Poly admissions turns away record number of applicants
Agriculture School becoming more impacted

By Laura Fleischer
Opinion Editor

Cal Poly received a record number of applicants for fall 1990, but it accepted 30 percent fewer students than usual in an effort to combat overenrollment during the 1989-90 school year, said Helen Linstrum, interim admissions officer.

In all, 14,990 students applied between Nov. 1 and Nov. 30. Of these, 4,000 students at all class levels, or about 27 percent of the total number of applicants, received acceptance letters in February, Linstrum said. A final enrollment of 2,700 new students next fall is anticipated by Admissions calculations.

"These expectations that we have each term are usually right on the money," and last year was no exception, Linstrum said. The overenrollment figures for 1989-90 can be explained, she said, by a greater than expected number of continuing students who left last June and returned in September.

Additionally, a trend seen in next fall's admissions is increased popularity of the School of Agriculture, which usually has been less impacted, Linstrum said. This year, applications received by the end of November for four majors (Agriculture, Food Science, Natural Resources Management and Nutritional Science) were considerably more than the number of spaces available.

Linstrum said it is true that students with 4.0 grade point averages have been turned away from Cal Poly, and she sees the university's situation as being unique from most other campuses in the California State University system.

"There are a few other campuses that may have an impacted program in one or two or three majors," Linstrum said, "but we are the only campus that has been consistently and almost across the board select their students from the November applicants." She said that Cal Poly, which has a 3.0 average for CSU applicants, "wouldn't. The same is true of the University of California system.

'\"There are a few other campuses that may have an impacted program in one or two or three majors,' Linstrum said, "but we are the only campus that has been consistently and almost across the board select their students from the November applicants.'"

City, university officials discuss housing problem, possible solution
Councilmembers call for additional on-campus dorms

By Marianne Bisotti
Staff Writer

The pace and beauty of the campus, is something that is desirable to many people, and some economic experts say the area is being crowded by an onslaught of Los Angeles residents.

But city officials point to students this quarter.

"We look at permits all day long," Campbell said. "We get pretty in tune with what they look like."

An official permit is made of a reflective material. This is very difficult to duplicate through photocopying or any other means.

Up to a dozen fraudulent permits are found per quarter, Campbell said. Those students caught are issued a $61 citation for no parking permit, unauthorized parking and misuse of permit. The car is towed (a maximum of $30) and the fraudulent parking permit is confiscated as evidence for See PERMITS, page 9

Maintain speaker committee

We commend ASI and the Administration for quickly responding to student demand for an outside speaker at June's commencement and for forming the joint ASI/Administration Commencement Speaker Selection Committee to find a willing participant.

We also feel, however, that the uproar that surfaced when President Warren J. Baker was announced as the main speaker for this year's graduation should never have had reason to occur in the first place.

The commencement committee and the Administration overestimated the agathy in this instance. And a quick response to criticism about not having an outside speaker is meaningless if the issue is allowed to be pushed to a back burner once this March is over.

The newly-formed speaker committee should become a permanent fixture that annually appoints ASI officers to the committee. It would improve many things on campus and would be annual involved in the selection process.

Additionally, this year's committee should compile a list of possible speakers who are interested in participating in commencement ceremonies for December 1990 and June 1991.

It's not too early to think ahead so future graduations can be planned more smoothly than this year's ceremony and will be received with less controversy.

Avoiding rape isn't a challenge

By Patty Mena

San Luis Obispo is a great little town. It's quaint, quiet and fairly easy-going. For students, it's natural to feel safe and secure here because we live among thousands of other college kids and friends. But I want to remind everyone not to let the SLO life blind you of reality. Bad things still happen here. I know.

One afternoon a couple weeks ago, I let a man into my apartment to use my phone. He said he was looking for a friend and apparently didn't appear suspect. I was aware of his presence in my apartment, never expecting that he was a convicted rapist on parole from the California Men's Colony. He looked like a young friend and his roommates. I was extremely lucky.

After he entered my apartment, I immediately screened the door and closed the front door behind him. I threw it open again and anxiously stood there as he punched a few numbers into the phone. He didn't talk to anyone, and he set the phone down gently and asked to use my bathroom.

For some reason, I was scared to say no. I sent him upstairs and then ran next door to get my roommate's boyfriend. After talking for a few minutes outside, he remembered my roommate was upstairs sleeping. He waited unsuspiciously in my room while I climbed the stairs to check on her.

