UU office location changes met with dissatisfaction

By Cass Caulfield
Staff Writer

Not all groups are pleased with the location changes in the University Union proposed in the annual space allocation and review report (SAR). The ASI Program Board voiced its dissatisfaction about the changes and renovations in the Union Executive Committee (UEC) meeting Wednesday.

"202A alone is not an adequate space for Program Board," said Jonathan McNaul, Program Board's vice chair.

The space allocation and review report calls for location changes and renovations in the University Union in order to deal with critical space problems.

Program Board, Disabled Student Services and Recreational Sports will share the 202 office complex as soon as the ASI business office vacates the space.

The Program Board asked the student Board of Directors to consider three options regarding the 202 office complex. First, to table the report until a later date; second, to give Program Board both 202A and 202C; and third, to give the Program Board the Foundation cashiers office, which will be vacated in the future, said Pat McGuire, Program Board chairman.

The Operations Committee of the University Executive Committee has been working on the SAR for most of this year — when a final plan was finally proposed, all groups involved agreed that the spaces allocated to them would work, said Don Hofer, chair of the UEC's operations committee.

Hofer also said that the space to handle this situation was at the committee level and not at the Board of Directors.

"It's been difficult to figure out really what Program Board has wanted ... their opinion and needs changed from time to time," said Hofer.

Hofer also said he thought there was miscommunication between the Program Board representatives at the UEC meetings and the Program Board itself.

Concern was also expressed by the UEC and Board of Directors that SSI is a state-funded program and it is using space in a university student union.

"We are really encouraging Program Board to work with my committee and the management in building to resolve the issue," said Hofer.

We are really encouraging Program Board to work with my committee and the management in building to resolve the issue.

Campus group to try cold fusion venture

By Ron Crawford
Staff Writer

"Fusion in a jar? I don't even understand Junior in a Drum" — Jay Leno

A Cal Poly professor will lead a group of students in an attempt to recreate the controversial cold fusion experiment that has gripped the scientific community since its announcement last March.

Tomlinson Fort, professor of metallurgy and chemistry, said by as early as next week he and his students could have a preliminary check of their findings completed.

"We are really encouraging Program Board to work with my committee and the management in building to resolve the issue," said Hofer.

"We don't want to attempt anything until we understand what are doing," he said.

Fort explained that the experiment creators, Dr. Stanley Pons and Dr. Martin Fleischman from the University of Southhampton, have not released all of the details of the project.

"I believe they held back the information to protect their patents rights," he said. "Understand, their findings, if substantiated, could literally change the way we live. It would eliminate smog in Los Angeles for instance."

Fort will be assisted in the experiment by a group of four students: metallurgy and materials major Mark Richards; chemistry majors Dwayne Bell and Dave Sheelsly; and physics major Af

'Model' students work math problem for award

By Mark Ahlemeyer
Staff Writer

Cal Poly math students showed they are just as good as students from schools like Cal Tech and Washington University, after being awarded the highest honor this week at an annual meeting of a national science organization in Vancouver, British Columbia.

The awards were a result of nearly 96 hours of work by two Cal Poly teams on a single math modeling problem.

"A lot of people don't know what math modeling is," said team member Michael Kelleher. "Math modeling is taking any real-life phenomena and making a mathematical description out of it."

"For example, say you have two people in a spotlight. They're obviously going to move around a lot to get the right angle to spot at. With math modeling you try to find the optimum angle possible."

In the end, team members Kelleher, Scott Guth and Scott Langfeldt received a meritorious outstanding award for their model while the team of members Jay Austin, Walt Clark and Craig Nelson received a meritorious award.

There were four categories of awards for the contest sponsored by the Operations Research Society of America. In descending order, they were: meritorious; honorable mention; successful participation; and unsuccessful participation.

This year there were 17 meritorious teams and prefix of "outstanding" was added to only three papers. Cal Poly secured one of them. Cal Tech and Washington University were awarded the other two. All "outstanding" papers are published in the Undergraduate Mathematics Applications Project Journal. This year's team is the first from Cal Poly to be published.

"Over 300 teams started this year's contest," said Thomas O'Neil, team coordinator and math professor, and 212 solutions were submitted from 143 different schools.

The contest began in mid-February when packets were mailed to universities nationwide, including Harvard and MIT.

Each of the packets contained two problems, one of which the team choose to do. "You're not allowed to look at

Date rape is hidden in ‘beautiful’ SLO

By David J. Carlson

A young 18-year-old girl comes to Cal Poly. San Luis Obispo is such a beautiful town. Yes, this is how the posters and environmentalists often portray it. The force of his hands. She could barely walk, so he left her there. San Luis Obispo is such a beautiful town.

