Watchdog group monitors professors’ lectures

A political science professor at Arizona State University was delivering a lecture on political ideologies when the discussion strayed to the topic of the nuclear age. A few students shifted uncomfortably in their seats and furiously began taking notes. This was the moment they had been waiting for — this professor was known on campus for his anti-nuclear stance.

These notes would soon be on their way to Washington D.C., to the headquarters of Accuracy in Media, a national watchdog organization devoted to eliminating “bias” in university lectures. The professor would soon find himself the subject of intense scrutiny and a concerted campaign to tone down his anti-nuclear rhetoric.

According to the organization, the professor has toned down the anti-nuclear content of his lectures, and has been seen wearing suits to class. He hasn’t completely succumbed to the criticism, however. He recently handed out an article to his students which was headlined, “Hunten of Nazis Won’t Forget Jew Slayers.” The professor is reported to have commented, “AIA may be my Hitler, but I’m not AIA’s Jew.”

The watchdog organization, Accuracy in Academia, has created a storm of controversy across the nation and has been assailed by university administrators and faculty from the Ivy League to the Pac-10.

Accuracy in Academia is an offshoot of Accuracy in Media, a group concerned with finding what it perceives as bias in the press. Accuracy in Media was founded 15 years ago by Reed Irvine, a political conservative who did intelligence work in World War II, and was an economics professor at the Federal Reserve.

Accuracy in Media was begun on a shoestring budget, but after only two years it was taking in donations at the rate of $50,000 a year, according to Bernard Yoh, director of communications for AIM. “A lot of people obviously felt the same way we did about the media,” said Yoh in a telephone interview from Washington D.C. Accuracy in Academia, which is also headed by Irvine, was started in July 1985, but is not officially organized,” said Yoh. “It slipped out of our hands,” said Yoh. “We had more than $30,000 in the bank before we even started soliciting funds.”

Yoh said the purpose of AIA is to combat dognomistic approaches in professors’ lectures. “If you’ve got a professor on your hands, call us. We want to help him. Incompetence, excessive zeal, ideological obsessions — these are the problems many professors have to deal with. Let him know he’s not alone. If he needs help, or just someone to talk to, we’re here. We care. Do you?”

The president of the University of Pennsylvania, Sheldon Hackney, has written that people have much to fear from clandestine attempts to stifle free inquiry, such as the above announcement. Yoh responds: “I can’t help laughing at these things. The whole thing is unstructured; we’re just having fun. We’re the mouse that roared.”

Yoh may be laughing, but the California Faculty Association, among other groups, is not amused. It announced in a full-page article in the CFA Professor that services are available to help California State University faculty fight AIA. These services include the Academic Freedom Fund, which is sponsored by the American Association of University Professors, and a $1 million professional liability insurance program sponsored by the National Education Association.

CFA President Ann Shadwick has called on CSU faculty to battle AIA. “All intrusions by outside forces to question what is taught, to stop ideas that are deemed un-American, to limit free exchange in the classroom, must be stopped,” she said in the article.

AIA is opposed to tenure, according to a report issued by the AAUP. The concept of tenure has long been regarded as a safeguard against outside intervention in academic freedom. “We must insure that the procedures for evaluation of faculty for retention, tenure, and promotion, are conducted in a fair manner,” said that faculty are.

See ACCURACY, page 4.
**LETTERS TO THE EDITOR**

**Ideological censorship: surely you jest**

“Liberal” is a dirty word to many Cal Poly students.

Mustang Daily’s cover story today reports on a conservative group called Accuracy in Academia, a watchdog organization whose purpose is to seek out university faculty members whose liberal ideologies are corrupting young, impressionable minds.

Mustang Daily has been accused of being “liberal.” And stereotypically, journalists are more left than right. So it is obvious that the Mustang Daily editorial board unanimously condemns and scoffs at Accuracy in Academia.

It is easy to segregate ourselves as conservative and liberal, each claiming ideological superiority. Yet all students, regardless of political party, share a common bond — and that is the very strength of being united.

We are all in pursuit of knowledge. We are here to open our minds to differing ideological views, to form opinions, then decide between those with which we agree or disagree.

We could hardly imagine any student endorsing the purpose, tactics or values of Accuracy in Academia.

There is a great distance between the left and the right but those categories should be rendered irrelevant on this subject of ideological censorship.

