubber bullets at rock-throwing Palestinian rioters in the occupied territories Wednesday, an Arab refugee camps to quell the protests. The violence stymied Israeli efforts to restore calm and defuse international criticism of its handling of the month-long rioting in the occupied West Bank and Gaza Strip. Army gazte has killed 24 Arabs.

Defense Minister Yitzhak Rabin said 1,978 Palestinians were arrested in the past month. Of those, 908 were released, 300 were tried and sentenced, six were acquitted and the rest were awaiting trial, he said.

The violence Wednesday sparked the day before, when an Israeli soldier shot and killed a 25-year-old resident of the Gaza Strip city of Khan Yunis and wounded seven. On Wednesday, soldiers fired tear gas and rubber bullets to disperse protesters in the West Bank city of Qalqilya. Troops also clashed with stone-throwing demonstrators in a nearby dozen other sites, including Gaza City, Ramallah, Rafah and several refugee camps.

The army clamped curfews on the West Bank refugee camps of Balata and Aza and on parts of Qalqilya and Gaza City. Curfews imposed Tuesday remained in effect in Khan Yunis and in Tulkarem in the West Bank.

In Tulkarem, an Israeli army officer shot and wounded a 21-year-old resident of the nearby Nur Shams refugee camp after the man attacked an army vehicle.

The officer told Israeli army radio the incident occurred about 8 a.m. when he was driving from his home to his unit and encountered three youths.

Some Arabs said for deportations appealed to military review boards. Five deportees appeared before a judge in the West Bank prison of Janaid and four in a military court in Gaza.

Defense lawyer Ibrahim Barghouti said the West Bank proceedings, expected to last several days, took place behind closed doors with family members barred and that evidence was kept secret.

JERUSALEM (AP) — Israeli army hand, and U.N. officials said four Palestinians were hurt in clashes with soldiers. The army clamped curfews on several cities and refugee camps to quell the protests.

The soldier was cut in the shoulder.

A Palestinian refugee camp in the West Bank was hit by a shell fired by the Israeli army.

1974 prophesy

Maravich's quotes

BEAVER, Pa. (AP) — Pete Maravich, in a 1974 interview with the Beaver County Times, said, "I don't want to play 10 years in the NBA and die of a heart attack at age 40." He played pro ball for exactly 10 years and died Tuesday at age 40.

"That's a little scary," said sportswriter Andy Nuzzo, who interviewed Maravich when he played for the Atlanta Hawks. "The story was laying on my desk when I got to work (Wednes­day). I read it and read it and read it and I couldn't believe it. Everything matched." Nuzzo said he was assigned the 1974 story because Maravich, who was born and spent his childhood in the area, "was unhappy about the fan reaction he was getting, unhappy that he was being labeled a hot dog."

"It was right after that fan had displayed that sign, the one that said, 'Pistol Pete, why do hot dogs cost $2 million in Philadelphia?' Maravich, the greatest scorer in major college basketball his­ tory and an NBA Hall of Famer, died of an apparent heart attack while playing a pickup half-court game in Pasadena. He averaged 44.2 points per game at Louisiana State University, an NCAA championship.
CONDOs
From page 4
"I approve of the current version of the plans which allow for low units so our view will not be blocked," said Jesse Tuttle.
"All the homes in this area have been nicely built and these condos have received the same careful planning," Paul Tuttle said.
Recommendations were given by Councilmember Allen Settle regarding the project's open space, the setback of the condos and the private interior street in the complex.
Councilmember Peg Pinard requested an immediate continuance on a zoning regulations amendment, saying the regulations would create high-cost housing and increase the current parking problem throughout San Luis Obispo.
These new zoning regulations would allow builders to sell "cheaper units" — one bedroom, one study, one den and one parking spot," said Pinard.
Councilmember Penny Rappa suggested a "town hall" type of meeting to discuss changes needed in the amendment.
Six San Luis Obispo residents opposed the amendment and supported a town hall meeting. All residents volunteered to form a committee to research needed changes.
Applicant Randy Detom's request for a permit to build a self-service car wash at 640 High St. was the only public hearing that evening.
"It was at this time, according to court records, that Beaver and three friends approached Shoop and asked him to leave. Shoop agreed to leave then lunged forward, stabbing Beaver in the chest with a knife. Shoop then fled.
The next day, Shoop turned himself in to sheriff's deputies in Shell Beach. Bail was set at $20,000.
Shoop said he had been drinking the night of the stabbing, and had feared for his safety when several of the men confronted him.
STABBING

immediately in San Luis Obispo County jail. He has been credited for the 180 days he's already spent in jail as well as 90 days for what the court calls "good work time."
Provisions of Shoop's probation include abstinence from alcoholic beverages, revocation of driving privileges and participation in an alcohol and drug testing program. He was also ordered to pay $100 restitution.
During the preliminary hearing, Beaver told the court that he and two friends had gone to a keg party at Pirate's Cove attended by about 20 students. They arrived at the party, given by another friend, around 10 p.m. Beaver said Shoop, who had not been invited to the party, "seemed to be drunk" and "giving a lot of people at the party a bad time."
Several of the men at the party asked Shoop and a friend who accompanied him if they would leave the party. The friend left, but Shoop stayed.
