CSU trustees approve $18 million arts center for three-way funding

By Christine Kohn

The CSU Board of Trustees approved Wednesday to support a jointly funded performing arts center for Cal Poly and the community.

Funded by the state, the city of San Luis Obispo and the Foundation for the Performing Arts Center, the $18 million cost will be shared on a two-thirds, one-sixth, one-sixth ratio, respectively, said Doug Gerard, executive dean in charge of Facilities Administration.

This would mean approximately $12 million from the state and $3 million from each of the other two partners.

In addition, authority was given to Chancellor W. Ann Reynolds to enter into further agreements needed for the joint funding.

"It really was the first step," said Gerard. "We'll have to go back to the trustees several times. We'll have to go back and ask them to appoint an architect and have the schematic design approved."

The 63,000-square-foot performing arts center, to be built next to the Cal Poly Theatre, will be about twice the theater's size, said Gerard. It will include a main auditorium with 1,500 seats.

Construction is expected to begin in fall 1991 with completion by early 1994.

The next step in the planning of the project will be to form a seven-member board of directors, which will include three representatives from Cal Poly and two each from the city and Foundation for the Performing Arts Center.

Specific plans for the performing arts center will be compiled and later presented to the trustees.

Students may need 2nd language to graduate if A. Senate agrees

By Karen N. Smyth

Students with speech or hearing impediments that specifically affect language abilities may fulfill the requirement by successfully completing alternative coursework in such fields as linguistics, foreign literature in translation, comparative cultures or American Sign Language. These waivers will be arranged through the foreign language department and handicapped student services.

Students may also be excused by majoring or taking LANGUAGE, back page

Poly student to bike TransAmerica Trek

By John Alexiou

A Cal Poly student plans to participate in a bike ride across the United States to benefit the American Lung Association.

Marina DeMatti, a full-time graduate student with a degree in biochemistry, will be among 300 cyclists in the seven-week, 3,425-mile TransAmerica Bicycle Trek June 6-July 22.

The trek from Seattle to Atlantic City, N.J., will raise more than $2 million to help the American Lung Association prevent and control lung diseases such as emphysema, lung cancer, chronic bronchitis and asthma.

"The Trek for me is a statement," she said. "I feel that people need to become more aware of the lung damage caused by poor air quality and smoking."

DeMatti, still $300 short on her $3,000 pledge, must raise the rest of the money, but isn't quite sure she's ready to average 75 miles a day on the road with a few 100-milers thrown in also.

"I really need to take some time out and mentally prepare for this," said DeMatti, thinking of her busy schedule.

"There's going to be days where it's going to be really tough and I just hope that I can make it through those days." 

Besides going to her Cal Poly classes, she is student-teaching eighth graders at Paulding Intermediate School in Arroyo Grande and working at Sea BIKES, page 10

Insight

Suicide is fact of life on many college campuses and many students burdened by relationship and school stress see no other way out. But counselors say there are alternatives.
Parents can do the cruelest things

W atch a show by any other name really smell as sweet? I think not. Few parents realize the awesome responsibility they hold as name givers. Names shape lives. People have this funny way of developing into what you might expect their names to describe.

Now I got screwed over by my family name. So surnames can have the same fearful affect as first names. It seems parents sometimes get so caught up in creative or commemorative naming that they don't realize the end result of branding their kids Sweetface, Early, Adolph, Floyd or Elmer for the remainder of their lives. Think of the torture these kids had to go through from their peers. With surnames like that, how do you think they'd turn out?

Now, I admit, names tend to go in cycles. What was chic in the '40s, like Harry, Alfred or Duane, gave way to Brittany, Darin or Mitch in the '80s. Indeed, people are so a tendency to live up to their names. Did Larry Speakes' parents desist him to be the White House press secretary? And women with names like Candice, Hope or Francesca always look like a Candice, Hope or Francesca, you know what I mean?

And then there's the blue-sky racially and gender implications of names. Anyone whose last name is Jackson or men with names like Robby, Kim or Ashley must constantly correct unthinking stereotypes.

Names become even more important if you're in the limelight. For instance, Bock never had a chance. No one wanted a Supreme Court justice whose name sounded as if it was inverted by the Muppets' Swedish Chef. First names don't seem to make the public blush quite so fast. Just ask Byron, Thurgood or Sandra Day. And the double whammy Lyn Nofsinger got dealt was ... well, would you want a name like that?

