Critics: Business building add-on inappropriate

By Lawrence Anton

A $13.1 million addition and renovation project for the Business Administration and Education Building has been approved by the Chancellor's Office and a Cal Poly planning committee, yet critics charge the proposed design is inappropriate for the site and overpowers the original building. The addition will provide 70 faculty office spaces, four department head offices, an office for the dean of the School of Business, 20,000 square feet for computer labs and a 200-person capacity lecture hall.

Mike Martin, architecture department head, agreed there is a need for additional office spaces, classrooms and lecture halls. However, he said, the architect should have "respected the fact that they have a sloping site." This could have been done, he said, by designing a building that naturally flows down the slope.

As designed, the addition, which would add 47,000 square feet to the building, will be raised on columns.

Doug Gerard, executive dean of facilities planning and operations, said, "I'm the first to admit that the architect on this project... didn't have the time to fully study the solution to the site issues that were generated as a result of the building." However, he added, "Those issues are being studied now, and we have resolutions to them."

Marie, a member of the planning committee who was absent the day the design was approved, said revision will only resolve functional flaws and his objections go beyond function.

"There is no question that the current concept can be revised to make it more workable. However, my real position is that they're working on the wrong concept," he said.

Jamie Smith, a fourth-year architecture student who has criticized the project in the architecture department newsletter, said the addition does not complement the business building, which houses the clock tower.

"You see something that is basically alien to what you have," said Smith. "It's like two pieces of a puzzle that don't fit."

Gerard said that many factors need to be considered when developing a project of this kind, some of which the architect has little control over.

"Architects... aren't the sole designers of their buildings, the state department of finance gets in the act. And they have very little regard for exterior appearance or exterior function..."

What is important when working under a tight budget, Gerard said, is to find a design that maximizes usable space. "Over the years we have had to continually cut back on exterior appearance of buildings in order to place the kind of..."

A. Senate members worried about growth

By Cindy McAndrew

Several Academic Senate members fear that increasing the Cal Poly enrollment will mean the loss of the polytechnic feature that makes the school unique from the 18 other state universities.

A report on expanding student enrollment to meet the growing need for higher education in the state was presented Tuesday to the Academic Senate. The Chancellor's Office requested that Cal Poly, as well as four other California State Universities, form a resolution regarding enrollment growth.

Linda Dalton, chairperson of the Long-Range Planning Committee, the committee charged with formulating the resolution, said the intention of the committee is not to do away with the polytechnic image. Many of the senate members fear more students could mean Cal Poly will become a commuter school, and the "hands-on" approach to learning will be lost in the shuffle.

"We want to keep the polytechnic image, we don't want to become like Cal Poly Pomona," said Paul Murphy, professor of mathematics. "Pomona is not Cal Poly."

Joseph Weaverby, a political science professor, said Cal Poly Pomona has become a university for all of San Bernardino County, and most of its students live at home and commute. He said if this would happen to Cal Poly, San Luis Obispo, then there should be no enrollment growth.

The committee said Cal Poly enrollment will mean a resolution regar­...
On the street

**Who would you pick for president if you had to vote tomorrow?**

**Joe Strooper**, civil engineering, junior:

"I would have voted for Bob Dole. Probably Bush because I think he's qualified and I don't think we can afford a Democratic president."

**Laura Rambin**, business, senior:

"Dukakis. I don't know why. I just like him. Right now I don't like any of the Republicans and he's the best of the Democrats."

**Rick Pigott**, business finance, senior:

"Probably Robert Dale. Out of the people that I know I think he's the most capable and has the most experience."

he presidential race is absolutely scary. We seem to be faced with a "lesser of many evils" decision. For one reason or another, not one man among the whole obscure collection of can­
didates is extremely qualified for office. I've been following the race as closely as time will allow, and no one really seems to jump out at me as a national leader. I look at a candidate and try to picture him leading my country. I try to see if he will make decisions that will radically alter my life.

The only thing that's clear so far is that some of these guys must really be joking.

