As of last week, Poly's "P" had been plucked, plowed and pommated into a mere plethora.

J.W. McPhail, Staff Writer

The large, sometimes-white "P" on the hillside behind Poly has been taking a pounding lately.

Hill-climbing wordsmiths, after creating their typically one- to two-letter messages, often never return for their materials—leaving the letter and the area a mess.

However, responsibility for clean-up after the artists desert their work falls into a gray area. "I don't know who should do it," said Ken Barclay, director of the Student Life and Activities center.

Executive Dean of Facilities Administration Douglas Gerard, said that until about 10 years ago an athletic support group called the Rally Club maintained the "P." Since then, he said, fraternities have occasionally cleaned it up, but always as a "one-shot deal."

Gerard said after the concrete letter is white-washed and the area is cleaned up, it looks good for about three days, "then some other group of idiots paints it red or something."

Gerard said the present condition of the "P" is a "bit of a blot" given the outstanding appearance of the rest of the campus. What should be a positive rallying point for school spirit, he said, provides no credit to the university at all.

"The unfortunate thing," he said, "is that it is visible from the whole community."

Frustrated with the condition of the hillside, Gerard said that three or four years ago he suggested to the administrative staff that the "P" be removed. The suggestion, he said, created such an uproar that he backed off. Gerard said he is "about ready" to suggest it again.

If Gerard notices that the letter area is really a mess, he said he calls the Student Life and Activities Center to round up help or gets his own people from plant operations on the job. He called the clean-up a "major effort" and to do it he has to pull people from their regular responsibilities.

Gerard said he would be pleased if a group or organization took on the regular maintenance of the "P."

By Yulmi Sera

Hysterical actions and assumptions by friends led to the mistaken report of a rape at Mustang Village on Oct. 14. "I never spoke up, I was crying and upset," said the alleged victim, who asked that her name not be used and said everyone around me thought I was raped."

"The one thing I didn't do was speak up and say no, it didn't happen," she said.

The San Luis Obispo police investigation that followed revealed that an assault had not occurred.

The police received a call from Mustang Village security after the victim's roommate reported the "rape."

"I ran down to security, because she was hysterical," said the roommate, who also requested anonymity, "she was very late at night and really dark down there."

"Rape was the first thing that came to my mind," the roommate said. "But (the alleged victim) never sat down and said I was raped."

According to the police, the 18-year-old female Cal Poly student was intoxicated and swimming alone in the Mustang Village pool. When she left, the pool, she became aware of a man and was apparently watching her.

Due to intoxication and fright, the victim made misleading statements indicating that she had been assaulted, the police officer explaining the situation.

Later, she went to the police and explained that although she was frightened, she had not been sexually assaulted.

There are numerous incidents of the man who was watching her is unknown.

Three members of the community have set aside their livelihoods to help examine one of the area's most sensitive and heated dilemmas, the rural homeless, by creating a documentary which tries to look beyond the politics of the issue and educate San Luis Obispo residents.

Pete Dunan, Patricia Renshaw and 15 TV put in over 200 man-hours researching and interviewing some of the most "hard-core" homeless in this rural community.

The film looks into the "hearts and minds" of the homeless, revealing the circumstances which caused their predicaments. Some are physically impaired and some are psychologically impaired. Others have no support to help them overcome their economic misfortune.

As a journalist and now community planner of the Economic Opportunity Council, Dunan said he wanted to create a documentary that would make people think. He wanted to show people there are homeless in rural areas, too.

"San Luis Obispo is a typical community where this problem is occurring," he said. "The goal of the film is to inform, educate and create a dialogue in regards to the homeless and hunger in San Luis Obispo," he said.

Dunan intimated the project because he said he felt there was a need to educate the community about the realities of the homeless situation. Because he was inundated with council projects, Dunan went to 15 TV, a UHF station dedicated to community events in San Luis Obispo, to ask for cooperation.

President Steve Urbanb and vice president Bob Vincent agreed whole-heartedly to go ahead with the project. Dunan and Renshaw then approached Patricia Renshaw of Alpha Video Productions to assist them.

Renshaw lives near Mitchell Park and considers herself politically-minded. When asked...

**Traffic school is useless**

By Bruce Sutherland

I'm missing out on. Kind of like a furlough program. Back in to talk about drugs and alcohol. Once again, the instructor makes some feeble jokes. "Does anyone know where to get?" Yuck, I am beginning to get annoyed. She goes on like this for about an hour until I mentioned that I was not going to get something to eat.

After a surprisingly long mid-day meal, the class must resume. The last thing you need is for boring sign-in process. Get to make sure nobody is skipping out on their job.

Then we get another treat. Five minutes of the teacher's act when she is not teaching this class. This time the new job is a national monument.

But then it is back to Authority and Responsibility. More boring attempts at humor. Two more quizzes and still no instruction. I think I am going to leave.

