AIDS education encouraged at monthly CSSA meeting
Child care, lottery fund allocation also topics discussed

By Shannon McFarlin

AIDS education, on-campus child care and the lottery revenue budget were the major issues discussed over the weekend at California State Student Association conference, hosted at Cal Poly.

Speaker Kathy Goggin from CSU Dominguez Hills encouraged the idea of AIDS education on CSU campuses. She conducted a survey at Dominguez Hills to find out the attitudes and knowledge of the general population. By Shannon McFarlin

CSSA has chosen the Evaluation and Training Institute to conduct the survey, which consists of mail and phone surveys to currently enrolled students, former students, drop outs and admitted students that are unenrolled. The purpose for surveying the drop outs and unenrolled students is to determine if the lack of child care had anything to do with their decision. The remaining $19,000 will be equally divided among the campuses.

The CSA has chosen the Laboratory for the Exploration of Space at the California Institute of Technology, Pasadena, to do the study. The laboratory's inner planets spacecraft systems engineer at the California Institute of Technology, Terrence Wilhite from San Diego State University, is the project scientist for NASA's twin Voyager spacecraft explorations of the outer planets.

While the tiny probes couldn't carry many instruments, they could be outfitted with tiny cameras, radio equipment and power supplies, Jones said. Some said they also might carry gamma-ray detectors, and perhaps seismometers to measure quake activity on moons of the outer planets, if a way could be devised for them to survive landing.

"Instead of one large, expensive spacecraft launched every few years, NASA could launch many, perhaps 10 to 50 identical, small, relatively inexpensive spacecraft per year," Jones said, estimating the entire spacecraft would cost a fraction of the $500 million to $900 million cost of a major-space probe.

"The capability of launching smaller probes more often is very appealing because they can address a number of specific science objectives," said physicist Ed Stone, project scientist for NASA's twin Voyager spacecraft explorations of the outer planets.

"If kids don't do well, the state should fail," he said. Hodgkinson said that his research has shown.

"I don't know the details of Jones' idea, but it is in the direction we need to be thinking in a way to diversify our program," said Stone, who also is chairman of physics, mathematics and astronomy at the California Institute of Technology.

The baby was delivered by a resident of the dorm before Public Safety officials could arrive on the scene. Upon receiving a call that a woman was giving birth in one of the dorms, said a public affairs officer, "We arrived on the scene about an hour later and the baby had already been delivered.

The mother and child were taken by ambulance to Sierra Vista Hospital.

City police apprehend theft suspect on campus
San Luis police arrested a man in front of the Main Gym Friday with the assistance of Cal Poly Public Safety.

Rudolph Muniz, 21, was apprehended for a warrant issued by the San Luis Police Department on a theft charge. City police officers located the suspect on campus after his whereabouts were reported to the department, according to Officer William Proll. Two additional city police units and two Public Safety units were also dispatched to the scene.

The suspect was taken to county jail.

Demographics

Expert says California must adjust education system to new population

By Jeff McPhail

"California's higher education can be no better than its public schools," said Harold Hodgkinson in a speech Thursday night on the future demographics of California.

During his talk, attended by more than 150 people, Hodgkinson discussed education, trends in population, our service-based economy and profiles of the baby boom generation.

Hodgkinson, the country's leading educational demographer, holds a Ph.D. from Harvard University and is a consultant for many major corporations.

Hodgkinson said that Hispanics in California will soon become the majority and we are not very good at educating them. "If kids don't do with the state fails," he said. Hodgkinson stressed the need for change in education from public schools through college. Even 9 year olds is too late to start teaching kids, his research has shown.

Children alienated from the educational system will be more likely to drop out of high school (California has a 50 percent dropout rate) and will be less likely to go on to college.

"So you think you've heard every wild dorm story there is to tell? Wrong," Friday morning a Cal Poly student gave birth in Whitman Hall.

