First phase of Poly budget cuts axes 53 jobs

By Jeff Krump
Staff Writer

A preliminary budget proposal released today will result in the loss of more than 53 jobs in administrative and support services at Cal Poly.

The proposal calls for a $2 million cut from the university's budget and is the first phase of a $7 million cut to be made in the Academic Affairs area of the university, said Vice President of Academic Affairs Robert Koob.

Koob said that departments which will be affected by the cut are those whose "function might be able to be distributed among other areas over the campus."

Most of the positions marked for elimination are currently unfilled or expected to be vacated sometime after next Tuesday, said Vice President of Academic Affairs Robert Koob.

The specific administrative and support services that will be eliminated by the first phase of reductions should be announced in Academic Affairs.

Drugs counseling program helps two Poly students clear records

By William Douglass
Staff Writer

Charges of marijuana cultivation against two Cal Poly students were suspended in a program that allows defendants to enter counseling programs rather than face prosecution.

The program, called drug diversion, allows drug charges to be suspended, usually for one year. If certain conditions are met by the end of the year, the charges are dismissed and the record is sealed.

"You do not have to put on an application that you were ever arrested or convicted or anything," Longacre said. "You do not have to put on an application that you were ever arrested or convicted or anything," Longacre said.

Longacre said the program's purpose is to divert cases out of the system of courts and jails and get people into counseling. "You get the same result — stopping the illegal behavior. But (diversion) is philosophically humanitarian to the defendant."

Construction management senior Eric Schwing, 22, and agribusiness junior Matthew Wilson, 23, were entered into the drug diversion program last month by Municipal Court Judge James Remm. The two were arrested in February after County Narcotics Task Force officers seized 12 marijuana plants at the students' Islay Street residence.

Not all criminal charges are eligible to be diverted, Cunningham said. Marijuana cultivation charges are eligible only if the drug is produced for the personal use of the defendant. See DIVERSION, page 6

GrC prof travels abroad to accept printing honor

By Michele Morris
Staff Writer

Gary G. Field, a graphic communication professor, will travel to England in May to accept the Silver Medal of Britain's Institute of Printing. He is a fellow of the institute and only the second person from the United States to win the prestigious award.

The Institute of Printing is a British professional society that monitors professional standards through examinations and publishes the journal "Technical Knowledge and Other Requirements for Printing Managers," appeared in "Professional Printer" in 1990.

"I knew it was a good paper, but I was surprised to win the award because they don't give it away every year, only when they feel a paper is worthy of it," Field said. See FIELD, page 8

LETTERS TO THE EDITOR

Stop insulting ethnic diversity

I am a black student graduating in June. I am writing in response to Travis Swafford's article concerning affirmative action.

I have been at Poly since my freshman year, and I am sick of attacks on affirmative action and ethnic diversity. Many students like Swafford do not value ethnic diversity because they are from homogeneous environments with no racial tolerance. They come to Poly and find that they must sit next to a black student or complete a group project with one. Coming from an all-white high school in an all-white town with all-white friends, it blows their minds to even imagine ethnic diversity. The consequences of affirmative action are that students will have to wake up.

In regards to Swafford's reference to "lower-quality students," Travis needs to be educated. He apparently is ignorant that GIP is not the measuring criteria for admission. Nor is it an adequate predictor of success. I'm afraid that Poly is producing many "Swaffords" who graduate and move into the power structure with their untenable views. I'm afraid freshman minorities will come into a Poly environment, which is hostile to diversity. Finally, I'm afraid Poly is going backwards as evidenced by recent ASI election results.