While on the topic of politics, take a look at presidents past and potential. Wouldn't it be a refreshing change to get away from the stuffiness of Ronald, Gerald, Lyndon, Franklin or possibly George? How could the common man relate to names like that? Wouldn't it be nice to have a Mike in office, for instance? I can hear Sam Donahion from the hellhole now: 'Yo! Mike! Got a question for ya!' Jesse almost goes over the casual barrier, although many have tried unsuccessfully for the same effect (just look at Ronnie, Jimmy, Jerry, Teddy; and who could forget Tricky Dicky?).

So you see, we really have little say in the matter. Once those few little words are printed on our birth certificates, it's all over.

San Jose State vs. styrofoam

Editor — We are three San Jose State students who have been gaining support on our campus to oppose the use of styrofoam products by our food-services department. All beverage containers on our campus are made of styrofoam, as are many food containers. The only alternative is carbonated beverages in cans. We have gained 351 signatures for our petition that opposes the use of styrofoam products here.

We strongly urge students at Cal Poly to become aware of the dangers to the Earth's environment due to continued use of chlorofluorocarbons in styrofoam. There are some practical things students can do to help:

• Don't use styrofoam products.
• Don't eat at establishments that use styrofoam.

If forced to eat there, let management know how awful it is for brevity and style. Submit letters to the editor must be typewritten, 200 words or less, and include the writer's name and telephone number. Editor reserves the right to reject any letter that does not conform to the requirements. Letters may be edited for clarity and style. Alameda County makes panel to deal with water shortage

OAKLAND (AP) — Alameda County supervisors have created an advisory panel, apparently the first in the state, to help the county get through the water shortage. Supervisors created the task force Tuesday at the request of the state Office of Emergency Services, which is seeking similar action from other counties throughout California.

Alameda County already has taken measures to deal with the effect of the drought on crops and livestock. Sheriff Charles Plummer said.

"To the now the possible effects of the drought on all aspects of the county need to be addressed in a comprehensive, coordinated manner," Plummer told the Board of Supervisors. The panel will be made up of 25 representatives.

Former security guard gets death sentence for slaying

SAN JOSE (AP) — A former security guard has been sentenced to die in the gas chamber for the slaying of a high school girl after attacking her at the Hillsborough marina where he worked.

David Allen Raley, 26, was sentenced Tuesday by Santa Clara County Superior Court Judge John Schatz, who followed through on the death penalty recommendation of jurors who heard the case after another jury deadlocked over the issue.

Raley was convicted last year of the 1985 murder of Jeanette Grinell, 16, and the attempted murder of Grinell's friend, Laurie McKenna, now 19.

He took the girl on an impromptu tour of the Carolands Chateau, a deserted 92-room mansion also called the Colby Mansion. He tricked them into going into an underground vault.

San Jose police received a tip from a janitor that a surveillance camera had recorded a man entering the house.

Defense secretary gives OK to MX missile launch system

WASHINGTON (AP) — Defense Secretary Frank C. Carlucci has authorized full-scale development of a rail launching system for the MX nuclear missile, the Pentagon said Wednesday.

Following the authorization, the Air Force awarded two development contracts totaling almost $329 million for the construction and testing of the missile carrying, launch control and security rail cars that will be needed to make the 71-foot missile mobile, the announcement added.

A $167 million contract was awarded to Rockwell International Corp.'s Autonetics Electronics Systems Division in Anaheim.

Soviets: Chemical explosion not fuel for nuclear missile

MOSCOW (AP) — The Soviet Union acknowledged Wednesday that something exploded at one of its chemical factories last week, but denied U.S. claims that it was rocket fuel used for a new long-range nuclear missile.

Gennady I. Gerasimov, Foreign Ministry spokesman, said three people were killed and five injured in the explosion May 12 in a storage area of the plant at Pavlograd, about 500 miles southwest of Moscow in the Ukraine.

He said the chemicals involved were explosives used in civilian industry, not fuel for the new 55-34 intercontinental ballistic missile.

U.S. officials in Washington said Tuesday the Pavlograd plant is the sole facility for manufacturing the major rocket motors for the SS-24.

World

Gorbachev may pull troops to gain East-West support

WASHINGTON (AP) — U.S. officials say Kremlin leader Mikhail S. Gorbachev may withdraw 50,000 to 100,000 troops from Eastern Europe this year in a bid to win support for a new round of East-West negotiations on conventional forces.

