Protesters seek dismissal
Discrimination alleged against Plant Ops head

By Diane Wright

A group of protesters charging Plant Operations Director Ed Naretto with discriminating against blacks and women marched outside his office Monday carrying signs calling for his dismissal.

David Jones, employed as an electrician in building maintenance, said for the group, the march was in response to Naretto’s lack of sensitivity about minority issues. Jones said Naretto’s failures have been “overt rather than subtle.”

Naretto has dismantled a trainee program that had helped minorities to advance to building trade positions. Jones said out of 50 people employed in building trade positions there is only one black — Sampler — and one Hispanic. Building trade positions include carpenters, painters, plumbers and electrical workers.

Jones said Naretto has done nothing to recruit women and blacks into building trade positions. Jones added that other departments on this campus have significantly increased minority personnel, but under Naretto, trade positions in Plant Operations have decreased.

Jones said he has talked with Naretto several times and Naretto told him he cannot find any blacks belonging to a minority group that is qualified for open positions. Jones said he personally knows qualified candidates.

Robert Negranti, a staff personnel officer, said that the issue is a “confidential personnel matter” and that he could not comment on it any longer. Jones said he has received no complaints about Mr. Naretto before.

“We’ve received no complaints about Mr. Naretto before,” he said. “Right now, little is known about him.”

Kevin Tuggle, a Cal Poly electronic engineering student, works at Plant Operations as an electrical assistant and participated in the march. Tuggle said he went with Jones several times to meet with Naretto about problems. Tuggle said, “Several comments he (Naretto) made toward minority workers were definitely derogatory.”

Another protestor, home economics senior Treenie Gibbs, said she participated in the protest.

Schedule cover spurs debate
Blunt-nosed leopard lizard has never known such fame

By James Welch

The Blunt-Nosed Leopard Lizard, listed as an endangered species, graces the cover of the 1988 summer class schedule. Or does it?

No, according to biology professor Aryan Roest.

The reptile depicted on the cover is the regular Leopard Lizard, not the endangered Blunt-Nosed.

The artwork was copied almost exactly from the book published by Hooten-Rifflen Publishers, said Roest. Plate 20 of the book shows the regular Leopard Lizard, which is a near mirror image of the one on the class schedule cover.

Steve Maynard, a Cal Poly audio/visual graphic artist, one of the creators of the cover, said it is true that the depicted reptile is not what it claims to be.

“Professor Eric Johnson from the biology department was helping me find a picture of the Blunt-Nosed Leopard Lizard,” said Maynard, “but the closest either one of us could come was the regular Leopard Lizard.”

The two lizards are almost identical, the major difference being the shape of the nose. The nose of the Blunt-Nosed is more .... well, you figure it out.

Maynard has also designed the rest of the class schedule covers for 1988. The Gray Whale swam on the cover of the winter schedule and the Peregrine Falcon flew on the spring cover. The cover for the fall schedule will depict the Morro Bay Kangaroo Rat.

All four of these animals are listed as endangered species, the theme adopted by Maynard for his designs.

“The two lizards are almost identical, the major difference being the shape of the nose. The nose of the Blunt-Nosed is more .... well, you figure it out.”

Maynard said he went with Jones several times to meet with Naretto about economics senior Tressie Gibbs, comments he (Naretto) made toward minority workers were definitely derogatory.”

Another protestor, home economics senior Treenie Gibbs, said she participated in the protest.

Smoking haven’
soon to be banned

By Marianne Biasotti

The Surgeon General has determined smoking is bad for your health, and so has Cal Poly.

The Cellar, the snack stop at the bottom of the Dexter Building, was the only public place on campus which allowed smoking as of two weeks ago. The smoker’s haven is now up in the air, with the recent endorsement of a smoking ban expected to be adopted in June.

Harry Busselen, dean of the School of Professional Studies and Education, recommended that a smoking ban go into effect in The Cellar, after numerous complaints were received from people who share the Dexter Building.

“It’s not a question of will we have a (ban), but rather when will we have it,” Busselen said. “Smoking is a nasty habit, and that’s coming from a reformed smoker.”

“An individual should be able to do whatever he or she wants. As John Stuart Mill said, ‘Genius can only breathe freely in an atmosphere of freedom.’”

