Calif. chief justice applauds SLO court for delay reductions

By Patty Hayes

California's top judge honored the San Luis Obispo County Municipal Court Friday night for its unprecedented efforts in trial court delay reduction.

Malcolm Lucas, chief justice of the state Supreme Court, congratulated the court and the Bar Association for reducing the huge backlog of civil and criminal cases that existed prior to the adoption of delay reduction standards in early 1988.

"Efforts of the San Luis Obispo County Municipal Court to reduce delays have had a beneficial effect on every participant and user of the court," Lucas said.

New Children's Center planned

Funding proposal based on fees initiative

By Moorea Warren

Now that the student body has already approved a 50-cent increase in the $1 fee increase for child care, the wheels have started turning to build the new Children's Center.

Since the increase's passage, the center can now prove that the debt for the new center will be paid off in 10 years. Prior to the passage, the proof was not there, said Liz Regan, center coordinator.

A funding proposal has been put together and is currently being reviewed by Hazel Scott, vice president of Student Affairs, and Alan Yang, associate vice president.

The proposal projects 11 years to build the new facility, which is based on modular buildings with a construction cost of $800,000, Yang said.

Currently, the center is licensed to care for 72 children per hour; if the proposal is approved, the licensed number will increase to 132, Regan said.

This increase will mean the center will be able to serve about 150 campus families, Regan said. Community families have never been served by the center.

Once Scott and Yang are finished reviewing the proposal, a recommendation will be made to President Warren Baker, Yang said.

If the president approves the proposal, the next step will involve the CBU Chancellor's Office.

"The Chancellor's Office has to see FOUNDATION, page 6

What a relief...

Projects aid underrepresented groups

By Tina M. Ramos

Contrary to the popular belief that unqualified minority students get accepted to universities, there are several Cal Poly outreach programs designed to develop underrepresented students into qualified, potential Cal Poly students.

The oldest of the outreach programs is the seven-year-old Upward Bound. It is a federally funded program sponsored by Student Academic Services and it is designed to identify and recruit selected participants with potential who are underrepresented and from low-income families. Student Academic Services is Cal Poly's department for educational equity programing within the university.

"The program recruits students in grades eight to 11 and works with them until they graduate from high school and are accepted into either a community college or university," said Andrea Mitchell, Upward Bound coordinator.

Upward Bound has eight different programs. The Summer Residential Program consists of 60 students living in Trinity residence hall for four to six weeks. While in the program, students take at least five hours of college prep math and English daily in addition to 1½ hours of Macintosh labs, science, mechanical drawing, and agriculture.

Near the end of the program, the participants go on an overnight camping trip and have an awards night in Chumash Auditorium.

The Tutoring program provides after-school counseling four days a week at Arroyo Grande High School and McKenzie Intermediate School. There are weekly lunch meetings that focus on college and career advisement, financial aid, and student leadership development. These meetings are held at Righetti High School and Arroyo Grande High School.

College and field trips such as the Achievement Team Con.

A tale of different cities

A television producer and I were conversing casually before sitting down for a university lunch for 300 guests in New York City. We were lamenting the appalling state of race relations in America's largest city. That day, the New York tabloids bore more screaming headlines of warfare between African-Americans and Asian-Americans in Flushing and the latest developments in the fatal black-white Armageddon in the south.

Mayer David Daniels had just made his second plea in as many days for racial harmony in his city of 150,000 people. The pessimists were already forecasting "a long, hot summer" on the radio.

"You know," the television producer was saying as he sipped his mineral water, "I was thinking of maybe doing a story on the cities. I was thinking of maybe doing them in your city, Oakland. What do you think of that idea?"

I stood speechless for a good long time. Given the murder and mayhem looming large in the Bay Area, I asked, what would make him choose Oakland as the metaphor for inter racial tension?"

We have our share of tension, poverty, and drug violence. So does New York and every other major city.

Well, be said, "I just assumed Oakland was experiencing the same problems as New York because you have some of the same racial groups that exist in New York."

I said, "That doesn't tell the full story, does it? Let me try to set the record straight before it ever begins. Tension and racial violence do exist in Oakland, as they do in some extent in every multiracial city. There, I said, the differences between Oakland (population 380,000) and New York City (population 8 million) cease.