That's when it happened. I don't know where he came from, but in a terrifying instant there was an arm around my torso and a frantic hand clutching at my face. I screamed before his hand got the chance to cover my mouth, but once it did, he threw me to the bedroom floor and pinned me there. Within a second, my friend was upstairs pulling him off me, and my roommate was now awake.

After a short chase, the man was caught by my friend and his roommates. I was extremely lucky. There are so many horrible "hundreds" that my sleeping roommate and I escaped. I still can't believe I can look at my apartment, in my bedroom — and in San Luis Obispo.

I suppose I feel the need to write this as a plea for women to always be aware. Now I realize that "aware" is a useless word. I was aware when I let the man in my apartment; I was aware of my entire four years here when I walked home alone after night classes. When I say aware, I mean meaningful as an instinct to act upon, not just as a general knowledge.

The bottom line is this: don't feel you have to walk fast to fight back with — shock. This doesn't go to say that women can't fight off an attacker; thank God many of them have. But don't consider your strength or wit as a reason why you will never be raped.

If you're uneasy about letting someone into your home, then don't do it. Even if he's going to walk away grumbling and thinking you're paranoid, you'll be the stronger for making your decision and refusing to be a victim.

Patty Mena is a junior majoring in English.

Letter to the Editor

Student applauds ethnic coverage

Editor — I want to thank Glenn Hom for his "Ethnic Perceptions," on March 7 (In-
sight).

I'm a Mexican who came to the United States 10 years ago. I didn't know what being different meant until I started fifth grade, and I didn't know how to speak English. Everyone avoided me, laughed at me and called me a "wet-
back." I always stayed quiet, knowing it was my best defense because I didn't speak the ver-

Back to top

bsoal language to defend myself. My first year was hell, but one art class opened up the door, and I had no more problems. The school I attended were composed mostly of Chicanos, blacks, Orientals and some whites. And soon I was able to pass as an or-

line student. I forgot what it meant to be different, and it wasn't until I came to Cal Poly that I had to remember again.

At Poly I'm definitely dif-

At Poly I'm definitely dif-

ering. In most of my classes I'm the only one with an accent. Many times I heard people talking and putting Hispanic accents to use my phone, and I had no more problems. The courage to stand up for them, knowing I was the only one of my kind at Poly.

I'm a member of the Latin American Student Association club on campus. This is a strong support for me. I know there are Hispanic students who feel like I do, and the club is bringing us together. We may be a minority, but we want to contribute to Cal Poly life.

Thank you for reporter Hom for giving us attention and to Mustang Daily for running arti-

cles that address the tribulations of minority students.

Knowing someone knows we're here boosts my morale.

Ramiro Nuñez

Third admissions route into Cal Poly pending approval

By Laura Daniels

If President Warren J. Baker approves a unanimously supported Academic Senate resolution, there soon may be a third admissions route into Cal Poly.

There is the high school diploma, which most students earned; there is the GED, which is accepted in place of a high school diploma with college-prep courses required; and soon, there may be the International Baccalaureate Program.

"The IB is better than a high school diploma," said professor Ray Terry, chair of the Academic Senate's instruction committee, because of the program's in-depth studies.

The IB is a comprehensive two-year program that takes the place of the last two years in high school. Students worldwide, including the United States, are annually tested in each of six subject areas in the curriculum. Students then receive a diploma or certificate(s) demonstrating participation in IBP.

The six subject areas (U.S. equivalents) are: English literature, modern foreign language, social studies, sciences, math and history. Election of art/design, music, computing studies, classical languages or one of the first four areas.

One of the most important reasons for the U.S. auto industry's decline is because it did not have a clear vision, said Balogh. Who is trying his new vision out on Spectra Physics in Mountain View, Calif. Balogh is plant manager for the 800-person plant.

Chrysler and other companies fell behind because they thought about short-term goals instead of long-term ones. In order to fix a problem, companies spent more money. "American management loves to fix things by spending money," said Balogh. "We want quick results regardless of the cost."

Doug DiFranco, a journalism senior, attended Brent International School in the Philippines during his junior and senior years in high school. DiFranco participated in the IBP his senior year and received certificates in geography, English literature and physics.

Because the program was not open to all students during his senior year, DiFranco took the program during his senior year only. "It's a really hectic program," DiFranco said. "It's not made for everyone."