The walls of her vagina were torn and bloodied by the force of his hands. She could barely walk, so a woman brought her in. Her, San Luis Obispo is such a beautiful town.

Acquaintance rape is not a recently discovered crime. It has been going on for a long time. It is now only beginning to be treated with the concern it deserves. One might ask if it is just now coming to be reported by victims. No, it hasn’t. There have been upwards of 14 reported cases since September. There were several that were so raped.

It is not the force of his hands. She could barely walk, so a woman brought her in. San Luis Obispo is such a beautiful town.

For the parents of one told about this wonderful,

place just up the coast a couple hundred miles.

He was told of clean air, proximity to a beach, no

traffic and a highly regarded university. So they
decided to make the trek up to San Luis Obispo and

fell in love with it as soon as they got there.

They found nothing wrong with the town. San Luis Obispo is such a beautiful town.

So the parents left after the weekend, wishing

her quiet. The pristine little girl was growing up in

her quiet. The pristine little girl was growing up in

their daughter the best and planning a big party

for their baby to one of these places. What a culture

shock for their girl.

As they sat on the sofa, they began
to kiss. They felt so good in each
other’s arms. Soon it began to get a
little too intimate for the girl. She
told him to stop, but he wouldn’t
listen. Initially, he thought she was
kidding, but soon she was struggling
to get away. This was a com-
pletely different person than the one
she knew.

The power of be, whether they be the admin-
istration of this university or the city itself
may be actively attempting to hush up these
crimes. We have been led to believe that this is a
completely safe environment, and walking the
classroom and into our homes. Orientation
meetings during Week of Welcome do little good.

This was a completely different person than the one
she knew. Hair was pulled out and

clothing torn as he shoved a sock in her mouth to keep
her quiet. She knew.

Priority register for summer classes. For
continuing students. Imagine my

horror when I opened the sum-
mer catalog and found that
some for bizarre reason students
attending summer classes get
“CAPTUREd” in order of their registration priority. It seems that I get to share my long-
awaited first priority status with those who are fourth priority.

Two who are second and third priority register the next day,

after the Stalls uncomfortably refer to

the fact of our campus being that
good. How can you put your image and

your portfolio back before the welfare of the students

of this university? The University is here to
educa.

tion, everyone is supposed to get

a fair chance at getting those

courses. According to the administrations, students have had

so many innocent young girls

like the one from Orange County need to be

sensitively attacked simply because some bureau-

cracy wishes to protect itself. Does a girl need to

be killed before we allow the facts to be printed?

We, as students, residents and potential victims,
have the right to know the facts. We cannot allow

ourselves to hold the naive perception that rapes do not occur here because ... San Luis Obispo is such a beautiful town.

The studies went well. In fact, they finished
tool early than they expected, so they watched some

TV. As they sat on the sofa, they began to kiss.

They felt so good in each other’s arms, holding

each other. Soon it began to get a little too intimate for

the girl. She told him to stop, but he wouldn’t

listen. Initially, he thought she was
kidding, but soon she was struggling
to get away. This was a completely different person than the one

she knew. Hair was pulled out and

clothing torn as he shoved a sock in her mouth to keep

New CFA chief plans for growth

By Laura Daniels
Staff Writer

The California Faculty Association's president-elect told a group at Cal Poly Tuesday that he values CFA because it provides protection from an outside world that does not know CFA faculty and support for education.

President-elect Nichelson, professor and chair of religious studies at Cal State Northridge, will begin a 15-month term of office June 1. He was on campus for an informal question-and-answer session honoring Cal Poly authors.

During his first year in office, Nichelson plans to expand membership, start an aggressive campaign for quality education and enhance communication between the CFA and the campus.

"We must see an increased membership over the next two years," said Nichelson. He estimates present CFA membership should be more than 50 percent for tenured faculty, and he wants the number to reach 70 percent.

"We've also been very successful in recruiting new faculty," Nichelson said, adding CFA helps new faculty members in the review process and in negotiating contracts and salaries on their behalf.

The faculty should join CFA not only to support their profession but also to add to "the actual numbers given (CFA) strength," he added. This strength will improve CFA's bargaining position, he added.

Nichelson said the CFA Chancellor's Office knows when CFA's membership numbers change.

"They know when we are strong. I want CFA to be ready and enthusiastic for bargaining in 1991."