It would seem silly to be wary of our classmates taping lectures, quoting lecture notes and sending them off in plain white envelopes to Washington D.C. Wouldn’t it?

**LETTERS TO THE EDITOR**

**Rec facility vote is not a Poly mandate**

Editor — I would like to send this open letter to Mike Mendes and the ASI. Mendes is quoted in the Daily as saying the high voter turnout “shows that the desires of the students to have a rec center.” With his high turnout, it is certainly true that 3,500 people wanted this plan.

Personally, though I am a rec center (I’m double-majoring) and in favor of a rec center, I voted against this plan.

Since 45 percent of those voting opposed the plan, there are those of us who would be offended if the ASI emulated the national government by using their “popular mandate” to justify other extravagances and complications. I trust you have the sense not to do so, but the example set for you has concerned me.

JOHN WARD

**Patience will help end apartheid in S. Africa**

Editor — To the knowledge of many, apartheid is terrible. P.W. Botha expresses “Apartheid is a wrong policy. We repent to it... we are going to remove it, but we cannot be suicidal.” By that, he means that if his push against apartheid policy appears to be ashown, the right-wing element of his national party will throw him out, resulting in a more rigid and radical group taking over that will renounce all the little progress that has been made. Patience with South Africa is needed with respect to the apartheid situation.

Read the remarks of this letter that much of the diplomatic and propaganda pressure focusing on South Africa is Soviet-inspired. There are many that have either ignorance or bias, coupled with superficial rhetoric, claiming that divestment is the way to go. Right now, the hungry people in South Africa are pleading for no further sanctions, because the fallout is more hunger. The oppressed.coloreds also claim that divestment cannot work. They say, “It will kill the patient in the attempt to cut out the cancer.”

**Extra English classes offered for Spring**

Editor — The English Department wishes to announce that there are two sections of English 310 which are not listed in the spring class schedule.

Graduating seniors whose current majors require English 310 should bring proof of class standing (graduating senior) and major to the English department office.

Qualifying graduating seniors will be allowed to register on a first-come, first-served basis until the sections are full.

Haitian life returning to normal

PORT- AU-PRINCE, Haiti (AP) — After two nights of wild rioting and mob retaliation against the hated secret police of the ousted Duvalier regime, life began returning to normal Sunday in this slum-ridden city of 1 million people.

Trashed, burned-out shells of businesses that were associated with the 28 years of Duvalier family rule bore silent witness to a celebration that turned violent, killing at least 100 people and causing great material damage.

Jean-Claude Duvalier became Haiti's "president-for-life" in 1971 at age 19 on the death of his father, Francois "Papa Doc" Duvalier. He fled to France on Friday on a U.S. Air Force plane claiming the ballot-counting that showed President Ferdinand Marcos defeating Corazon Aquino was falsified.

An international observer group, meanwhile, accused Marcos' partisans on Sunday of vote-buying, intimidation, snatching and Counting Center.

The computer operators wept on each other's shoulders after the long travail. "There was something wrong," a woman operator explained. "What's posted on the tabulation board does not tally with the computer readout," said Christian.

Students charged in cocaine sale

BY REBECCA HANNAH

Five Cal Poly students were arrested last week following a two-month drug investigation which culminated with undercover agents allegedly buying more than two pounds of cocaine from one student, according to a San Luis Obispo County narcotics agent. Including other drugs seized in connection with the investigation, street value of the narcotics is approximately $300,000.

Kevin B. Long, 23, a senior agricultural management major, was arrested Wednesday for selling and conspiracy to sell cocaine after an agent from the county Narcotics Task Force met Long in downtown San Luis Obispo to buy a kilogram of cocaine, said Jim Christian, special agent in charge of the task force.

David W. Rusconi, 20, who was an agricultural management major, but is not currently enrolled at Cal Poly, was Long's alleged partner in cocaine sales and was seen observing the drug transaction downtown, said Christian.

Rusconi was arrested an hour later at his home, Christian said, on charges of conspiracy to sell cocaine.

According to Christian, subsequent search warrants were served at both Long's and Rusconi's homes, and resulted in three additional arrests and the seizure of more illegal drugs.

At Long's home, two pounds of marijuana and an additional ounce of suspected cocaine were found, said Christian.

Bruce B. Cutting, 20, a sophomore in agricultural management major, was arrested for sale, Christian said.