A unilateral Soviet withdrawal of that scale would have "little impact strategically" said a U.S. official. But the political payoff could be immense in Western Europe, where polls show great enthusiasm for Gorbachev's foreign and domestic policies.

U.S. officials trying to anticipate Gorbachev's summit strategy have also detected hints that he will suggest a fifth summit meeting before Reagan leaves office in eight months. The projected sites are Vienna or Budapest.

JOBS!

Come to the Job Fair Monday, May 23, 10 am-2 pm in Chumash Auditorium. Over 70 different employers with jobs. Check the Placement Center for further details. Here are some of the employers represented:

Council votes to cut trees to widen Madonna

By Karen N. Smyth

The San Luis Obispo City Council is calling for the removal of trees along a frontage road to allow for the widening of Madonna Road. The trees will be removed from the CalTrans frontage of Madonna Road as it approaches Higuera Street to permit one lane for right turns and two for left turns. The council decided on a 4-to-1 vote.

Before making their decision, councilmembers reviewed three other alternatives: The staff report, however, recommended a full project calling for a complete widening, tree removal and the installation of sidewalks. Other alternatives called for no widening, or widening and moving the sidewalk behind the trees.

Although the last alternative would have saved the trees and allowed for adequate handling of the vehicle and pedestrian traffic, CalTrans owns the land where the sidewalk would go. CalTrans had told city staff members that it would oppose sale of the property.

The approved plan was seen as having the primary advantage of providing for traffic needs now and in the future. It also takes advantage of a right-of-way, for which the city has already spent $50,000.

The trees will be replaced with landscaping in the form of smaller trees, flowering plants and shrubbery.

Councilmember Peg Pinard was opposed to the action and said the council should hold off from any tree removal in the interest of landscaping. Councilmember Allen Settle said the issue was a matter of "health, safety and welfare" and there was no other choice.

In other action, the council decided to review and consider the 1988-89 annual budget. Director of Finance William Statler said the city's financial position continues to one of "health but not wealth." Statler said the proposed budget for 1988-89 builds from the groundwork set forth in the last plan, and reflects only modest changes.

Statler said the primary changes were in the review and adoption of a fire master plan, a five-year police services plan and an airport area specific plan. Also included was a "Park and Open Space Element."

Another primary change from the last budget called for continued support for the Cal Poly liaison committee to improve community-university relations.

Statler said the proposed budget is a comprehensive statement of all the council's major goals.

Demand for life-saving organs spurs Poly, UCSB donor drive

By Brenda Suppansz

Students at Cal Poly and U.C. Santa Barbara have organized an Organ Donor Card Drive this week to make students aware that organs are much needed for transplants in order to save lives.

Brian Ternan, a member of Alpha Upisolon fraternity, organized the event at Cal Poly along with a friend who attends UCSB.

"We got 1,000 organ donor cards from the DMV ... and decided to just pass them out on campus," Ternan said. He and fraternity members planned to pass the cards out in the University Union.

One of the reasons he became involved with the donor card drive, Ternan explained, is that he has a cousin who possibly needs a kidney transplant.

"I just think it's something so simple and so easy but at the same time, it's so vital ... I can't find any reason to not do it. When you're dead, you don't have any need for organs any more," he said.

Pointing out that there is a great demand for organs, Ternan quoted some statistics from the American Council for Transplantation. He said that the demand in America for people awaiting organs includes: 300 hearts, 400 livers, 5,000 corneas and 9,000 kidneys.

He added that anyone older than 18, living in the state, and not a donor, would be able to donate his organs.

Concerning the outcomes of transplant operations, Ternan said, "The cornea is considered routine. The other ones have become highly successful."

He said factors contributing to whether or not someone's organ can be transplanted include the donor's age, body size and blood type. "The odds are against people ever being used as a donor," he said, "because the situation has to be perfect." Also, the organ must be removed within six hours, or else it will die.

Because the conditions must be ideal for a successful transplant, Ternan said he believes the best way to provide the needed organs is to increase the amount of volunteers.

However, there are some reasons why people are afraid to donate their organs, Ternan said. To people who are concerned about whether or not it would jeopardize their chances of living, Ternan said that there is no way someone's organs can be used unless they are pronounced dead.