A campaign for quality education, said Nichelson, will help boost the moral of CFA faculty.

"We have to tell the story of the CSU to the legislature, community groups, (and) parent groups," Nichelson said because of the traditional second-tier status of the CSU (in comparison with the UC system), people are unaware of how vital the CSU is.

"I just feel that they (the Chancellor's Office) don't represent the CSU membership, or at least they don't listen to us, maybe they don't listen to us, maybe they don't represent us. Everyone knows that we have the talent campus."

Nichelson said because of the traditional second-tier status of the CSU (in comparison with the UC system), people are unaware of how vital the CSU system is. Nichelson said he believes this to be the fault of the CSU Chancellor's Office.

"I am devoted to CFA because it is a means for protecting and expressing values I cherish as a teacher and student: inquiry, competence, democracy process, diversity of personalities and freedom to be unique, eccentric selves as we act collectively," he said.

25 arrested at Fresno St. sit-in

FRESNO, Calif. (AP) — A two-day student sit-in involving a week's suspension of classes ended Wednesday night with 25 arrests at an office at Fresno State on Wednesday afternoon.

Fresno's liberal campus political party called United Students for Responsible Government said 25 people were arrested at 6:30 a.m. Wednesday in the office of the Student Senate, headed by Michel Kelleher, vice president of the Senate, and a member of the five-year-old campus labor union.

The Student Senate had scheduled a meeting on controversial campus bylaw changes. When police arrived students began to make arrests at 8 a.m. Wednesday, citing the students for unlawful assembly and for disrupting school activities on a campus, said Officer Brad Wodle.

Wodle said the office was cleared of all protestors.

Those arrested reportedly were reacting after being issued citations.

In the protest, the liberals accused the current conservative administration of sexism and racism for proposing changes which would dilute power of the two top elective positions which will be held next year by women, one of them Hispanic.

The current student body president, Scott Vick, vetoed the changes, but the liberals feared the Student Senate would override his veto. Vick was one of four officers whose resignations the protesters demanded.

An estimated 15 students remained in the Student Senate office overnight Tuesday even through the university's president, Harold Haak, had told them he would use his authority to reject the amendments if the Student Senate overrode the veto.

Hotel guests get loud wake-up call

LOS ANGELES (AP) — Guests at the Hyatt Whistle Hotel got an unusual wake-up call when about 50 hotel employees blew horns and whistles to protest lingering contract negotiations.

The employees, who staged their protest at 6:30 a.m. Wednesday, want a raise from $5 an hour to $7.75 an hour and time pay for working more than five days a week, said Miguel Contreras, director of the Hotel Restaurant Employees International Union.

Contreras said Hyatt wants employees to work 10 consecutive days without overtime pay.

"It takes a lot of stamina and perseverance just to turn something in," said O'Neil. "And to do as well as they have taken a lot of preliminary work on their part.

"(These pets) were just remarkable. And this isn't a math school at all. It just goes to show that we have the talent here on campus. It's just a matter of tapping into it."

The rules for the competition were chosen through MATH 371, the math modeling class on campus.

Metallurgical and materials engineering senior Mark Richards from Danville won a student research contest held at CSU Long Beach on May 7. Richards received $500 and a plaque for his project on the processing of superconducting ceramics. A team of 10 Cal Poly students was recently declared the winner of the Hoard’s Dairyman Cow Judging Contest, a mail-in event that involved 103 college and university teams and more than 67,000 students. The high individual in the senior division was Bob Dickey Jr., senior dairy science major from Exeter. Other high placers were senior biochemistry major Yang Yu, senior dairy science major David Zwart, senior ag management major Mike Macei, senior dairy science major Jonathan Merian, senior dairy science major Jon Tollenar, and senior dairy science major Dennis Regli. Dairy science freshman Sherry Fisher placed tenth in the junior division.

FUSION

From page 1

The students are really doing the work," Fort said. "They are scrumng the materials we'll need from various parts of the campus, as well as helping on the technical side."

Fort said the materials and specifically the money to acquire them will be the first obstacle in their effort.

"Cal Poly doesn't have the money of a Cal Tech or Stanford," he said. "What we do have is committed personnel."

Fort initially became interested in the subject when he attended a physics conference in Dallas where Dr. Pons spoke about his experiment.

"I got excited about the possibilities of trying the experiment here at Poly, but I admit I was a bit skeptical," he said. "It almost sounded too simple."

Upon returning, Fort discussed the idea of room temperature fusion with fellow physics and chemistry professors which fueled his excitement.