— Hilary Watkins, smoker

Accreditation surveys help determine quality

By Brenda Suppanz

There is a test on campus that takes years to prepare for. The good news is that students and the ones who have to pass it. As a matter of fact, it’s to help faculty members to ask themselves the important question: “Why are we doing it?”

Barbara Weber, home economics department head, explained just how many answers accreditation boards want to know. The interior design department was recently reviewed in order to qualify for fully accredited status. The board was interested in “information about the class, course content, how often they are taught, student enrollment, (and) quality of faculty,” Weber said.

The boards look at every aspect, she added, saying that they also examined faculty resources and opportunities for students to participate in internships.

“By the time they leave, they will have met with the vice president of Academic Affairs, the school dean, the librarian,” Barbara Weber said.

See ACCREDITATION, page 8

See BAN, page 6

ASL is having a contest! It wants an acronym (a word formed by the initial letters of a group of words) for its new touch-tone registration system. The winner will get first priority for the first quarter’s installment. Entries must include the touch tone aspect and should include that it is Cal Poly. Entries go either to John Moore or Brent Grizzle at the ASL offices. Deadline is as of yet, so the sooner the better!”
Editorial

Hey, this boy stuff is kind of fun

I never used to play with dolls. It just wasn’t the thing to do at my house. It was for little girls. It’s a different method of growing up, trying to be the same as everybody else. You don’t get the luxury of choosing between Barbie and G.I. Joe— you get taken to Dodger games for your birthday present.

And you know what? My father has teased me for as long as I can remember about how I was supposed to be a boy. My name would have been Paul. When I emerged into the world missing all of the equipment, I needed to procure, my parents had to paint on the name. They did all right.

Until I was 2, I fully believed the only reason Dad let me take me home from the hospital was because I had brown eyes. I think Mom was sort of relieved that she didn’t have to go through nine months of morning sickness and 12 hours of agony for nothing. But Dad, who died a rather happy childhood in North Dakota with four brothers (and he really did walk to school in the snow), was miffed that his son would be a girl. And the poor man, once again, had to put up.

Through junior high and high school, I would get down on my knees and thank God that I slept through it. Watching football with Dad wouldn’t have been half the fun if he had to strap me to the chair to make me watch. It also was a relief that I could actually play a sport. Dad was bummed that as the only girl in the class, I had to play a bit small to play linebacker. But football was my life for about six years, and I think that pacified Dad’s yearning for a son. I couldn’t pass on the family name (who would want this name?), but man could I pitch.

Alas, I would soon realize there was nothing that deals with sports. It’s that feeling of contradiction that some of you have told me I couldn’t possibly understand unless I’ve played the game. I’ve never played anything but touch football and basketball, that I’ve done always in a parking lot for halftime on Superbowl Sunday, but I can relate. My point is that teamwork extends beyond a playing field, but I consider sports sort of a “low technical denominator” to which everyone can relate.

Comedian had fun at others’ expense

Editor — The last Poli Royal was pretty much like any previous Poli Royal, with one exception.

On Friday night I attended the second annual Comedy Show at the “Comedy Shoppe IV” presented by the ASI Entertainment Department and ASI Special Events. The opening act was a popular comedian who relied on his tried and true “fat” joke to get a laugh. To put it simply, the system can be broken for verbal “fat-bashing” is never appropriate.

It would seem to me that a university such as Cal Poly would be sensitive to such issues and would not hire someone who would insult and degrade a sizable portion of the student body. (Let’s face it: had the words nigger, chink, grease or any other racial slur been used in stead of fat, I feel sure the comedian would have, quite rightly, been asked to leave out the material or been off the stage at all.)

If the government allows future events, all portions of the university would be sensitive to the wide variety of people who make up the community and not attack one segment for the sake of a few cheap laughs.

BILL WEAVER

Minority perks

Editor — Matt Weiser’s column on equality (April 25) was a great way off the mark. Programs to help minorities in the academic environment are a must. Rather, they are a result of the decades of academic and social injustices that many minorities by the majority. Only by allowing minorities into the system can we be certain that the managerial system can’t fail to operate. I know that the odds were 350-to-1 and we beat it. The reference is to the 1986 Measure A that, as the article says, gives voters a say in the approval process. What the story does not state is that those numbers referred to the approximate amounts of money spent on Measure A, not the amounts given over the 1986 ballot measure.

