State budget crisis costs 
CSU $402 million in cuts 
Interim chancellor says cutbacks are the worst in 30 years and may affect faculty, staff, libraries, classes and enrollment. 
By Karen Travis 
Staff Writer 
Reduced enrollment, fewer classes and a decrease in staff and faculty members may result from recent budget cuts, says the chancellor of the California State University system. 
Ellis McCune, who has served as interim chancellor since May 1990, said Monday at a press conference that this may be his toughest challenge yet. 
"The CSU system is facing its worst budget problem in 30 years," McCune said. "We will survive it, but with great difficulty." 
McCune said this will have long-term impacts on the CSU system. One area that may be affected seriously by the budget cuts is faculty and staff members. 
"We have 330 new faculty positions open, but we won't be filling any of them," McCune said. He also said 800 non-faculty positions, including administrative, technical and clerical jobs, may be cut. 
"With fewer faculty members, enrollment will also have to be reduced," McCune said. "You can't serve more students with fewer staff people." 
McCune said this may be difficult because of increased population in California. 
"We are becoming a majority/minority state now," he said. "The minority are fast beating the population." 
Other places that will be affected by the cuts include the Chronicle of Higher Education, said McCune. 
Because of this change, universities and colleges are challenged to educate minority students, who often come from different cultural backgrounds and speak limited English. 
"We have to be able to continue educating people through this change in population, because these are the people who will eventually run our state," McCune said. 
McCune said that this year's Good Neighbor Day will include projects with people in the community as opposed to last year where events focused on small-group cleaning tasks. 
"The true benefits of the format changes won't be felt as much this year as in years to come," McCune said. 
Kapic said that this year's Good Neighbor Day projects will be more accessible for students. 
"The projects to be accomplished on Good Neighbor Day are bigger than they have been in the past and they will have longer lasting effects," Kapic said. 
"We are becoming a majority/minority state now," he said. "The minority are fast beating the population."
GLBU says stop discrimination

Today in a national day of protest against the Department of Defense's policy that keeps gays, lesbians and bisexuals from joining the military. On campus that means, lesbians and bisexuals can't join the Reserve Officers Training Corps.

The DOD says that homosexuality is incompatible with military service, yet it offers no proof to back up this statement. In an effort to find evidence, the DOD paid for two reports that studied homophobia's impact on military service. The findings of these reports stated that homophobia endangers individual military performance, and so they are not suitable for military service.

The findings of these reports stated that heterosexuality endangers individual military performance, and so they are not suitable for military service.

The DOD's policy is in direct conflict with the CSU's policy stating the "CSU does not discriminate on the basis of sex, handicap, race, color, national origin, religious belief, political belief, veteran status, or sexual preference."

On March 1, the CSU Academic Senate unanimously authorized all campus groups to produce a resolution or statement or action that will not allow or allow all campus groups to offer RTOC programs at each university. On April 16 Cal Poly's Academic Senate will vote on a similar resolution to eliminate the ROTC program from Poly until the DOD changes its policy and allows gays, lesbians and bisexuals to serve.

The Gay, Lesbians, Bisexuals United are pleased with the resolution currently in front of Cal Poly's Academic Senate and hope they will pass with unity.

It is time to force the DOD's policy to change.

The E. Perle
GLBU vice president

Bus system aids Poly, students

Instead of languishing on the back of parking lots or the walk from parking lots to class, we offer a solution.

SLO Transit will pick you up near home and take you to class. The service is free and is paid with parking fines, not student fees or academic budgets.

SLO Transit carries nearly 500,000 students a year in a safe, economical way and reduces the need for parking.

SLO Transit has short-term plans to meet the demand for service and reduces route times. SLO Transit will soon meet with Poly representatives to determine the level of service wanted in the upcoming years.

We value your ridership and want to continue to play a part in solving commuting and parking problems. Together we can make a real difference.

Harry Watson
Transit Manager

Power plant accidents cut electricity sources

TOKYO (AP) — A run of nuclear plant accidents and shutdowns has left Japan's power industry nervous about the prospects of supplying electricity this summer.

Japan's nine electric power companies have made emergency additions to their supply plans for the year because of the shutdowns, an official at the Resources and Energy Agency said. And some utilities have decided to reopen old thermoelectric power plants to help meet the electric load.