"I already had a piece of palladium (one of the two metals needed for the experiment) and I discovered we have heavy water on campus," he said.

Heavy water is composed of deuterium and oxygen (D20), as opposed to oxygen and hydrogen (H20).

In fusion, two atoms of deuterium join to form one atom of helium, a neutron and extra energy in the form of heat.

"If we can detect that the heat is being emitted from a chemical reaction then our experiment will have been successful," Fort said.

Adoption creates mix of special families

Kuuipo Burleigh thought her family was like any other. They shared the usual good times and sibling rivalries. Yet as she grew older, Kuuipo realized that people thought her family was different.

Kuuipo is the oldest of five children. There are the biological children of a Chinese-Hawaiian mother and Caucasian father, and two are adopted. Her brother Kimo is a black-Vietnamese, and her sister Kameron is a black-Korean. Kuuipo said her family was the subject of many double-takes.

“We’d go places and people would stare,” she said.

Her brother Kimo said when the family moved to Colorado, the children at the new school would not believe he and his older brother were actually from the same family.

“People wouldn’t believe that we were brothers,” he said.

Marin Kellerman, a Cal Poly chemistry professor, had a similar experience. He and his wife adopted two black children. When his daughter was three years old, she got lost in Sears. An elderly couple thought again and laughed.

Kellerman said they never thought twice about having a racially-mixed family.

“It wasn’t something I planned. I only wanted a baby that looked like us,” he said.

Michael Abler, a technician for the U.S. government agency, said they also shared the usual good times and a support group for people who adopt children from overseas.

Michael Abler said they try and introduce the children to their own culture. A kite from Korea and fan from Japan hang on the walls. Kameron and Ethan had Han Boks, traditional Korean costumes, and Bryce has a set of Japanese fish kites. Both Kameron and Ethan had Korean names when they arrived. The Ahlers retained these as their middle names. Their full names are Kameron Seong-cheol Abler and Ethan Kyung-ho Abler.

Adopting their children from overseas has caused one problem for the Ahlers: They have to study black leaders and movements for the United States.

“I wouldn’t trade it for anything,” Michael Abler said. “These are our kids.”

The Ahlers have adopted four children: Bryce, now 14, who is part Japanese, Lea, 11, who is Caucasian, and Kameron, 4, and Ethan, 1, who are both Korean. The Ahlers also run Open Homes Open Hearts, a support group for people who adopt children from overseas.

When the Ahlers first wanted to adopt in 1974, it was very hard to get infants. So they applied to adopt children from South and Central America. Then the local government agency came through with Bryce and Lea, and the Ahlers had to turn down the children from overseas.

Later, they grew more interested in pursuing their original path, especially when the local government agency began to stall them. They heard adopting children from Korea was faster, so they tried it and got both Kameron and Ethan.

Michael Abler said they try and introduce the children to their own culture. A kite from Korea and fan from Japan hang on the walls. Kameron and Ethan have Han Boks, traditional Korean costumes, and Bryce has a set of Japanese fish kites. Both Kameron and Ethan had Korean names when they arrived. The Ahlers retained these as their middle names. Their full names are Kameron Seong-cheol Abler and Ethan Kyung-ho Abler.

Adopting their children from overseas has caused one problem for the Ahlers: They have to study black leaders and movements for the United States.

“I wasn’t something I planned. I only wanted a baby that looked like us,” he said. 

He said bonding is easier with a baby, which is more dependent on the parents. He said it took a couple of years before he felt a father-child bonding with his youngest son.

Philip Bailey admitted that it was a novelty having a black baby at first, but “after you change a couple of diapers and it throws up on you ... it doesn’t matter what color they are.”

The Baileys said when they were first adopting children, there were many babies available. They said some prospective parents would even specify the color eyes and hair they wanted in a baby. People wanted a baby that looked like them. The Baileys, however, just wanted children.

They don’t think any problems have developed because of their interracial family. They said they never thought it would be different from raising their own children; they didn’t expect anything to be different.

In fact, they also forget that their children are adopted, and so does the community.

“Occasionally someone will say, ‘I keep forgetting.’” Philip Bailey said. The Baileys believe their children are essentially “white middle class,” because they have been raised that way.

However, they encourage their children to study black leaders and movements for school projects.

Philip Bailey said he has never seen any racial discrimination against his children. Kellerman said his family has never had any problems in the San Luis Obispo area either.

The Ahlers believe their children are essentially “white middle class,” because they have been raised that way.

However, they encourage their children to study black leaders and movements for school projects.