As a native of New York and a resident of Oakland, I thought I might be in an unusual position to understand what was similar about the two cities and what might be quite different. Those similarities and differences, I believed, might escape an East Coast-based TV producer.

The similarities are that both cities have large multiracial populations and visible pockets of poverty, especially in the communities of color. New York and Oakland share those characteristics with hundreds of other cities. The differences, I tried to tell the producer, have to do with Western cities vs. Eastern cities. The principal difference, I argued, is that New York City has a smaller population. New York is more than 350 years old. Oakland is half that old, as are most cities in the west.

The age of respective cities has much to do with tradition and policy, history and social patterns. One of the reasons my wife and I moved to Oakland was the tradition-bound East was in part to escape a phrase: "That is the way we have always done it."

I hope not. The editorial, however, does bring to our attention an inter-

The lessor of two evils

In the upcoming June election, there will be a choice that no one will want to make.

The choice is between the growth management initiatives, Measure A and Measure B.

As if you didn't know, Measure A (Fair Share) dictates that the unincorporated areas of San Luis Obispo County would grow at the same per capita rate as the state population, provided we have the resources to accommodate it. Measure B (Countywide SLO Growth) states that growth in unincorporated areas would proceed at a steady rate between 1.5 and 3 percent, depending on increases in housing units built in the cities within the county.

Both initiatives also touch on the issues of water and air quality, affordable housing, conserving agricultural land and preserving open space, although they take different approaches to almost each issue.

It seems like some critical issues are finally being proactively addressed, and solutions to some of this county's pertinent problems are around the corner.

However, after looking at each initiative carefully and listening to proponents from both sides, the reality is that either initiative will...
Poly architecture senior's paper on solar lighting wins $2,500

By Alex Main

A Cal Poly student has been awarded the $2,500 Robert W. Thunen Award for technical lighting. Architecture senior Linda Brandt is one of three West Coast university and college students to win the scholarship provided by the Illuminating Engineering Society of North America.

Brandt won the scholarship by submitting a one-page paper and three letters of recommendation. Her paper stemmed from a concern for conservation and her love for things in their natural state.

"I hate all the artificial lighting at Cal Poly," said Brandt. "I'd like to integrate natural lighting along with other lighting in the buildings." Her ideas involve the use of sunlight as the primary source of illumination.

Brandt's goal is to become a master builder, one who does all the design and construction. This way, she can follow the building process all the way through. "We're running out of energy resources," she said. Brandt emphasized her discontent with the mechanical element in buildings. Particularly the fact that many mechanical devices in the home are loud and unneeded.

She even finds disgust in her own apartment at Carhill in San Luis Obispo. "It's so dark in here," said Brandt.

Her answer is solar. It is obvious that she believes there can be a way to use sun energy to conserve resources. "I'm working on a solar lighting project around the country ..." she said.

assistants of district attorneys and public defenders as well.

Target dates are given to each case as it enters the court. Weekly updates on each case must be completed so that the case can be tracked via a new computer system.

The program requires cooperation of bench and bar," Lucas said.

"It benefits the citizens the most," he said. "The result is speedier justice, without detracting from fairness or efficient case management and with no lessening of quality.

Lucas told the approximately 150-member audience of judges and lawyers at the Cliffs Hotel in Shell Beach, that other municipal courts in the state are slowly but surely following San Luis Obispo's lead.

"The greatest disappointment is that more courts have not followed your suit," Lucas said. "But they are beginning to."

He cited a delay reduction in Los Angeles as one example. He said that 25 Superior Court judges have used a similar program to reduce a five-year trial scheduling backlog to only three years. They expect to reduce it to only 30 months within the next year, he said.

Lucas said the delay reduction program will not solve all of the courts' overcrowding problems and that more trial judges will be needed.

"Overcrowding will still occur in some cases," he said. "But at least when we go to the legislature now, we can say, quite accurately, that our judges are working up to the maximum."

Lucas gave his appreciation to the local judges, especially to Presiding Judge Donald Umbarger. Umbarger was a key figure in bringing the delay reduction program to San Luis Obispo.

Umhofer said he was pleased to see that "the kicking and screaming that we heard from the lawyers when the program was introduced has subsided."

