CSU enrollment jumps to new high

Enrollment at California State University campuses continues to increase as fall 1988 sets a record of 354,988 students. The increase of 12,321 in individual enrollment from fall 1987 is 3.6 percent.

California Poly saw an increase of 3.1 percent in student enrollment from fall 1987. Last September, 16,553 students started classes at Cal Poly as compared to the 16,304 who started in the 1987 fall quarter.

CSU San Bernardino saw the greatest percentage increase, with an enrollment of 9,673 students, a 15.6 percent jump from 1987. Sonoma State University was second with an increase of 8.4 percent from 6,159 to 6,765 students. Other campuses showing substantial increases in student enrollment from last year are San Francisco State (total enrollment of 28,132), Humboldt State (6,734), CSU Bakersfield (4,930) and CSU Northridge (31,531).

San Diego State remains the largest campus with 35,821 students. CSU Long Beach is second with 35,363.

From 1980 to 1988, enrollment donations reach peak

Private contributions to the California State University climbed to a new record of $16.8 million in the 1986-87 academic year, a $1.5 million increase over the previous year. However, donations declined by nearly $4.3 million to $57.5 million for the 1987-88 fiscal year.

According to a report to the CSU Board of Trustees on gifts, bequests, devices and donations to the CSU, the individual campuses received a total of more than $38 million. The most successful fundraiser was San Diego State University with a total of about $2 million.

The donated monies were used for instruction, research, libraries, campus improvements, and other projects.

Based on a recent report from the Council for Aid to Education, current CSU campuses received the national average for public comprehensive universities, with the CSU receiving 44.4 percent of its support from corporations versus the national figure of 32.7 percent.

Orcutt Rd. shelter site awaits council approval

The San Luis Obispo City Council will vote Jan. 16 on whether or not to approve a planning commission decision to open a homeless shelter on a vacant property near the city limits.

For several months the city of San Luis Obispo has been pulling its collective hair out trying to find a suitable location for a consolidated homeless shelter. For various reasons, none of the previously proposed sites have met with the City Council’s approval.

The latest proposal is an empty house on two-thirds of an acre at 750 Orcutt Rd., near the city limits. The owner, Kurt Kupper, a former county supervisor, has offered it to the city and county under a lease-purchase arrangement.

The city and county have applied for approval of an integrated homeless shelter to be located on the property and that would house about 60 people.

“It’s my impression that it’s a very good site,” Kupper said. He would not disclose financial details of the lease-purchase.

Members of the city council seemed optimistic about the location.

“How much of a potential,” City Councilmember Penny Rappa said. “If all the sites so far, this one seems to be closer to what we want. We’ve been looking to consolidate the shelter effort for some time now.”

The property offers many advantages that other proposed sites have not, according to the planning commission report. Among those: It is not in a residential neighborhood, it is close to town than the existing Kansas Avenue shelter (which would save the cost of transporting people that far) and it’s large enough to accommodate a substantial number of people.

The report suggests a maximum occupancy of 72, but limits the current size to 54 based on available parking.

The empty house would be used to shelter the working homeless and modular units from the Kansas Avenue shelter would be relocated to house others requiring more supervision.

In a 5-0 vote, the city planning commission had recommended using the Orcutt Road site for a homeless shelter. Businesses in the area, however, voiced concern and opposition over the site.

Neighboring businessmen Steve Tobin, owner of Photo Aid, appealed the commission’s unanimous vote, thereby sending the decision to the city council.

In the appeal, Tobin said he was worried about worker safety. Tobin did not return telephone calls from the Mustang Daily.

The YMCA, which operates children’s programs as a center near the shelter site, expressed concerns for child safety.

“We’ve been mistreated in the past as taking a stand against the shelter,” Vicki Fisher, associate director of the YMCA, said. “But we’re not against the shelter, we want to see a place for the homeless.”

She said the YMCA is concerned with control of shelter residents and how they may affect the surrounding area.

Most of the concerns, the planning commission report indicated, dealt with density, loitering and threats to employees and children.

Governor questions Gann Limit

Suggests inmate work program

SACRAMENTO (AP) — Gov. George Deukmejian proposed a mandatory work program for all able-bodied state prison inmates Tuesday, and said he is willing to consider easing constitutional caps on spending by the state and local governments.