The baby was delivered by a resident of the dorm before Public Safety officials could arrive on the scene. University and city officials would not give any details of the birth. Dorm residents also declined to comment on the incident.

"I've been working at Pol for 25 years, and this is the first time, in far as I can remember, anything like this has ever happened," said Public Affairs officer Ron McIver.

"At approximately 10 a.m. Friday morning Public Safety received a call that a woman was giving birth in one of the dorms," said McIver. "When we arrived on the scene the baby had already been delivered."

The mother and child were taken by ambulance to Sierra Vista Hospital.

As far as a police department on the scene.

The dorm resident played doctor, delivered baby.

**Editorial**

**Sacrificing freedom for parental control**

A **v** ersion is a decision that ultimately can only be made by an individual or even a parent. Only the pregnant woman truly knows the gravity of the choice.

The state would like to dictate the answer for minors. A new law, AB2274 by Assemblyman Robert Frazee, R-Carlsbad, would shutter the written consent of one parent for an abortion. The law is being blocked by a state Superior Court order resulting from a legal challenge to the law's constitutionality.

State Attorney General John Van de Kamp, in papers filed with a state appeals court, wrote that "The only abortion (the law) seeks to prevent are those that can constitutionally be prevented: those chosen by a minor without the capacity or knowledge to make a proper choice. He says "It doubtless was intended to prevent abortion by minors."

But is it not the parent's right to control their offspring's choice? The parent is legally responsible for his child's actions, but parentage is a uniquely individual situation — one that should place the parent in an advisory position. When it comes down to rights, which is more important: the parent's "right to control" or the daughter's right to determine her own future?

It is not fair to say that minors lack the capacity or knowl­edge to decide. In a good parent-child relationship, the child is given responsibility and is able to take it on. Good parents don't make choices for their child, but present all sides to help young adults decide for themselves. Real life is seldom rosy. If parental permission is legislated, pregnant girls will be helpless to decide their own health and future. If minors are allowed to make their own ones, they should be allowed to resolve them as well.

Permitting the state government to legislate abortion for minors is not being fair for the parents or general at the federal level, and a reduction in freedom of choice in general down the road. Defeat this law now to prevent further abuses of our freedom.

**Letters to the editor**

**Favors don't help fairness**

Editor

The stated goal of Cal Poly's educational-equity program is to offer access for under-represented minorities and to offer Cal Poly's campus culture a more diverse body of students. This goal is admirable and explains why such programs were established. However, these programs cost taxpayers money and are unfair to people not eligible to participate. For example, several years ago in a math class I was discriminated against. Minorities were provided with a professional note-taker, study aids, tutoring sessions, and test samples that were not available to all students. Is this equal?

When my grandparents arrived from Italy, they had no education. They struggled to learn a new language, culture and way of life in this country. They went to every means available to become Americans, and what they accomplished, they accomplished on their own. Through hard work and perseverance, they were able to make successful lives for themselves and their children.

Accomplishing something without unfair advantages is what gives a person a sense of pride. My forefathers' story is not one of incredible achievement; the same story can be told for most everyone who came to this country, regardless of where they came from or where they settled.

If we want minorities to be successful, we must treat them equally. We hold the minorities' hands throughout their college experience until they can control their own in high school, admittance to universities at the expense of others and pampering them with special programs in college. How will they ever be able to accept if ever considered equal to us among the workforce, equal to us in competition for opportunities? How do they ever compete, much less succeed, if we are always holding hands? They must be taught to walk on their own, as our ancestors did.

Four more activists arrested in Berkeley homeless protests

BERKELEY (AP) — Activists who had promised to hand out free food to the homeless — and take over an abandoned house owned by Fantasy Records — saw their dream take a new twist when four protesters were arrested by police instead.

Their demonstration in front of the small, boarded-up 10th Street home drew about 60 people on Saturday. Sgt. Steve Engler estimated 25 people participated in the protest.

