WSPA questions Measure A
Claims it threatens San Miguel, five tentative projects

By Bruce Sutherland
Staff Writer

In a suit challenging the constitutionality of Measure A, the Western States Petroleum Association (WSPA) alleges that the law threatens the San Miguel project outlined and five subsequent projects to follow, according to a copy of a petition.

The San Luis Obispo County Department of Planning and Building Offshore Energy News dated Jan. 10 states, "The suit alleges that the development of at least five additional projects will follow the San Miguel filed project and that Measure A threatens those projects."

Measure A is a voter referendum passed by popular vote in 1986. The law states that all plans for onshore oil processing and treatment plants must be approved by a majority of county residents. The vote will come following approval by the County Board of Supervisors and prior to permission from the California Coastal Commission.

Jon von Reis, head of San Luis Obispo County's Department of Planning and Building, confirmed the possibility of the additional projects.

"We've looked at the possibility of six additional platforms," said von Reis. "There is nothing firmly planned, but there are potential (oil) discoveries that have been discussed in part in an overall planning document."

Presently, there are no plans filed with the county for more on- or offshore facilities. But more offshore development is a strong possibility.

"Ultimately, there will be," von Reis said, but that would be "at least five years away."

Von Reis said he felt the new projects mentioned in the newsletter would be offshore platforms. With the addition of offshore platforms, he said other onshore plants would most likely be necessary.

"But each one (platform) may not need its own separate (onshore) facility," von Reis said, indicating that some of the sites offshore could double-up with those plants on land.

WSPA and Shell officials were unable to confirm or deny that more projects are to follow the San Miguel project by press time.

The controversial Measure A presently remains in effect, but is being challenged by WSPA in the Ninth Federal Circuit of Appeals Court and, in a more recently filed case, in San Francisco Superior Court.

The constitutionality of Measure A was upheld Sept. 6 in Federal District Court. Authorization for WSPA, formerly the Western Oil and Gas Association, centered that Measure A is a violation of state and federal constitutional rights.

Wounded USC student improving

LOS ANGELES (AP) - An undergraduate student shot in the back just a block from fraternity houses at the University of Southern California was in guarded condition Sunday, authorities said.

Kimberly Warfield, 21, UNC junior from Harborscreek, Pa., told friends who came to her aid that she had no idea why she was shot Friday night by one of two men outside her West 27th Street apartment.

The experiment will take about 45 minutes, but only two men (of eight workers) will take place. After the astronaut starts the experiment there will be a 30-minute delay until the space shuttle can sleep. An additional seven minutes is required for the complicated circuitry to warm up.

A pipe specimen is welded and gases flow the joining area of the pipe before the welding takes place. The computer senses the project's completion and automatically switches off the power.

"We can't really do anything to stop something like that," said WSPA's roommate Caroline Chappell. "I mean, it just happens. It's scary."

"This is a bad neighborhood," Roy added.

"We're an island in the middle of a storm."

By Anthony M. Romero
Staff Writer

Cal Poly Space Systems will realize a long-held goal when a $100,000 welding project that took five years to design takes the next scheduled space shuttle flight.

"This project is not only important to us but has scientific relevance as well, since welding has never been done in space before," Space Systems President David Tamir said. "A few students in the aero department wanted to see an experiment in space."

Aeronautical engineering student Blake Welcher started the welding project in 1983, which was originally funded by small donations. The first year, students received only about $1,000 from faculty and interested donors.

Tamir said one of the student's roommates saw the project and told his father, who worked for Rockwell, which led to the company's financial backing of the project.

NASA was already looking for a welding project and everything fell into place, said Faysal Kokalta, AE professor and advisor for the project. He said the Soviet Union is ahead of the United States in this field, and Cal Poly's early involvement in the project insured its future with other space welding projects.

Since Rockwell funding, the project made timely steps toward completion. Tamir presented papers on the welding project to NASA for design and safety approval and the project is currently in its final stages.

The project is a self-contained welding experiment that conducts itself when the astronaut activates it with a computer much like a calculator. The experiment runs on batteries because it cannot use the space shuttle's power.

"Welding is the most efficient means of joining pipes," Tamir said. "It saves materials and costs, and if it is successful at zero gravity, it can save millions of dollars for Rockwell. It can also be valuable when space debris hits the ship and repairs are needed."