Lucas, a former law partner of Gov. George Deukmejian and presiding judge of his conservative Supreme Court, refused to address issues other than delay reduction.

Following Lucas' keynote speech, awards were presented to several SLO Bar Association members for their pro bono (non-profit) work.

less sacred. Change generally is more socially acceptable in the West. Thus the settlement and acceptance of new peoples in the West goes more smoothly than in the East.

There has been violence involving new settlers and old settlers, I told him — small potatoes next to the Big Apple's escapades. African-Americans and Asian- and Hispanic-Americans have had their brawls in school and on the streets of Oakland and other Western cities. The difference is how those situations have been handled by the police and other civil authorities. Dialogue and attempts at social reconciliation have been the rule rather than the exception.

This has included the news media, which generally have attempted to help advance understanding. Television and the tabloids in New York appear to take the attitude of "Let's you and him fight."

The television producer agreed with that last observation. Ethnic warfare in the East has become a blood sport in which the news media seem to play the role of an instigator, not of occasional instigator.

If he comes to the West, the television producer agreed, his story might not be about how the Oakland and New York City, but how each community deals with the differences within its borders. That, we agreed, would be a more accurate story. We'll see.

Can you do windows?

And doors? Showers? And snack bars? At Robert H. Lee & Associates, Inc., you'll get to work on all aspects of projects from start to finish. You won't be pigeonholed into one small element of design.

It's that kind of thing that's made us one of the top architectural firms in retail facilities for 24 years. And why we need more top talent to build on our success. You'll have the opportunity to meet in person at the:

An equal opportunity employer.

Cal Poly Wheelman Todd Hoefer (rear, left) took fourth place in a road race at University of California at Santa Cruz. He is ranked sixth in the nation in overall points.

Wheelmen fourth at nationals; Colorado rides away with title

By Bill E. Ridge
Spacial to the Daily

The top five men and women of the Cal Poly Wheelmen competed in the 1990 U.S. Collegiate Road Cycling Championships held this weekend at Stanford University.

Riders from 40 schools, coming from as far away as Maine, competed in the championship road race, time trial and criterium. The Wheelmen finished fourth overall and placed second in the men's team time trial.

The weekend was dominated by the impressive women's team from the University of Colorado at Boulder. The team dominated its 10-lap, 30-mile road race, with more than 400 feet of climbing per lap. The Colorado team swept the top three positions with national team member Julie Fertado placing first. The only Poly rider to finish was Chris Smith, but problems with her bike during the final laps of the race kept her out of the points.

Three laps into the 20-lap men's road race, Anthony Miller from the University of Arizona, who recently won a stage of the Tour de Trump, took off on a solo breakaway, trying to repeat his effort that won last year's road race in Colorado.

Miller stayed a few hundred yards ahead of the field for four laps, but was caught on the first of the race's six prime laps. Poly's Eddie Salgado fought his way through the pack to capture the Wheelmen's first points of the weekend by placing fifth in the prime.

The Mustangs' Todd Hoefer won the next prime and stayed in the lead pack until the final lap when he attempted a breakaway. He was finally caught in the last half-mile climb to the finish by three riders, including UC Santa Barbara's Trevor Thorpe, who won the race. Hoefer finished...
**WHEELEN**

From page 5.

In the championship team time trial, Cal Poly's women's team of Smith, Janie Kesselring, Mimie Smith, and Janie Kesselring had a perfect start and looked like one rider as they sped away from the start/finish line.

Thirty-two minutes, eight seconds later, they had posted the fastest time of the race. The team stood together and watched as the UCSB team finished just after them — six seconds faster.

Unreasonable rain woke the women as they prepared for the criterium Sunday morning. Unlike her teammates, Smith avoided trouble and remained in the lead group of riders for the entire race. With 11 laps to go, Smith chased down Fertado and a rider from the University of Arizona, but she drifted back one lap later as Fertado took off on a solo breakaway that helped her run away with the women's individual championship. Smith recovered to finish 11th.

Going into the men's criterium, UCSB's Thorpe was leading the individuals competition by just one point more than Hoefer and six more than Cal's Jacob Hacker. Since the University of Colorado had already locked up the overall national championship, the three teams dedicated themselves to helping their top rider win.