The oil companies and their associated politicians are trying to defeat the initiative. How? By spending a hefty $500,000 to defeat the initiative. There is much support; the measure raised about $1,500. My reference, therefore, was to the notion that big money — in this case, oil company money — need not win. In this way, grass-roots organizing can overcome corporate financing in local electoral issues.

JEFF HAIGHT

Grass roots win

Editor — The generally well-written story on May 2 regarding Measure A should be applauded. The story was made up of students, faculty and staff to oppose Measure A in B and C on the June ballot that deals with development of an oil facility in the South County needs one point of clarification. The article states that “Big money — in this case, oil company money — need not win.” The odds were 350-to-1 and we beat it. The reference is to the 1986 Measure A that, as the article says, gives voters a say in the approval process. Merced police search for man who took baby from hospital

MERCED (AP) — Merced Police are searching for a man in his 30s who reportedly abducted a two-day old baby girl from the Merced Community Medical Center's nursery over the weekend.

The baby, described as a Hispanic girl, was last seen wrapped in a white blanket before she was taken Sunday around 2 p.m. from the hospital, a police spokesman said. The suspect was described as 5 feet 11 inches tall, 135 pounds, with sandy brown hair. He wore a light colored jacket and tan slacks.

Elizabah Lorenzi, marketing director for the hospital, said the staff reported the infant missing.

"It's such a shock. It's unbelievable. The staff is all quite shaken," said Lorenzi.

Hospital Administrator Bill Gilbert said Monday that "there hasn't been any major breakthroughs" in the investigation.

"We don't have any good news or new details," Gilbert said.

Police haven't determined a motive for the abduction and a spokesman said a search for the child is continuing.

Water saving idles fountains, ups bar tabs in San Francisco

SAN FRANCISCO (AP) — One day after a water rationing plan took effect, decorative fountains fell idle, bar tabs grew and plumbing supply stores reported brisk sales of water-saving devices.

San Francisco residents have been told to cut consumption by 25 percent in response to the most severe water shortage since the 1976-77 drought. But many of the cutbacks will be highly visible to the hundreds of thousands of tourists who crowd the City-By-The-Bay each summer.

Only fountains that use recycled water — like the one in front of City Hall — continued to flow freely on Monday.

"It's potentially critical information," said Dr. Paul Volberding, of the University of California, San Francisco. "If we knew that somebody was getting close to the point of developing AIDS, we would want to treat the person at that point even if he hadn't developed full-blown AIDS."

Volberding was commenting on a study in which researchers at the national Centers for Disease Control spent three years regularly testing blood cells from 15 homosexual men who were infected by the AIDS virus and had chronic swelling of lymph glands but didn't suffer full-blown AIDS.

Six of the 15 subsequently developed AIDS, said CDC clinical immunology chief Janet Nicholson, who presented her study Monday during the annual meeting of the Federation of American Societies for Experimental Biology.

Children trapped, 14 killed as hospital collapses in India

NEW DELHI, India (AP) — A new wing of a children's hospital collapsed Monday in Kashmir, and at least 14 people died in a crash of bricks and concrete.

Dozens of children, their moans growing fainter, were feared trapped.

"There are fewer and fewer signs of life," one official said. "Rescuers were pumping oxygen and drinking water through the debris in hopes of sustaining any survivors.

The three-story building disintegrated shortly after sunrise in Jammu, winter capital of the northern state of Kashmir.

The wing, completed in 1985, had been lined with water resistant material. Although the wing had cracked in the late evening, police reported.

"I heard children moaning in the morning, but in late evening there was nothing, a kind of strange silence amid the noise of rescue work," said Kashmir Times reporter Arun Joshi. "They may be dying."

Study finds sign in patients that signals impending AIDS

LAS VEGAS, Nev. (AP) — A study found AIDS-infected people show a sharp increase in virus-infected white blood cells in the year before they develop the disease, a discovery doctors say might help them improve patient care.

"It's potentially critical information," said Dr. Paul Volberding, of the University of California, San Francisco. "If we knew that somebody was getting close to the point of developing AIDS, we would want to treat the person at that point even if he hadn't developed full-blown AIDS."