After a search warrant was served at Rusconi's home, narcotics agents seized six more grams of suspected cocaine, in addition to two more arrests, said Christian.

Mark E. Zabrycki, 23, an agricultural management sophomore, was arrested for suspicion of possession of cocaine and Rusconi's twin brother John Rusconi, 26, a sophomore agricultural management major, was arrested for traffic warrants, Christian said.

Long and David Rusconi were transferred from San Luis Obispo County Jail to the federal magistrate in Santa Barbara where they were arraigned Friday on federal offense charges of selling cocaine and conspiracy to sell the drug, Christian said.

John Rusconi was released from county jail and Cutting and Zabrycki, who are facing state offense charges, were released from jail on bond, said Christian.

The two-month drug investigation was a joint effort involving the Federal Drug Enforcement Administration, the San Luis Obispo Police and the county Narcotics Task Force.

ACCURACY IN ACADEMIA

From page 1 evaluated for the quality of their academic performance," Shadwick said.

The CFA Professor states that AIA and affiliated groups have appeared both on the San Diego State and Chico State campuses. Chico President Robin S. Wilson said, in a letter to faculty, that he hopes any faculty member who feels threatened will make use of the services provided by the university. "I hope, too, that whatever our individual politics, we will unite as a faculty to decry any attempt, from the political left or the political right — however well-intentioned — to chill the untrammeled expression of reasoned opinion in the academy," he added.

AIA spokesman Yoh would not say if any reports have been filed on Cal Poly professors, though AIA buttons have been seen on campus. Cal Poly President Warren Baker, in a statement made through his secretary, said he believed "A watching approach in attempting to evaluate what occurs in the classroom can be detrimental to academic freedom. Academic freedom is essential if the university is going to play its proper role in our society." However, Yoh said AIA is necessary for students who believe a professor is inaccurate. "We realized that students can't challenge professors if they want good grades," he said.

Most of the professors interviewed at Cal Poly said that many students do challenge them, and they welcome these challenges. "The highest grades I've given have been to people who've taken me to task," said political science professor Randall Cruikshanks. Because professors in the social sciences — where many professors expressed concern that because they presented an idea, it might be construed as advocacy. Vice Chancellor Moye said, "Professors have to present issues that are unpopular. For example, an instructor must give the best and worst light to communism. I don't think anyone (AIA) wants communism presented in their class."

Many professors said AIA wouldn't be so bad if accuracy was its only goal. Harvey Kelso, a social sciences professor, said AIA could be an arm of the new right that seeks to impose their own values. This issue of bias, Kerbo added, goes back to the days of Galileo, when the famous scientist was jailed for his now proven observations on the nature of the universe.

Those who adhere to the religious right often think there is one best answer to a complex situation, said Kerbo. History Professor John Snetsinger is more blunt: "It looks like a right-wing pressure group that is trying to put the fear out there. The parents are probably next to be targeted." Snetsinger was the only professor who thought some good might come out of the situation, because it raises the issue of freedom of expression. "I'd love to see AIA come to campus. You'd see a real rallying of support for the professor," he said.

For all the controversy AIA has generated, the group has had little impact on American universities. No professors have been fired. Whether or not any professors have changed their teaching style or course content is difficult to ascertain. Many professors share Kerbo's opinion: "I think there is a lot more hype to AIA than anything else."

A letter from AIA's Campus Report masthead is a quote from Thomas Paine, an influence during the formation of the United States. The quote reads, "It is an affront to treat falsehood with complacency."

Many Cal Poly professors would probably find the following thought, also written by Paine, to be more appropriate to a discussion of AIA. "No nation under heaven ever struck out in so short a time, and with so much spirit and determination, into the labyrinth of art and science; and that, not in the acquisition of knowledge only, but in the happy advantages flowing from it."
Mardi Gras
City celebrates 'Fat Tuesday'

Hundreds of wacky and fun-loving people paraded through the streets of downtown San Luis Obispo Saturday night for the eighth annual Mardis Gras celebration. Bagpipers, floats and antique automobiles helped to make this a successful pre-Lent festivity.

COUPON COUPON COUPON
Group to expand self-awareness

By Angela Darnell
Staff Writer

A new Cal Poly program designed to challenge students to go outside their traditional academic orientation and become more aware of opportunities at the university has been underway since last spring quarter.