No one associated with the organ transplants is authorized to make that judgment, he said, pointing out that the only transplant that can be performed from a living person is, "if you donate a kidney to a family member." Another concern people may have is that their family members may not be comfortable donating their loved one's organs. To this Ternan said that "if your parents or family are really against it, they can veto." Ternan also explained that the donor's body will not be disturbed much. "One girl said she did not want her body mangled when she died, but they don't do that. They take your organ and sew you back up just like a normal operation."

Pointing out that profits cannot be made through organ transplants, he assured that, "No one is allowed to sell them." The DMV encourages the use of donor cards by sending one with every license renewal, Ternan said. All a person has to do is fill out the card and present it to the back of his driver's license. A small sticker is placed on the
There are other alternatives
But to some troubled students, suicide seems only answer

By Karin Holtz

College is a time for people to find themselves and establish a balance between work and play. But some never find that balance and end up losing themselves in the struggle.

Death is tragic. Suicide can be more tragic, because it didn't have to be. It was a choice. The person who committed suicide was a young college student who could have reversed the tragic end to their story if they had been able to recognize their potential. But the tragedy continues to unfold.

Frederick B. Greenfield, a psychologist who wrote the book The Suicide Prevention Triangle, estimates that nationwide, 15 percent of college students are suicide risks.

Twenty-one suicides occurred within the student population in the California State University system over the last three years, according to a survey on student suicide compiled by r. March. Of these, three were from Cal Poly. Attempted suicides are much more common than successful ones in the system, 29 from Cal Poly. These statistics may be higher because often some students may never know that a student has committed suicide if it happens at break or when information is not forwarded for some other reason.

Kerry Yamada, director of the Counseling Center, said he assumes that the number of Cal Poly suicides is probably lower than that at a more urban school like UCLA or Cal State Northridge because students here have different experience different kinds of pressures, like "the Chinese lunchroom." He said there are also more distractions in more urban areas, and "any distraction, if you exaggerate, can be the turning point away from suicide," he said. "Students can in turn become a person.

Joan Cirone, nursing supervisor at the Health Center, said students struggle with three major problems: loneliness and depression, problems with these are some of the reasons for student suicide.

The first task is to develop a relationship with the student, Cirone said. "Making independent decisions can be difficult for people who have been making decisions all the time for a student," she said. "Then a student comes here and they are kind of overwhelmed with all that they have to do and all they have to decide for themselves." Developing mature, interpersonal relationships is the goal of the task. Some people develop immature relationships that lead them to suicide. Problems arise "if there is an immature interpersonal relationship that stems from the loneliness in the relationship, and all this time you've been going with the person for one year of your life," she said. If the couple has a fight and one person is overwhelmed, the other will feel that person was his or her whole world and now that world is gone.

The last task is to develop purpose, Cirone said. "If you develop a purpose for life goals, a value system, and personal morals, you wouldn't be thinking about suicide," she said. "Not in the way. There are other ways to think about it. People can be less likely to commit suicide if they can see the good in life. They just need to make it through the tough period and things will change around.

But for some, suicide is a viable option, Floyd said. They methodically and systematically go about committing suicide. Chronic depression has worn down the part of them that wants to live. Most of society does not accept suicide as a viable option, Floyd said, but at the same time society is set up in a way that doesn't seem to always discourage suicide.

"People don't prioritize personal relationships enough. They need to put themselves out for others, but many don't want to get involved with other people's problems," Floyd said.

Brady said, "I had a client one time who had said something was kind of reaching them. I was just making small talk with her just about 'Oh, how did you do on the test?' She said 'Gosh, he just wanted to talk and I knew it and I didn't talk with him and he killed himself.' "

... People who commit suicide see that there is no option left

—Kerry Yamada

Yamada reasons for college suicide mainly stem from coping with the transition from dependence and independency.

"When that transition period occurs, the college period, (students) experience things that they may have been protected from to some extent previously," Yamada said. He said that sometimes people overemphasize certain things in their lives, and that "people who get so involved (with one thing) in a way that it becomes an obsession with them can be in danger."

For example, he said an incoming freshman who is new to the campus and newer to life "probably isn't the end of the world if he doesn't get it."

Whatever the reason a person becomes suicidal, there is one trait the suicidal people have in common, Yamada said: "If you cut across all the reasons and you ask who has the single ingredient that makes them go from OK to not being OK, you think that probably people who commit suicide have in common, you'll see that there is no option left."