In his annual "State-of-the-State" address to a joint session of the Legislature and a statewide television audience, the Republican governor also said he will ask lawmakers to develop a plan to raise additional revenues for California highway construction.

On fiscal issues, Deukmejian revealed no specifics from the $43.5 billion-plus budget that he will submit to the Legislature Tuesday. But he said some state programs will be cut or frozen at current dollar figures and warned that if the Legislature stepped up to his proposed reserve to restore those programs, he would veto those additions.

Deukmejian also reversed his long-standing opposition to moving California's primary to an earlier date in presidential election years, and he said he will sponsor a constitutional amendment to have the governor and lieutenant governor run as a ticket.

But perhaps the most significant shift in Deukmejian's televised address was his proposal for a "complete re-examination of the constitutional usefulness of the Proposition 4 spending caps."

"During his six years as governor, Deukmejian has consistently opposed all attempts to repeal or modify the 16-year-old Proposition 4 limits, known as the "Gann Limit," for spending controls on the state's $59 billion-plus budget.

"It is time for comprehensive budget reform," Deukmejian said in his 22-minute address. "I will invite the legislative leadership to sit down with me to thoroughly review the state budget process. Included on the table for review and possible reform should be all mandated entitlements (and) automatic budget re-fo r m ," Deukmejian said.

Members of the city council met with the City Council's ap­proval.

Whether or not to approve a homeless shelter on a vacant property near the city limits, it is closer to town, has an expanded parking.

"Of all the sites so far, this one seems to be closer to what we want," Kupper said. "We’ve been looking to consolidate the shelter effort for some time now."

The property offers many advantages that other proposed sites have not, according to the planning commission report. She said the YMCA is concerned with control of shelter residents and how they may affect the surrounding area.

Most of the concerns, the planning commission report indicated, dealt with density, loitering and threats to employees and children.
Give Blakely a chance

David Blakely was recently sworn in as a county supervisor in District 5. Many of us voted for him, due to his anti-growth stand. His opponent, Carl Hyesen, was a "controlled growth" candidate.

In the past month, a lot more than growth has become an issue surrounding Blakely’s election to the county office. Blakely has admitted to using drugs for 10 years. Now many people feel he should be recalled, or he should resign.

Blakely disclosed his drug use last month; after he was elected to office. He admitted experimenting with cocaine, mushrooms and marijuana. He was using drugs while teaching junior high school in Atascadero, according to the San Luis Obispo County Telegram-Tribune. Blakely recently submitted himself to a drug test, which came out negative, but it only tests for recent use. Blakely says he has been clean for three years, and he publicly apologized for his drug use.

If every politician who has ever used drugs was recalled, we would probably have far fewer left in government. It says a lot for Blakely that he was honest about his drug use, and that he has turned away from drugs.

People are worried about the influence he may have had on the young teenagers that he taught. This is a valid concern, for if kids know they can do drugs, and hold a job, they might not think drugs are dangerous — which is wrong. But if they are shown that once they make the mistake of using drugs they can never hold public office, even if they get off drugs, they may never try and contribute to our society.

Blakely should not be recalled, nor should he resign. Drug use is illegal, and use of drugs should not be taken lightly. Yet if he really is off drugs, then maybe he can use his knowledge and experiences to steer children, teenagers and adults away from drug use.

Recall fans may have another motive besides just having a "clean government." Many of the most vocal advocates of the recall who were Hyesen supporters. Hyesen told the County Telegram-Tribune that he did not instigate the recall effort and has no thoughts of being a supervisor again. A contracting party is reportedly a central group calling for Blakely’s resignation or recall. This would make sense, since contractors and developers in particular don’t like Blakely’s no-growth views.

While all the facts in the matter, Blakely has a lot of valid ideas to put into action, and we ought to give him a chance.

Letters to the Editor

Modems could help CAPTURE

Editor — Although it is obvious that the new CAPTURE registration is lacking, there have been few reasonable suggestions to help solve its problem. The main complaint I, as evidence, have heard is that it is quite difficult to even get into the system.

