Library book theft causes tighter policies

By John S. Baker III
Assistant Editor

The recent case of book theft by a non-
student has inspired Cal Poly's Kennedy
Library administration to review its lend­
ing policy, the dean of library services
said.

"The administration had been reviewing the
lending policy and this incident led to the
requirement for members to list their
driver's license number on their file," said
dean David Walsh.

Formerly, library associates -- non-
students who were registered with the
library and paid a minimum yearly fee of
$25 in order to use the resources -- needed
only to list their name, address, phone
number and social security number. Now, they must also include their driver's
license number.

The recent incident Walsh referred to regards an Academy Award nominee, 40­
year-old Jerry Gustav (Gus) Hasford, who
allegedly stole books from Kennedy
Library in January.

Hasford, a novelist and screen writer
who co-wrote "Full Metal Jacket" with
director Stanley Kubrick and Michael
Herr, was booked at the County Jail and
released on $7,500 bail.

He is charged with two counts of grand
theft and ten counts of possessing stolen
property. He faces a preliminary hearing
Aug. 18 in San Luis Obispo County's
Municipal Court.

Hasford turned himself in to police on
June 22. That day he pleaded innocent to
the charges before San Luis Obispo
Municipal Court Judge James D. Ream.

The novelist, formerly from Morro Bay,
now resides in San Clemente. Hasford had
checked out books from Kennedy Library
for Dec. 12 of 1987 until that people
found using illegal fireworks on campus
will be prosecuted in accordance with state law, which requires a minimum $500 fine and a max­imum $1,000 fine, or a one­year
maximum jail sentence, or both.

Illegal fireworks are defined as those that explode, rise in the air,
or move about on the ground.

Those that explode, rise in the air,
or move about on the ground.

"We've had some mild weather
recently, so fire conditions are
moderate right now," said San Luis Obispo Fire Marshall Irwin
Willis. "But we always have one
which could start a serious
fire," he said.

Brain reflections

New discoveries in the field of medical research never cease to amaze and inspire. Recently, researchers at UCLA disclosed their findings regarding new information about the brain. They question the part of the brain long believed to play a crucial role in memory but whose inner workings have been largely misunderstood.

The UCLA team was involved in exploring ways in which the brain stores and retrieves information. What they learned is simultaneously fascinating and disturbing.

In one part of these experiments, subjects memorized 20 words, forming lists of words containing 10 of the original words and 10 new ones. These subjects were told to pretend they were viewing words when they were viewed repeated words. Meanwhile, the researchers monitored their brains.

It was found that individual neurons could respond to specific and multiple stimuli, also, stimuli could be converted into a pattern involving many cells.

These excited researchers say the new information is beneficial to more fully understanding the brain and its role in memory. Moreover, this data is helpful in devising computers modeled on the brain, technological advances which both of which benefit mankind tremendously.

But perhaps the most remarkable aspect of all this is that all scientists using their impressive yet limited knowledge, are working hard to comprehend how in fact their own brain functions. The more idea of a brain reflecting upon itself and asking, “what are you?” leads one to recognize how truly wonderful human intelligence is.

Letters to the Editor

Boxing has points

Editor — (Regarding June 23 editorial) — I believe it was Descartes who said: “The one great need of both body and public life is justice.” I’ve always been surprised that few, if any, of the researchers who write reams of words containing 10 of the original words and 10 new ones. These subjects were told to pretend they were viewing words when they were viewed repeated words. Meanwhile, the researchers monitored their brains.

Milk fed veal boycott sought

By Dave Sparks Staff Writer

The rhythmic chant of "Boycott veal! Boycott veal!" could be heard for quite some distance Friday night as a group of local animal rights activists picketed a downtown restaurant. The small group of 15-20 people, led by local chiropractor Mark Schecter, was protesting the sale of "milk-fed" veal at area restaurants.

"We're looking at this as more of a Veal Awareness Day than a protest," said the group's spokeswoman Artemis Papadakis. "We just want to make sure that the consumer understands exactly what they are getting when they order "milk-fed" veal.

What consumers are getting, according to Papadakis, is meat from a veal calf that has been locked in a small wooden box since birth.