As some barbecued hot dogs and hamburgers, four activists were arrested as they tried to scale a fence to get into the house. Engler said those cited for trespassing were: Michael Delacour, 49, a member of the 10th Street Homeless Collective; Robert Sparks, 49; Albert F. Winslow, 45; and Michael Cochran, 36, all of Berkeley.

Delacour, a leader in the 1969 battle for People's Park in Berkeley, also was cited for resisting arrest.

Delacour said Fantasy Records, which has offices across the street from the vacant house, had offered to lease the house to the city of Berkeley, which would allow homeless people to live there.

But city officials have said the two-bedroom, 900-square-foot house is too small to do much good and would cost about $15,000 to bring it up to code.

"Sooner or later they are going to take the house. It's going to happen. It's a symbol now," said Jonathan Short, a squatter and another member of the 10th Street Collective. "The police aren't going to be here forever."

Sgt. Steve Nelson said police planned to continue patrols in the area to keep squatters away.

Nation
Supreme Court to consider right of police to search trash

LAGUNA BEACH (AP) — One of the mundane rituals of life — taking out the garbage — comes under scrutiny by the Supreme Court, which will hear arguments Monday on whether police can search trash for evidence of crime.

Attorneys for the defendants in People vs. Greenwood, an Orange County drug case which seemed routine at the outset, say the high court's decision will send a message to government on how far they may intrude into the private lives of citizens.

"There is a basic expectation of privacy when someone puts the trash out expecting it to be picked up and dumped at the dump," says defense attorney Michael Ian Gary. "They don't expect that anyone will pick it through, and that is a reasonable expectation."

But Orange County Deputy District Attorney Michael Pear, who, along with Gary, will argue the case against Billy Greenwood before the Supreme Court, sees the issue differently.

"Once an individual places trash out for collection in an area accessible to the public, they have given up any reasonable expectation of privacy in that trash," Pear says. He classifies it as "abandoned property" and most federal circuit courts that have confronted the issue agree.

Attorney Richard Schwartzberg, who represents co-defendant Dyane Van Housen in the Greenwood case, says the Supreme Court decision will determine whether government agents can rummage through the public's garbage.

World
Leaders in Central America try to extend peace deadline

SAN JOSE, Costa Rica (AP) — Leaders of five Central American nations are expected this week to extend once again the deadline for compliance with a regional peace plan漫ined in controversy and continued bloodshed.

The leaders of Nicaragua, El Salvador, Guatemala, Honduras and Costa Rica met here Friday in a summit originally meant to measure the 3-month-old initiative's progress.

Some participants and most observers now agree the peace plan is unilaterally by the failure to achieve lasting cease-fires in Nicaragua, El Salvador and Guatemala.

But the five chief executives are not expected to turn their backs on the plan, which won last year's Nobel Peace Prize for its principal architects, President Oscar Arias of Costa Rica.

Luis Guillermo Solis, chief of staff of Costa Rica's foreign ministry, indicated last week that his country would have little choice but to seek an extension of this week's deadline.

The only other option, he said, would be to abandon the plan altogether.

Solis would not predict what Arias might recommend.

But the Costa Rican president has stated repeatedly in recent weeks that his plan should not be held hostage to a calendar, that the quest for peace is long-term.

When he unveiled the plan 11 months ago, Arias told reporters one of its major strengths was a clear-cut calendar outlining not just what each country would have to do, but when. An earlier peace initiative known as the Contadora Process lacked deadlines and dragged on fruitlessly for more than three years.

START YOUR NEW YEAR RIGHT AT CALENDAR GIRL

The National Security Agency is looking.
We're in search of new professional relationships with both Mr. and Ms. Right. What we offer in return is a unique career that may well be the answer to your personal desires.

What we offer is certainly different. At NSA, our thirdworld mission is critical to our country's security. We process foreign intelligence information. We safeguard our government's communications. And we secure our nation's computer systems. A mission of that proportion requires a diverse range of leading technology and talented professionals.