He likened the exams to a finals week of nothing but SAT's. "It was hard, challenging and exhausting, but rewarding," said DiFranco.

Three or four courses must be offered at the Higher Level (a two-year course) with the others at the Subsidiary Level (a one-year course). The resolution states that university credit will be awarded only for classes at the Higher Level.

Along with successfully completing these six subjects, each IB Diploma candidate must write a research paper called the Extended Essay, participate in a community service project and see an IB film. Options include art/design, music, computing studies, classical languages or one of the first four areas.
From page 3 changes to U.S. industry is giving the worker more responsibility and more opportunity. “We have the most intelligent, brightest work force in the world,” said Balogh. “But we treat people poorly.”

U.S. businesses are giving ownership back to the laborers through profit sharing and other tactics in hopes of instilling pride in the work force. Lisa Climent is a 1985 Cal Poly graduate and manages the manufacturing engineering part of Spectra Physics.

“Some of our company’s best ideas come from the labor force,” said Climent. “They work with the products every day and they know the most about them. They seek perfection just like anyone else.”

In traditional U.S. manufacturing plants, the people stayed in one place and the products came to them. But now, through a program called Just In Time (JIT), workers rotate and work on different parts of the product to produce a top quality item. In 1981, the United States realized it had a fundamental problem in its industrial plants.

Richard Schonberger first introduced an idea that would turn the management pyramid upside down. What this did was allow workers more say in producing products. When workers had more say, they had more motivation and took pride in their performance.

Toyota Motor Company was a leader in this concept. “They could produce the same number of products with only half the people,” said Balogh, who has been in management for 16 years. “Our philosophy used to be, ‘we want it now’ but we realize that doesn’t always work.’”

Dr. K. Bala, a professor of industrial engineering at Cal Poly in San Luis Obispo, has a role in bringing the new management technique to the forefront in India that tested the JIT concept.

Crabb said the renewed popularity in agricultural majors at Cal Poly can be attributed primarily to a nationwide trend and reflects the agricultural economy in general, which experienced a slump in the mid-1980s. Since then, the agricultural sector of the economy has picked up, he said, and there are now more jobs than graduates. This has led to an increased interest for students with agricultural backgrounds to stay with agriculture.

Secondly, agriculture is recognized more and more as an applied science, he said, and people are moving into agricultural careers because of advances in biotechnology.

“In’s not all plows and cows,” Crabb said. Most graduates in agricultural majors are not working on farms, but instead are working in high-tech areas or international marketing. “The salaries and type of challenges they get are phenomenal,” he said.

A third explanation for the increased number of applicants for agricultural majors can be linked to a greater interest in environmental issues. Crabb said. “Becoming involved in agriculture is one way of becoming involved in an industry that is very dependent on environmental issues.”

Crabb said the possibility that the greater popularity of agricultural programs as a result of students applying with the hopes of transferring to another department seems unlikely because of actions taken by the School of Agriculture to decrease enrollment in agriculture majors.

From page 1 added to the procedure next year because they filled up this year, said Charles Crabb, associate dean of the School of Agriculture.

Non-impacted majors in the School of Agriculture do not require the supplemental questionnaire, he said, and accept the top one-third of high school graduates whose grade point averages, SAT scores and courses completed meet the minimum CSU and Cal Poly standards. SAT scores and courses completed meet the minimum CSU and Cal Poly standards.

Crabb said he feels the renewed popularity in agricultural majors at Cal Poly can be attributed primarily to a nationwide trend and reflects the agricultural economy in general, which experienced a slump in the mid-1980s. The Cal Poly baseball team got its offense on track this weekend, scoring 31 runs in two games against CSU Dominguez Hills. Unfortunately for the Mustangs, the Toros scored 31 runs of their own and the teams split the weekend series.

"The games were a series of ups and downs," said head coach Steve McFarland. "Both teams generated offense every inning."

McFarland used six pitchers in a 20-19 loss Friday night. The Mustangs got behind early, 13-2, and were forced to battle back. But after tying the score at 19-19 in the bottom of the eighth inning, the Toros forged ahead in the top of the ninth and held on at the end.

The Mustangs won Saturday's game, 12-11, in 11 innings. McFarland said originally again had to fight its way back into the contest. With the score tied at 11-11 in the bottom of the 11th, outfielder Drew Herron hit a one-out triple off the outfield wall. And when Jared Snyder beat out an infield single with two outs, Herron crossed the plate with the winning run.