The Wellness Program, developed by the Housing Office and the Recreation Administration Program, is defined as an evolving and changing process in which individuals participate in the development and integration of all aspects of their physical, social, spiritual, emotional and intellectual well-being.

Stephan Lamb, associate director of housing, hopes the program will help students to "celebrate other parts of themselves other than just their strict academic curriculum." He said, "It’s difficult for Cal Poly students, particularly, to see the good in the program since they are so career-oriented."

Lamb said he is concerned with engineers, for example, "who have little variety in their class structure. If they don’t get some sort of development in their interpersonal skills and really hone it here, they won’t do it."

The program focuses on five domains, said Lamb -- physical, social, spiritual, emotional and intellectual well-being. Five different types of posters representing the domains have been distributed on campus. Eventually all the student affairs offices and departmental offices will have them to display, Lamb hopes.

Each poster lists a range of clubs, courses and offices on campus in which students can turn to enhance their self-wellness. Students can determine their degree of wellness by taking a "wellness inventory."

The inventory is a worksheet which asks various questions about one’s lifestyle. The inventory should only be used as an individual assessment tool. "It is not statistically sound," said Lamb, "but it’s really just a tool to challenge the individual to invest time in themselves."

A follow-up inventory is suggested to determine through one’s own analysis if a greater degree of wellness has been achieved.

Lamb hopes the program will allow students to "become more aware of all the opportunities that exist at the university and look at themselves from a number of different perspectives."

The program has developed some success, said Lamb. "We’ve gotten people from different areas and services on campus who are working together using a common vocabulary with common goals to assist students."

Lamb acts as a communication link between 19 different groups on campus representing every area within the Student Affairs Division.

Film industry ignores complaints by Soviets

WASHINGTON (AP) -- The Soviets complained Monday to Hollywood about the movies "Rambo" and "Rocky IV" are fostering anti-Soviet feelings. But as far as the entertainment industry and the U.S. government are concerned, that’s their problem.

"The job of the filmmaker is to entertain audiences, not to be a political instrument," said Jack Valenti, president of the Washington-based Motion Picture Association. "They tell stories that they think people want to see. It has absolutely nothing to do with political propaganda."

Hollywood, too, has responded with barely a shrug since the Soviet government newspaper Izvestia lashed out last month against what it called "vulgar anti-Sovietism" in the United States.

Izvestia said Hollywood sownet such attitudes by turning out "such lowly anti-Soviet products" as the movies "Rambo-First Blood Part II," in which a Vietnam veteran tries to rescue Americans in Indochina, and "Red Dawn" about a Soviet invasion of the United States.

"I’ve been asked to do an inventory," said Lamb, "and I’m concerned, that’s show biz."

Los Angeles schools are preparing for next quake

LOS ANGELES (AP) -- Fifteen years after the Sylmar earthquake toppled buildings and killed 65 people, school children are benefiting from the temblor and preparing for the next strong quake scientists say is inevitable.

The Feb. 9, 1971, quake measured 6.4 on the Richter scale and shook the Los Angeles area for 12 seconds, causing widespread damage to buildings and freeways, particularly in the San Fernando Valley where the quake was centered.

Since the destruction, earthquake preparedness has intensified in the schools. Student search-and-rescue teams have been organized, food and tools are stashed and evacuation procedures have been rehearsed.

The city has held an Earthquake Preparedness Week disaster rehearsal on the anniversary of the quake for the past four years, but this year a statewide event will be held on the anniversary of the great earthquake that devastated San Francisco in 1906.

Officials at the Los Angeles Unified School District have asked school principals to develop plans ranging from providing meals to creating makeshift morgues and implementing identification procedures to ensure children are released only to their parents or a trusted adult.

Mustangs own first place in CCAA

By Joe Packard

The weekend did not start out the way it was supposed to for the men's basketball team, but the Mustangs ended up winning both their games to take sole possession of first place in the California Collegiate Athletic Association.

Cal Poly Pomona was supposed to roll over and be disposed of easily on Friday night so that the Mustangs could save themselves for a weightier contest against UC Riverside Saturday night.

The first half against Pomona went according to script. The Mustangs had all the right moves and went into the locker-room with a 16-point advantage. Chico Rivera had a hot hand for the Mustangs, hitting for 12 points with his pretty jumpshot.