Hoefer stayed near the front for most of the race but was being shut out of all of the prime laps points. Hacker had won in three primes and moved into the overall lead 45 laps into the race. But with 12 laps to go, a group of riders, none of whom were from Cal, UCSB or Poly, opened up a 1.5-second lead. The race was won by a rider from George Mason University, but all eyes were on the field sprint to see who would be the individual champion.

Thorpe won the sprint to finish 12th, but Hacker, a member of the 1988 U.S. Junior National team, finished right behind him in 13th, winning the individual title by two points.

Shut out of the primes, Hoefer finished sixth overall andrazier was 15th. Smith finished 15th overall in the women's division. In the final points standings, the University of Colorado won with a record 715 points, UC Berkeley finished second with 378, the University of Arizona third with 319 and Cal Poly placed fourth with 297 points.

**FOUNDATION**

From page 1. calculated, they (the Foundation) set aside reserves over the years," Griffin said. "When it is time for the new building to be constructed, there are funds available."

The reserves accumulate and then earn interest, he said. The state cannot, by policy, appropriate funds to revise Foundation buildings. That is why there is a need for the plant fund, which provides revisions. Every spring President Warren Baker asks the board to allocate about $500,000 for the University Services Program, $150,000 of which is committed to the athletic scholarship program. This year is the last of a five-year commitment, but West said he sees a new agreement in the near future.

"I fully anticipate some type of agreement over the next several months, at the request of the university president," he said.

**ENTRY-LEVEL OR EXPERIENCED, FIND YOUR PLACE WITH A LEADER.**

In the healthcare industry, the Fortune 75 Baxter Healthcare Corporation has global recognition and influence. Today our Glendalebased Hyland Division seeks enterprising individuals to move our operations forward in key positions.

**BUT FIRST, JOIN US AT THE SPRINGBOARD JOB FAIR**

For East expert to give lecture

A professor of the U.S. Naval Post Graduate School in Monterey will speak today at 11 a.m. in Dexter Room 227. Edward Olson will discuss "The Changing Security Environment in the Far East" as part of the Pacific Rim Speaker Series. He is a specialist on Soviet interests in the Far East and on Korean political activism.

Rutgers dean last in speaker series

The president of the Modern Language Association will examine "On Being a Cultural Democrat: A Republican of Letters." Thursday at 11 a.m. in Room 220. Catherine Stimpson is the final speaker in the 1989-90 Arts and Humanities Lecture Series. She is dean of the graduate school at Rutgers, the state university of New Jersey. Stimpson will outline the principles of a cultural democracy in the late 20th Century.

RPI professor to discuss technology

A lecture series entitled "Technology and Ethics" will feature a Rensselaer Polytechnic Institute professor as its final speaker Thursday at 7:30 p.m. in the Cal Poly Theatre. Langdon Winner, a San Luis Obispo native, is a political science professor at the New York institute. He will discuss "The Technology Race and Political Culture."

Diablo Canyon committee meets

The Safety Committee for Diablo Canyon will hold its first public meeting, an all-day session today beginning at 8:30 a.m. at the Grange Hall, 2880 Broad St. Appointed by the state of California, the committee encourages public comments and questions at morning, afternoon or evening sessions. Contact Rochelle Becker at 773-3881 for details.

Nurse to discuss kids, self-esteem

A pediatric nurse will discuss "Promoting Self-Esteem in the Boy and Young Child" tonight from 7 to 9 in the Sierra Vista Hospital auditorium. Andrea Herron specializes in parenting education. Her program is free, but reservations are suggested. For more info, call Dee Rowlee at 528-4535.

BBQ to benefit recovery home

A benefit barbecue for a women's alcohol recovery home will be Saturday, May 26 from noon to 4 p.m. at Cuesta Park in San Luis Obispo. All proceeds go to Casa Solana in Grover City. The all-you-can-eat beef and chicken BBQ costs $7.50 for adults, $3.75 for kids. Door and cash prizes will be given away. For details call 481-8555.

Far East expert to give lecture

Two of her letters of recommendation were from architects from her summer employer, Ehrlich/Ramming Architects. She has worked there using CAD (Computer Aided Design) for the last two summers. Her other recommendation came from Cal Poly architecture professor Howard Weissenhaupt.