Concerts can't please everyone

This letter is to Mrs. Cook who wrote a recent letter. I appreciate that you have solidified your right to free speech. As ASI cochairman, I realize that Bob Hope cannot be liked by all. This is a situation that my committee and I face constantly. We try to bring a variety of shows from rock to Bob Hope. Perhaps there is one thing that you do not realize, we are unpaid volunteers and put in hundreds of hours of uncompensated labor. If you don't care to go then don't. I do think, however, that you did lose an important lesson when you were younger— it's not the gift, but the truth that counts. So, when you are sitting there on May 12, while we are working hard at our show with a few thousand people enjoying Bob Hope, I hope you will agree that Bob Hope give tribute to our beloved mothers, remember the insult you have cast upon us and our mothers and maybe you will recall that last lesson.

I give you an open invitation to voice your opinions at our meeting from 7 to 9 p.m. in UU 220 on Thursdays. If you don't come, then I assume you are another person who speaks hot, doesn't follow with any action.

One rape survivor speaks out against popular misconceptions

By Catherine Chipman

I was stunned after reading the Mustang Daily commentary on rapes in the January 30, 1991 issue ("A night she couldn't forget..."). Everything that was said was in a false slip.

The only description given of a rapist was as a "dominating" and possessive person. It was further stated that he tended to be very hostile and didn't treat women well. I then got angered because this description is completely different than in my case. I felt that this article was helping people buy into the stereotypical myths that hurt me so much.

To the people who believe in these myths I have some questions.

Do you not believe that I was raped just because I was raped by my boss who was a quiet man who seemed very concerned.

Am I to assume that I wasn't assaulted when one night I was beaten up for many hours and had my life threatened by a seemingly nice man who offered to help me find my friend?

Am I to believe that the "nice" guy that I met one night at a party who locked me in a room to "help me find a rape survivor" speaks out
BEIJING (AP) — The Foreign Ministry today denied a British newspaper report that Chinese ammunition and spare parts for weapons are being shipped to Iraq.

The newspaper quoted an unidentified U.S. intelligence source as saying there were "very strong reasons to believe that arms are reaching Iraq via radios operated by the Red Crescent, the Red Cross and most information on the disaster came via radios operated by the Red Crescent," the newspaper reported.

Normal communications were severed, the state that holds the nation's first presidential primary. He began his campaign at a rain-drenched hometown rally in Lowell, Mass., and then headed to nearby New Hampshire, which hails as the nation's first presidential primary.

A dryer but smaller crowd heard the same speech a week earlier at the Manchester campus of the University of New Hampshire. "I feel like I've come home in New Hampshire," said Tsengas.

Researchers find new role in cancer growth

WASHINGTON (AP) — Mysterious bacteria that infect about 30 percent of the world's population may be a major role in the development of stomach cancer, a group of Stanford University researchers reported.

Dr. Julie Parsonnet, an associate professor, said that bacteria called helicobacter pylori cause chronic inflammation of stomach tissue and "just having chronic inflammation for a long period of time may predispose a person to get cancer." Helicobacter pylori bacteria are considered strange organisms because they thrive where no other bacteria can survive — in the stomach, where they are constantly bathed by powerful acids.

Inflammation caused by the bacteria has been known for about a century, but helicobacter pylori provoked new interest and gained a name in the 1980s, when they were found to be nearly always present when stomach cancer occurs.

In a study of 37 patients with the most common form of stomach cancer, helicobacter pylori were found in 33 patients, or 90.2 percent of the total. Gastric tissue removed from patients with other types of cancer, however, the bacteria were found in only 31.8 percent.

China denies that its arms are reaching Iraq

DHAKA, Bangladesh (AP) — A powerful typhoon battered Bangladesh for more than eight hours Tuesday, killing at least 1,000 people and leaving millions homeless. Five thousand fishermen were reported missing.

"Very strong reasons" to believe that arms are reaching Iraq. Others ask how Jews should die. Nazi slogan "The Jews are our misfortune." Others ask how Jews should die. Nazi slogan "The Jews are our misfortune." Other "Anti-Turk Test" tells the player: "With this program our German friends can tell whether they like Turks or they hate them." Bobby Abraham Cooper, associate dean of the Wiesenthal Center, said his staff obtained copies of eight such games within the last month.