Pat Robertson is the obvious example. The man is an evangelist—a religious fanatic. He claims to divert hur­ricane through prayer, and he has prophesied at length about the ap­

crash of Armageddon—that it will be started in the Middle East by the Soviet Union. He once said that Christians and Jews are the only people fit to
govern because they will submit to God. How's that for foreign policy?

Sure, Robertson has piled up a mountain of achievements, mostly the founding of the Chris­

tian Broadcasting Network and a graduate-level university. And despite his overwhelming religious
determinism, Robertson insists he would treat the presidency as a secular office. But he doesn't even
know what office public office is like. The man has never

even worked in a secular organization. By the way, since he is now a secular man, what made Robert­

son think there were missiles in Cuba? Did he pro­

phesy that existence?

Do we want a man who will certainly erode the

American separation of church and state? The guy once said that if you do not teach a religion-based

morality in schools, then you are teaching ahoenst.

Am I missing something here, or is America the same country that allows people to choose their

own religion, even if it is atheism? You're outta

here, Robertson! Go play with a hurricane.

Next on our list of obnoxious politicians is George Bush. The guy is just a plain fanatic. Reagan has done
even gotten away with doing things that Bush is now

thinking of doing. For instance, Bush is the most experi­
denced candidate. He pro­

tected his experience, anyway. What worries me about Jackson is pretty funda­

mental. Sure, he has ideas, and they may truly be

great and good, but what will happen when he gets in office? I fear Jesse simply won't be able to get

everything done. Since he came on the scene eight years ago, the only thing he's really done is

inspire black voters. He has a few years to take foreign policy into his own hands and free some

marginal. The key word here is "free.

Jackson's career is officially listed as "civil

rights leader." What the hell is this? How does a guy make a living as a civil rights leader? I think he

filed himself as a civil rights leader just so he

wouldn't be listed as a Baptist minister, which is

how he really feeds himself.

I think for now it's safe to dub him "Inaction

Jackson" and leave it at that.

Beyond my own narrow, the inevitable dropouts

have helped more than anything. I mean, we'd be just as pleased with a terrible

dilemma if Pete DuPont were still running. He was a tough customer. But now I love artistically, I

kind of liked Bruce. I liked what he stood for and I

related to where he was coming from. But now he's

gone, and I mourn (sort of).
Letters
Cartoonist gets smeared

Editor:
The cartoon "Brewski" by Bill Brzykcy which you printed on Feb. 11 was not funny. Not only does it lack humor but it was extremely insulting. It is insulting because it trivializes a very important issue: violence in dating and other male-female relationships. It is not so much that a guy can't get a date without a resort to violence but the casual assumption that a woman's choice (to date or not) is not respected and that she could/should be compelled to date (have sex) against her will. It is the off-handed, casual disregard of a woman's right to make meaningful choices that is an affront to both men and women.

— Barbara Mori

Twice

Editor:
Obviously, Bill Brzykcy needs some consciousness raising if he believes as his cartoon in the Feb. 11 Mustang Daily indicates—that men may only gain a female's attention through either coercion or violence. Therefore, I would like to invite him to a series of Women's Week presentations. Perhaps his cartoons will then be transformed from tasteless banality to enlightened banality.

The Action Option
Careers at
Advanced Micro Devices

Set your career into motion at AMD. We're large enough to challenge for worldwide leadership in the
semiconductor industry, innovative enough to set new standards in integrated circuit technology —
like our 32-bit AM29000, the world's most powerful monolithic microprocessor. And most of all, we're
smart enough to encourage our people to put their talents into action.

Organized for excellence
At AMD, you'll be working within business units designed to encourage entrepreneurship as well as

Looking for the best
So if you've already committed to excellence and determined to make things happen in your career,
we invite you to explore our current career or co-op opportunities. We're looking for graduates with
BS, MS, or PhD degrees in fields such as Electrical Engineering, Computer Science, Chemical Engi­
neering, Computer Engineering, Materials Engineering and Solid State Physics. There will also be
positions available for MBA's with technical or non-technical undergraduate degrees.