Volberding was commenting on a study in which researchers at the national Centers for Disease Control spent three years regularly testing blood cells from 15 homosexual men who were infected by the AIDS virus and had chronic swelling of lymph glands but didn't suffer full-blown AIDS.

Tank-led Israeli troops roll into Lebanon's Arkoub area

BEIRUT, Lebanon (AP) — Tank-led Israeli troops backed by helicopter gunships on Monday punched into southeast Lebanon's Arkoub region in the foothills of Mount Hermon in "hot pursuit" of Palestinian guerrillas, police reported.

They said initial reports from the area in the western sector of Lebanon's Syria-controlled Bekaa Valley indicated at least three guerrillas were taken prisoner in the late-evening thrust.

"We have no information yet about the size of the attacking force or the distance it covered in the penetration," said a spokesman at Lebanon's police headquarters in Beirut. He cannot be named under standing regulations.

The spokesman said he could not comment on a report by the NBC television network that about 2,000 Israeli troops had crossed into Lebanon in search of Palestine Liberation Organization guerrillas and their strongholds.

He said the attacking force was supported by militia men of the Israeli-allied South Lebanon Army, a predominantly Christian contingent in control of Israel's self-designated security zone in south Lebanon.

House OKs 'atomic vets' bill but presidential veto is likely

WASHINGTON (AP) — The House Monday gave final congressional approval to a bill granting new benefits to the "atomic veterans" who were exposed to radiation in the U.S. occupation of Japan during 1945 or in post-war tests of American atomic weapons.

The 326-2 vote sends the bill to President Reagan, who may veto it.

Administration officials contend the measure is not based on firm scientific evidence. The Senate passed the measure a week ago by a 48-30 vote.

The bill grants new benefits to the estimated 250,000 U.S. service personnel who were in Hiroshima or Nagasaki following the U.S. atomic bombing of those Japanese cities in August 1945, or who took part in post-war tests of American atomic weapons.

The 326-2 vote sends the bill to President Reagan, who may veto it.

Project ‘C’

Student groups unite to reconstruct courtyard

By Kathy Campbell

Heap of dusty brown earth and symmetrical stacks of old bricks filled the courtyard. A work crew armed with shovels and wheelbarrows enthusiastically attacked the piles of dirt, rearranging them and leveling pathways in between. Cheerful music and tantalizing whiffs of barbecuing tri-tips competed for attention with the clatter of shoveling dirt. The Cal Poly credo “learn by doing” is alive and well on Saturday mornings. A group of students representing a variety of related disciplines has taken on reconstruction of a courtyard tucked into the square formed by the Engineering West complex of buildings. When it’s finished, the courtyard will feature several canopies have built over this, he said, pointing his cooking fork around the courtyard. He had bought tri-tips and was preparing lunch for the volunteers. “Everybody’s out here working, and they really deserve it,” he said.

“Everybody’s out here working, and they really deserve it,” he said.

The courtyard committee developed its plan with a clear idea of what materials would be available, Herrick said. Most of the materials, including railroad ties, trees, plants and bricks have been donated. The committee also has a $600 budget allotment from the Student Senate to help with expenses.

The student volunteers have worked closely with the industrial technology department offices and classrooms used to be located in the buildings which enclose the courtyard, he explained.

“Canopies have built over this, we had a geodesic dome over it once, and one time it was a lake where architecture students built galleons and had a little sea battle,” Johnson said. “It’s an inter-disciplinary group, and the bottom line is that I’m meeting a lot of people and Cal Poly is getting a neat project. It’s a win-win situation.”

EXPRES MAY 10, 1988

IBM will be taking orders during the demonstration.

IBM PS/2 Demonstration

UU 220, 10:00-2:00
Excitement was in the air when about 425 participants in the 19th Annual San Luis Obispo County Special Olympics paraded around the track at Arroyo Grande High School during opening ceremonies last week.

Highlighting the event was San Luis Obispo resident Mark Conover, who will compete in the 1988 Summer Olympics in Seoul, South Korea as a marathon runner. The athlete ran a lap on the track and handed the torch to Special Olympian Avery Walter of Friendship School to light the cauldron. The cauldron was the same one that was used at the 1984 Olympic soccer competition at Stanford Stadium.