The obvious reason for this is that there are not enough phone lines; however, there is a more significant truth at the fact that oral completion (as effective as it may be for humans) is undesirably cumbersome for a computer. After the student punches in the code for the class that is desired, the CAPTURE system has to decode the tones, check its information base for an opening in that section, check for a conflict of time, check for a comparable class, and then it has to formulate a short speech in response, and finally pronounce the words through a speech synthesizer.

The CAPTURE system’s speech is deliberately slow and poorly voiced for best understanding (as it should be), but this lethargy speech tends to make the checking of class schedules and such a rather time-consuming and monotonous process.

Much additional time is taken when a section is closed and the CAPTURE system gives you an alternate class. Certainly, it is a good idea that the system would provide the user with an alternative, the problem is that CAPTURE doesn’t even check to see if that class has a conflicting time in your schedule. Thus, the user must look through their schedules and try other sections until they find one that is both open, and at an appropriate time.

I would like to suggest a supplement to the CAPTURE system that I believe would make the registration process faster and easier for students, take less phone time, cut down on understanding errors and cut the cost that must to implement.

Why not add to this modern with students? Students with access to computers with them to which many these days can call directly, and converse electronically with the CAPTURE system.

Information could be sent high-speed over the phone line, rather than slowly through CAPTURE. Most people can read much faster than they can listen. This would speed up the whole process. People could print out their schedules easily.

Modems are inexpensive (less than $100 for a good one, less than $40 for a slow one) and should not require much change to the current CAPTURE system to support them. I believe that modems, or a similar solution, should be seriously considered.

Opinion

Space wastes chasised

I am not here to bitch about coming back to school. It’s a fact of life and there is nothing you or I can do to change it.

Nor am I here to cry about CAPTURE. We all know it sucks and I’m sure you will read about it in subsequent issues too.

I am not even going to complain about the exorbitant amount of money El Corral is extracting from us for books and supplies. Not to say, I highly doubt the bookstore has ever operated on a deficit budget.

I want to talk about something far more important, far more serious. Something that affects a sizeable group of the campus population. And, most importantly, something that can be corrected. What am I talking about? The parking problem.

But not the parking problem on campus. That is something that has been and always will be. There is nothing we, as students, can do about it. Rather I direct your attention to the parking dilemma surrounding campus.

Out of the goodness of our city planners’ hearts, there are several streets close to Cal Poly that allow all-day or two-hour parking without a residency permit. These streets contain a limited amount of space for those who like, cheaply, to shell out some money for a campus permit.

The problem here is not that the number of spaces are limited, I believe the amount of spaces to be adequate. After all, the purpose is to provide a little bit of relief for the cheapies, not give an entire campus permits.

No, the problem here is the people grabbing the spots. Where did they learn to park the Institute for the Blind? This is not the land of wide-open parking lots. A place to store one’s vehicle for a few hours a day while attending some form of higher education is a commodity to be used to its fullest.

But I guess some of you out there don’t agree. This is the way we see cars screech all along the side of the road.

Reporter’s Notebook

By Bruce Sutherland

Several times last quarter I was driving around on the side-streets frantically searching for a 14-foot hole to park my wreck. Always I would see cars with seven or eight feet both in front and in back.

Normally there was nothing I could do but keep the car and drive on. I kept thinking, but I wanted help. A few times the perpetrator was unfortunate enough to drive an old VW bug. When this was the case, I would open the car by pushing the little triangle window open. Then I could release the E-brake and park the car correctly.

But everyone drives an old Volkswagen so myself, and people like me, cannot be the person’s friend.

I listen here people, there is no need to screw over your fellow student by leaving him eight feet to park his 15-foot car.

Sports rather close to campus have become an endangered species and the reason for that is clueless drivers. These people who rise at the crack of dawn and race across parking spaces are like buffalo hunters, wasting two spots for every one they take.

Have you ever heard people pulling forward so that somebody else might get behind you? It is something else for you to recognize what you are doing. It’s bad enough you do this before most of us have eaten our first cup of coffee.

Give me space, man. I need to park.

Prof’s say: tell it to CAPTURE

Editor — The professor’s answer is always the same. Go talk to CAPTURE. Oh joy, the rapture and bliss if only I could! However, the exorbitant statistics 211 has been thwarted by the beep beep beep of CAPTURE’s busy signal. So here I sit, one lonely class away from graduating in March, the victim of Computers Assisted Punishment and torture. Why not insert a little humanity into the system?