These positions are located in centers of important activity. We're headquartered in Sunnyvale,
California, the heart of Silicon Valley, conveniently located near the cultural and natural wonders of
the San Francisco Bay Area. In addition, we maintain facilities in Austin and San Antonio, Texas, an
expanding corridor of high-tech business that also offers affordable housing and great recreational
and educational resources.

On-Campus Interviews

employer.
Weighthy Choices

By Rob Lopez

Students making the transition from high school to college anticipate a major increase in homework, sports and social life. However, what some Cal Poly students are finding is a major increase in other areas as well — the stomach, thighs, and the belt.

However, these overweight Cal Poly students have no one to blame but themselves, said Dr. Jim Webb, an exercise physiologist and director of the Human Performance Laboratory at Cal Poly. He said students are overweight mainly because of the food choices they make.

"You have to be selective about what you eat," Webb says. "You can't put the blame on someone else — when you go to the grave you go alone.

Webb says college life changes a person's lifestyle.

"Kids tend to be more active in high school than in college," Webb says. "They have more time for athletics when there is in high school. The college setting changes lifestyles. Eating patterns are different. People eat more fast foods — they become snackers and ballooners. They find they have no time to exercise because they're studying all the time.

"Webs said being overweight is a "disease of affluence. There is a lot of food available to us," he said.

He also tried to modern technology as one of the contributing factors to people becoming overweight.

"Think about all the things you don't have to do," Webb said. "We have automatic transmissions, dishwashers, garbage disposals. Escalators take us up and down stairs — horizontal escalators take us up off of planes. Fitness is not do to an increase in calorie intake. We find individuals are not exercising enough — they're not burning off enough calories in a day. People have to spend time working out.

Dale Smith, owner of Gold's Gym in San Luis Obispo, said a lot of people have memberships at his gym and never use the facitilies.

"A lot of people get excited about working out and losing weight but once they find it's hard work they quit ... they have every excuse in the world to justify not coming," Smith said.

He said about 40 percent of the people at Gold's gym are overweight — women more so than men. The men overall, he says, look more "malnourished" than women.

"If you tell some people what they have to lose the weight they want, they won't do it — it's too much work," Smith said.

He added people have to stay active if they want to lose weight.

"When you work all day long you're not active," he said. "When you exercise you have more energy for other things."

Smith said the "processed" cafeteria food is the main reason for Cal Poly's extra pounds.

"You can't reach your goals at the gym and eat that stuff," he said. "It's like taking one step forward and two steps back."

Sidney Rudd of Atascadero joined Gold's gym three weeks ago and said it's been hard work since day one.

Rudd is a 38-year-old woman who weighs 236 pounds. She said her problem is from eating one step forward and two steps back."

Rudd said bringing the overweight is a "disease of affluence. There is a lot of food available to us," she said.

"You have to be selective about what you eat," Webb said. "The percent body fat is what you want. The average for a college female is 24 percent and 15 percent for the average college male.

Webb said national statistics show only 30 percent of their clientele are from Cal Poly.

"You have to look at the 100 percent fat not the overall body weight of a person," Webb said. "The percent body fat is what dictates what condition you're in."

According to Webb, one of every two adults in the nation is "overfat." He used the term "overfat" instead of "overweight" because he said it is hard to say what the ideal weight is for each individual.

"We're working on the caloric need of each person," Webb said.

The program consists of one weekly meeting and homework assignments about nutrition. Each individual is also asked to keep a diary of the foods they eat throughout the quarter.

"The weight loss program incorporates various tools for losing weight and changing people's lifestyles," Webb said.

Debi Carrol, a weight consultant at Nurti Weight Loss Center in San Luis Obispo, said 30 percent of their clients are from Cal Poly.

"There is less stress in college," Carrol said. "People are eating on their own for the first time. They go out of control and eat the wrong things. Students need more nutritional information. We try to change their eating habits."