Finally the last topic is Defensive Driving. What can be said about this topic that no driver has not already heard. An hour and a half of this, 20 minutes of waiting for a proof-of-attendance certificate, and I am free.

I got the impression that the woman teaching the course was the most bored person in the first two hours of the course. Throughout the day she showed no enthusiasm nor did she try and create some. I don't know what the purpose of the class other than serving as a Saturday of detention.

If the state courts are going to place traffic violators in captivity for a day and make us pay for it, why don't they put us in jail for the community. The way the system works now, all parties involved are just going through the motions and wasting time.

I know you are probably saying, "Well you got the ticket taken off your record." Yeah, but it really worth it to spend a day in a dark hole listening to stuff you are going to forget before you get home.

German frats—steeped in tradition, beer

By Klaus RothfrHz, member of Landsmannschaft Shottland, models traditional fraternity garb.

The Neckar River which flows through Tubingen was overlocked by large and imposing fraternity houses. Fucse are organized and complete with watch towers and tall columns. The large and imposing fraternity houses are home to some 30 Tubingen fraternities, Verbindungen, having centuries-old traditions. It wasn't long before I became a member of one of them, Landsmannschaft Schottland.

Most German fraternities can be traced back to the war with Napoleon, when American students came to Tubingen to protect their occupation of Germany. Founded on political and social principles, many remain political to this day.

German fraternities offer their members many benefits. Members are part of a family, building one of the closest and most personal relationships, just as much as is a family, even more so. For four years I lived in such an apartment, which was just too long to run as letters. And since I have no time, many of the letters call my columnists, and I have been winging it. I just think readers read letters First. It's also from the left because I am, and I don't want to lose my figures.

So, I Find it challenging to run the opinion page consistently. Articles run on all other pages in the paper. There is no hazing or ritualistic initiation. Fucse (pledges) are among the most respected in the Verbindungen. There are some basic tasks, including servingreeting new members, helping treasurer and providing housekeeping services. Even if I am not included in the Verbindungen, I believe it is important to have a voice. But the majority of the editorial board, in this case the nine members, are not interested in the opinion page. It is not a hard time generating debate. According to Cal Poly standards, students should study two hours for one hour of class. As a Mustang Daily staff writer, I know that reporters spend 10 times that amount. We work hard for a meager two unit class, and we try to create a reputable and interesting paper five days a week. It's not easy.

Despite the fact that reporters have other classes, jobs and a yearning to eat, sleep and have friends (I know the editors have and do none of these things), there's a lot up against us. It is difficult to cover stories on campus, because some campus officials treat us like "students playing reporter." For instance, there is the Health Center, which consistently deprives reporters to a public relations person instead of a doctor when statements about topics like AIDS or a flu epidemic are needed. The bottom line is, the Mustang Daily is not "the real world." Because we are a small student newspaper, sources do not have to cooperate with us and organizations do not need us.

All work on the Daily, editing, layout and printing is accomplished by students. Every reporter does not want to write for a paper when he graduates. In fact, we are a jumbled-up mixture of students with news-editorial, agricultural journalism, broadcast-journalism and public relations concentrations. The Mustang Daily is just a class.

Recently, I've been asking students what they do not like about the Daily. "The paper's so boring," many have said. Well, guess what, this is San Luis Obispo — SLO as the acronym appropriately reads. Not a lot goes on, and when something does happen, journalism ethics can prevent us from publishing a story. Having lives that go beyond the realm of the Daily, reporters can also find out about the fast-breaking story too late.

"There's not enough stories in the paper — it's full of ads," bumbles the current of Daily critics. This quarter there are exactly 18 reporters who must turn in two stories a week. I'm not a math student but if each reporter could write two stories a week, that would equal 36 stories a week — that is if reporters do not fall behind. The paper is published five times a week and that comes out to 7.2 stories per paper. Fancy that.

"Articles are always wrong, scattered print of misinformation," students complain. The Daily is one vast continuing class assignment. Do you Daily-haters get it? It's a learning experience. If we could write perfectly, we would not be here. We would be writing for the Washington Post and getting paid for our work. What other class gives assignments for thousands to criticize?

It's our job to report the news in an unbiased and accurate manner. It wouldn't help our students if every other roar of thundering condemnation to a sprinkle of complaint. I'm not making excuses for the Mustang Daily. There have been times when my stories were criticized by an editor's axe, but if I can take it with a grain of salt, I hope readers can too.

If that doesn't work, don't read it.

Kelley Cummins is a staff writer who secretly aspires to someday become a Mustang Daily editor; she also wants to share in the joy of obliterating stories.

Special feed helps hens lays low-cholesterol egg

By Shelly Evans
Aquatic Management Editor

A new, low-cholesterol egg developed in Santa Maria may bring hope to the Central Coast's health-conscious population.

Rosemary Farm, an egg producer in Santa Maria, is feeding its chickens a special, formulated feed to produce an egg with 55 percent less cholesterol and 25 percent less sodium per egg, according to Paul May, general manager of Rosemary Farm.