Currently, NSA is searching for Mathematicians, Computer Scientists, Language Specialists and Electronic Engineers.

Our Mathematicians work with applied and pure math. They apply — and create — a host of advanced concepts from nuclear theory and combinations to probability theory and astrodynamics.

Our Scientists and Specialists discover a variety of projects and technologies that is virtually unplumbed. We can literally write some of the software, including hardware from every major manufacturer. Applications include everything from communications software to artificial intelligence.

Our Foreign Language Specialists in Spanish, Near East, and Asian languages contribute to our mission in many ways. NSA linguists tackle the challenges of translation, transcription and analysis. They use both their language skills and their knowledge of world events.

Electronic Engineers also find a vast array of specialties from Signal Processing and CAD/GM to Speech Processing and Computer Security.

The mission is vital, the variety staggering. And the benefits also are impressive. Our employees enjoy competitive compensation plus the many advantages of the Baltimore-Washington area.

If you're in search of a meaningful career with real opportunities, look to NSA.

Schedule an interview through your College Placement Office. Or write to us at the address below.

NSA will be on campus Feb. 1st interviewing graduating seniors for Engineering, Computer Science and Math positions.

Students awarded recycling contract

By John Alexis

The city of San Luis Obispo has awarded a $10,000 contract to a group of Cal Poly graduate students to prepare a recycling improvement plan.

Dave Elliott, administrative analyst for the Public Works Department, said graduate students from the Design Institute, a research and public service organization within the university, School of Architecture and Environmental Design, will make recommendations on recycling improvements to ease the use of existing landfills.

Project Director Bill Howard, department head of the city and regional planning department, said students, Mary Billington, Robert Katozian and Kevin Whalen will complete the recycling plan for the City Council to review by April 1, 1988.

Elliott said the plan will survey existing recycling activities in San Luis Obispo, forecast the practicality of new recycling strategies and recommend specific actions for recycling improvement.

"The last couple of years in this county the city has become aware that there is a big problem with our landfills filling up really fast," said Elliott. "There has been also a recent state legislation which governs the closure of landfills."

MX missile guidance system continues to fail alarmingly

WASHINGTON (AP) -- The guidance systems used for aiming the MX nuclear-tipped missiles are continuing to fail in tests at an alarming rate, the House Armed Services Committee said Sunday.

"We are still dealing with a decidedly unguided missile," said Rep. Les Aspin, D-Wis., chairman of the panel which has been reviewing the problems with the nuclear-tipped weapon which is at the heart of the Reagan administration's defense build-up.

The report by the Democratic-controlled panel was critical of Northrop, which is building the guidance system, known as an inertial measurement unit (IMU).

Tony Cantafio, a Northrop spokesman, said he had not seen the report. But he said Northrop has taken steps to ensure that it will meet the Air Force's goal of having enough guidance systems by next October for all the MX weapons the service plans to deploy.

Air Force Lt. Col. Barry Glickman, a spokesman for the service's Ballistic Missile Office, said the service was confident in the force that is deployed. We have every confidence that it will complete the mission it is designed to accomplish. It is the most accurate, advanced weapon ever designed by the Air Force for the intercontinental ballistic missile world.

The problem involves the reliability of the units and not their accuracy, Aspin's report noted. The accuracy of the missile has been repeatedly demonstrated during 17 test flights and is better than had been projected.

According to Aspin's report, of the 30 MX weapons that have been deployed, only 18 are standing on alert, ready to fire. The other dozen do not have guidance systems because of the IMU problems in other sets, the report said.

"We are still dealing with a decidedly unguided missile." -- Rep. Les Aspin

D-Wis.

Last fall, Aspin's committee held a highly publicized series of hearings into the variety of problems which have plagued the IMU production line.

Aspin said in a statement issued last Friday after he visited the Northrop plant in California, "My impression is that the firm is taking the problems very seriously, and addressing them with their best people. But it appears the problems are more intractable than thought."