The group claims that the calves are fed only liquids for their entire life, thus making them anemic. The calves are kept alive by the continuous injection of drugs, such as oxytetracycline and sulfa.

"What people have to realize is that the drugs injected into these calves are staying in the meat all the way to their dinner plates," Papadakis said. "These drugs can be toxic to humans."

The small group of 15-20 people, led by local chiropractor Mark Schecter, was part of a nationwide protest. In 40 other cities similar protests took place all under the watchful eye of the Humane Farming Association, a national group that recently placed a group handed out pamphlets naming 16 restaurants in San Luis Obispo County that sell veal. Schecter urged people to call up these restaurants and demand that they remove "milk-fed" veal from their menus.

"There is an alternative to "milk-fed" veal Schecter said. "Grass-fed" veal, raised on smaller, "family" farms, is treated much better and not in injected with drugs, making it healthier for consumers, he said.

"Milk-fed" veal is usually raised by "big-business" type farms, which are basically concerned with mass production, added Schecter.

There is hope in the future for those who enjoy "milk-fed" veal but don't want to consume toxic drugs. A bill now before Congress if passed would limit the types of drugs that agribusinesses are permitted to use to keep the veal calves alive.

Outside of Sebastian's, the group handed out pamphlets naming 16 restaurants in San Luis Obispo County that sell veal. Schecter urged people to call up these restaurants and demand that they remove "milk-fed" veal from their menus.

WATER

From page 1
gallons. This 75 cent-charge is for the first 10 units; above this amount users will be charged $1.50 per unit. The average household uses 18 units of water during the summer months and up to 30 units during the summer, Herman said.

The fee increase will first be seen in the August billing but will be retroactive to June 1. This increase will give the residents an incentive to conserve water in order to save money on their water bill. Herman said residents were previously billed at a uniform rate of 70 cents per unit.

The city also will try to limit irrigation by enforcing even-odd water scheduling. This will limit even numbered houses to only watering lawns on Mondays, Wednesdays and Saturdays. Odd numbered houses can only water on Tuesdays, Thursdays and Sundays. No watering will be allowed on Fridays.

The even-odd water scheduling will go into effect on July 1 and hopefully just for the summer months, Herman said.

The even-odd schedules are only enacted when the city declares a critical water period. She said there are some exceptions to the rule such as container plants, gardens and nurseries.

Herman said there have been many complaints from people who will have to adjust their schedules to fit the city's water scheduling. She said to help residents out, the city is offering a rebate. They can receive a 320% rebate if they need to upgrade their timers to comply with the mandatory irrigation schedules.

In addition to establishing the even-odd scheduling and the fee increase, the city has hired a repre- sentative to drive around and check for illegal water use. This repre- sentative is responsible for enforcing the city's water conservation ordinance that prohibits excessive runoff. This is known as the "Water Cop" program.

Herman said Cal Poly will not be affected by the new programs or the rate increase. "We technically have no jurisdiction over Cal Poly because they have their own water sources," she said. "The city is only responsible for the feeding and distributing their water."

Both the city and the Cal Poly purchase water from Whale Rock Reservoir, north of Morro Bay. The city treats and distributes Cal Poly's water but it doesn't decide how it can be used. "Since we can't tell Cal Poly what to do, we just hope they piggyback on to what we are doing and learn to conserve even more," she said.

Norman Jacobson, Cal Poly energy coordinator, said water is an on-going concern and course of action by Cal Poly. The universi- ty has several water-source areas such as plumbing shops, foundations and leach fields and water irrigation.

Jacobson said they are water- using during off-peak hours such as 6 p.m. to midnight. He said there are areas of lawns being work- ed on. The city and Cal Poly will meet in the future to help allevi- ate the water shortage.

We'll give you a PRIVATE ROOM, 14 meals per week, ALL utilities paid*, plus more than this ad will hold for only $419.00/month.

SLO plan being revised

By Karen Williams

San Luis Obispo city planners are in the process of updating the city General Plan for the first time in ten years.