Although the eggs contain no drugs or additives, the exact ingredients in the feed remain a secret until the formula is patented, said May, the Telegram-Tribune on Oct. 20.

The eggs, which hit the market last week, seem to be selling well.

"Sales are really picking up," said Eric Bauer, dairy manager at William Bros. Market in the Laguna Village Shopping Center. "A lot of older, retired people are buying them."

"They didn't sell very well for the first few days," Bauer said. "Then the media picked up on it, and bingo, they started selling. We ran out (of the eggs) over the weekend."

Rosemary Farm developed the egg to meet demands of an increasingly health-conscious society, according to Paul May, general manager of Rosemary Farm.

A large grade AA egg contains an average of 274 milligrams of cholesterol and 70 milligrams of sodium, while Rosemary Farm's low-cholesterol eggs contain an average of 125 milligrams of cholesterol and 55 milligrams of sodium per egg, according to May.

The staff at Cal Poly's poultry unit sees the new eggs as a "wait-and-see type proposition." "This may give egg production a boost," said Bob Lutrin, an animal science lecturer. "Per capita egg consumption has declined over the last 10 years. Now people may eat more eggs because they have in the past simply because they are more available."

Martin said the chickens in the poultry unit will continue to be fed the same feed because the new-formula feed is not available.

"I'm told only at William Bros. Market. Markets for $1.89 a dozen, 60 cents more than regular large grade AA eggs which sell for $1.29 per dozen," Bauer said.

"No one has even questioned the difference in price," Bauer said. "They are not suppose to demand as much. I wouldn't pay it (the higher price). Course, I don't buy these eggs anyway. I get mine off a farm for a dollar."

By Stephen Carson

We've run out of eggs. Over the weekend."

"It is something we need to be aware of that given the right circumstances, it's something that could be a problem," said Martin.

Martin said the chickens in the poultry unit will continue to be fed the same feed because the new-formula feed is not available.

"I'm told only at William Bros. Market. Markets for $1.89 a dozen, 60 cents more than regular large grade AA eggs which sell for $1.29 per dozen," Bauer said.

MOVIE

From page 1
to direct and edit, Renshaw said she felt it was her duty.

Describing her video company as an unbiased political tool, she said that once given the facts of the homeless situation, she believes the people would come to the right decision.

Renshaw and Dunan began the interviewing and filming in March 1988. Three months later, the half-hour program aired on 15 TV.

One homeless man featured throughout the film had an alcohol addiction. When he was sober, he worked and supported himself. But when under the influence, he was out of work and living on the streets. His friends and family had lost all respect for him.

Just before the film was completed, the homeless man killed himself in a Mitchell Park.

"It's close-up like this one which earned the film a standing ovation from a group of public service announcements from all over the country who met last month in Houston.

Members of the San Luis Obispo chapter of The American Societies for Public Administration watched the film in a recent meeting while discussing government-related issues.

Political Science Professor and Chairperson Diane Long has volunteered at the shelters and worked closely with the homeless. She said the stories in the film were not new to her, but they were an accurate representation of a complex social problem.

"It is something we need to be more knowledgeable about," Long said. "You can be bright and personable, but anyone could lose it. Very close to that situation."

"It's time for a violent over­throw, a coup of sorts; it's time for the antipasto. This is your salad, and it is used to clear your tastebuds of the appetizer. Now this salad is not a pasta or potato salad, but a green salad with a vinagrette dressing."

Spinach salad was always "yucky" to me as a kid. I am now a pseudo-adult and I've learned to appreciate things that I didn't as a child. Spinach salad is always good to impress your date with — it looks nice, has a hot dressing, and is a terrific flavor blend.

Spinach must always be wash­ ed quite well. I like to fill my sink with water, pick the stems from the leaves, then wash the leaves by tossing them in the water.

If your spinach is not entirely clean, start with fresh water and wash again, arrange the salad in a bowl or on your plate and dress with sliced mushrooms, thinly sliced onion in rings, bacon bits and sliced, hard-boiled eggs. Mix these together for your vinagrette.

To make this dif­ ferent, add a little bacon grease that you reserved from the bacon bits, put the mixture in a skillet and heat over medium-high heat. When it starts to boil, add some flour to thicken this a little, about one tablespoon for every half cup of liquid. Whisk this for about one to two minutes to lose the bo­ ston.

As much as I hated spinach, I loved my father's Caesar salad. Caesar salad is classically made with romaine lettuce, but it is the dressing that sets it apart. Romaine lettuce needs to be cleaned the same as spinach.

Most likely to succeed.

Name: IBM Personal System/2
Major: Advanced Academic Excellence
Special Contributions:
- brainstormed and wrote paper on the problem
- "The people don't want to admit responsibility or face the fact that they could be a victim themselves," said Renshaw.