The Mustangs are now 4-4 in the California Collegiate Athletic Association and 8-13 overall, a similar position to last year at this time. McFarland said the winner of the CCAA is going to be the team who plays well down the stretch. Last year the Mustangs pulled away at the end of conference play. But someone has to slow down UC Riverside, which is ahead of the pack at 7-2, McFarland said.

"We need to get some consistency in our pitching (to have a chance to win the CCAA)," McFarland said. He added that

See BASEBALL, page 6

We’ll see ‘Heels in Final 4

that elusive equation, can lift mediocre teams past perennial powerhouses.

So here goes. Before the regionals are set, here are the teams who will be in the final four.

The beast from the east, Georgetown will make it to the Final Four based on their all-around depth. The M&M towers of Mounting and Mumumbo will melt any thing in the middle and swat shots into the stands. But the guard play of Tillmon will provide senior leadership to the young towers in the middle.

John Thompson has been to several final games in the 85's, so he knows how to rally the troops. Despite lackluster performances in the Big East tournament, the Hoyas have the capability to beat any team on a given night. Look for foul trouble to hamper the Hoyas and other Big East teams in the early rounds after playing the regular season with six fouls instead of five. But if they make it past the first frantic level the Hoyas can adjust and progress.

There are numerous Big Eight contenders. From Kansas, Missouri and Oklahoma there are a number of teams from the heartland that can go all the way. But the nod goes to Oklahoma this time. Kansas and Missouri have had good seasons but they both have some apparent flaws going in.

Kansas pulled off some upsets early in the season, then rode a soft record the rest of the way. They have a good system and play well as a team but they lack the closer, the go-to guy. They may make it to the sweet six.

Consider Arizona. They have a good system and play well as a team. But they lack the closer, the go-to guy. They may make it to the sweet six.

Women's tennis loses to Cal Poly Pomona

By Glen Hom

The Lady Mustang tennis team's domination of the California Collegiate Athletic Association came to an abrupt end Saturday when Cal Poly Pomona, at home, defeated the Mustangs 6-3.

The match was the squad's first conference loss in 7 years. "They had homecourt advantage with a lot of people who were very vocal," coach Marty Reid said. "Pomona rode on positive emotions."

With the victory, the Broncos avenged their Feb. 24 loss to the Mustangs in San Luis Obispo.

The match was tight after singles play with the score tied at three.

Mustang Debbie Matano lost at No. 1 singles slot. Matano defeated Heron in their earlier confrontation, but this time around, Heron hit more moon balls to frustrate Matano and to allow her to make unforced errors.

But the Mustangs fell apart in doubles play, losing all three contests.

"They were more comfortable with the business for the rest of the season, save the national finals. Consequently, the two Cal Poly schools are looking, assuming the CCAA title, assuming both schools win the rest of their matches."

Matano and to allow her to make unforced errors.

The Mustangs are now 7-2 in overall standings and 3-1 in the conference.

"We were frustrated with our energy, and we let the fans get us," Reid said. 

"They (the Mustang team) had an easier time with Donna Ewing," she said. "We have to learn to lose and just move ahead."

Traicy Matano also saw the loss as a character builder. "It's better to lose now than at Nationals," Matano said.

The Mustangs are now 7-2 in overall standings and 3-1 in the conference.

By Jay Garner

Every year, the United States sends its 12 best male and female cross-country runners to the sports' ultimate race, the Olympics — The World Cross Country Championships. This year, two of the top 12 women are Cal Poly athletes. Jamie Park, a soft-spoken 18-year-old freshman in biological science, is an All-American in cross country. She finished third in the nation in the Division II nationals this year, leading the Mustangs to their 11th straight national title under coach Lance Harter. Janet Smith, a quick-to-laugh sophomore, is a graduate student in physical education, who came to Cal Poly to train with Harter. She was a 16-time All-American in track and cross country as an undergrad at North Carolina State and is a force in open distance running, recently winning the Redondo Beach Super Sunday 10,000 meter road race in 31:19.

Park and Smith earned the right to take to the world, some 60 different countries, in France after running at the U.S. trials in Seattle, Wash., on Feb. 10.

Park finished second in the junior division, for runners under 20 years of age; Smith placed second in the senior division. The top six in each division make the junior or senior race teams.