"We are somehow managing right now ... but the situation is going to be pretty tough by summertime," said Norio Kuzuyama, a spokesman for Chubu Electric Power Co.

Power plant closures had cut electricity sources by summertime, Kuzuyama said.

Demand soared to just less than maximum output. Although there were no brownouts, neither raises nor cuts taxes but reverses spending programs.

Gay Mormons ask to be led according to their principles

Proposed budget may alter Bush's priorities

WASHINGTON (AP) — The House Budget Committee moved toward passage Tuesday of a $1.46 trillion Democrat budget for 1992, that would balance some of President Bush's domestic priorities and could set the tone for a year of confrontation between the White House and Congress.

Work on the budget came as lawmakers returned from their holiday recess and as Democrats and Republicans gridded to battle over a host of contentious domestic issues, including civil rights, crime legislation and parental leave.

On Wednesday, a House Judiciary subcommittee will consider the so-called Brady Bill, named for former White House press secretary Jim Brady. The legislation would impose a seven-day waiting period on people seeking to buy a handgun. The administration has criticized the bill.

The budget proposed by Democrats neither raises nor cuts taxes but reverses multi-billion dollar cuts Bush would make in Medicare, veterans' pensions and other benefit programs.

Shoemaker in serious condition after crash

COVINA, Calif. (AP) — Bill Shoemaker, rating's winningest jockey, was in serious condition and partially paralyzed Tuesday following a car accident in which authorities said he was under the influence of alcohol.

Shoemaker, whose career as a rider ended with his retirement last year, suffered a fracture dislocation of his neck and paralysis to undisclosed parts of his body in the Monday night accident, said Inner-City Medi­cal Center spokesman Dennis Richards, reading from a statement by Shoemaker's wife, Cindy.

Shoemaker, who earlier was listed in critical condition, was transferred Tuesday afternoon to Centinela Hospital Medical Center, a facility known for its expertise in sports medicine and orthopedic surgery.

Richards said Shoemaker's family and personal physician requested the transfer but refused to release any further information about his injuries.

Ticket revenue could aid local governments

SAN JOSE, Calif. (AP) — If Santa Clara County had a better way to collect unpaid traffic tickets, the city of San Jose could be up to $17 million richer, according to City Auditor Gerald Silva.

Silva estimated Tuesday that there are more than 58 million worth of unpaid traffic tickets in San Jose alone, and possibly as much as $100 million countywide.

But the county hasn't created an efficient system to collect fines, he said, and it didn't benefit programs.

Be excommunicated of gay Mormons disenchanted by the faith's pronouncements on homosexuality met with church representatives Monday and asked to be excused from future meetings.

Winds are biggest hurdle for men's track at Fresno Relays

By Jeff Krum
Matt Wild

Strong winds pounded the Cal Poly men's track team during its last Saturday at the Fresno Relays in what Mustang Head Coach Tom Henderson described as "not a particularly good weekend."

"It was like riding a motorcycle from here to New York without a helmet on," Henderson said.

Henderson said some teams had runners "going down left and right" with muscle pulls due to the wind, but Cal Poly escaped with no wind-related injuries.

Cal Poly's Tom Halszynski went down to the ground during the 4x800-meter relay, but not because he pulled a muscle. "It (the baton) just jumped right out of his hand," said Henderson.

The baton slipped out of Halszynski's hand 50 yards from the finish line as the Mustangs were in third place behind the Brazilian national team and Adams State College.

Halszynski stumbled while attempting to retrieve the baton, making matters worse.

"He looked like a Ninja Turtle break dancing on his back," joked Henderson. "It put us back 200 years in recruiting."

Five minutes after Halszynski's debacle, Brian Stroff was running the last 800-meter leg. A bright spot during the meet was when Jeff Yole scored a personal season's best 100-meter sprint. Unfortunately Yole broke his leg in a physical education class on Monday.

Kevin Rankin, last year's NCAA Division II pole vaulting champion, slipped through the wind to clear 16-9 in the pole vault.

Mike Parrott and Matt Hemsen, respectively, in the 5,000-meter race.

Henderson said these were good performances considering the weather conditions.

"All of our distance races were hampered by the wind," he said.

Tom McGuirk also ran a season-best 53.8 seconds in the 400-meter intermediate hurdles.

Cal Poly's next meet is at home this weekend against conference rivals Cal State Los Angeles and Cal State Bakersfield. The meet begins at 1 p.m. on Saturday at the Cal Poly track.