"The community is scared to look at the problem."

Romaine lettuce needs to be cleaned the same as spinach.

After the cleaning, I like to take some of the ribs out of the leaves. Dressings can always be made ahead of time and stored:

-3 cloves garlic
-2 pinches of salt
-2 teaspoons of dry mustard
-2 anchovy fillets

Mash these ingredients into a paste. Don't delete the salt because it helps the garlic melt.

Then add:

-1/2 of the juice from a lemon
-4 to 5 drops of tabasco sauce
-1 and 1/2 tbsp. of worserhore sauce
-1/2 cup to oil mixture

-1 egg beaten

Now mix these together and add the oil and vinegar for as much dressing as you want.

Salads become so much better when you use good olive oil and wine vinegar. In many cases, companies that make salad dressings use coconut and palm kernal oils; both are highly satu­ rated oils. Give these (olive oil and vinegar) a try, and change or add ingredients to your own tastes. There has never been a recipe that was set in stone.

Next week well take on the momentous task of the main course. Good eating and happy cooking.

Stephen Carson is a dietetic technician and food administration major.

Professor almost struck again by bicyclist

By Yuemi Sera
Staff Writer

The history professor who was hit by a student bicyclist over a week ago was almost hit again yesterday afternoon.

Professor Barbara Hallman, 59, was walking out of the north end of the Computer Science Building headed toward her class in the Graphic Arts Building. "He was stepping off the sidewalk, I looked to the right and the left. Then just as I stopped off the walkway, there was a bicyclist," Hallman said. "He stopped just six inches away from me."

After the second incident, Hallman asked a student to escort her from her class to her office.

On Oct. 14, Hallman was walking up Poly View Drive toward Via Carta when she was struck from behind by a bicyclist.

Hallman was treated for cuts and bruises and released from Sierra Vista Hospital that same day.

Hallman cancelled several of her classes early last week because of accident-related injuries. I began seeing strange flashes of light," she said. "I think it was related to the blow and trauma of the accident."

Hallman has started walking on sidewalks on campus whenever she can, and she is very careful about crossing the streets, she said.

"I think more students and faculty are riding bicycles because of price hikes and lack of parking on campus," Hallman said.

Public safety has suggested that Hallman write memos about her accident because they are concerned with pedestrian safety on campus, she said.

"Some faculty members have suggested that I start a petition keeping bicycles out of the inner circle, especially between classes," Hallman said. "I will, once I get the use of my hands back."

Hallman's hands have been bandaged since her accident.

Former Marines extend peace to Vietnam

NEW YORK (AP) — Three former Marines extended a peace offering to Vietnam on Monday in advance of a mercy mission to that war-torn country, which they will look for land mines that might still be in place 20 years after they planted them.

The Americans presented a plaque at the Vietnamese mission to the United Nations saying: "I am happy to present this plaque again to the Vietnamese people to help them in their preservation of human life."

11th Engineers January 1989."

While the nine-day trip to be made by six former Marines from the 11th Engineer Battalion, 3rd Marine Division, is a private and, in some ways, sentimental journey for one of the leaders of the group, said the 11th Engineers planted about 100,000 mines below the Demilitarized Zone between 1966 and 1969 and left them intact when they pulled out.

Gene T. Spanos, a Rosemont, Ill., businessman and one of the leaders of the group, said the 11th Engineers planted about 100,000 mines below the Demilitarized Zone between 1966 and 1969 and left them intact when they pulled out.

Spanos said American veterans visiting hospitals in Vietnam have seen children who had been killed and maimed by old mines.

Let's Talk
We take Business Personally!
San Diego (AP) — The USS Vincennes returned to San Diego Tuesday after a tragedy-marred deployment Monday, returning to its homeport more than three months after it mistakenly shot down an Iranian airliner in the Persian Gulf.

Sailors dressed in Navy whites lined the deck of the Anglo cruiser, which sported a red, white and blue pennant at its bow and carried a sign declaring the crew’s love for San Diego and America. Hundreds of relatives, awestruck by the sight, who had been absent for six months, released a cloud of red, white and blue balloons as the ship docked.

“Then I got the idea that if the building could be made into a structure," said county counsel Douglas Maloney to consider applying for landmark status for the Maloney. "Most experts say the building’s flexibility makes it safer than a wood-frame house," said county counsel Douglas Maloney.

To qualify, a building is supposed to be at least a half-century old, associated with a famous person and historically significant. The 26-year-old Civic Center may have trouble qualifying.

San Joaquin Valley naval station targeted for possible shut down

LEMOORE, Calif. (AP) — A magazine includes Lemoore Naval Air Station on a list of military facilities that may be closed, but officials said Monday the central San Joaquin Valley installation is more likely to be expanded. The Oct. 24, 2014 edition of U.S. News & World Report lists Lemoore among 25 installations nationwide that a commission appointed by Defense Secretary Carter has recommended for closure.