Community Development Director Michael Multare describes the General Plan as "the vision for the community's future." Multare believes the vision includes keeping open spaces and a small-town atmosphere. Issues important to the plan include land use, housing, traffic, open space, parks and recreation.

The city will discover community wants through the use of public surveys and community forums. Last Tuesday evening about 30 residents voiced opinions in a community forum, the second in a series of three.

Small groups were formed for discussion and each group was overseen by staff from the city planners department. Participants had many positive comments about San Luis Obispo ranging from the cleanliness of the air and low crime rate, to the town's friendly relationship with Cal Poly and civic activities. It seemed the negative comments were generally a reflection of individual taste rather than serious complaints.

When residents were asked what they would change, more parks and recreation sites were asked for along with street intersection improvements and a lowered height limit on downtown buildings. Cal Poly's housing was discussed by some residents.

"Fraternities should be more localized," said Mary Billington. "They (Cal Poly) have the space and choose to use it as they see fit, for example, parking lots." After the discussions, participants created large banners decorated with magazine cutouts and drawings illustrating their perceptions of what the city should be like. The banners will be displayed at the final community forum June 30.

Following the completion of the new General Plan this fall, city planners will prepare a draft of the plan for public comment and another series of community forums will begin.

Housing conflicts between Cal Poly students and residents will be addressed after the General Plan is completed. A main conflict involves higher rent and house-buying prices for single families caused by high student housing prices, Multare said. "It makes it more difficult for young families to live in the city, this causes commuting and commuting increases air pollution and congestion," said Multare.

Another housing problem is the creation of "cheater units."

Drilling still possible

---

**Fires continue to worsen**

The Volcanoa, Pismo Beach Fire Chief Paul Price, has said, "We are going to have a hard road ahead," he said. Californians may have to fight another battle in order to stop oil drilling off the coast. The California's coastline is divided into several leasing plans. Lease Sales 91 and 95 are being discussed in Washington D.C. right now. The House Appropriations Committee approved a proposal by the House to postpone Lease Sale 91, which allows for oil and gas leasing off the northern California coast, until at least October 1989. Pizana said in an issued statement that she was satisfied with the committee's vote. However, San Luis Obispo County falls under Lease Sale 95, which runs from the Mexican border to the northern San Luis Obispo County line. The county plan by that will initiate Lease Sale 95 earlier than its proposed start-date of 1990, Toiv said. Frank Bush, a member and former chairman of the local Sierra Club chapter, said Republicans of the Joint Conference Committee want to move the two plans. The committee is trying to get drilling started in the north in order to compromise in the delay in the north, Bush said. Bush said the Sierra Club would like to see a moratorium that would cut funding for the lease sales for at least one year until the effects of offshore oil drilling are looked at carefully. "Any policy on oil drilling on the coast is not worth ruining it. States are supposed to be consulted when there is planned offshore drilling," Bush said. Californians must be balanced to protect the environment and emphasize conservation, he said. Bush said the amount of oil on the coast is not worth ruining it. States are supposed to be consulted when there is planned offshore drilling. Bush said Californians must be balanced to protect the environment and emphasize conservation, he said. BOOKS

From page I

tory and were allegedly stolen from libraries in Los Angeles, Santa Monica, Longview, Washington; Sacramento and other cities. From the London library the author had “borrowed” several rare 19th Century volumes.

The charges against Hasford involve about $20,000 worth of books from 10 libraries. Deputy District Attorney Teresa Estrada-Mullaney said that agreements have been made with agencies in other counties and in England that would permit her office to conduct the prosecution.

“Hasford faces a maximum of six years in prison,” said Estrada-Mullaney. While Hasford’s rather extravagant collection may be shocking to some, it seems large scale book theft from libraries and especially universities isn’t all that uncommon.

According to Ray Berett of Cal Poly’s Public Safety Office, Washington State reported the theft of books valued at approximately $200,000; and at Oregon State the figure for pilfered publications is about $100,000. Berett says it appears the books have been stolen by the same person who likely plans to sell them on the black market. Pages of works from the Renaissance era can fetch $30 per page.

For all you Bronc Busters!

For just $30 a month you can have an inexpensive, comprehensive program with physical therapist supervision.