Surely talking with a person goes a lot farther than talking to a busy signal.

Gymnasts go through motions, fall to George Washington University

By Anthony M. Romero

Cal Poly gymnastics started their season last Saturday against George Washington University and despite losing, Head Coach Tim Rivera said his teams performance showed only a small part of what they can become.

"Our main goal was to go through the motions," Rivera said. "When the time comes we'll be ready."

The Mustangs amassed 168.95 points to George Washington's 171.55. Rivera said the score was good considering that Poly gymnastics had 21 times throughout the meet.

"We were trying some tricks that other teams try at the end of the year," Rivera said. "Now we know what we need to work on.

The Mustangs did have some bright spots though. Mimi Phene earned a 9.5 out of a possible 9.8 on the vault to win that event.

Amy Reardon placed in the uneven bars, beam and floor exercises. Freshmen Don Fowler and Marci Lacort also placed second in the balance beam and floor exercises respectively.

"We have lots of high hopes for the freshmen," Rivera said.

The all-around champion for the meet was Nancy Plasket of George Washington with a score of 35.15. Mimi Phene was the highest all-around placer for the Mustangs with a score of 33.45.

Veterans also placed for the Mustangs. Kim Wells took fourth in the vault, and Julie Bolen was runner-up in the uneven bars.

The Mustangs travel to Boise this weekend to take on NCAA rival Seattle Pacific. The Mustangs return home Jan. 20, to take on UCSD and Sacramen­to State in a tri-dual meet.

ADAT preaches prevention of drug abuse

Caroline Boulton

Rather than taking an authoritative stance on drugs and alcohol, the Alcohol and Drug Awareness Team (ADAT) uses preventative education against substance abuse, said Carolyn Huizenga, Cal Poly's head health educator.

"We're not going in and telling you not to drink," Huizenga said. "Instead we teach the students to make their own choices and decisions on their drug choices.

"We're not going in and telling you not to drink," Huizenga said. "Instead we teach the students to make their own choices and decisions on their drug choices."

ADAT also offers one-on-one counseling, evaluations to detect signs of addiction and if a problem is found, ADAT refers students to treatment centers.

"Be smart and be careful," Godinez said, "because life's too short to focus on alcohol and drugs - there's so much more to life.

Deadline for WPE sign-up is Friday

Postscards notifying students about the Graduation Writing Requirement are no longer being mailed to students.

The winter quarter Writing Proficiency Exam will be Saturday, Jan. 21. Deadline for sign-ups is the Friday before, Jan. 13, to Cashier's Office. A $15 fee is required.

Students planning to meet the GWR by passing the WPE also have to worry about eligibility to take the rest other classes. Also there will be no pass/fail option for the writing proficiency student exam (90 units completed).

As before, it is still wise for students to finalize graduation plans now. It is a degree requirement and failure to meet it will mean no diploma.

Don't be afraid to dump in spices, garlic for authentic Tex-Mex taste

By Stephen Carson

Dear Grandma ... Oops, I forgot this isn't one of those endless streams of thank-you letters that I have been writing lately. Since we have just hiked through the Christmas season, I thought it appropriate to discuss the Mexican food of course.

Now, I'm not claiming to know anything about authentic Mexican food. What I know is food from the Southwestern is known as Tex-Mex. Tex-mex seems from Mexican cooking but has taken on a life of its own. Tex-Mex has a spicy fullness to it that makes your mouth explode with flavor. I love it. There are so many fancies of Southwestern cooking. I couldn't find much off the spices we most commonly used:

•Cumin or comino — This is the old-time favorite. It's spicy-sour flavor is welcome in almost any dish.
•Garlic — I like garlic so much why not use it in the candy I make. Always go easy on the garlic for Mexican cooking.
•Salt — This is always the last ingredient. Mex can turn tender meats tough and there is salt in other ingredients.
•Beef base — When your meat tainting a little weak, this will strengthen it up.
•Tomato sauce — This is an old-time favorite. Its spicy-sour flavor is welcome in almost any dish.
•Mince pepper — This is good for meats and poultry but so easy - this could take over a dish with a very little effort.
•Paprika — It must be the happier spices in the whole world and also the most tasteful. Don't get me wrong, I like that woody flavor and red color that paprika adds.
•Black pepper — I think we all know about this one.
•Red or green pepper — When used with black pepper, it's easy to burn your lips to bacon.
•Cumin or coriandro — This is the ground cumin seed. Use it in a one-to-one ratio with ground
"I remember when I could get fries and a coke for a buck..."
Theatre needs old wringer washing machine, lawn mower