"That you can take the cream of the United States," Harter said, "and send one team of six of them from come San Luis Obispo that's terrific. We're real proud of that."

The world championships, to be held March 24, will be Park's first taste of elite international competition.

"It hasn't really hit me yet," Park said. "I want to get the uniform on and walk around with the uniform with USA on it."

Smith qualified for the world championships at the senior level in 1987 when it was held in Warsaw, Poland. Harter coached the women's team that year — the last U.S. team to win in the world championship. Smith placed 23rd in this world — finishing in the top 25 is considered an honor — to help the United States bear the banner from first place only to all over the world. The only one that was notably not there was the United States.

Park and Smith are used to competition before we ran the (1987) race, and one of our goals was "Where do you think you'll come in — top 100, top 75, top 50?" Smith said. "We're competing against some of the best athletes in the world. It's the ultimate competition."

"We can show off our depth in the longer races," Smith said. "To turn a corner, you've got to be a showdown between UCI and Poly athletes to run at world championships."

The vault was expected to give Poly its sweep of the triple jump. Poly took the lead, 1-2-3 finish in the discus, while Shanin Stevens easily won the female's lead relay of 4:26.15. Kristina Hand lowered the women's team, they had

Regardless of which standard was used, Cal Poly needed to score points where possible in order to be in contention for the team title. Things started off in typical Cinderella story-type fashion.

"It's a chance of a lifetime to be able to go," Park said. "Only a few people get to do it. I'm going to France, run for the U.S., and have it all paid for — it's great."

Men's Track

Mustangs barely lose to Gauchos

Arnetti, Toney lead pole vault sweep

By Eric Bellamy

Special to the Daily

The Cal Poly men's track and field team traveled to UC Santa Barbara on Saturday to take on Division I powers UCSB and UC Irvine. The meet was expected to be a showdown between UC and Cal Poly, but in the end, the Gauchos came out with a narrow half-point victory over the Mustangs, 1345-134. Irvine scored 125% to take third.

In a normal triangular meet, the top three in each individual event would score points, and the first-place team in each relay would also earn points. On Saturday, however, this was decided to use an international scoring measure where only the top two from each school could score in an event. Regardless of which regular triangular standard of scoring been in effect, Cal Poly would have won with 31 points, UCSB would have had 69% and Irvine would have had 62%.

Regardless of which standard was used, Cal Poly needed to score points wherever possible in order to be in contention for the team title. Things started off in typical Cinderella story-type fashion. UCSB used its strong weight event crew to put Cal Poly down 21-12 after the first two events. After a bad hand-off was fumbled by Pat McGurk in the 400-meter relay, title hopes for Cal Poly were sinking fast.

But then there was the pole vault. Pole vault is known for producing distance runners, and Saturday was the perfect day to show off its depth in the longer races.

Scott Peterson took command of the race from the start, leading a Mustang-dominated field through national qualifying splits before teammate Steve Neubahn took over the lead, never to look back. Neubahn, running in his first-ever pole vault championship, won in a time of 9:08.54, just missing an automatic berth to the Division II national championships. He did, however, make a provisional qualifying standard time, which is used to fill the field after the automatic berth qualifiers are set. Teammate James DeRosso shaved six seconds from his previous personal best time, placing second in a time of 9:25.65.

The pole vault is another area where Cal Poly seems to excell. The vault was expected to give Poly much needed points, but Neubahn's scoring in effect, only the top two from each school would score.

That didn't stop the Mustangs from competing, though. Steve Toney, Steve Williams, Todd Arnetti and Tony Castigliano swept the first four spots in the fields, with Arnetti and Toney becoming Poly's newest national champions. Steve Toney's previous attempt was 16'-6" to earn an automatic berth. Ben Holbach jumped 18'-4.5" to lead teammates Nathan Cotton and David Ramirez to a 1-2-3 sweep of the triple jump.

With the pole vault and the triple jump giving much needed points, Poly was able to make a 24-8 run on the Gauchos.

First-place finishers included in by Roger Chagnon in the 800 meters, Tom McGurk in the 400 meters and Griffin, holding a narrow lead over Irvine's second runner, got into a minor arm collision at the 200-meter mark. Griffin temporarily lost balance and then lost the baton. By the time he had found the baton, he had lost about 80 meters to both Irvine and UCSB. All the Mustangs could hope for was that Irvine could hold on for the win.