The magazine article does not explain why Lemoore is listed. Calling the list "purely speculative," Lemoore information officer Dennis McGrath thinks the facility could grow as others close because the installation in Kings County has lots of room to expand. The Navy owns 18,000 acres at Lemoore and has aviation easements on 12,000 acres more. Lemoore houses the Light Attack Wing Pacific Fleet, including SA-18 Hornet and A7E Corsair bombers.

"We've been telling people this is the place to go if they shut other bases, because we've got room to grow," McGrath said.

Tommy Holmes, press officer for San Joaquin Valley Congressman Charles Pashayan, R-Calif., checked with the Navy congressional liaison and was told that there is no list yet.

"We're pretty optimistic about the future of Lemoore," Holmes said in a telephone interview from Washington. "It is the Navy's most modern naval air station; it has room for expansion unlike a lot of bases on the West Coast; and it is quite safe with about 1,000 civilian employees plus 10,900 military, and two more for granted. We're going to be keeping an eye on this."

Unlike previous military closure attempts that were completed by the end of the year with Congress allowed to reject individual parts. The schedule calls for President Reagon to act on the recommendations shortly before he leaves office in January.

Lemoore has 3,700 service and 1,200 civilian employees plus 9,100 dependents, McGrath said.

BART boss bids bye-bye to bus business

OAKLAND, Calif. (AP) — Keith Bernard announced Monday he is quitting his $99,500-a-year post as general manager of the scandal-plagued Bay Area Rapid Transit.

Bernard has been under fire for lax management in an ongoing FBI investigation that has led to the indictment of three BART officials for a possible bribe. But an FBI spokesman said Bernard is not suspected of playing any role in the corruption and is not involved in the case.

"He is not a target of the current FBI investigation," said Chuck Lanting of the FBI's San Francisco office.

Bernard, 49, took a three-month medical leave for stress-related illness last year. He did not say in his statement Monday whether he is again suffering from the same problem, and said he was leaving “with mixed feelings” to take another position and pursue other interests.

However, members of BART’s board of directors believe the main reason for his resignation was the stress caused by the federal investigation.

"The stress was causing him some problem and that’s what led him to make the decision," said John Glenn, president of BART’s board.

Glenn said Bernard’s stress increased after he assumed more responsibility last month following the death of Richard Demko, the district’s second-in-command for maintenance and engineering.

"He’s a very conscientious person and he keeps things on his plate," Glenn said. "He was having trouble sleeping and couldn’t spend the time he wanted to with his family."

Glenn said Bernard told him and other directors his resignation was complete by Saturday, and the board held an emergency meeting Sunday. At the meeting, the board agreed to keep Bernard’s job open for a year, pending any potential investigation

"We’ve been telling people this is the place to go if they shut other bases, because we’ve got room to grow," McGrath said.

100th Congress has unfinished business for successors

WASHINGTON (AP) — Although the 100th Congress was one of the least productive in history, it adjourned with an unfinished business ranging from cleaning up the nation's air to reorganizing the military.

"Much remains to be tackled," Senate Majority Leader Bob Dole of Kansas said. "It is not that we didn't get anything done, but it was certainly our least productive congress in history.""I thought it was quite successful, overall, but there were some areas where we didn't do as well as I hoped," Dole added.

Of the many unresolved issues that involve domestic policy fights, such as the minimum wage, family-related legislation, and health care, the nation's air remains a chief concern.

pollutants continue to escape into the atmosphere, posing a threat to both human health and the environment. At least 75 percent of that money would go toward child care centers sponsored by religious institutions.

"We're marching out to the north and west," said NOAA biologist Skip Withrow. "This is the next big project in moving ice more than one and a half miles deep."

The device was to begin work in the spring, according to the National Oceanic and Atmospheric Administration.

The state now allows storage for up to 10 weeks of radioactive waste at Rocky Flats, but there were also some things we didn't get done," said NOAA biologist Skip Withrow.

"We'll cooperate with the DOE to find an appropriate site until a new facility is built," said Rear Adm. Sigmund R. Petersen, director of the Pacific Marine. But there was strong opposition in both the House and Senate, particularly from legislators representing states producing low-level wastes such as those in the Rocky Mountains.

但是, 对于海上哺乳动物来说, 仍有一个未解决的问题——鲸鱼的救助。鲸鱼被困在浅水区, 水深仅五到十英尺。

"We're trying to get the mammals to move off the coast and into open water through a shoal about five feet deep," said Rear Adm. Sigmund R. Petersen, director of the Pacific Marine. But there was strong opposition in both the House and Senate, particularly from legislators representing states producing low-level waste such as those in the Rocky Mountains.

The ships need 39 feet of water to operate, according to the Navy. The whales were trapped in water 12 to 25 feet deep.

Even if the icebreakers cannot reach the whales, the ships could help clear a path to open water about 200 miles away, Petersen said.