"Everyone has felt down when tomorrow doesn't look all that good, Yamada said. "If you push on that even further, where they say nothing they can do will make any difference in their life, then you can understand the dynamics of the suicidal person," he said. "When they feel that there is no option left, whether it's true or not, then maybe an escape is the only thing they can think of. Escape would be a final escape in this sense."" Yamada said the same idea also applies to people who attempt suicide just to get attention. In cases of these attention-getting gestures, he said, "They see no other way of getting attention. They don't see the options. They don't see that they can act or do things differently."

Chuck Floyd, a crisis worker at the County Mental Health Department, said suicidal people cannot bounce back from setbacks and have lost perspective on life because they have a personality disorder which causes them to see everything in black and white. These people are more at risk when a problem comes up because they cannot see the gray zone. There are no maybe, ifs, ands or buts; life is either good or bad, nothing in between.

Even if these personality traits are not recognized by others, there are other clues that a person may be suicidal. Barbara Brady, a licensed psychologist, said the warning signals that people should pay attention to are "if a person hints around, saying things like "You know, I don't think I want to be around..." or if a person starts giving away things. If they're depressed, and they have problems and they also start giving away things, they're starting to get things set up so they can die."

"Sometimes a person has been depressed for a long time. Right before they commit suicide, they'll actually appear to be less depressed because they feel they're getting out of it."

If a person thinks a friend may be suicidal, he or she should be intrusive, said Cirone. "Anytime you see any change in behavior in the person you know, I think it's wise to just say 'Hey, how are you doing? And I am wrong about that?' and just get feel for that," she said. "The person may put up their honor and just say 'No, no, everything's fine.' And you just say, 'Well, I do care.' Let them know that you really want to help."

Yamada said a discussion with the person may reveal how serious the problem is. "Listen and they talk, then they're still grasping at something," he said. "If you start talking about options and they actually form and say 'Maybe I should try this,' that's a good clue. Any indication that they would be willing to follow through, including getting help for themselves, is also a good sign. But if you make suggestions and they turn you off completely by saying 'I tried that and it didn't work.' Nothing's going to work for me anyway. Nobody cares, and they're not responding, that's not a good sign."

"At some point in time you have to make a decision whether you're making enough points to hang on to that, or you've lost something and you need to get help," Yamada said. "If people are not feeling cool around this time, they just have to make it through the tough period and things will change around."

... I think it's wise to just say 'Hey, you seem kind of sad. Am I wrong about that? That person may just say... No, no, everything's fine. And you just say, 'Well, I do care.' Let them know that you really want to help.

—Joan Cirone
Wheelmen to host collegiate cycling nationals

Road race, criterium, time trial on tap this weekend

By Terry Lightfoot

For the first time ever, a national collegiate cycling race will be held in San Luis Obispo this weekend, hosted by the Cal Poly Wheelmen.

The 1988 Collegiate Road Championships will be the first race at Cal Poly to match cyclists from five regions of the country. Bob Thornburg, president of the Wheelmen, said 25 teams and 49 individual qualifiers will represent more than 110 colleges and universities from five conferences around the country.

"We're getting registration forms from more teams every day," he said.

The teams will consist of five men and three women qualifying through conference championships. Individuals not on qualifying teams will also be selected at the various conference championships.

Representing the Wheelmen are Craig Anderson, Michael Bennett, Robert Enzerink, Angelo Guinasso, Chris Pappas, Sheldon Smith, Mindy Track and Elizabeth Vanderlier. Thornburg said the race will bring all the regions together and help solidify cycling as a national sport.

The racing starts Saturday at noon with the Creston Road Race, which consists of two laps around a 32-mile course. On Sunday there will be an 11-mile team time trial near Cuesta College at 9 a.m., followed by the main event — the Criterium — on the Cal Poly campus beginning at 1 p.m.

The Cal Poly Wheelmen submitted a bid in November expressing interest in hosting the national collegiate cycling championships. Individuals not on qualifying teams will also be selected at the various conference championships.

Student access to the parking lots behind the North Mountain and red brick dorms will be restricted Sunday as the national collegiate cycling championship criterium will be held on campus.

Entry and exit to the parking lots will be via Polya Canyon Road only.