SCIENCE

From page 3

development of the High Resolution Imaging Spectrometer (HIRIS). The instrument was not selected for flight on EOS-A1 because of unresolved technical issues, but is a candidate for flight on subsequent EOS satellites.

A similar team led by JPL's Dr. Richard Wilson also will develop the Active Cavity Radiometer Irradiance Monitor (ACRIM), another instrument targeted for flight on a platform of opportunity.

ACRIM-2, as the centerpiece of NASA's "Mission to Planet Earth," a global-scale research program that will study the Earth as an integrated environmental system, focusing of the interactions of the atmosphere, oceans, land surface and biosphere.

"Mission to Planet Earth" is NASA's contribution to the U.S. Global Change Research Program, a multi-agency federal program to observe the Earth, improve understanding of natural human-induced global change and develop better models and predictive capabilities for interpreting environment changes.

"The primary goal of the EOS-A1 satellites is to study the effects of global potential warm- ing by conducting long-term research into the key parameters of the Earth's surface and atmosphere," said Dr. Charles Elachi, assistant laboratory director for JPL's Office of Space and Science Instruments.

"Global changes are very complicated and require long-term monitoring," he said. "The EOS-A1 series will help determine the extent and causes of global climate changes through a program of long-term observations."

Launch of the first satellite, tentatively scheduled for 1998, will mark the beginning of a 15-year-long program of observations of the Earth system, which includes the oceans, land surface, and lower and upper atmosphere.

Specific observations from EOS-A1 will include the determinants of the balance of radiation that is absorbed from the sun and emitted by Earth. This radiation balance heats and cools Earth's atmosphere and drives the circulation of the oceans.

Other measures will include atmospheric circulation, the interactions of these processes, and the measurement of biological processes, such as the production of phytoplankton, a factor in helping regulate the flow of carbon through the sea.

The exchange of carbon between the oceans, surface and atmosphere is essential to understanding potential global warming and the carbon dioxide of Earth's atmosphere.

Nine of the "Mission Instruments" will conduct simultaneous observations of related environmental variables, such as the role of clouds and water vapor on temperature and humidity, or the impact of surface winds on change in the sea.

"These atmospheric interactions are very important in understanding global warming," Elachi said. "It is critical that we monitor temperature fluctuations, atmospheric and surface patterns simultaneously to understand how they combine to produce certain environmental conditions."

Global views of the Earth system, possible only through use of the space-borne instruments, will enable scientists to make integrated measurements of these global patterns without interruptions from rapid atmospheric changes or sudden shifts in sunlight, Elachi explained.

JPL's Atmospheric Infrared Sounder (AIRS) will measure atmospheric temperature profiles with an accuracy of about 0.1 Centigrade and provide data on atmospheric water vapor, cloud cover, and sea- and land-surface temperatures.

The Multi-Angle Imaging Spectrometer (MISR) will use its high imaging resolution of 30 meters to study biological and geophysical processes. HIRIS will be able to study continental interactions along the borders of different marine ecosystems, for instance, and determine the annual cycle of phytoplankton in the open sea and along the coastal waters.

The JPL EOS-A satellite instruments are being developed under the auspices of the laboratory's Office of Space Science and Instruments.

The EOS project is managed by the Goddard Space Flight Center in Greenbelt, Md., for the National Aeronautics and Space Administration.

Launch program management is an international effort involving NASA, the European Space Agency, Japan and Canada.

America's newest veterans:

Leaving behind the horrors of war

By Karen Travis

Eric Miller was an ambitious, sharp-looking 20-year-old working as a supermarket checker in Sacramento before he enlisted in the United States Air Force.

Back in 1971, young men who weren't in college, like Eric, could almost expect to be drafted to fight in Vietnam. Eric enlisted in hopes of getting an office job and avoiding the war, particularly to avoid direct ground combat.

Eric received his first choice of location, George Air Force Base near San Bernardino, almost immediately. He packed the few items he was allowed to take with him and left wondering if he would ever return.

When he was assigned to fly F-4 Phantom jets, unfavorably dubbed the "hot ticket to war" by the military for its frequent combat use, Eric knew he would be going to fight in Vietnam.

He dutifully served his country and tried to accept the fact that "life dealt me a bum card." And in April 1972, exactly one year from the day he left the United States, Eric came home.