UCSB's anchor runner ran an outstanding anchor leg, holding off Irvine's runner, to steal the win from the Mustangs.

Neubahn was voted athlete of the meet by his teammates for his effort in the pole vault.

Cal Poly will not travel this weekend due to finals, but will return to action on March 24 to host Cal Poly Pomona and Division I Fresno State.

By Jay Garner

Women's Track

UC Irvine, UC SB

5 Mustangs qualify for nationals

The Cal Poly women's track team took on Division I powers UC Irvine and UCSB at a triangular meet Saturday, with five Mustang women qualifying for the Division II national championships.

Poly athletes won 11 of 17 events, including 1-4 sweeps in the 100 meter hurdles and the 800 meters.

"It's the most we've ever qualified for the nationals," Harter said. "When I look at this team, they were 1-2-3 finish in the 100s. Poly won the race in 9:33.99. Holback took second in 9:39.85, a personal best by over 15 seconds.

"I have no idea of what I'm doing," she said, "because now I'll know more of what I'm capable of."

Smith said she will finish in the top 20, who recently set a freshman record in the meter hurdles, won't have a specific goal for the junior race, but "I don't know how good the girls are from any of the other teams that's running. We're getting better each race, so I think I'm in as good a shape or better than anyone."

Harter said Park has a good chance to finish in the top 25. The World Cross Country Championships, while largely ignored in the United States, is a huge event in Europe.

"It's the most prestigious of competitions," Harter said. "When I went to Warsaw, Poland to coach the women's team, they had 60,000 spectators. They had 60,000 people. It's really an outstanding, huge event in Europe.

"It's a chance of a lifetime to be able to go," Park said. "Only a few people get to do it. I'm going to France, run for the U.S., and have it all paid for — it's great."

Jamie Park (left) and Janet Smith stretch out in preparation for a workout.

From page 8

nation and... he is to obey all
laws," Chidlaw said. "This per­
son is also sentenced to at least
two days in the county jail.
For a second offense, a $1,200
fine is imposed, a sentence of 10
to 20 days in jail is given and a
year-long alcohol program pro­
hibition period is mandatory.
For a third offense, a $1,200
fine is imposed, a sentence of 120
days in jail is given and probably
repeat of the alcohol program is
given.
"I think we've really tried a lot
of things," Chidlaw said.
Another question asked to the
panel was "Why does it take so
long to judge an appeals case?"
Superior Court Judge Harry
Woolpert gave a simple answer
of "It isn't a long time. It is in a
death penalty case, and in others,
it's not."
"How can minorities and
women become a judge" was also
asked.
Superior Court Judge Barry
Hammer said that "it should be
the same way white middle class
males become a judge."
He said he does not really
think that is the case now, but
"we're moving in that direction."
Other members of the panel
included: Judges William Fred­
man, Christopher G. Money and
Commissioner Carol Allen of the
Superior Courts; Judges James
D. Ream, Harold Johnson,
Michael Duffy and Commissioner
Sidney B. Findley of the
Municipal Court; and Judge
Wickson Woolpert (ret.) of the
Court of Appeals.
"You don't hear about our
judges getting stage fright. You
don't hear about our judges tak­
ing long lunches.
"And you don't hear about our
judges being discourteous to
people," Umhofer said.
"The community I think
should be pleased and proud to
have the quality of justice that
they have."
"This county is fortunate to
have both an experienced and
ergetic bench," Conklin said.

PERMITS

From page 1

criminal prosecution.
"So already we're talking $60
plus $30 for a permit that would
have cost them the $36 (per
quarter), Campbell said.

The students at Cal Poly are
highly motivated, intelligent
people, Berrett said. "I think
sometimes they see a flaw in the
system," he said. "Some of them
take it on as a challenge." Some
simply can't afford the permit.
"It's a way of beating the
system," he said.

Berrett says it's a game of
cause and effect. "You want to
do something," he said. "You go
out and do this. You falsify your
driver's license, your dorm pass,
the light card for the tennis
courts or your parking permit."
The effect of that is the possi­

a philosophy and critical thinking
class not graded by examina-
tion, but by the instructor.

The grade scale is a one
(very poor) through four
(most satisfactory) to seven
(excellent). If the student's total
score is 24 or more and does
not contain any failed course
time, 28 or more with only
one failed course, that student
is awarded the IB Diploma.