The criterium loop runs down Deer Road (the road between Vista Grande restaurant and Tenaya Hall), right on Grand Avenue, right on Perimeter Road, right on the road between Santa Lucia Hall and Lassen Hall, and right on Klamath Road until it meets Deer Road.

Representing Cal Poly in the 1988 Collegiate Road Championships are Mindy Track, Sheldon Smith, Chris Pappas, Robert Enzerink, Angelo Guinasso, Michael Bennett, Elizabeth Vanderlier and Craig Anderson.

5 ball players named all-CCAA

Four Mustang baseball players were named to the all-conference first team, while another was named to the second team, it was announced Wednesday.

Pitchers Erik Bratlien and Lee Hancock, first baseman Pat Kirby and outfielder Rich Shepard were chosen for the first team, while catcher Doug Noce was named to the second team.

The teams were chosen by the CCAA coaches.

Bratlien, a senior righthander, set a Cal Poly strikeout record this season with 140, and tied the single-season record for wins with his 10-7 mark.

Hancock, a junior lefthander, finished his season with a 2.62 ERA while striking out 117. His record was 7-9.

Shepperd, a junior, was a strong hitter for the Mustangs this season. He led the team in home runs, with 7, and in RBIs, with 51, and he finished the season hitting better than .360.

Kirby, a sophomore, played only half the season for the Mustangs. He hit nearly .370 in conference play while driving in 28 runs.

And Noce, also a sophomore, batted .315 for Cal Poly with one home run.

Cal Poly finished its season with a 28-26 overall record — 16-14 in CCAA — and one game short of being chosen for the NCAA playoffs.

Student access to the parking lots behind the North Mountain and red brick dorms will be restricted Sunday as the national collegiate cycling championship criterium will be held on campus.

Entry and exit to the parking lots will be via Polya Canyon Road only.

The criterium loop runs down Deer Road (the road between Vista Grande restaurant and Tenaya Hall), right on Grand Avenue, right on Perimeter Road, right on the road between Santa Lucia Hall and Lassen Hall, and right on Klamath Road until it meets Deer Road.

Representing Cal Poly in the 1988 Collegiate Road Championships are Mindy Track, Sheldon Smith, Chris Pappas, Robert Enzerink, Angelo Guinasso, Michael Bennett, Elizabeth Vanderlier and Craig Anderson.

Student tries to 'ACE' entrepreneur club at Cal Poly

Difficulty in restarting organization plagues his efforts, but Brown is confident it will fly

By Jenny Lampman

Starting a club on campus is much like starting a business, especially if it's the Association of Collegiate Entrepreneurs, better known as ACE.

Mark Brown, entrepreneur and engineering technology student, is trying to restart an ACE organization on campus which existed two years ago but has since diminished.

ACE is a non-profit corporation which works with students in 50 states and 23 countries and helps bring together the resources and information of the entrepreneurially-minded. Its headquarters are in Wichita, Kansas. Through international and regional conferences, quarterly newspapers and an electronic networking service, ACE represents more than 250 universities throughout the world.

"It's all about promoting entrepreneurship. I'm trying to get members who are really interested in being an entrepreneur," said Brown. "It's a base location to intermingle and share ideas, we don't take hands and guide them."

Brown joined an entrepreneur club at Cal Poly two years ago which merged with the ACE organization last winter quarter.

"There were about 50 members then," said Brown. "Most of them graduated in the spring and it eventually faded out."

But restarting the club hasn't been that easy.

"I had some members working with me at the beginning of this year to get things moving along, but they got too busy and involved with other things," said Brown.

He also tried to promote the club during Poly Royal but ran out of resources. Coca-Cola was going to provide Brown with a booth but backed out at the last minute, he said.

"I sold T-shirts and got a lot of compliments but I don't think I displayed the word Poly Royal enough," and he inevitably lost money, he said. "There is also a lack of knowledge about the existence of the club."

"They recently had a conference (Innovation and Entrepreneurship conference last Friday) and the people purging it on didn't even realize there was ever such a club existing," said Brown.

Another problem with restarting the club is the misconception that there is a lucrative plan can win $1,000. "There are pretty prestigious," said Brown. Famous ACE members include Debbi Fields, 29, president of Mrs. Fields Chocolate Chippery who was interested in combining the ACE club at U.C. Santa Barbara has 29 members. Members of the ACE organization are called "ACE pups" because all of the members are less than 30 years old.

"A lot of the ACE members are pretty prestigious," said Brown.