"I returned with no sense of pride at all," said Eric, who currently works at a Lucky supermarket in Sacramento. "I returned to the United States, the country I fought for, hated me and considered trash when I returned. My own country, the country I fought for, brought on signs of PTSD. For example, doctors and other medical personnel who treated the wounded might have felt that errors in their judgment cost American lives. Technical repair troops might suffer from feeling responsible for machinery breakdowns which caused American casualties."

Eric Miller said that for years after he left Vietnam he would wake up in the morning on the floor. "I guess I was so conditioned to jumping that I have to change. I have to jump or bring back visions of war. "Even now, 20 years later, I still wince at loud noises," he said.

Gulf veterans may not have experienced the same type of combat fighting as did Vietnam or other war veterans, but some soldiers who fought in the Gulf War witnessed many deaths, saw and smelt remains of charred bodies or watched as innocent women and children were killed.

Nolan said some veterans from the Gulf War will try to jump back into life in the United States as if nothing has happened, only to discover that things had changed.

In most cases of PTSD, combat was the setting for traumatic incidents. However, Jerry Nolan, Sacramento Army Depot family service counselor, said other areas also brought on signs of PTSD. For example, doctors and other medical personnel who treated the wounded might have felt that errors in their judgment cost American lives. Technical repair troops might suffer from feeling responsible for machinery breakdowns which caused American casualties.

Eric Miller said that for years after he left Vietnam he would wake up in the morning on the floor. "I guess I was so conditioned to jumping that I have to change. I have to jump or bring back visions of war. "Even now, 20 years later, I still wince at loud noises," he said.
INSIGHT

From page 5

Nolan said feelings of depression, sometimes accompanied with sleep disturbances and feelings of unworthiness are common PTSDs, as well as guilt for surviving when others did not.

He said some Gulf veterans might ask, "Why did I survive when others died?" They might experience dreams about being shot at or being pursued and unable to run or escape as isolated or even dreams of seeing a friend die.

Vietnam veteran Ellisworth Weaver of Arroyo Grande said he sprayed Agent Orange and dropped Napalm on North Vietnam to destroy foliage.

"I didn't think anyone wanted to hear about Vietnam, and this left me with a feeling of anguish and despair when I came home," Weaver said.

"I think anyone returning from the Persian Gulf definitely need counseling ... not because they're crazy but because a lot of things have happened since their deployment.

"Many soldiers have cruised through life with superficial communication skills. They have been taught not to scratch too deep at their emotions and think they don't need to explore any scarred feelings," he said. "These people simply do not want to be vulnerable."

Nolan said that if Gulf veterans are not prepared or counseled early, they might experience some of the same post-traumatic stress seen in other war veterans.

Kent Cox, a project platoon commander in Saudi Arabia, returned home to Port Hueneme in Oxnard in mid-March. "So far, I haven't experienced any major difficulties," Cox said. "But loud noises still make me jump."

Langer wrote that recovery for some war veterans necessitates a spiritual or moral healing, as well as an emotional healing.

Spiritually, veterans are seeking forgiveness for their actions. Emotionally, they need to reintegrate back into normal life and be able to function as a family or career. Therapy can help veterans express their emotions more effectively, as well as reduce their sense of guilt, he wrote.

Langer also told how counseling won't promise an absence of pain or rage but will draw a closeness to oneself and to others.

Nolan said many soldiers left for the Gulf with healthy relationships with family, friends and spouses. He said, however, trying to resume these relationships after the war could be a problem if not done gently and carefully.

The strategy to reunify families is being performed by the Sacramento Army Depot Family Services Center.

"The program will offer individual as well as group and family counseling," said Port Hueneme Command Master Chief Carl Maxwell. "We planned this to help Persian Gulf veterans adjust to home-life."

Military institutions along the Central Coast, however, are not offering any reunification programs at this time. The San Luis Obispo Air Force Department, Army Department, ROTC, Camp San Luis Obispo and Camp Roberts at Paso Robles have not formed special programs for local Persian Gulf veterans. They do, however, have a general counseling program for individuals who need help in adjusting to life after war.

Reunion is the period of time after adjustment following the return of the soldier from short- or long-term deployment. Nolan said that reunion and homework are often more stressful than the initial pre-deployment and deployment phases. The program held at the Sacramento Army Depot helps with the readjustment period," Nolan said. This period usually lasts from six to eight weeks.