Mustang Daily Editors Needed

Applications are now being accepted for next year's Mustang Daily Editorial Staff. Positions begin Fall quarter, 1990. Open positions include:

- Managing Editor, Content
- Opinion Editor
- Investigative Reporter
- Graphic Editor
- Photo Editor
- A & E Editor
- Freelance Editor
- Sports Editor
- Illustrator

Each position is paid. Applicants need not be journalism majors, but should have sufficient experience related to the job. Interested persons submit a cover letter stating position wanted, resume and samples of work. Send applications to Christine Kohm, Editor, GA 226, Cal Poly University. For questions on individual positions, call Christine Kohm at 756-1143.

Deadline: Tuesday, May 29, 1990 at noon.

Hey! What are you doing this summer?

Mustang Daily is now accepting applications for its Summer 1990 editor and staff. Positions open include:

- Editor-in-chief
- Managing Editor
- Asst. Managing Editor
- News Editor
- Photo Editor
- Asst. Photo Editor
- Op-Editor
- Investigative Reporter
- Graphic Designer

Applicants need not be journalism majors, but must possess writing, copy editing and management skills. (Photo editor position needs shooting, as well as darkroom skills.) Each position is paid. Interested persons should send letter of interest stating position wanted, resume and samples of work to Doug DeFranco, Editor, Mustang Daily, Graphic Arts 226, Cal Poly University. For questions on individual positions, call Christine Kohm at 756-1143.

Deadline to apply: Friday, May 25 at noon.

Poly tennis star Sasao shines in national tourney, beats top seed

Glenn Hom

Legend has it that every now and then, nature blesses us with a great warrior to lead us out of oppression and onto higher ground.

Cal Poly may have found such a person, but ours has spiked hair and plays a mean game of tennis.

After helping Cal Poly to the 1990 National Team Tennis Championship in St. Louis, Mo., All-American Eric Sasao went beyond the call of duty and finished fourth in the individual singles competition, reaching the semi-finals by beating the tournament's top-seeded player on Friday.

Sasao then teamed up with All-American Brendan Walsh in doubles play and went as far as the quarter-finals.

If that wasn't enough, Sasao became the only Cal Poly player ever to be honored with the Tournament Sportsmanship Award for his positive attitude under stress and for respectful conduct on the court.

And to top off the season, Sasao finished his junior year with the best singles' and doubles' record of any division II player in 1990, with a 60-12 overall posting, and an even more impressive 43-5 mark versus division II opponents.

Also in the limelight was the All-American team of Tim Presnestas and Max Allman, who played to the semi-finals in the doubles category by defeating a pair from Central State Oklahoma on Saturday 6-4, 6-4, 6-3.

Coach Kevin Platt was surprised that his players performed as well as they did under the circumstances.

"It's so easy to let up," Platt said. "After winning the championship, you don't feel like playing individuals."

The Mustangs may have felt the exhaustion after 10 straight days of tennis, but sometimes sheer talent and ability transcends physical hardships.

In the semis of singles play, Sasao lost the first set 7-6 to Vesa Ponskka from the University of Tennessee at Martin. Until that match, the top-seeded Ponskka had not lost a singles match against any division I or II opponent all season.

"I was killed in the first set," Sasao said. "I was so tired, but I thought this could be my last match, so I took more chances."

"He didn't believe he could beat him," Platt said of Sasao after the initial set. "Then he (Sasao) started hanging with him and believed he could win."

Sasao went on to upset Ponskka 6-2, 6-4 and advance to the semis. Fatigue finally set in on Sasao during the semi-finals against University of California at Davis' Tom Burwell, who won 6-2, 7-5.

After the match, Sasao was given the Tournament Sportsmanship Award, honoring his gracefulness in victory and in defeat. Sasao was also nominated for the Arthur Ashe Award.

The award for sportsmanship was quite an accomplishment, Platt said. The team has a few guys who are loud and like to yell, but Sasao overcame that by handling himself well, and people recognized that, he said.

Presnestas and Allman may not have won any sportmanship awards, but they proved they can play to the best by advancing to the semis.

The two lost 7-6 (7-5), 6-4, 6-1 to Ponskka and his partner. The pair was the eventual winner of the national title.