For each exam score of five
or higher, a maximum of eight
units of elective credit may be
awarded. Also, students may
receive course-specific credit
with the approval of the
department if the course fulfills
a course offered in the Cal
Poly catalog.

There are 122 high schools in
the country that offer
the IBP, of which California
has 24, which is the highest
in the nation.

"It's possible someone with
an IB Diploma could enter as
a sophomore because of an ac-
demic placement," said Terry.

Although the California State
University system's senate decided in 1986 to en-
mbrace all students who have
accepted the IB as an admis-
sions factor, course credit and
advanced placement, Cal
Poly is just starting to address
the issue.

Terry said he believes this will
have minimal effects due to the
campus, since California
residents are given top admis-
sions priority, and foreign
students still constitute the ma-

**CENSUS**

**From page 3**

San Luis Obispo, not at their
permanent homes.

Residents are obligated by law
to complete the forms, Dengler
said. There is, however, no way
to determine if the questions
are answered truthfully.

"The 1990 census will have two
forms," Dengler said. "There will
be a short form with questions
numbering about 14 plus multi-
ple parts), and the long form
will be released with questions
including multiples parts." To
be released with questions
including multiples parts.

One of every six households
will receive a long form. The short
forms contain questions
regarding race, age, marital
status and whether you rent or
own your home. The long form
will, in addition, ask more per-
sonal questions about ancestry,
employment, education and in-
come.

For reasons of confidentiality,
"none of the (personal) informa-
tion will be about 59.72
years," Dengler said. "It doesn't
mean that the roll-up of the in-
formation will be available to
us, but the individual questions
will be.

"The Census Bureau wants the
answers to create statistics," she
said. These statistics will be used
to determine the sums of state
money employed for cer-
tain counties based on popula-

census."

**HOUSING**

**From page 1**

Gerard pointed out, even
though it has half the population
of some CSU campuses, Cal Poly
houses about 2,800 students, or
18 percent of its student body,
while San Diego State has the
largest figure with 9 percent of
its student body.

"At the moment, we believe
there is adequate housing for
those students who like to live on

"There is not a shortage of
housing in the community," he
said, because apartment com-
plexes still report vacated

And Gerard said Cal Poly
single family homes, which are in
great demand, have become the
most popular living environment
for students, which eases the other

He attributed this factor to a
housing ordinance that failed
almost 10 years ago which
allowed no more than three
unrelated persons in one house.

An ordinance which passed last
fall allows no more than five
adults in one house without a

"Since this ordinance was
struck down by the courts
(10 years ago), there has been an
inexorable increase of students to
move to R—R (residential neigh-
borhoods)," Gerard said.

And Gerard said the student body
is largely made up of students from
an upper middle-class
background, more of them want
to live in houses like the en-
vironments in which they grew
up, he said.

City Planner Dave Moran said
the city is working closely with
the university to provide more

"There is a shortage of housing
in the community by several
hundred dwellings," Moran said.

He said more students are liv-
ing in residential housing
than four years ago when he
began working for city planning.

"HEY, DO YOU GUYS FEEL LIKE WE'RE BEING WATCHED?"

"It has become popular to
criticize Cal Poly," Bostrom said,
"and I think that's because there
are more landlords trying to turn
a profit, said Bostrom.

Whereas a family might be
able to pay $600 a month rent for
a two-bedroom house, students
can pay $100 per month rent by
living off-campus with four
families. Couples cannot
competition with that," Pinard
said. A local computer rental service, says a

"Homes that were designed for
student living would make more
houses available and affordable," Moran
said.

He declined to give a number
of students the city might like
to see living on campus, and said
only that any amount of new
housing would help the housing

Councilmember Penny Rappa
said Cal Poly didn't hesitate to offer the
number of students she would
like to see living on campus.

"Hopefully it (more on-campus
housing) will make more houses
available and affordable," Moran
said.

"There should be more student
housing on campus," Pinard said
because it is difficult for the dif-
ferent lifestyles of students and
residential neighborhoods to mix.

Dave Conner, chairperson of
Residents for Quality
Neighborhoods — the group
which initiated the housing ordi-
nance — said the main problem
was students in residential areas
begging for permits.

"Homes that are designed for
traditional families now are being
used by six to nine kids," Conner
said.