Nolan said many veterans wonder if relationships with family and friends will be different when they return. They may ask, "What will it be like for us to be together again?" and "How has this whole ordeal changed our relationships?"

Nolan said this reunification program begins with the education of both the spouse or family member and the soldiers. Information on the potential difficulties involved with the homecoming is prepared and sent to units in the Gulf region as well as to support groups and schools back in the United States.

Nolan said veterans will be able to attend presentations on topics such as reunion, re-establishing intimacy, adjusting to children, new parents of infants, single parents and single soldiers.

The program facilitates discussion therapy groups for veterans as needed. The reunification program also has prepared a list of businesses to whom military families can go to for help with finances and re-employment services. It provides liaison with Vietnam veterans and ways to get information on PTSDs as well.

Almost 200 veteran centers throughout the United States offer individual and group therapy, vocational guidance, financial assistance and help in obtaining veterans' benefits.

As a result of counseling, veterans can renew commitment to family and friends on a deep and meaningful level, not just in marriages but in their everyday lives. With therapy, Gulf veterans can make more positive use of the frustration and pain they may have experienced in Desert Storm.

Karen Travis is a journalist with the U-T and is writing in public relations. This is her second quarter reporting for Mustang Daily.

TACO BELL
Santa Rosa Taco Bell

That's 29¢ Tacos from midnight until 6 am are served!
Tuesday the ministry sent a team to the People's Daily, the Communist Party newspaper, which published the poem March 20 in its overseas edition. The team has failed to track down the author, but has decided that People's Daily editors were merely negligent in publishing the poem and did not notice its hidden message, the sources said.

The sources, who work at the People's Daily, spoke on condition of anonymity. The poem, written in a florid style, ostensibly is about the coming of spring. But readers noticed that the words "Li Peng, step down," ran diagonally through the poem from top right to bottom left. The words could not have been juxtaposed by coincidence. The poem's final line also is regarded as having political significance: "Wait, sacred land, spring is everywhere." Many Chinese refer to the crushed 1989 democracy movement as the "Beijing spring."

Although relatively few ordinary Chinese subscribe to the overseas People's Daily, news of the poem spread rapidly through Beijing by word of mouth. Many Chinese said they and co-workers rushed to reading rooms at their workplaces to find the paper and copy the poem. Copies passed from hand to hand.

The sources at the People's Daily said authorities attempted, too late, to recall the edition. They said the paper's director, Gao Di, was away at the time the edition was published. Investigators from the State Security Ministry broke into the desk of the editor who handled the poem, looking for information on how it was received and who approved it, the sources said.

The poem was signed Zhu Hushong, who was identified in the paper as a Chinese student in the United States. The investigators determined it was a pen name.

The State Education Commission regularly solicits essays and poems from Chinese students abroad and submits them to newspapers for publication.
Teachers from near and far learn ABCs of agriculture at Cal Poly

By Lori Cheeseman
Staff Writer

Cal Poly’s agricultural education department head and program director, Silva said. “We take new knowledge and new methods directly out to the agriculture teachers.

It’s like an outreach program for the dissemination of new technology,” he said.

Another program, an undergraduate teacher training program sponsored by the U.S. Agency for International Development, is designed to educate Nigerian teachers about agriculture.

Folu Otunuga is a high school teacher from Nigeria who has spent the last two years learning about agriculture at Cal Poly. He is part of the third group of teachers that have come from Nigeria to participate in the program.

Otunuga and three other teachers from Nigeria have received basic teacher training at Cal Poly as well as farming experience from an internship at Swanton Ranch, located near Santa Cruz.

Otunuga, who is specializing in agricultural business, believes his training at Cal Poly will help him serve as a role model for teachers in his country. He said that the agriculture industry in Nigeria is not as technical as America’s agriculture.

“I want to change things,” Otunuga said. “I hope to go beyond teaching when I go back to Nigeria and become a policy maker (for education).”

After his graduation in June, Otunuga will return to Nigeria.

From page 3

CHAPTER 14 AGRICULTURAL EDUCATION

From page 3

Provide the information the city needs to begin its own enforcement.

“We went to (the county) and asked them how many outstanding tickets there were for San Jose and they ruled it out,” Silva said.

But based on estimates obtained from the county’s microcomputer records, there are more than $58 million worth of unpaid traffic tickets in San Jose alone, Silva said. The city’s cut would be $17 million, although Silva conceded it would be impossible to collect the full amount. The county and state also get a percentage of every fine paid.