Jews belong in the West Bank

Editor — Though Wendy Maurer's intention seems to be good she does not understand the problems in the Judea Samaria (West Bank). Do you think we Jews enjoy this? Of all the people in the world we understand what it is like to be persecuted. However, let's look at the facts.

The rightful owners of the land are the Jews. It's in the Old Testament and there is Justice in the West Bank. No food would say otherwise, and we do speak out and we see the United States News and Time or what we do say about it.

However, I don't see any Palestinians speaking out when the PLO kills Israeli women and children, or about the 1972 Olympics massacre. Do we forget so soon?

You talk about peace. We want peace but what about all those Arab countries which, except for Egypt, do not even recognize our existence? Believe me, if they could they would destroy us. You don't seem to understand what kind of leaders these people have.

The Syrians used chemical weapons on their own people and Iraq has used them to fight the Iranians. Do you understand that, given the chance, they would love to use them on Israel?

For Israel to give up the West Bank is not to turn on itself but into a group. If you looked at a map you could see it is only 20 miles from the West Bank to Tel-Aviv. Any cannon could easily reach that distance.

We'll be the first to say Israel must stop the injustices in the West Bank, but for us to give up this strategic land would be like giving Yasser Arafat a nuclear bomb... very disastrous.

Non-IFC houses must be patient

Editor — Regarding the Jan. 24 article titled, "IFC under fire":

As a member of a local fraternity I am not completely aware of the situations which face national, but as a fraternity president I am aware of IFC's situation. There are valid reasons for waiting to get into IFC. IFC is a responsible body which must shoulder responsibilities for its member fraternity's acts. The non-IFC houses have all been in existence on this campus for years or less and have yet to show the level of responsibility expected of an IFC member. If they want to be in IFC, they must start by demonstrating appropriateness.

The suggested guidelines put forth to Delta Chi were completely ignored by them and they displayed open contempt for member houses and sent similar communications to national headquarters of IFC houses. In response to such actions, is it any wonder that Scott Miller feels an attitude of alienation?

Pi Kappa Alpha has stated that it was invited on campus for such a visitation that was given by IFC and in fact a letter was sent out asking nationals not to expand on this campus due to the already burgeoning proliferation of fraternities. For fear of competition, Delta Tau and other houses have always welcomed athletic events with non-IFC houses. The IFC's position in IFC showed that they could work well with other houses. The IFC expansion policy was not set up as an exclusive system; however, if new fraternities show how they handle responsibility and problems in a period of time. This is the most proven method of showing adaptability and if a house shows this, IFC will have no choice but to allow it in. Non-IFC houses be patient, you must prove your maturity and worth to the college and community and not just to yourselves.

Michael R. Warinner
President, Delta Tau

' Staying cool' doesn't cut it

Editor — The brothers of Pi Kappa Alpha do not wish to publicly argue the desire or intent of IFC to have the highest quality membership possible. Rather, the points made in Elizabeth Gillis' Jan. 24 article were intended to express our need and desire to have a written set of criteria and guidelines for entrance to IFC.

In the past, no such established regulations have been available and "staying cool" has led to a lack of a clear goal and set of objectives necessary for admittance which would permit non-IFC fraternities to know where they stand in the Greek community.

If the intent of the original article was misinterpreted, we hope this letter has helped to clarify our position.

WHEN TOP GRADUATES WANT A CAREER WITH THE TOP UNIX SYSTEM TEAM, THEY CHOOSE SCO.

The Santa Cruz Operation, Inc. (SCO) is the leading UNIX System company in the world today. SCO XENIX System V is the world’s most popular UNIX System. And our technical team is the best in the business.

If you’re ready to put your knowledge of the UNIX System to work for the leader, we’re ready to hear from you.

You’re invited to an Information Session hosted by members of the SCO technical staff, including a slide show and refreshments:

Thursday, February 9, 1989
6:00 – 8:00 p.m.
Staff Dining Hall, Room B

To discuss career opportunities at SCO, sign up at your Career Placement Office for an appointment with an SCO recruiter who will be at your campus from 8:30 a.m. to 4:45 p.m. on Friday, February 10.