This creates parking problems,
and unsafe and unhealthy fire
hazards within the houses, she
said. One reason for the housing
ordinance was to get landlords to
commence fire prevention
regulations.

"You can't overcrowd and ex-
pect the same property
maintenance and preservation of
the neighborhoods," Conner said.

People are moving in and out all
the time. The noise ordinance and
the housing ordinance are recent
results of these conflicts.

Rappa agreed with Moran and
said students living in residential
houses increases the market
price of rent, displacing more

"Landlords determine how
many people can live in a house,
then they determine the rent," he
said. Pinard said.

The past 10 years have been
the first big inflationary period
for housing, said Pinard, there are
more landlords trying to turn a profit, said Bostrom.

Whereas a family might be
able to pay $600 a month rent for
a two-bedroom house, students
can pay $100 per month rent by
living off-campus with four

"City Council is now con-sid-
tering 35 percent water racion-
ing by August and 50 percent

Housing Director Bob Bostrom
said it really doesn't matter
whose water students are using,
"It is all the same water that
comes from Whatcom
Rock Reservoir. That water is
upstream from the city, the
water that is supplied with safety
regulations," Bostrom said.

"People are paying more for water
up there than we are using," said
Bostrom.

Housing force behind the city's
push for more on-

The City Council is now con-
sidering 35 percent water racion-
ing by August and 50 percent
racioning by the end of the

"We're not saying they (stu-
dents) don't contribute to the
community," said Pinard. "We
just don't have that water to
give them."
The program, which was started in December, 1988, helps alcoholics and their families recover by getting alcohol out of the patients' system. This detoxification must take place before any other treatment can begin. After detox has occurred, which takes an average of 15 to 20 days, the patient can become coherent and begin to participate in Alcoholics Anonymous or other treatment program or begin residential treatment if they have health insurance.

Hansen, who is also Senior Coordinator of the home detox program, said that two registered nurses who administer the in-home treatment, said once the patient is sober, or she can begin real treatment for the disease. "Alcoholism is a disease of denial. The secret to recovery is peer support which is given by A.A. and other groups."

The patient must meet three requirements in order to be eligible for treatment. They must have a place to stay for at least three months, have someone to stay with them, and must be at least 18 years old. An average of four alcoholics are treated each month.

"We see at least 50 people a month who come to us and are indigent for detox because they have medical problems or don't have anywhere to stay with them," said Hansen. "But we try very hard to help them without giving them away."

The key to the program's success is that initial recovery phase involves family participation. "Trying to search the help and check lists of things to look for because the patient is usually very forgetful," Hansen said.

Things that the family might look at during the detox period are rapid pulse rates and other signs of alcohol withdrawal.

The family is also made aware of things to look for to themselves to minimize the impact of drinking and making excuses for the alcoholics.
It's like getting paid to go to school.

Backpacks and frisbees abound. Challenge is in the air. Heated debates erupt from passionate beliefs.

Surprise! It's Microsoft. The premier software corporation in the world has more the feel of a college than a multinational corporation. Intellectual energy. Eclectic decor and dress. All on a modern, wooded campus in the Eastern hills above Seattle.

Microsoft is better than college, however. You get your own room — a private office with a door. You have access to the latest microcomputer technology, as well as the brains that helped create it.

So now you don't have to give up the fun and excitement of college in order to make it in the "real world". All you have to do is join Microsoft.

Software Design Engineer

As a Software Design Engineer, you will design, develop, and implement applications and systems software for microcomputers. Your projects can include workgroup applications, sophisticated graphical interfaces, operating systems, tools, powerful personal and business applications, and multimedia.

Program Manager

Actually, "Technical Catalyst" would be more accurate. Because we believe engineers are the best people to envision and design product features. To create the user and programmer interfaces. To write the specs, and drive them through to release.

If you'd like to impact the agenda for the future of Microsoft products, bring your impressive technical skills and unique ability to make things happen to Microsoft.

Ready for some real fun?

If you are about to graduate with a Bachelor's, Master's or PhD degree in Computer Science, Electrical Engineering, Math, Physics, or related technical degree, then we want to talk to you. Tell us about your microcomputer programming experience, design skills, and/or exposure to managing projects.

Please send your resume to: MICROSOFT CORPORATION, Dept. CWSDE-CPSLO, One Microsoft Way, Redmond, WA 98052-6399.