In the second half the Mustangs made a few bad passes, a few bad shots and the comfortable lead had dwindled to a narrow lead. Pomona had all the momentum and went ahead with 30 seconds left on a shot by Greg Brofer.

The Mustangs then worked the ball around to Melvin Parker who found the hoop on a nifty inside move and was fouled while shooting. He calmly sank the free throw to put the Mustangs up by two with eight seconds left. The Broncos brought the ball down the court and threw up a prayer which impressive freshman Tom Fay tipped in at the buzzer to send the game into overtime.

The overtime period started badly for the Mustangs as Pomona scored the first three points and was in position to make it five when Sean Chambers stole the ball, went upcourt and was fouled while slam dunking. He completed the three-point play to put the Mustangs even and scored five more in the extra period to put the game on ice and run the Mustangs' league record to 7-1, 17-4 overall. Chambers led all scorers and rebounders with 21 and 10 respectively.

The dream matchup was now reality, UC Riverside knocked off stubborn Cal State Bakersfield on Friday, 71-70, to arrive in San Luis Obispo tied for first place in the CCAA with the Mustangs.

Coach Ernie Wheeler praised them as the best team he had seen in the CCAA conference. "They have a combination of height, talent and depth that is rarely seen at the Division II level. Two of their players, Robert Jimerson and Paul Kapturkiewicz, previously started at Division I schools, and their fine guard Andre Greer was rated the best guard in the junior colleges two years ago. Their other guard plays very well and is like another coach on the floor."

The Mustangs, however, showed that they weren't tied for first place for nothing and jumped to an early 10-point lead before settling for a six point halftime bulge. Point guard James Wells showed his scoring ability, popping in 10 points while Riverside concentrated on stopping Poly's other usual high scorers.

When Riverside scored two quick baskets to open the second half and cut the Mustangs lead to 25-27, Poly fans were hoping they had not seen an omen. In Poly's earlier meeting in Riverside, the Mustangs led 25-20 at halftime and scored two quick baskets and eventually took control of the game.

But this time Poly maintained its grip, answering blow for blow. Chambers electrified the 2,000 plus Mustang faithful with a slam dunk to put the Mustangs up by eight with just under 10 minutes left. Seconds later Riverside's talented Jimerson fouled out. "To say that we missed Jimerson is like another coach on the floor."

The Mustangs, however, showed that they weren't tied for first place for nothing and jumped to an early 10-point lead before settling for a six point halftime bulge. Point guard James Wells showed his scoring ability, popping in 10 points while Riverside concentrated on stopping Poly's other usual high scorers.
Lady netters sick over Fresno loss

By Rebecca Hanauer

Illness played a big part in the Cal Poly women’s tennis team’s disappointing 2-6 loss to Fresno State Thursday at the San Luis Bay Inn courts.

Susan Norman, who was battling the flu, scored the only two Mustang points, teaming up with Amy Lansford to win in the number three doubles position and the number six position in singles competition.

Norman and Lansford won their doubles match 6-1, 6-4 and Norman beat Fresno’s Stephanie Richards 6-4, 6-2 in singles competition.

"Susan was a big help for us," said Mustang head coach Orion Yeast.

Individual credit also goes to Amy Lansford who played extremely well in her first team match ever in doubles action with Norman.

The Lady Mustangs played without their number three and four singles players, Amy Stubbs and Cici Barbe, who missed the match due to illness and to recover for the matches played over the weekend at San Francisco State and UC Davis.

Even though number one and two seeded singles players Patti Hilliard and Cristin Leverte lost their matches, they came very close to upsetting their two Fresno State opponents.

Hilliard won her first set 7-6 against Julie Frasier, but lost the next two sets 2-6, 2-6.

Leverte won the middle set 6-1 against Fresno’s Jenny Davies, but lost the first and third sets, 4-6, 5-7.

Yeast said of their performance, "Patti and Cristin played to their levels and deserve praise for their effort."

Michelle Archuleta, assistant tennis coach, reasoned the Mustang loss to the fact that Fresno State is a Division I team with a higher caliber of players, while Cal Poly is in Division II.

"The Fresno players were aggressive and were always attacking, whereas we’re more backcourt players. We haven’t gotten to that point yet where we’re in total control of the point," said Archuleta.
The Mustangs, who held a three run lead going into the last inning, needed only three outs to complete their seven of their double-header Saturday with Santa Clara. Cal Poly did get the three outs, but not until they let five runs cross the plate and lost the second game 7-4.