ACE is 'a base location to intermingle and share ideas, we don't take hands and guide them.' — Mark Brown

Our trucks can handle some of the world’s most priceless possessions.

At Ryder, we know your belongings can be serious stuff. Maybe that’s why so many students move with us.

We've got sturdy, dependable trucks in all sizes. Many are automatic, with power steering, air conditioning and FM on top of the AM.

Plus, Ryder can help with everything from moving equipment to tips on how to save money.

So call Ryder. We’ll help make sure you hold on to some of your most precious memories.

Call your local Ryder dealer for special student rates

Cal Poly clubs is that any profits that are made are equally split between the members and not put into a fund. Members of the club are also eligible to enter contests that are sponsored by ACE. The group that enters the best entrepreneurial business plan can win $1,000.

Brown would like to see his club interface with the American Marketing Association, the marketing club and the financing club.

"They're all facets of entrepreneurship," he said. "If we could connect, we could use all the information to implement ideas."

He has spoken with an ACE member at the University of California at Santa Barbara who was interested in combining the two ACE clubs. The ACE club at U.C. Santa Barbara has 29 members.

"A lot of the ACE members are pretty prestigious," said Brown.

"There are pretty prestigious," said Brown.

Famous ACE members include Debbi Fields, 29, president of Mrs. Fields Chocolate Chippery whose 1984 revenues amounted to $45 million and Brett Davis, 26, the chairman of Stockton Savings Association who started the firm at the age of 24. Its revenue in 1984 were $215 million.

Brown has delved into his own entrepreneurial career since he's been at school and is always in search of new ideas. Two years ago he worked with Hewlett-Packard on implementing a customer-service plan in San Luis Obispo. "It could have gotten off the ground but never did," he said. "If I would have known more about the financing it would have been. You really learn by your mistakes and that's that 1 percent of ideas that work and that's what I'm looking for."

Pets have chance for humane adoption

By Jenny Lampman

It may seem cruel and inhumane, but Cal Poly students do it every year, especially at the end of spring quarter. Hundreds of pets are expected to be abandoned by students graduating or going home for the summer.

"Right after spring quarter we are on daily calls to go pick up dogs and cats and other pets that have been abandoned," said Bob Dollahite, county animal regulation director.

Last spring quarter 350 animals were left homeless by students, 180 of them were left on the streets, in houses and dorms. The rest were either left at the Woods Humane Society and the county animal shelter or an unfortunate few were run over, eaten by larger animals or starved to death.

Due to the publicity on abandoned pets, the numbers have been decreasing, according to Dollahite. "But we're looking so further decrease the problem and eventually bring it to a stop," said Dollahite.

He advises anyone who has a pet he knows he cannot keep to either bring it to Woods Humane Society or to the county pound at no charge. Or, he can contact the Action for Animal Rights in Atascadero, which places pets in new homes.

"Just bring it to us, tell us a little bit about its history and it will have a much better chance of getting adopted than an animal we pick up and know nothing about," said Dollahite.

The other option is to give about a 30-day notice to the Action for Animal Rights and they can usually find a new home for the pet, he said.

Woods Humane Society, which receives about 30 percent of their animals from students who abandon them, keeps animals that once had owners and try to find new homes for them. The county pound handles animal control and takes in animals with unknown owners.

Four nights a week at This Old House in San Luis Obispo.
DeMattei, who has been riding seriously for two years, says it's been difficult for her to spend as much time as she'd like preparing for the Trek because teaching is still her number-one priority. "Training for me is just being able to get on my bike and just going for a ride," she said.

But riding her Trek Tri-Series 500 bike back and forth from Arroyo Grande to San Luis Obispo to teach as well as traversing parts of Cuesta Grade on her mountain bike have helped her begin to get in shape for the Trek.

Although she hasn't spent as many hours riding as some other cross country participants, she plans to buckle down with the notion that more pain while training in San Luis Obispo will ultimately mean less pain once the big ride begins.

Last year, nearly 200 cyclists raised more than $1 million in pledges, averaging $6,400 per person in the first TransAmerica Trek.

The upcoming ride is the largest coast-to-coast non-competitive cycling event in the nation.

The cyclists will ride from Seattle, through the rugged Cascade Mountains to Spokane, northeast across the panhandle of Idaho to Montana and Glacier National Park, then over the Great Plains through North Dakota and Minnesota.