"How far is far, how high is high, we'll never know until we try," words of the Special Olympics Anthem, were sung by professional singer Mary Macgregor and Special Olympian Connie Logan of Friendship School. Macgregor also accompanied Special Olympian Dennis Hall of Achievement House in the singing of the national anthem. The special day enjoyed by all was electric.

"Non-smokers have decent places
to get coffee in the U.U.
and the Campus Store, we don't.
I enjoy my cigarette and my
social time and I have no place
on campus to do it."

Bussen, however, disagrees.
"An individual should be able
to do whatever he or she wants," he
said. "But the university policy is very
deeer, which states if a compromise is
not available, the rights of the
non-smoker shall prevail."

He said although he appreci­
ates the fact that smokers need
a place, this isn't the real issue.
Rather, non-smokers have the
right to work in an environment
not detrimental to their health.
Mulder said smokers will peti­
tion if they have to.
"I'll call the police if I have
no other choice," he said. "Either I
or we can gather non-smokers
before and equip them with
fire extinguishers."

Poly's smoking policy
was revised in April 1987 and approved by Cal
Poly President Warren Baker.

This policy was "... establish­
ed in recognition of the rights
of non-smokers in a smoke-free en­
vironment." Endorsed by the
Public Safety Advisory Commiss­
tee, the policy was revised in
April 1987 and approved by Cal
Poly President Warren Baker.

Special Olympics Oath was
recited by Special Olympian
Mysha Thomas of San Luis
Obispo High and the pledge
of allegiance was led by Special
Olympian Craig Silva of Arroyo
Grande High School.
The releasing of balloons and
pigeons just prior to the start of
competition brought cheers from the
crowd.

Assistant Maureen McCormick,
who is best known for her role as
Marsha on "The Brady Bunch," was
the honorary chairperson of the
event. McCormick, whose
brother is disabled, always pre­
vented the medals for the swimming
competitions. Congratulating the
athletes with hugs and hand­
sakes, McCormick has been in­
volved with Special Olympics for
more than 14 years.

Swimming events included
men's and women's 25-yard free
style, 25-yard back stroke, 25-
yard breaststroke, 50-yard freestyle, and a
100-yard relay.

Tom Lee, faculty member at
Cal Poly, worked with Special
Olympians in the South County
colleges to plan the swimming
events with Dick Smith, who
worked 4th Special Olympics in
the North County. Lee also
coordinates an adapted aquatics
class for disabled children and
adults at Cal Poly.

Poly Losh, a member of the
Athletes with Special Needs
Group, was the honorary chairperson for the
Special Olympics. Losh said he
enjoyed the opportunity to work
with the children and see their
accomplishments.

Cal Poly journalism student
Cathy Hernandez announced
field awards. Hernandez has been
doing volunteer work for Special
Olympics for two years, offering
her time for public relations and
office work. She said she enjoyed
volunteering because Special
Olympics provides a place where
the participants can excel and
Fecha. Hernandez praised San Luis
Obispo High area director Vicki
Sacksteder for "a wonderful job"
organizing the event. McCormick
said her group was made up of 30
people rally behind the athletes
to bring them support. Delta
Sigma Pi, a professional business
fraternity at Cal Poly, ran a
softball throw in Tent City.
Karen Gunts, a member of the
fraternity, said, "It gives you
such a good feeling to know
you're participating and to see
the kids face." Guse said the
Special Olympics brings the
community together because
people rally behind the athletes
to bring them support. Delta
Sigma Pi has participated in the
Special Olympics for several
years.

More than 800 volunteers were
involved in this year's Special
Olympics and more than 200
deepen businesses and organiza­
ones worked in reduced time and
materials.

The first California Special
Olympics Cycling Games are
scheduled for Aug. 19-21 at Cal
Poly.

Fund-raising internship designed to help ease African starvation

By Martia Fujikake

As an intern for the local American Red Cross, a Cal Poly business major is working on "A New Appeal" to help starving Africans. Rick Freeman's internship deals with campaigning for a worldwide fund-raising event titled "A New Appeal: Red Cross in Africa."

"This is a perfect chance for me," said Freeman. "Millions of people's lives are in danger.

The 20-year-old plans to go into the field of fund raising by working for a non-profit organization such as the American Red Cross. His internship gives him the opportunity to dedicate time and effort to starting a campaign to help rid starvation in Africa, a problem that deeply concerns him.