It nearly ruined a perfect afternoon for the Mustangs, who pounded the Broncos in the opening game 13-4. “The tell-tale sign this year will be our pitching. It’s no secret that our success depends on how well we pitch this year,” said Steve McFarland, whose pitching worries were quieted by two fairly strong outings by Mike Berringer in the opener and John Berringer in the second game.

In the first game, the Mustangs wasted little time scoring four runs in their half of the first inning. It began with Eric Baysinger, who went four of five with two RBIs, and hit a sharp grounder that ricocheted off second base. Then Santa Clara’s starting pitcher Matt McCormick, who would only last five innings, made a diving catch of a blooper off of the bat of Jim Giles, and in the process collided with Constantino who had come driving in off of the bat of Jim Giles, and in the process collided with Constantino who had come driving in the second inning to lose the game.

Briare’s second defensive feat came when he fielded a well placed Dave Andrews bunt, and riffled a throw that beat Andrews. The Broncos did get a run, but the damage could have been much greater and could have changed the momentum.

Briare, however, settled down and retired eight of the next nine batters he faced. The performance was more than enough as the Mustangs scored three more times before Santa Clara got two in the top of the fifth.

Cal Poly, who had pounded the Broncos for 13 hits, also got two runs in the sixth, and four in the eighth. Reaves delivered the big blow with a line drive homerun over the left field fence. The game, which had never been in doubt, was now a full fledged rout.

Santa Clara did get one run in the ninth and did little else until the seventh inning of the second game. It was, however, seventh inning that would end the Mustangs hope for a sweep. John Berringer pitched six strong innings, but on the strength of a couple key hits and untimely errors, the Broncos scored five runs and the Mustangs failed to score in the seventh and final inning to lose 6-4.

The manner of the loss tainted an afternoon, where the Mustangs had things going their way. In both games the Mustangs hit well, played good defense and got fairly strong pitching.

It seemed somehow unfair that the Mustangs, who were so dominant for one game and most of the second should come away with a split. Yet, it does appear that the Mustangs can score runs and if they can avoid self-destruction in the future then post-season play might become a reality.

MUSTANGS

From page 7
an understatement,” said Riverside coach John Masi. “He scored 13 points and had six rebounds in just 16 minutes of playing time.”

Riverside made another run at the Mustangs, cutting the lead to four. This time Jim Van Winden came alive. He hit two freethrows and twice went to the hoop over the 6-foot-9 Kapoorwicz in a 6-2 Mustang spurt. The Mustangs then maintained their poise and made the necessary freethrows down the stretch to preserve the 75-66 victory.

Wheeler praised his team’s effort in the big win. “We reacted very well and executed offensively. It was a great game and a great victory for Cal Poly. It’s a credit to our kids. It was also nice to have a large, enthusiastic crowd cheering for us.”

Masi also credited the Mustangs. “I don’t think we played with the same intensity as the last time we played them, but they played well in all facets of the game tonight. Chambers hurt us in the open court when we were making a run at them in the second half and Jim Van Winden had a heck of a game.”

A happy Van Winden who had 18 points and six rebounds summed it up after the game. “This was a great win for us. But we’re going to have to be extra ready from now on. Everybody wants to knock off number one.”

Parker had another big night, scoring 17 points and getting a rousing ovation when he fouled out late in the game. Chambers had 13 points, Wells finished with 12 and Rivers overcame an ankle injury to pour in 11. Darren Massingale and Mark Ott scored two each to round out the scoring.

Search for Challenger intensified

CAPE CANAVERAL, Fla. (AP) — Initial attempts to locate an explosive satellite booster rocket spotted underwater by sonar failed, and Navy divers intensified their offshore search Sunday for wreckage of the space shuttle Challenger.

The 32,000-pound booster, composed of two solid-fuel rocket motors, was believed to be in an area 18 miles northeast of the launch site, where parts of the shuttle's crew compartment, one of its two solid-fuel rocket boosters and other debris have been reported.

"There is plenty of material out there, but they have found nothing identifiable," in dives 100 to 120 feet down late Saturday and early Sunday, said Navy spokesman Cdr. Arthur Norton. Norton said the 22 divers aboard the Navy salvage ship USS Preserver concentrated their efforts Sunday in a zone where "good sonar images" showed the 10-by-17 foot "inertial upper stage" rocket was resting on the ocean bottom.