As high-tech heavy equipment pushed into this whaling village during the weekend, Eskimos used chain saws and muscle to make the most progress toward freezing the animals.

"We're marching on to the lead with Inupiat (Eskimo) power," said Petersen. "The whales are responding to the holes.

The breathing holes extend more than one and a half miles from where the whales were first trapped.

The Eskimos connected several hoses, converting them into a narrow pool 250 feet long to give the whales more room to rest. They made a similar slot in the ice over a shoul d about five feet deep. The whales were already deterred from moving farther toward open water.

The whales appeared to be in good health, although a patch of skin torn off one animal's snout appeared to be worsening, said Spokesman Harvey, Withrow's colleague.

The rally is sponsored by the campaign of Vice President George Bush and his running mate, Sen. Dan Quayle of Indiana, on Thursday.

The same day, Reagan will speak at Republican rallies in North Carolina and New Hampshire.

On Friday the president will address the Los Angeles World Affairs Council, after which he and first lady Nancy Reagan will travel to their ranch north of Santa Barbara, Calif., for the weekend.

They will return to Los Angeles on Sunday and the president "will participate in additional campaign activities in California and other states," before returning to the White House.

White House Undersecretary for Nuclear Security, R. Arneville, said NOAA biologist Ren Morris, rescue coordinator.

NOAA asked the Soviet Union for help, and America's Arctic neighbor ordered the icebreakers Adak and Vladimir Arseniev to Barrow, said NOAA Administrator Sigmond R. Petersen, director of the Pacific Marine.

The task, ordered out of Barrow by Gov. Cecil Andrus on Saturday, was to shunt to a siding at the Rocky Flats plant 16 miles northwest of Denver on Monday. But the state said it would debate what to do.

Colorado Gov. Roy Romer on Sunday turned down a Department of Energy request to expand storage facilities for low-level radioactive waste at Rocky Flats and asked that the Department of Energy not unload the rail car, which contains 140 drums of waste at 55 gallons per drum.

The state now allows storage for up to one and a half months for an increase, a drive they hoped to turn into political gains during the election campaign.

The Democrats who control Congress told an aide that they have hit the minimum wage at $4.55 per hour over a three-year period, but Republicans said it would filibuster unless the Judiciary Committee approved as early as Monday of President Reagan's judicial appointees.

A look at some of the other unfinished items:

CLEAN AIR — The Senate considered a bill which would have tried to control acid rain by restricting stacksmoke emissions, along with tightening auto-emission standards and restricting the burning of toxic chemicals. But there was strong opposition in both the House and Senate, particularly from legislators representing states producing low-sulfur coal as those in the Rocky Mountains.

CHILD CARE — The Senate Health and Labor Committee voted approval in July of a bill providing $2.5 billion for child care, with 75 percent of that amount ticketed for low- and moderate-income families. But opposition by a variety of groups, including the National Education Association and the National Parent Teachers Association, stalled floor action. They were opposed because some of the money would go to child-care centers sponsored by religious institutions.

PARENTAL LEAVE — Democrats backed a proposal to require employers of 50 or more persons to give up to 10 weeks of unpaid parental and medical leave. Senate Republicans attacked an amendment making child pornography a federal crime and Democrats tried to strip that provision out of the bill, but failed.

IMPEACHMENT — The House voted 413-0 Aug. 7, to impeach U.S. District Court Judge Alcee Hastings of Florida for high crimes and misdemeanors, alleging perjury and conspiracy to receive a bribe. The Senate later decided to postpone the impeachment trial until 1989.

SOUTH AFRICA SANC­ TIONS — On Aug. 11, the House voted 244-132 approval of a bill to prohibit almost all trade with white-rulled South Africa. It would have barred South African imports. The Senate Foreign Relations Committee approved similar legislation, but filibuster threats blocked any floor action.

Reagan, however, has been seeking ways to quell the growth of such campaigns.

"We'll cooperate with the DOE to find an appropriate site until a new facility is built," said Rear Adm. Sigmund R. Petersen, director of the Pacific Marine.

Choose the company that gives you choices.

At National Semiconductor, we know that diploma and degrees go hand in hand. But earning a diploma doesn’t mean you’ve made a final career choice. That’s why when you join National, we’ll give you plenty of space to explore your engineering options.

Whether your interests are in ASIC (Applications Specific Integrated Circuits), Advanced Peripherals, Advanced Linear, Process, Packaging Technologies or other areas, you’ll find abundant opportunity and prime project responsibility at National. So, go ahead, give your career and yourself the choices you deserve. As a producer of some of the most advanced proprietary products in the world, National knows that freedom of choice is a crucial part of success.

National Semiconductor is recruiting on campus next week for Electronics/Electric, Computer/Computer Science and Mechanical Engineers, at all levels, so please stop by your Placement Office and sign up for our interview dates.