They'll continue to Chicago, through Indiana and Ohio farmlands, to Pennsylvania, the Appalachian Mountains, then the boardwalk in Atlantic City.

Strangely, DeMattei will be the only participant from the city of San Luis Obispo — a community many cyclists like to call home because of the mild climate and open roads.

Although she will be joined by Atascadero resident Kent Welden, who she recently met with to discuss the upcoming trip, the prospect of cycling, camping and living with 300 strangers for seven weeks doesn't bother her.

"Getting hit by a car or ripping out her knee concern her most, said DeMattei.

She hopes her experience in science, fixing bicycles and being trained as an emergency medical technician will make the Trek more interesting and safe for everyone involved, but her ultimate goal is to reach the East Coast.

"To make it and to be alive at the end is what will make the whole trip worthwhile," she said.

Queen Victoria says, "Off with your head — I'm reading Mustang Daily!"

than buying more land.

Prop. 71 is a direct reaction to the Gann Initiative which set limits in 1978 on the amount of money a city could raise or spend. Proponents argue that the limit should be raised to make inflationary adjustments.

**LANGUAGE**

From page 1

minority in an officially declared foreign language, or by receiving a passing grade in an advanced class or a same-level exam in a classical language such as Ancient Greek, Latin, Hebrew, or Sanskrit.

Charles Crabb, chair of the Cal Poly Academic Senate, said although he feels a second language is “clearly desirable” and that the United States is one of a few countries without a significant foreign language requirement, he was a little reluctant to get excited about a systematic requirement. Crabb noted that he feels the requirement may be good for some majors such as political science or agriculture, but other departments may not feel the same.

“Curriculum is a function of the school and faculty; decisions should be made at that level,” Crabb said.

He said a problem will occur with resource allocation.

“We can’t just teach all the students at Cal Poly a foreign language,” he said. He added that since allocations are formula-based, an increased number of faculty in the foreign language department would take faculty away from other departments.

Crabb said that the language requirement will also limit a student’s ability to take on free electives.

Little said a similar foreign language requirement was submitted to the senate five years ago and was defeated by a large margin. The main criticism of the last proposal, he said, was that it specifically asked for increased teaching duties in the foreign languages department. Little said that this time the proposal has a better chance since interest in foreign language requirements is increasing.

“The foreign languages department teaches 3.5 percent of the students,” he said. “This is too great a university, with a large responsibility to California and the world in a global village to have only 3.5 percent actively engaged in learning what will improve the university, enhance one’s career, international life, and so on.”

The foreign languages department offers courses in Spanish, French, German, and Italian. Japanese will be added in the fall. Liberal studies and journalism are the only Cal Poly departments which now have some foreign language requirement.

**DONOR**

From page 4

from of the card to identify the person as a donor.

Andy Gickson, a student who helped pass out cards, said the response was good.

“About 75 percent of the people took them. A lot of people said they had them already… No one said they didn’t want them.”

The cards will be passed out on campus through today but people can also pick them up at the DMV at any time.

Torrans said he hopes to make this an annual event. “Next year we’re hoping to get more schools like U.C.L.A., so that we can have all of Southern California do it,” he said.

**ART**

From page 11

The Petersons have contributed much money for the Center for the Arts. They recently donated a $100,000 piece of property to the Foundation for the Performing Arts.

Currently, the Petersons are involved in the development of an 18,000 performing arts center, which the CSU Board of Trustees approved Wednesday. The performing arts center is designed to serve both the university and the community and is expected to be completed in 1991-92. Cal Poly agreed to participate in the project with help from the city and the Foundation for the Performing Arts.

Peggy Peterson said it is “wonderful” for the community to come together as a single body. She described her feelings of community involvement by quoting a poet who once wrote, “Community is a single soul dwelling in many bodies.”

The Student Art Award, also presented at the Cal Poly Art Sale, went to Lori Vix, ASI Program Board Chair, for her involvement in the arts during her enrollment at Cal Poly.

**APPLE DAYS ’88 EXTENDED DEADLINE**

Due to the overwhelming response by Cal Poly to Apple Days ’88, El Corral Bookstore is extending the special one-time prices until next week!

Some additional computers are available for pickup on May 21. But, we cannot guarantee delivery by May 21 on orders taken during this extended time. We will make every effort to deliver the order as soon as possible.

Absolute last day at these prices will be Saturday, May 21