According to the American Red Cross, fears of a another drought like the 1984-85 Africa famine have prompted it to plan "A New Appeal," set to begin in May. Its purpose is to educate potential donors on the logistics of famine relief. This appeal is being conducted by the Interna­tional Committee of the Red Cross and the League of Red Cross and Red Crescent Societies. They hope to raise $20 million.

"The American Red Cross is pledging funds to the people in Africa," said Jeannie Nix, executive director of the American Red Cross in San Luis Obispo. "The drought has continued there and it is a threat to lives."

Freeman, supervised by Nix, is working on a plan to get San Luis Obispo involved with the relief program. Freeman said he feels that campaigning and emphasizing community awareness may help lessen the harshness of such a crisis.

Thousands of tons of food are already in Africa, but transporting it to various distribution sites is costly for the Red Cross.

According to Freeman, bringing food to the villages is important to prevent mass migration around the feeding centers. Many people die from traveling long distances, he said.

Contributions help raise money for trucks to distribute food to the villages.

COURTYARD

From page 4 which has provided heavy equipment to help as needed.

George Mead, who supervises groundskeeping for the cour­tyard area, said the students have been good to work with.

Plant Operations is upgrading the irrigation and drainage systems. Mead oversees the overall renovation of the square. But for the most part, the students are in charge. "We've taken a kind of 'hands-off' approach unless they need specific help," said Mead.

Plant Operations provided a backhoe to drag out tree stumps and chain saws to help chop up railroad ties, Herrick said, noting that the students couldn't have handled those chores alone.

That kind of campuswide cooperation has been one of the most valuable aspects of the pro­ject, said Richard Zweifel, associate dean of the School of Architecture and Environmental Design. "I think it's a great pro­ject," he said. "Our students regularly take on projects, but this one is special because so many different groups are involved in it."

Zweifel said the courtyard design committee was able to accommodate the needs of several different groups in working out a "real-life" solution for the area. "I've been very pleased with the cooperative effort on this project," he said.
Professor to analyze evidence for 12 crime labs

By Kelley Cummins
Staff Writer

A Cal Poly chemistry professor will be on leave during part of next school year to pursue his own interests and to bring additional knowledge into the classroom.

Lee Coombs, who has taught at Cal Poly for more than 18 years, is going on a sabbatical to work in the 12 State Forensic Crime Labs located throughout California.

"The crime labs identify samples from everything you can imagine," said Coombs. "The samples could range from living material, rocks, water to body fluids."

The Crime Labs are set up to analyze evidence during police investigations. The labs are used to help find answers to unanswered questions, said Coombs.

Coombs said it was not hard for him to be able to work with the forensic labs. He simply contacted the crime labs and was invited to see the facilities, which led to his sabbatical.

The head of Forensic Services for California is Steve Weber, who said that workers in the 12 State Forensic Crime Labs must be highly qualified.

"The labs provide complete examinations. We analyze quite a diverse amount of substances which can provide crucial evidence for testimony in court trials. The men and women working in these facilities are specialists," said Coombs.

Each crime lab is involved in different specifics of forensic medicine. Coombs said, "One lab specializes in, let's say, hair fibers or body fluids. During an investigation these articles are sent to these specific labs to be determined."

Coombs said that being able to work in the crime labs is an ideal way to combine his course material with situations in the outside world. He said, "I will use my knowledge of analytical methods and apply it to crime reporting to be able to find out information concerning such crimes as arson or possibly even murder."

Coombs said the knowledge he will gain throughout his sabbatical will also be beneficial for his students. "This will benefit my teaching. In analytical courses I'll be able to apply what I've learned in a real world situation. It will give me some exposure to things that have been developed in the real world. We've obviously a direct benefit for the students," he said.

College Life Is Easier At Woodside.

Getting through school is tough. Woodside Apartments clears your path with the ideal environment. You'll enjoy a private, spacious bedroom. A comfortable, convenient living/kitchen area and a picnic area. There's much more. Call us, or come see our furnished model (open daily 10 to 7).

Bush, Jackson take on Dukakis

George Bush charged Monday that Michael Dukakis advocates policies that would "turn America "to the misery" inhered by the Reagan Administration in 1981, while Jesse Jackson accused the Democratic frontrunner of failing "to operate with courage, clarity and candor.