Co-Op/Permanent Placement
Interview dates:
Tuesday, November 1st and Wednesday, November 2nd

MANAGUA, Nicaragua (AP) — Hurricane Joan killed at least 111 people as it ravaged the Caribbean, officials said Sunday. In Nicaragua, authorities labored to rescue communications and care for about 300,000 homeless.

The storm left 30 dead in Nicaragua, 21 in Costa Rica, four in Panama, 25 in Colombia, and 11 in Venezuela on its six-day slash along the coast and then across Nicaragua to the Pacific Ocean. More than 150 people were missing.

Joan slowly weakened into a tropical storm over Nicaragua but strengthened again when it reached the Pacific. No longer an Atlantic hurricane, it was given a new name in the sequence of this year’s Pacific storms — Tropical Storm Miriam.

At 5 p.m. EDT Tuesday, Miriam was about 60 miles south-southwest of San Salvador, El Salvador, with maximum sustained winds of about 55 mph, according to the National Hurricane Center in Miami. It said the storm was moving in a westerly-northwest direction at 10 mph.

Hurricane Joan blasted into the east coast Nicaraguan city of Bluefields with 125 mph winds early Saturday and marched across the low-sized country of 3 million, leaving a trail of death and destruction before reaching Managua, the capital, about 10 p.m. Saturday.

Officials said there were 21 dead in Bluefields, 180 miles east of Managua. The city of about 38,000 was reported 90 percent destroyed.

Mário Tapia, an Associated Press photographer, said Sunday in Bluefields that only a few buildings were left standing. A Red Cross nurse said, “There isn’t enough left of the houses to make a fire.”

Officials worried about food supplies and lack of sanitation facilities. The bodies of rats littered the streets. Most of the people in the area rely on fishing for their living, and many boats were destroyed.

Bluefields, Corn Island off Nicaragua’s Caribbean coast and the northeastern Atlantic coast region “practically disappeared from the map,” the Managua daily El Nuevo Diario said Sunday.

The storm felled trees, electrical towers and telephone lines as it ripped into Managua.

Throughout the capital people were cleaning mud-covered homes Sunday while others cut up fallen trees for fuel. Soldiers carrying picks and axes joined to clear the streets.

A Cuban plane landed Sunday afternoon in Managua with the first batch of help for the country’s hard-hit people.

President Daniel Ortega, after touring the capital city of 1 million, reported that at least 50 people had died across Nicaragua and 300,000 others had been left homeless. He gave no details.

Death toll from Hurricane Joan up to 111

Typhoon Ruby hammers Philippines; 10 drowned

MANILA, Philippines (AP) — Typhoon Ruby struck the Philippines Monday with winds up to 93 mph and the military said 10 people drowned in raging flood waters.

The storm went ashore at Samar island, 350 miles southeast of Manila, and was expected to move northwest toward the main island of Luzon, according to government forecaster Crisologo Enriquez.

Storm warnings were issued in Manila, the central Visayas and the coastal provinces of Cebu, Cebuano and southern and central Luzon. The government weather service said the storm was expected to pass near Manila late Monday.

Rains drenched Manila late Sunday and early Monday. Officials at Manila’s Ninoy Aquino airport said 25 domestic flights were canceled Monday.

Schools were closed in the Manila area and southern Luzon. Red Cross and government officials urged residents of low-lying areas to seek shelter on higher ground.

Military commanders said at least 10 people drowned Sunday when a tornado triggered by the approaching typhoon caused flash flooding in six villages near Cagayan de Oro, 500 miles southeast of Manila.

They reported 20,000 people were left homeless by the storm.

Lourdes Masing, spokeswoman for the Red Cross in Manila, first said the flooding took place Friday and the tornado was spawned by Typhoon Pat, which struck the Philippines the same day.

But later statements from further reports indicated the tornado struck before dawn Sunday and was caused by Typhoon Ruby.

Col. Triunfo Agustin, Philippine Constabulary regional commander in the Cagayan de Oro area, said the storm destroyed a bridge and washed away more than 1,000 homes.
The Cal Poly volleyball team had a dismal weekend losing two matches to UC Irvine and Long Beach State. UC Irvine who started the Mustangs slide after a 11-game winning streak, continued their domination winning both matches this past weekend.

The match went the full five games with the Mustangs dropping 3-2 before the Anteaters swept the last two.

Saturday’s match at Long Beach State was a little less painful as the Mustangs dropped three straight to a strong Long Beach State team.

After the weekend the Mustang record stands at 14-8. The spikers, who haven't had great success at home, return to Mont Gyn for a three game home stand this weekend against Pacific, San Jose State, and Brigham Young.

You can find what you need in Mustang Daily's Classifieds

Volleyball

The run is open to all Cal Poly students, faculty, staff and members of the community. Registration will continue until 4:15 p.m. at the race or participants can sign up in UU 119. Cost for registration is $6 for a T-shirt and $3 without.

Prizes will be awarded to top finishers in each division, and will be drawn with all runners eligible to win.