Philip Bailey said he has never seen any racial discrimination against his children. Kellerman said his family has never had any problems in the San Luis Obispo area either.

Rugby closes out season
By Scott Green
Sports Editor

Last weekend the Cal Poly rugby team completed their season in Monterey at the Pebble Beach Rugby Classic.

The Cal Poly team won two of five matches to finish 14th.

The Mustangs' first match of the weekend was against their alumni team from Occidental College, 7-4.

Sunday, the team lost to former national champions Old Mission Bay Athletic Club 18-3.

Tennis team heads to nationals
By Tracy C. Fowler
Sports Editor

The Cal Poly men's tennis team heads to the Division II nationals at Lake of the Ozarks, Missouri.

The Mustangs, ranked second in the nation, will take on teams such as the number-one seeded Hampton University of Virginia, and Rollins College of Florida.

Tennis is often seen as an individual competition, but the team has thrived this season on team utility and good coaching. Brendan Walsh, the history major and Pol's number-two singles player, explained, "We play as a team. No one gets singled out to pull the weight."

The team will compete in five singles and three doubles matches. Tim Presenilis and Walsh, Havrileiko, and Allman will fill the singles spots with Peter Killian serving as the alternate. The doubles teams are Presenilis and Havrileiko (ranked first in the nation), Walsh and Killian.

Softball begins regionals
By Michael J. Levy
Staff Writer

After using the Sacramento State Tournament last weekend as a tuneup, the Lady Mustangs begin playoff action Saturday in the north regionals at Cal State Northridge.

The Mustangs open the double-elimination tournament against Cal State Bakersfield, while Northridge will follow with a game against Cal State Dominguez Hills. Both winners will then play each other in the winners bracket. But because it is an NCAA regional, a team can lose the first game, and can still win the tournament by winning three straight. The winner of the regional then advances to the national tournament at Sacramento State beginning on May 31.

The Lady Mustangs are 5-2 on the year against Bakersfield, including a 6-3 loss last weekend that left the Mustangs in a tie for second place with tournament host Sacramento State. Overall, the Mustangs finished with a 3-14-1 record. They finished 4-5-1 in conference, coming in second behind Northridge.

As tournament as a whole, Beyer is optimistic of the Lady Mustangs chances if they play up to their capabilities.

"We need the same mental sharpness that we've had all year. If mentally we stay sharp, there's no reason why we shouldn't win regionals."

Weekend events:
Friday, Saturday
• CCAA Track & Field Championships at Cal Poly
• Women's Softball regionals at Sacramento State

Gorbachev to visit China
Asked to speak at Beijing University

BEIJING (AP) — Leaders of China's pro-democracy student movement announced Thursday they would invite Soviet President Mikhail S. Gorbachev to speak on political reform in his country when he arrives Monday. Protest leaders also said they were planning their own "welcoming ceremony" for the Soviet president, who will be the first Soviet leader to visit China in 30 years.

"We have not ruled out a demonstration to express our support for political reform," said one activist, who has helped lead seven marches since mid-April for democracy and a free press.

On Thursday night, students collected 1,200 signatures on an open invitation to Gorbachev. Organizers said they hoped most of the university's more than 10,000 students would sign by Saturday, when the invitation will be delivered to the Soviet Embassy in Beijing.

"We believe the Kremlin leader would come to the university. Gorbachev's trip is expected to mark a thaw in Soviet-Chinese relations, strained since Beijing challenged Moscow's right to dominate world communist movement three decades ago.

"We are doing this to express our interest in Gorbachev's reforms and of the peaceful reform in China," said the leader.

An Asian diplomat said Gorbachev had expressed interest in addressing the student body at Beijing University. But he said the Chinese government rejected the request and instead offered to allow the Soviet leader to walk through Tiananmen Square, shake hands and converse with passers-by.

"The Chinese are afraid that no matter what Gorbachev says he will feed the fires of the student movement," the diplomat said on condition of anonymity. At this point in time, they are afraid of Gorbachev's reforms and of the effect any speech by him could have on the students."

Students have been demonstrating for democracy and a free press in Beijing and elsewhere following the death of ousted Communist Party chief Hu Yaobang, a former reformer. Students who have formed an independent association have asked the government for dialogue and to recognize the organization as legal.

The government has called the organization illegal and said it would only conduct talks with the officially appointed student unions.

On Thursday, the government said it was still unable to answer the students request regarding dialogue but would have a reply in one week, students leaders said.

At Beijing University, students said Thursday night they wanted Gorbachev to speak at their university because they were interested in the Soviet reforms.