Dukakis, anticipating landslide primaries in New Hampshire, Tuesday in Ohio and Indiana, turned Jackson's comments against him. "The talk is not just in the talker. I'm a doer. There's no question about that."

The Massachusetts governor, returning to his title, "the talker," also took aim at embattled Attorney General Edwin Meese III. "We want an attorney general that you and I can be proud of, not ashamed of," he said.

Ohio, Indiana and the District of Columbia offer a total of 254 Democratic National Convention delegates in Tuesday's primaries.

Dukakis is heavily favored to defeat Jackson in Ohio and Indiana, and huge majorities in the three races combined, thus padding his substantial lead over his only remaining opponent.

The Massachusetts governor has nearly 1,100 of the 2,081 delegates needed to claim his party's nomination at the convention in August.

Jackson campaigned through Ohio, jabbing at Dukakis while seeking an increase in the federal minimum wage as well as a "liberal code of conduct" to prevent American jobs from being exported overseas.

In a hunchinson speech to the City Club in Cleveland, he said the minimum wage should be raised to an amount equal to half the average wage in America.

The most recent Bureau of Labor Statistics report pegged the average wage of as March 9 $19.19 an hour, so raising the minimum would be nearly $4.60 an hour, an increase of $1.25 over the current minimum wage of $3.35.

As for Dukakis, Jackson said the news media had created a "Teflon candidate.

"So far, Dukakis has operated with caution when we must operate with courage, clarity and candor," he said.

Dukakis spent part of his day visiting a day care center at a predominantly black Cincinnati high school as part of an attempt to court more black support. He also told reporters he had no intention of criticizing Jackson, whose supporters will be essential to Dukakis's chance of success in the fall.

Amnesty bill extension unlikely; applicants to exceed 1.2 million

LOS ANGELES (AP) - The co-sponsor of the immigration amnesty bill said Monday that an extension for the measure past its midnight May 4 deadline is unlikely, and one immigration official said applicants will exceed 1.2 million.

Sen. Alan Simpson, R-Wyo., made his comments to a federal Immigration and Naturalization Service legal office near downtown, where a long line of late applicants wondered when their turn for filing.

"Wednesday night at 12 o'clock we will take the envelope in the line, all over the United States," Simpson said. "We will receive status in the United States that removes them from a fearful sub-culture of human beings.

"Simpson said he worked eight years to get the Immigration Reform and Control Act passed in 1982, but it barely squeaked through Congress then. It was unlikely, he said, that any support could be found to extend it past the deadline.

INS Western Regional Commissioner Harold Erfi said late applicants in the previous week totaled about 75,000 more than double the agency's highest figure since the program began a year ago.

The commissioner said the INS had received 1.2 million applicants nationwide by Monday, a figure sometimes mentioned as a final goal for the alien legalization program.

Where are all the southsiders and chicken little's who said we couldn't do it? Erfi said.

Outside the Wilshire Boulevard legal office more than 100 applicants waited to get in.

Armando Reyes, 39, of Los Angeles via Aguas Calientes, Mexico, said he came to the United States in 1978 looking for work. Applicants need to have lived in the country since Jan. 1, 1982, but Reyes said fear kept him away from INS offices until Monday.

"I was afraid before, but now there's no more time to be scared," Reyes said in Spanish. "A good friend says it's not a trick, and now I realize I have to think of my family.

"In the program's final days, late filers were being allowed to submit just their application forms and pay required fees. Other documentation and medical reports can be filed up to July 5, Erfi said.

With the amnesty program about to end, the INS is preparing to shift its emphasis to employ sanctions to be levied against bosses who knowingly hire illegal aliens, Erfi said.

"Amnesty is not going to stem the flow (of illegal aliens in the United States)." Erfi said. "Sanctions are going to stem the flow.

Erfi also urged applicants who filed their paperwork with private agencies designated by the INS to make sure the documents reached federal authorities.

NARETTO

From page 1

no matter because she was concerned about the rights of minority people.

The protesters also charge Naretto with wane and inefficiency in the running of Plant Operations.

Jones said the protest is directed only against Naretto, not Cal Poly President Warren Baker or other members of the Cal Poly administration. Jones said a petition will be submitted to Baker soon after asking that charges against Naretto be investigated.