Northrop promised to make up a delay in IMU production by delivering six more a month for the last three months of 1987. Aspin noted. But only four were delivered, including none in December, he said.

Both Glickman and Cantafio said Northrop had delivered four new guidance units in December and five repaired units, for a total of nine during the month.

Rep. William Dickinson, R-Minn., ranking Republican on the committee, said, "When the administration is talking about possibly earning the number of strategic weapons in half, it is essential that the remaining half work."

He was referring to ongoing U.S. Secret efforts to negotiate a 50 percent reduction in each side's long-range nuclear arsenal.

The 10-warhead MX is one of the weapons which would be affected by the cuts.

Mustangs fall short of Boise in opener

By Cindy McAndrew

The Cal Poly gymnastics team opened the season by coming in second place in a four-way meet against Boise State, U.C. Davis and Chico State Friday night.

The Lady Mustangs, with a score of 170.45, came in behind Boise State, which scored 176.9. Chico was third with 147.3 and U.C. Davis was second with a score of 170.45, coming in behind Boise State, with a score of 176.9.

By Cindy McAndrew

The Cal Poly women's basketball team played in its best and worst game of the season Saturday night, as a last-second shot from Jeff Gray gave the Mustangs a 72-71 win over Sacramento State in the Main Gym.

The Mustangs, who took the floor in the first half in no resemblance of the Mustangs who dominated in the second half. With less than one minute left, Sacramento led 71-68. But a full-court press by Mark Shelley and Coby Naes forced a turnover, and Shelley's dunked the Mustangs to within one point. Shelley and Naes forced a second turnover, but they missed a layup and a following shot. Cal Poly then knocked the ball out of bounds with seven seconds left.

After Sacramentos inbounded the ball, the Mustangs forced a jump ball. The possession arrow pointed to Cal Poly, giving the Mustangs the ball. Mitch Pierce inbounded the ball to Gray, who sank the winning basket.

"I got the ball and tried to go underneath the basket, but I was cut off," said Gray. "I pulled up, took the shot and hoped it would go in."

Cal Poly improved its record to 7-4, while Sacramento fell to 15-5. The Horne's defeated the Mustangs Nov. 30 in Sacramento, 77-75.

"In the first half we seemed to space out and not concentrate," said Cal Poly head coach Steve Beason. "Cal Poly made only 36 percent of its shots in the first half and trailed 12 at halftime."

"What got us into the locker room I told my players exactly what I thought," said Beason. "I told them that they had embarrassed themselves and we're in no way playing up to their potential."

In the second half I just wanted to remind that we have the ability to come from behind and defeat an outstanding team like Sacramento State."

In the second half the Mustangs looked as if Beason had coached them in for a new set of players. They made 57 percent of their shots and pulled down many crucial rebounds.

The winning point came with 10.1 seconds left. D.C. Cashman scored three consecutive baskets to give Cal Poly a 55-52 lead with 6:28 left in the game. From then on, the game went back and forth.

Shelby led the Mustangs with 13 points and nine rebounds. Naes followed with 12 points and eight rebounds, and Cashman, Pierce and Errol Talley each had eight points.

The Mustangs seemed to wear down the Hornets by playing all but two of their players and substituting frequently. Beason praised Gray's strong defensive play as well as his winning shot.

"Gray had the best defensive game of any player this season," said Beason. "He managed to deny Sacramento's three-point threat, Alex Williams, the ball."

Beason also played a major factor.

"When we started to come back in the second half the crowd began to get louder and louder and it really fired our players up," he said. "I hope we have support like that for the rest of the season."

Cal Poly will begin California Collegiate Athletic Association play Thursday at Cal State Bakersfield.

Wednesday, January 11, 1988

Intensity carries Poly to 29-12 win

By Rob Lopez

The Cal Poly wrestling team dominated the weaker Boise State Broncos Friday night, winning seven of 10 matches in a dual meet in the Main Gym.