If you've got grandma's old wringer washing machine hiding out in the garage, the Cal Poly theatre and dance department would like to talk to you. The department needs a round, old-style wringer washing machine for use in the upcoming campus production "Morning's at Seven," said set designer Russell Whaley. He is also in need of a vintage 1930s or 1940s push lawn mower.

Neither item needs to be in working condition as they will be used only as non-working props during the rehearsal and production of the play, Feb. 13-25. Persons who own, or know who might own, such a washing machine and/or lawn mower should call Whaley at 756-6561 or leave a message at 756-1465. —Peter Wilt

### Skiers tackle Mammoth challenge

**By Stephen Carson**

The Cal Poly ski team had its first 'race over the break and started off the year by romping all over Mammoth mountain and the Southern California collegiate Ski Conference.

In a field of 17 schools, Cal Poly took fourth place in the Giant slalom and first place in the slalom. Senior business major Corky McLsaac, took first place in the giant slalom and second place in the slalom. Other strong finishes were made by Chuck Parsons, Aymeric McLsaac, Dimitri Hrovat and Stephen Carson. Only Jody Mason showed for the Cal Poly Women's team and she took 15th place on both days. Cal Poly's next race will be this weekend at Mammoth Mountain.

Cal Poly cows recognized by American Hereford Assoc.

Cal Poly received recognition from the American Hereford Association in Kansas City, MO Jan. 2 for four cows, which achieved production excellence in the Total Performance Records Program. Recognition given in the AHA program’s Most Efficient Cow Report identifies cows that have efficiently combined fertility and growth, two traits of primary economic importance to each producer.

Less than one-half of one percent of all registered Hereford cows enrolled in the program can meet rigid requirements. Each cow listed is four years in age or older, had her first calf 25 months of age or less, has a 370-day or less calving interval, and her calves must have weaned at least five-percent above the herd average.

Recognition has been granted to 1,374 cows representing 325 breeding programs distributed in 30 states.

Russell Klehn, a metallurgical and materials engineering senior from Newhall, CA., was one of only 31 students nationwide to receive a 1988-89 Undergraduate Scholarship Award from the American Society for Metals. His award was $500. Klehn also won a $1,250 scholarship from the Alcoa Foundation. Glenn Simonson, a junior metallurgical and materials engineering major from Tahoe City, CA., received the $150 Greg Stines Scholarship.

This year, students all over campus are working on 100 new computer terminals donated to Cal Poly by Hewlett-Packard. Engineering students Leo Gallacher, a senior from Modesto, Mark Landkammer, a junior from Sequoel, and John F. Sweeney, a senior from Sonoma, all won $500 scholarships from the Granite Construction Co. of Watsonville. Chevron U.S.A. awarded two $500 scholarships to Tim Jenson, an engineering senior from Watsonville, and James M. Smith, an engineering senior from Martinez.

The Pacific Telesis Foundation has donated $20,000 in scholarship funds for students in Cal Poly’s minority engineering program.

Cal Poly’s construction management program was cited for excellence and honored with a special plaque by the Sacramento-based California Building Industry Foundation.

Eighty Cal Poly students were selected to join 332 students from the other 18 CSU campuses as program participants in the 1989-90 International Programs of the CSU system.

The category showing the largest increase — 5.6 percent — was part-time, first-time freshmen. The only category to post a decrease was a 2 percent drop! in full-time students entering professional school for the spring "earning years," said Robert Manners, executive director of University Development. "But even with these negatives, growth in enrollment during the last three years has been remarkable."

In comparing the CSU to the national figures for alumni giving to public and private comprehensive universities, only 8 percent of the CSU’s total gifts came from alumni as compared to almost 19 percent for all reporting public institutions and 29 percent of total gifts to private comprehensive universities.