Jones refused to be seen or talk to anyone about the charges. An anonymous letter writer of Naretto's wished not to reveal her name said Naretto was referring questions to the personnel department because it was "the best place to do so."

Piper was unavailable for comment.

Small teams compete; CCAA championships next

The Cal Poly men's track team sent abbreviated teams to two invitational meets Saturday, but most team members took the weekend off in preparation for the CCAA championships this weekend at Cal State Los Angeles.

The Mustangs last year placed third in the conference, behind Cal State Los Angeles and Cal State Northridge, but the teams were within 20 points of each other. Cal Poly head coach Tom Henderson said the competition is almost identical this year, and the title will go to "whoever is on that day."

Henderson added Cal State Los Angeles has the edge on paper, but the competition is really up for grabs.

A few team members traveled to San Francisco State Saturday for the Johnny Mathis Invitational, named for the singer who was also a high jumper for San Francisco State.

Cal Poly's Brant Warren took the conference lead in the javelin competition with his second-place throw of 208-8. The distance was a season best for him.

Cal Poly's Robert deBorde ran a lifetime best time in his section of the 400-IH with his time of 53.8, and he placed second in the 110-IH high hurdles at 14.70.

Henderson said these times give Coleman a good contention in the CCAA meet.

Teammates Christian Prieur and Erich Ackermann both had lifetime bests in the discus competition at 147.8. Avenging an earlier loss, Cal Poly's Dan Bakhodlin placed fourth in the discus with a lifetime best time of 147.8.

Henderson added Cal State Los Angeles has the edge on paper, but the competition is really up for grabs.

Softball team wins 2 at Sacto tournament, will compete in regional meet next week

SACRAMENTO — The Cal Poly women's softball team won three of five games at an invitational tournament held at Sacramento State last weekend.

Cal Poly started the tournament off with a 2-0 shutout against Chico State. The Mustangs then lost to Sacramento State, 1-0.

The team gave it a good shot, but came out behind UC Davis, 8-5.

Cal Poly had an easier time against St. Mary's College, and took the game, 4-1. The Mustangs finished the tournament with a 5-0 loss to Cal State Bakersfield.

The team is now 30-23 overall, and 11-9 in CCAA action.

The Mustangs will next compete in the Western Regional Tournament on May 7 at Cal State Bakersfield. The four teams in the tournament include top-seeded Bakersfield, second-place Sacramento State and fourth-place Chapman College.

Sacramento State will compete in the national tournament, to be held at Sacramento State in late May.

Dry Run to promote health, fitness, not alcohol

By Karen N. Smyth
Staff Writer

Promoting fitness without promoting alcohol is the key theme of the fourth annual Dry Run sponsored by Alcohol Services of San Luis Obispo. The race will be held Saturday, May 7.

Elisa Baranski, health education coordinator, Dry Run coordinator, said with the run she wants to help students and the community come together around the issue of alcohol in a health promotion, not in a drinking environment. She said she wants them to realize they're having fun without having alcohol.

Baranski said too often these types of events are sponsored by companies like Coors or Budweiser. She said this is deceptive. "They're trying to promote the message that alcohol and fitness go together."

Elizabeth Daymond, a Cal Poly journalism senior, has been in- tervening at Alcohol Services for more than six months. Her efforts of promotion and coordination of the event have been a part of her senior project.

Daymond said, "The top goal is to have a fun run. We do want to increase the awareness of Alcohol Services, but we're not out there to preach. The people who will be there wouldn't be drinking at a bar-hopping, it's more fun to go to a social event on a Friday night so they can get up the next day and exercise."

The Dry Run isn't limited to runners. The race is open to people in all areas of fitness. There will be a 5K race for joggers and those who wish to walk the course. A 10K race will be for runners and competitors in wheelchairs. Baranski said, in keeping with last year's turnout, she expects about 150 participants.

Prizes and gift certificates donated from local merchants will be awarded to the top male and female finishers in each division. Alcohol Services is looking for volunteers who wish to help and will be at Farmer's Market to take sign-ups for volunteers and volunteers.

Alcohol Services is a non-profit organization that offers counseling programs and assistance to those with alcohol-related problems who live in San Luis Obispo.