Rounding out Cal Poly's strong showing were All-Americans Neal Berryman and Alex Havrilenko pairing up to reach the quarter finals, only to lose 6-2, 6-4 against UC Riverside.

Cal Poly's six All-American players on a single team sets a new division II record, surpassing the old mark of five set by the 1988 squad of the University of South Illinois at Edwardsville, Platt said.

After such a memorable season, Platt said he cannot help but imagine the team's outlook for next season.

"It'll definitely be different next year," Platt said, realizing that four of his players will not be returning. "It will be hard to follow up such a unique set of guys. I'm gonna miss them."

The new season will press Sasao, Allman and Havrilenko into leadership duties as recruiting continues to look for new talent to complement the established team, Platt said.

"It was so tired, but I thought this could be my last match, so I took more chances."
Speaker says that California's drought needn't ruin its beauty

By Kenn Easland

"We need a good drought every once in a while to get people to realize that there are many native plants that bloom with colorful flowers. Some native plants are very beautiful," said Heddy Avant, a nursery saleswoman at Hometown Nursery in San Luis Obispo. "Because of the drought, sales of native or drought resistant plants have increased at least 50 percent," she said.

But not enough is being done to realize that there are many arren areas along freeways and very once in a while to get people to realize that there are many native plants and native animals. The trend in the growing urban-suburbia is to level the land, re-contour it, build on it and then paste on a landscape," Bontrager said.

"We wouldn't need birdfeeders to attract birds if people planted the right types of plants," Bontrager said. "It's a mystery to me," Bontrager said, "why and when the trend of landscaping with low diversity, high irrigation plants started."

**AWARDS**

From page 3

"Plant's now used in landscaping doesn't have to mean dead front lowers. In a slide presentation, Bontrager showed several varieties of native California plants that bloom with colorful flowers. "Some native plants are very beautiful," said Heddy Avant, a nursery saleswoman at Hometown Nursery in San Luis Obispo. "Because of the drought, sales of native or drought resistant plants have increased at least 50 percent," she said.

GrC students tour SoCal magazine facility

They get a taste of high-society as they see the Palm Springs Life

By Caroline E. Pinola

Seeing movie stars in Palm Springs is quickly becoming a part of the past, but that hasn't stopped the design director of the largest magazine in Palm Springs from capitalizing on that affluent attitude to capture the city's wealthy readership.

Design Director Bill Russon gave about 15 Cal Poly graphic communication students a tour of the glossy, high-society magazine, Palm Springs Life, last weekend during the students' two-day field trip to the area.

"The purpose of the trip was to see the inner workings of an established magazine in the real world," said Alan DeWeese, a graphic communications senior. "We walked through all the phases of production from conception to designing the ads to the finished product."

About 55 percent of the magazine is advertising—nearly 300 ads per month—and the other 45 percent is editorial material, said Russon, emphasizing the importance of advertising to keep up the flashy appearance of the magazine that appeals to its well-to-do readers.

"The 'Around Town' column, featuring a two-page spread of snapshots of affluent residents, is the most widely read column in the magazine," said Russon. "Everyone wants to see if their picture will be featured that month."

"Overall, the field trip was worthwhile," said DeWeese. "There wasn't a whole lot of graphic design involved, and it wasn't a particularly creative magazine, but if they were too artistic, they would lose their customers. I think their readers depend on the magazine's already-established format."

Russon, who has worked with the magazine for 17 years, said that several new magazines have challenged Palm Springs Life in an effort to capture new readership, but none has been successful.

"We seem to do things better and have targeted our audience," said Russon. "A successful magazine is a fine marriage between the manuscript and the design."

Although the magazine's circulation is strong, the company's success is not determined by revenues from Palm Springs Life alone. The company also works on several other projects at the same time. They publish the Desert Dining Guide, the program for the Nabisco Dinah Shore annual golf tournament, the Monterey Bay monthly magazine.

"It was interesting to see the variety of other publications that they produced," said DeWeese. "They are a little behind as far as today's technology is concerned, but because they have no competition, the technology is not needed."
Calif. detectives look for clues to slayings of 4 people

SALIDA, Calif. (AP) — Detectives searched a blood-splattered house looking for clues that might give them a motive or even a suspect in the slayings of four people early Monday.