The IUS was to have boosted a $100 million NASA communications relay satellite into higher orbit after it was carried into space aboard Challenger, which exploded after lift-off Jan. 28, killing all seven people on board. The Navy focused on the satellite boosters rather than on searching for the shuttle crew compartment or the boosters that propel the spaceship because "they're pretty sure of what they've got there, and it's in relatively shallow water. So, it's a bird-in-the-hand type of situation," Norton said.

The IUS, powered by 27,400 pounds of solid fuel, will have to be declared safe by Navy explosive experts before it is brought to the surface by the Preserver, which is capable of lifting up to 10 tons.

The IUS was considered "a hazardous object," Norton said earlier.

"Our divers are identifying and mapping a small area of the ocean floor, taking photographs and eyeballing," Norton said Sunday. "We can leave this (the IUS) and go anywhere that may be considered more important at any time.

"Our people are committed as long as it takes. We may be here months... The idea is to get the job done..."

Navy and NASA officials would not say if there had been any progress in recovering Challenger's crew cables, rocket boosters or remains from any of the seven astronauts.

Space agency officials would only say that three NASA ships were at sea conducting sonar sweeps and photographing underwater objects with remote subs.

Recovery of the shuttle's right solid fuel rocket booster is of particular significance because speculation about the cause of the explosion currently centers on it. Videotape and still photos taken after launch show a plume of fire shooting out from its side toward the external fuel tank, which blew up into a giant fireball.

New anti-cancer drug to be given at City of Hope

DUARTE, Calif. (AP) — Telephones at the City of Hope have been busy since the medical center announced it will be one of six U.S. cancer research institutions to test a promising new anti-cancer drug.

By close of business Friday, more than 700 calls had come in from people hoping to be among just 300 nationwide to get the drug interleukin-2, or IL-2.

Of those 700, eighty qualified for further consideration, but none has been chosen yet to undergo treatment, City of Hope spokeswoman Bonnie Rogers said Sunday.

"We've had as many phone calls as we can possibly come in on one line," said Mary Rose, a research associate at the Cancer Research Institute at UC San Francisco medical center, another of the test centers selected by the National Cancer Institute.

"We've gotten phone calls from people whose physicians have told them that there is no treatment for them," she said.

We have people calling who are dying and looking for a last treatment. We have people who want to stop the cancerous growths." Experimental IL-2 is a cancer drug that spurs a patient's own blood cells to help the body's immune system fight off cancer. It will be tested on people with kidney cancer, colon cancer and malignant melanoma, a type of skin cancer.

The treatment was first announced in December by NCI scientists based in Bethesda, Md. Researchers said that during a preliminary trial on 25 patients, disease regression was more than 50 percent in 11 patients who no longer were responding to regular treatments. Those results were considered good enough to warrant the national study of 300 patients.

Sally Gallagher, City of Hope's assistant administrator, said because the experimental treatment is "extremely potent," patients who are accepted must be healthy enough to physically tolerate side effects.

ACCREDITATION

From page 1

Examination to the National Accreditation Council. Although only 10 years old, the Cal Poly recreation administration program has received academic accreditation. Professional accreditation, however, is mandatory next fall.

Beginning in November, the National Recreation and Parks Association will only award professional certification to students who graduate from professionally accredited schools. Students currently enrolled in Cal Poly's recreation administration program need not worry because they are protected by a 'grandfather clause.'

More than 50 recreation administration programs nationwide are professionally accredited. Out of 13 such programs in California, five are accredited.

To pave the way for accreditation, a college must first conduct a one-year self-study of its program. After completion of that study, the program is then submitted to a similar study by an outside group of experts. The work of the panel is also subject to examination by a third party.

After the visit to Cal Poly, the panel will submit its findings to a review board at a National Accreditation Council convention. Cruse and Lynn Jamieson, coordinator of the Cal Poly recreation administration program, will travel to the convention in Cincinnati, Ohio, in April to offer their input.

The Accreditation Council demands that each applicant for accreditation meet a strict set of guidelines. The council, however, can be flexible. "No school meets every standard," Cruse said. "It's a matter of degree that counts."

Jamieson, however, is confident that the recreation administration program will receive accreditation.

"We applied for accreditation because we believe we are qualified," Jamieson said. "We want to continue to be able to attract quality students..."