The Nurti System diet consists of three specially planned meals, which they provide, for a total of 1,000 calories per day. Anything less than 1,000 calories per day, according to Carrol, causes damage to nerve fiber and muscle tissue.

"Health and well-being are the most important things in life," Webb says. "If you're not healthy you can't work and you also run into a lot of other problems. Staying healthy can become a part of your lifestyle."

The Foundation Food Service and the Cal Poly Weight Loss Support Group have started a program in the Dining Hall called "Nutrition Corner." This is an information center that provides a weekly nutritional theme and health tips for students. There are also educators available from 5 to 7 p.m. on Wednesdays to answer questions.

Student finds life fulfilling despite deafness

By Sherry Wittman

In a world of split-second satellite feeds, instant international audio, video and computer-simulated voices, some of the best means of communication is a basic hand signal, said Irene Daschian, deaf services specialist for DSS. "Every student..." said Daschian. "...must explain that to the interpretermust contend with a host of other problems that hinder communication. Difficult context, poor articulation or bad lighting add to the difficulty of understanding a speaker, said Susan Chilek, one of three professional interpreters working for DSS. Also, a fast-paced speech can be frustrating, she said. "By the time the deaf person gets the message, the group has moved on to the next topic." In a one-on-one conversation, Glass can speak by imitating the appropriate sounds, but sometimes her words seem close. "It's hard because people say they don't understand and sometimes that bothers me," said Glass. "That's why I don't try hard to meet new people."

Jamie Glass, a freshman business major, has been profoundly deaf since birth. She uses an interpreter. Only 30 to 70 percent of a dialogue can be accurately deciphered through lip reading, said Glass. A speaker's vocabulary can make comprehension difficult. "I may not know what something means," said Glass. "That's probably the major problem for me." Through an interpreter, every word, expression, "um" and "ah" is translated for the deaf student, said Irene Daschian, deaf services specialist for DSS. "If the class turns and looks out a window, I must explain that to the deaf student." The interpreter acts as a "pipeline of communication," a tool that links a deaf student with the environment. "I am just as much a part of the classroom situation as a book," said Daschian.

Aside from vocabulary, the interpreter must contend with a host of other problems that hinder communication. Difficult context, poor articulation or bad lighting add to the difficulty of understanding a speaker, said Susan Chilek, one of three professional interpreters working for DSS. Also, a fast-paced speech can be frustrating, she said. "By the time the deaf person gets the message, the group has moved on to the next topic." In a one-on-one conversation, Glass can speak by imitating the appropriate sounds, but sometimes her words seem close. Powerhouse Pomona in town

Tough test awaits slumping Poly

There has to be a better way to end a losing streak. The Cal Poly basketball team, the losers of four straight, will face Cal Poly Pomona 7:30 tonight in the Main Gym.

The latest in a series of Poly victories that has won six consecutive California Collegiate Athletic Association championship games for the Po"wheels."

Saturday meet features nation's best

In what could be a preview of the national championships, the Cal Poly gymnastics team will host Seattle Pacific and Northern Michigan in a triangular meet Saturday night.

Seattle Pacific is Division II's top-ranked team, while Northern Michigan checks in at No. 6. Cal Poly is sandwiched in the fourth spot. Competition begins 7:30 p.m. in the Main Gym.

"This could be the biggest meet we've ever had," said head coach Tim Rivera. The Lady Mustangs have been raising their most scores since day one. The numbers hit a peak last weekend, when they posted a season-high 178.5 in winning Texas Women's University.

POLY TITLE HOPS DOWN TO WIRE AGAIN

As usual the California Collegiate Athletic Association title race has gone to the wire, and once again Cal Poly is there for the promoting.

The Mustangs, U.C. Riverside and Cal State Bakersfield all share the top spot in the CCAA standings with 9-3 records. Those three teams will be in- volved in four games this weekend that may -- or may not -- solve the deadlock.