The matmen's 29-12 Pac-10 conference win raised the Mustangs to a season-high 3-0 in dual meets.

Other Cal Poly winners included: Jeff Perry (157), who aggressively beat his opponent, Danny Tensanti, 15-7; and Robert Tabarez (126) who used an aggressive style to whip Craig Cashman.

Poly's Own Carlin (bottom) last to Travis Krawl, 7-2.
MATMEN
From page 7
Ceremony. 1-3.
Cal Poly's losers included Owen Carlin (134), who lost to Travis Kraak, 7-2, and Malcolm Boklin (156), who gave up a 6-1 victory to John Watson by false starting three times. In the heavyweight division, Craig Miller was pinned by Pat McHale with 24 seconds left in the first period.
Frye Osborne, the defending Pac-10 champion in his class, was out of the lineup with a stretched knee ligament. Cowell expects him to recover in time for Cal Poly's next home match. The Mustangs will host Cal State Bakersfield 7:30 p.m. Friday.

OPENER
From page 7
with an 8.65, placed fifth.
Cal Poly's next meet will be Friday in Washington, D.C. The Lady Mustangs will compete against George Washington University and Radford. That meet will be followed by competitions at Towson State (Md.), Davis and Berkeley.
Cal Poly's next home meet will be Feb. 3 against San Jose State and U.C. Santa Barbara.
Poly's Debra Alessi finished fourth in the balance beam.

Art and reason
When Mark and I decided to spend the weekend at his mother's house, I never imagined I would be walking into a mouse's nightmare. There were cats everywhere.
Cat plaques, cat statues, cat clocks, even a cat mat. I couldn't begin to duplicate her collection of kitty litter if I spent a year at a garage sale. Conspicuously absent, however, was a real cat. Strange, I thought, and began to fear that a weekend with cat woman could be a lot less than purr-fect.
But then she came home, and Mark introduced her. She was dressed surprisingly well—no leopard pants. In fact, you could say she was the cat's meow, but I'd rather not.
She offered me a cup of Dutch Chocolat Mint. Now that was something I could relate to. Then she brought it out in the most beautiful, distinctly unlineal china I'd ever seen. As we sipped, I found out that Mrs. Campbell has my same weakness for chocolate, loves the theater as much as I do, but, incredible, never saw "Cats." So Mark and I are taking her next month.

General Foods' International Coffees. Share the feeling.

II Literacy more prevalent in society than most suspect

By Joan M. Halpin
Staff Writer

Illiteracy affects all walks of life, and even successful people may have problems getting past a language barrier. Illiteracy doesn't necessarily mean unintelligent. It's just means that reading and writing was never learned or was not learned in a native language.

There are two definitions of illiteracy. In one instance, functionally illiterate is the inability to read and write well enough to get along in society. In another, it is the inability to speak, read, and write English as a second language.

Although the inability to read and write at an elementary school level is seen "across the board," a higher percentage exists in the lower income bracket, said Charlotte Smith, literacy coordinator of the San Luis Obispo City/County library.

According to the state Department of Education, one in six adult Californians is functionally illiterate. And one of this statistic, 48 percent do not speak English. At this time there are no statistics available for San Luis Obispo.

But because of a growing concern two San Luis Obispo community organizations are involved with helping out. The San Luis Obispo Literacy Council and The San Luis Obispo City/County library both offer solutions to this problem.

The San Luis Obispo City/County library offers the public whose native language is English assistance in all facets of speech. The San Luis Obispo Literacy Council is a non-profit organization that provides tutors for students and communities.

Definitions of functional illiteracy include the inability to read and write well enough to get along in society and the inability to use English as a second language.

One in 6 adults in state can't read well enough to get by

Although illiteracy is almost non-existent at Cal Poly, there is a margin of students that have trouble putting sentences together. Some students are mathematical wizards but may not be good writers," said Mary Kay Harrington, Cal Poly's writing skills program coordinator.