Inquiry headed by Justice Charles Dehn. That inquiry will begin shortly.

Johnson, 26, was suspended from competing for Canada for two years, retroactive to Sept. 24, the day he tested positive for use of a banned performance-enhancing steroid and was stripped of his 100-meter gold medal.

The two-year suspension was levied by the International Amateur Athletic Federation, the world governing body for track and field, and ratified by the Canadian body, Dupre said. There is no appeal of the suspension.

However, Johnson can appeal his suspension to the Olympic Committee's court of arbitration for sport, Dupre said.
BERKELEY, Calif. (AP) — The Berkeley City Council, with a knack for going where no local government has gone before, is about to consider a “Labor Bill of Rights,” featuring a ban on pre-employment drug testing and a limit on police involvement in labor strikes.

The nine-item proclamation also would require certain employers to provide on-site child care or contribute to a city fund to pay for the service.

But a representative of the business community says the far-reaching proposal is yet another attempt by Berkeley to “grab some headlines” by drafting policy that, if approved, will only end up in court.

The City Council, which has attracted national attention by legislating everything from foreign affairs to commercial rent control, established a nine-member Labor Commission three years ago, in what one member calls “an example of Berkeley’s vision.”

Part of its mandate was the drafting of the Bill of Rights, which will be the subject of a public hearing before the City Council Tuesday.

“We want to set up a partnership of working people, the city and business people, talking about how we can have a stable, driven economy in Berkeley,” said Mayor Loni Hancock, who believes the document is a first.

“Our, the business community and government work closely but there is no voice for working people in the city.”

Referring to the often adversarial relationship between organized labor and business in the United States, Hancock said, “It’s time we got beyond that.”

Although some of the document is patterned after legislation approved by other jurisdictions, like a prevailing wage provision for the construction industry that resembles a measure in neighboring Oakland, much of the document is classic Berkeley.

One element would forbid the city to sign a contract with any employer involved in an officially sanctioned management-labor dispute or which appears on the AFL-CIO “Do Not Patronize List.”

The provision would be “building on the tradition the city has, rather than be something wild and radical, which it’s not,” according to Kathy Labriola, vice-chairman of the commission.

The city has already formally endorsed the United Farm Workers’ grape boycott. It refuses to pay for city employees to travel to states that have not endorsed the Equal Rights Amendment and boycotts products made in South Africa as well as companies that do business there.

Another provision of the Bill of Rights would instruct police to remain neutral in labor disputes, preventing officers from escorting strikebreakers across picket lines or “attacking, harassing or intimidating workers.”

Employers would be required, if “lawful and feasible,” to give 12 months notice of plant closures and to meet with city and employee representatives to help avoid shutdowns.

And the proposal would expand an existing informal city directive by requiring, where possible, developers who build new non-residential structures over 15,000 square feet to provide on-site child care facilities for workers, or to pay into a city child care fund.

Other items would make it city policy to promote full employment for Berkeley residents, encourage local ownership of property and businesses by residents and workers, and foster union participation in “high quality” job creation efforts.

The statement endorses a proposal to help the city’s approximately 13,000 disabled residents find jobs and would also urge the school district to develop a labor-oriented curriculum.

Commissioners have tried to insulate the ground-breaking document from legal challenges by qualifying the legal language with “when lawful and feasible” throughout, and they say the business community has yet to express displeasure.

“People are just sort of turned off by the whole process” of working with the Labor Commission, which he described as “stuck with all union reps.”

The Chamber, which is working with the city’s Office of Economic Development to attract businesses, is not planning to fight the Bill of Rights because Casey believes it would not be enforceable and is just another attempt by local politicians “to grab some headlines.”

Berkeley likes to be first, kind of like the Styrofoam ban,” he said, referring to the city’s trend-setting ban on the use of plastic foam containers.

“They’re more statement than laws to be enforced and fines to be bestowed on people,” Casey believes it would not be possible to enforce the law and is just another attempt by local politicians “to grab some headlines.”

Casey believes it would not be impossible to enforce the law and is just another attempt by local politicians “to grab some headlines.”

But Jeff Casey, executive director of the Berkeley Chamber of Commerce, said business people “are just sort of turned off by the whole process” of working with the Labor Commission, which he described as “stuck with all union reps.”

The Chamber, which is working with the city’s Office of Economic Development to attract business, is not planning to fight the Bill of Rights because Casey believes it would not be possible to enforce the law and is just another attempt by local politicians “to grab some headlines.”

Berkeley likes to be first, kind of like the Styrofoam ban,” he said, referring to the city’s trend-setting ban on the use of plastic foam containers.

“They’re more statement than laws to be enforced and fines to be bestowed on people,” Casey believes it would not be possible to enforce the law and is just another attempt by local politicians “to grab some headlines.”

But Casey doubts that the measure would have any impact business or drive people out of town,” he said, “we’d stand up and fight it.”