We will be interviewing candidates for these positions:

- Software Engineer
- Software Support Analyst
- Programmer/Systems Analyst
- Technical Trainers

Qualifications:

- B.S./M.S. in Computer Science or equivalent
- Excellent communications skills

If you are unable to meet with us while we’re on campus, send your resume to:

College Relations
The Santa Cruz Operation, Inc.
400 Encinal Street
Santa Cruz, CA 95060
or call 800-626-UNIX (626-8649), Ext. 5600

An Equal Opportunity Employer
Poly athletes have higher academic goals
By Anthony M. Romero

While other sports programs adamantly protest the implementation of Proposition 42 requiring incoming student-athletes to have both a 2.0 GPA and a 700 SAT score, Cal Poly is indifferent. The university remains unaffected because admissions for student-athletes are above and beyond Prop. 42 requirements, Athletic Director Ken Walker said.

"Prop. 42 is a revision to Prop. 48," Walker said, "and our admissions requirements are higher than that.

Prop. 48, the old standard for admissions, required that a student-athlete have either a 2.0 GPA or a 700 on the SAT.

The average student-athlete entering Cal Poly last year had a high school GPA of 3.125 and an average SAT score of 959, Walker said.

Cal Poly and the California State Admissions standards are dictated by the high academic standards, Walker said, and therefore the athletes have to fall in line with these standards to get into Cal Poly.

"There are about 550 student-athletes at Cal Poly and there will be some who flunk out, but there will also be English students and math students (non-athletes) who don't make it here either," Walker said.

There is an unfounded "dumb jock," stereotype about athletes that exists at Cal Poly, Walker said. He believes it's because of a few student-athletes who seem to openly scorn an education. Because of these students, people think all athletes are just dumb jocks.

"Athletes here don't just major in football and basketball," Walker said. "They are real students with real majors.

Football coach Lyle Setenich said the proposition does not bear any light on recruiting at Cal Poly; although it might affect the competition. Setenich's players entering Cal Poly last year averaged a 3.068 high school GPA. The swim team averaged 3.57; the wrestling team, 3.05; volleyball, 3.37.

The 2 percent rule allows students to gain admission into Cal Poly without grades representative of the student body. Two percent of enrolled students who don't meet the admissions requirements for various reasons are allowed admission under the rule.

Walker said very few student-athletes are recruited under these conditions.

"It'd be more suspicious of a kid with low grades," Walker said.

The former philosophy department head added that coaches around the country argue the rule on the basis of discrimination when they could argue it from a better stance and avoid bringing other issues into the touchy topic.

"The NCAA doesn't have the right to tell a school how to spend its money," Walker said.
-DON'T BID US FAREWELL-

WASHINGTON — Intense interest in revamping and expanding college humanities requirements has translated into little success in the past five years, according to a study released Sunday.

The study, sponsored by the National Endowment for the Humanities, found that students are increasingly likely to have to take such courses in order to graduate, but it is possible to bypass many significant fields of knowledge en route to a degree.

General requirements in the humanities area jumped an average of 1.5 hours from 1983-84 to 1988-89 — a 6.2 percent increase, according to the study of course requirements at 496 colleges and universities.

Group claims responsibility for fire

DIXON, Calif. (AP) — An ecological extremist group has claimed responsibility for an early morning fire at a Dixon Livestock Auction on Sunday.

A Fire Department spokesman said the spokesman said that the fast-moving fire had not yet been ruled out as a case of arson.

The spokesman said that the fire started shortly after 2 a.m. and was still burning as of 3 a.m.

The spokesman said that the fire was described as a class A fire, which is the most severe type of fire.

The spokesman said that the cause of the fire is under investigation.

The spokesman said that the fire was burning in an area of the auction where livestock is kept.

The spokesman said that the auction is located in Dixon, a city of about 25,000 people, about 20 miles northeast of Sacramento.

The spokesman said that the auction is a major fixture in the Dixon community, and that the fire has caused significant damage.

The spokesman said that the auction is still operational, but that it may be closed for some time.

The spokesman said that the auction is owned by a local business.

The spokesman said that the business owner is cooperating with investigators.

The spokesman said that the business owner is providing assistance to the fire department.

The spokesman said that the fire is the latest in a series of fires that have occurred in the area.

The spokesman said that there have been at least three other fires in the area in recent weeks.

The spokesman said that the latest fire is not related to the other fires.

The spokesman said that the business owner is providing assistance to the fire department.

The spokesman said that the business owner is providing assistance to the fire department.

Mustangs Daily

This line of reasoning states that whatever permits given by the state or federal governments cannot be overruled by local residents. Distilled down, this would be an invasion of interstate commerce, Verleger said. This, in itself, he said, is a violation of federal law and state law.

Defense attorneys could not be reached before press time.