The body of one man was found outside the run-down residence where Stanislaus County sheriff's deputies responded to a report of a disturbance. The other three victims were adults — three men and a woman, they said. Their names were not released.

Authorities in other areas were advised to be on the lookout for several people investigators believe might have been involved in the killings, Breshears said.

"We really haven't got sorted out whether they were responsible for it (the killings), or whether they were there, or whether they were told, or they were hiding," Breshears told reporters.

The lieutenant said early indications were that the killings were related to illegal drugs, leaving the motive a mystery.

Departments patrolled found the bodies when they responded to a call for help which was telephoned to the Sheriff's Office from a neighbor's home. It appeared the person found outside had been stabbed, Breshears said. The house is behind a vacant lot, and at least one victim inside the house appeared to have been killed by a bullet.

The owner of the house was away. The drive from Livermore in the east San Francisco Bay Area to Salida in the west is about an hour. None of his tenants were among the dead.

4 people hurt in Osaka blasts believed to be in protest of Roh visit to Japan

TOKYO (AP) — A series of blasts occurred outside an Osaka apartment house used by government employees Monday, injuring four people, and police blamed extremists opposed to the visit of South Korean President Roh Tae-woo.

The three explosions broke windows in the apartment building and in nearby homes, according to police in Osaka, 255 miles west of Tokyo.

One of the injured was a firefighter, who officials said was in serious condition. The other injuries, to apartment dwellers or area residents, were minor, they said.

The South Korean president arrives in Japan on Thursday.

Radical groups, including the leftist Chukaku-ha, or Middle Core Fraction, say Roh's visit is a step toward re-establishing the Japanese empire as it existed before and during World War II.

Roh has been under pressure in South Korea to cancel the three-day visit unless there are more agreements involving the treatment of the estimated 677,000 Korean nationals in Japan.

Last month, Japanese and South Korean government officials reached agreement on the legal status of third-generation Koreans in Japan, many of them descendants of Koreans brought by force to Japan as workers before and during World War II.

The cost of child care at the Center will host a picnic near the Clock Tower at 5 p.m. to thank everyone for their support.

"We were terribly excited when the ballot (issue) won," Regan said. "But we will be sitting with our fingers crossed until everything is approved."

From page 1

approve all new construction," Yang said.

Regan said the proposal hopefully will arrive at the Chancellor's Office in July.

The Chancellor's Office will decide if projected 11-year repayment schedule is acceptable or not, Yang said.

The cost of child care at the center will increase from $13 to $15 per day, which Regan said is a cost-of-living increase needed with or without the new center.

On Wednesday, the Children's Center will host a picnic near the Clock Tower at 5 p.m. to thank everyone for their support.

"We were terribly excited when the ballot (issue) won," Regan said. "But we will be sitting with our fingers crossed until everything is approved."

OUTREACH

From page 1

rente held at USC last fall are usually held on Saturday.

"There were motivated speakers who talked about the strength in diversity," said Mitchell. "There was also career workshops and a college fair with representatives from different universities all over the country. It was fantastic."

Finally there is the Parent program which involves parents in workshops such as "Career Awareness" and "How to Help Your Child Study," to help the students succeed.

"Upward Bound aims their efforts at students who are characterized as underachievers," said Mitchell. "Therefore a student receiving a grade of 'C' in algebra who could be receiving an 'A' or 'B' is a good candidate for the program."

To participate, the student's family must meet the U.S. Department of Education low-income family income guidelines; neither parent can have a four-year college degree; and the student must be enrolled in a participating school: Arroyo Grande or Righetti High Schools, Judkins, McKenney, or Paulding Intermediate Schools, and students show potential and interest in pursuing college level work.

The success of the program can be summed up with the story of Mike Rodriguez. On June 16, Rodriguez, a sophomore at Righetti High, will join 100 other Upward Bound student delegates in Washington, D.C., for a celebration of the 25th anniversary of three educational opportunity programs, Talent Search, Student Support Services and Upward Bound during the National Student Leadership Congress. The Congress is sponsored by the National Council of Education Opportunities Association. Rodriguez will be one of the two delegates from California and was selected a month ago for academic achievements.