According to Harrington, Cal Poly does not have a illiteracy problem since students selected are among the top in academic ranks. Harrington pointed out, however, that the Scholastic Aptitude Test (SAT) isn't noted for writing requirements on the student entrance exam.

Although functional illiteracy is high in California, it largely goes undetected. "American speakers have an easy way of hiding it," said Linda Carmel, office coordinator for San Luis Obispo Literacy Council.

Rather than face the embarrassment of not being able to read a simple sentence, people tend to make up excuses, such as forgetting their eye glasses when asking for help, said Carmel. Medication labels, highway signs, job applications and insurance forms are just a few of the daily reading obstacles that occur for the functionally illiterate.

Along with these inconveniences, an estimated $20 billion a year is spent on problems.

Hodgkinson believes social idealism will not return to our culture until the baby boomers turn 50 and become more philosophical.

"They have to have everything and they have to have it right away," he said. "This generation gives and volunteers less than any group so far." Hodgkinson said the values of the baby boomers are the same values embraced by students today. Thirty-four percent of undergraduates say that being a millionaire before 35 is an important personal goal, he said.

In finishing, Hodgkinson said there are signs that a new type of economy is peaking around the corner ready to take over from our service-based one, but refused to say what it was. "I don't get paid much for these things. I've got to keep something to myself."
One police officer killed, 2 injured in weekend shootings

(AP) One of four California lawmen shot in three incidents over the weekend died and two others were in critical condition, authorities said Sunday.

Three people were in custody in connection with shootings in south-central Los Angeles and San Diego and authorities sought a man for questioning in the shooting of a California Highway Patrol officer in northeast Los Angeles.

Los Angeles County sheriff's Deputy Jack B. Miller died Saturday morning after being shot in the head Friday night during a drug raid.

Natalie, with him, she said. The man bought for questioning in Baker's shooting, Florentino Silva, 25, of Glendale, was believed to have switched clothes and may be driving a yellow Chevrolet Camaro with the license number 2NOZ. Officer Monny Keifer said.

The other wounded lawman, Los Angeles County sheriff's Deputy John Dickinson, 29, was in good condition at Daniel Freeman Memorial Hospital in Inglewood with an arm wound, Cox said.

Dickenson, 29, was in good condition at Los Angeles County USC Medical Center for superficial wound he received in that battle and a more serious wound he suffered during a scuffle over a deputy's gun in an ambulance en route to a hospital, authorities said.

In San Diego, police arrested Stacy Butler, 24, about two hours after Harliss was shot. He was paroled for robbery 10 days earlier, Lord said.

Harliss, on the force for nine months, was shot when he and Officer John Schneider chased a group of men they encountered about 12:15 a.m. Saturday in an area known for drug dealing. The officers became separated and Schneider found Harliss after hearing a shot, police said.

Harliss underwent hours of surgery Saturday morning and again that night at the University of California San Diego Medical Center, as his wife, Shawn, kept vigil, said nursing supervisor Diane Pace.

Butler was found at a friend's house near his own home after residents there called police. Lord said. Two guns were found in the backyard of the home on 10th Street.

The phone number for the Brady Bunch is 555-6161.

The C SSA system must use part of the money for in instruction and academic support, but no money is to be used in the lottery to carry out research, non-instructional purposes, construction of college facilities or acquisition of real properties.

The lottery began in October 1985, almost $1.5 billion has gone to public education in California.

In the past, the C SSA has put a lot of effort into advocating student needs.

Some of their past achievements are ridding the sub-minimum wage, working on funding for child care and getting all colleges and universities in the state of California to conduct mandatory student education programs dealing with the crime of rape.

The C SSA meets each month and is made up of representatives from each of the 19 campuses. Each representative is either an ASI president or an appointee of the president.

The purpose of C SSA is to facilitate communication between schools to create a voice in addressing campus and statewide issues concerning students.