Riverside will host Cal Poly Thursday and Cal Poly Saturday, while Cal Poly Pomona will host Cal Poly Thursday and Bakersfield Saturday. If the Big Three split their games, they will be tri-champions. Any combination after that can result in one or two champions.

Northern Michigan in town

There has to be a better way to end a losing streak. The Cal Poly basketball team, the losers of four straight, will face Cal Poly Pomona 7:30 tonight in the Main Gym.

The latest in a series of Poly victories that has won six consecutive California Collegiate Athletic Association championship games for the Po"wheels."

DENMARK

From page 1
"I was amazed to hear how few people vote here," Pia added. "From my experience, people vote here." Pia said Denmark is one big middle class that has few homeless. "Of course we have some problems, you'll always have people who don't want to be a part of society, but you know you can get help if you need it," she said. "We do pay a lot in taxes compared to over here, but then again we don't pay for all of the other services. I think it makes the whole society more equal." Having already received the equivalent of a master's degree from the Academy of Art in Copenhagen, Pia said she is currently taking various courses to broaden her knowledge. She is attending Cal Poly on a one-year scholarship, and will eventually return to Denmark to work in industrial design. Pia said the university system in Copenhagen is quite different from the system in the United States, though student life is fairly similar. "In Denmark they don't have a campus with everything together like at Cal Poly. Because they don't have classes with teachers present, how much you learn is more up to you," she said. "I think the Danish system makes students more independent, but it's nice to have the facilities and always have teachers to let you know how you're doing." According to Pia, students work on increasingly difficult projects, then after working for about six months on a final project, a jury critiques it. "If it is good enough, then you graduate," she said. At Cal Poly the students have to concentrate on more than one project, where in Denmark they spend a lot of time on one project, thinking it all of the way through, said Pia. "People at Cal Poly learn to be extremely productive," she added.

WOMEN

From page 1
"The women's movement is not about issues," Johnson shouted, "it's about the spiritual revolution in the world — and I don't mean religion." Johnson explained feminism as woman's way of being human, as being female and exploring the idea of what it exactly means to be a woman. "The first step of breaking free, "involves loving ourselves, ...patriarchy could not exist if a critical mass loved themselves," said Johnson.

Johnson referred to the scenario in her book where a woman standing on a tall building contemplating the distance of a jump, and then leaps, holding on to a rope. Johnson said the rope is the symbol of the woman's voice, which is leading the species home.

"Pioneers never seem to know where they are going, they just listen to their own voice and take the next step," said Johnson. The opinion that internal things can be changed, and patriarchy is internal, therefore patriarchy can be changed, is one way Johnson explains her beliefs. She added women should create something else.

"Patriarchy is so ripe it's rotten," said Johnson. Although it's difficult to go against brainwashing, Johnson said, "what we resist, we persist. Even in child-rearing, the saying holds true." And she said in jest that after raising four children and trying her best, she would now let her son self-destruct. "Patriarchy is like a bad marriage, ...the system keeps us belled up in the mud," said Johnson. "If the men say so, doesn't that give you cause to pause?" Johnson said men are no longer in charge of her life and her happiness is dependent on herself. "I am going to love myself and take back my power."

Johnson's speech ended with the audience holding hands and singing the lyrics, "We are women loving women, and we are loving for our lives."

According to Pia, students work on increasingly difficult projects, then after working for about six months on a final project, a jury critiques it. "If it is good enough, then you graduate," she said. At Cal Poly the students have to concentrate on more than one project, where in Denmark they spend a lot of time on one project, thinking it all of the way through, said Pia. "People at Cal Poly learn to be extremely productive," she added."

BUILDING

From page 1
money that we had into the functional elements of the building," he said. Smith said the administration is "incredibly insensitive" toward architecture because they look at building design from an "economic standpoint only."

State voters will be asked to approve a bond issue to fund facility construction for higher education. If passed, some of the money would be used to fund the proposed addition and renovation. Construction could begin as soon as next February.