Currently, county courts collect few of the unpaid traffic tickets. The county suggested in its audit that minor computer changes could give city officials a list of major traffic scofflaws broken down by area to help police track them down.

Vehicle registration holds are done for those who have outstanding parking tickets, but it’s harder to catch those who have outstanding traffic tickets, Silva said.

Those who don’t pay traffic tickets are sent a notice, but the addresses on people’s licenses can’t be found. Silva said. “I got more than I ever expected,” Otunuga said. “I am looking forward to going home and improving my country.”

Cuscy said projects such as

Glen Casey is the agricultural education department head and oversees Poly’s programs that teach teachers about agriculture.

Otunuga said the hands-on experience.

He said he would like to see more teachers offer free hours and spend more time with their students one-on-one.

“I believe the interaction between student and teacher is the essence of education here,” Otunuga said.

Otunuga is also planning on introducing a program similar to Future Farmers of America that would promote leadership and agriculture among the youth of his country.

“I got more than I ever expected from Cal Poly,” Otunuga said. “I am looking forward to going home and improving my country.”

OFFICE WITH A VIEW

The Peace Corps is an exhilarating two year experience that will last a lifetime.

Working at a professional level that ordinarily might take years of apprenticeship back home, volunteers find the career growth they're looking for and enjoy a unique experience in the developing world.

International firms and government agencies value the skills and knowledge mastered during Peace Corps service.

ment is expecting a California education institutes for school teachers and conducting high school and community college curriculum-planning projects that will be subcontracted to UC Davis.

The contract will also fund the continuing pre-service program, which provides training for new teachers. It will also pay for the continuing in-service program, which provides training for teachers already in the field.

"We hope to keep the agricultural teachers (we teach) on the cutting edge," Casey said.

The final opportunity before June graduation to meet the Graduating Writing Requirement by passing the Writing Proficiency Examination will be on Saturday, April 20.

The Writing Proficiency Examination will not be offered summer quarter, and the next testing is scheduled for October.

Deadline for sign-ups for the April 29 examination is Friday, April 12 at the Cashier's Office. A $15 fee is required.

The Writing Skills Program will offer workshops on the evenings of April 10, 11, 15, 16, 17 and 18 to help students prepare for the writing exam. The free workshop will be held in the University Writing Lab in room 138 of the Agriculture Building from 7 to 9 p.m.

The graduation requirement must be met before bachelor's and master's degrees are con­ferred. All students who have earned more than 90 units are eligible to take the examination. Students who plan to graduate in June and who have not yet met the Graduation Writing Requirement should take this test. Students who have not yet met the requirement are al­lowed to go through graduation ceremonies, but the diploma is withheld until the requirement is fulfilled.

Investors club holds meeting

Financial Education Clubs Inc., a nonprofit corporation, is pleased to announce the April meeting of the Morro Bay Chap­ter of the Women's Investor's Club.

April's meeting topic is how to start a "mock investment portfolio." As part of the meeting, the Morro Bay Chapter will be making investments of $100,000 worth of play money to see if their investment strategies will be profitable. Come join the fun. All are invited to bring a guest.

The meeting will be held at the Morro Bay Library, which is located at 625 Harbor in Morro Bay.

The meeting is today and it will last from 2:30 p.m. until 4:30 p.m.

Thought For Food

It's about time.

Healthy food in a hurry.

KONA CAFE has come up with a new idea that is really innovative - a KONA CANOE.

This health conscious meal is prepared right before your eyes! Delicious, fast, and hot; you get more than you can eat for only three dollars!

Picture this...

Nine freshly chopped vegetables, turkey, ham, two eggs, and cheese steamed to mouth-watering perfection in a twelve-inch pita! Each meal is prepared individually to your liking in a special pan that cooks with steam, so no oils or fats are added to your food.

We've invented it; now it's your chance to savour it! And the only place in the world to try one is at KONA CAFE! It is served from 7am-11:30am, and then from 2pm-10pm.

Plan a canoe trip to KONA's today!

KONA CAFE is conveniently located near campus at 977 Foothill, SLO (between Burger King and Kinko's). Give them a call ahead of time to reserve for group or party orders at 546-0369.

Fast food with a difference - healthy, plentiful, and inexpensive!
Remembering the past...