There had been word of the games for several years, but they were not believed to be widespread until a recent surge of reports in Austrian media. Newspapers reported that a poll of students in one Austrian city found 39 percent knew of the games and 25 percent had encountered them, Cooper said.

"Eight now. I look as a good friend of mine in Jamaica every Sunday," said club president Javier Campus, KHEK (this FCC-issued call sign). "We just keep in touch. So if I ever go down to Jamaica I can stay at his place and vice versa."

"One guy who was out in the field with us had a very pregnant wife," said Marine Capt. Scott L. Adam Bliss, N6YUG, a Cal Poly applied arts graduate. "Through the phone patch (the linking of hand-held radios into phone lines), we found out she had gone into labor, and we got him out of the field and to the hospital. Ham radio has actually given me a leg up in my position as communications officer."

The 20-plus member club combine their diverse technical skills in communications to run a ham radio station that is a part of the school's On-Campus Emergency Planning system. Several thousand calls have been made over the past 10 years.

The Parents & Sisters Of Suzanne Andrea Roberto
Wish To Express Their Heart-felt Thanks To The Students And Faculty Of Cal Poly
Who Attended Her Services, Dedicated Mass For Her, Sent Kind Letters And Otherwise
Supported Us During The Weeks Following Her Death. It Is Comforting To Know She Was Surrounded By Such Caring People And We Thank You.

SCIENCE

From page 3 fully operative emergency communication station, where local residents could pass along information to and from the Bay Area where phone lines were jammed. However, the club encountered an interesting problem. "We had some trouble with the EE/EL department who wasn't allowing us to operate the next morning," said club emergency coordinator David Fichou, K6OEN.

Normally the club is not allowed to operate during school hours. "A news crew from KSBY-TV heard what we were doing and came back by the 'shack' (club station) to interview us and were upset with the fact that we could not operate," Fichou said. After the news crew telephoned a few school officials, the radio club obtained permission from the dean of the School of Engineering and was back on line and successfully passed more than 200 messages for the community.

Non-emergency related community service activities in the past included the annual Wildflower Triathlon, the Cal Poly Whynamo's cycle race in Creation, fun runs and even ham radio license classes.

"Community service is the thing I love most," said computer science freshman Len Kawamoto, N6FNP. "I've always helped out in community events, but by being a ham radio operator, I feel I can contribute more."

"Ham radio really allows you to see applications with what you're learning," said IEEE representative Thor Bazzarussen, N6FP, an engineering technology student. "Ham radio actually lets you physically experience things you're learning and lets you see how it applies to the real world."

In addition to engineers, the Cal Poly Amateur Radio Club has seen its share of agriculture, speech communications, business and ornamental horticulture majors.

"There's just so much you can do," said secretary/treasurer John Rogers, KK6DJ. "There are people from all walks of life in ham radio. Anyone can do it."

Kerwyn Schinke, N6YXX, said, "We do fun things, such as going up Mt. Paseojar and talking to far away places."

"It's fun taking down the station's antennas," he said. "Good ME stuff!"

To hams, radio waves cross social borders and geographic ones. "Right now, there's a big separation between nations and cultures," said station manager Jim Wood, W6TNC. "But I think amateur radio is and will continue to be a link between different countries so people can see the 'other side' rather than just political sides."

WORLD

From page 3

Muslim equivalent of the Red Cross

"Thousands of people are injured and crops and houses over a 200-mile radius are damaged," said a Red Crescent official in Dhaka, who also asked not to be identified by name.

The Red Crescent mobilized 21,000 volunteers for relief work, a television report said. The army has been deployed to help, it said.

Before the storm hit, about 3 million people were evacuated from an area where 7 million people live in 2,000 villages. About 80 percent of the mud and straw huts were blown away, the Relief Ministry official said.

"The deaths would have been on a much larger scale" if the residents had not been shifted, he said.

"The typhoon triggered a flash flood in the Meghna River, which flows through the area, United News of Bangladesh said. The agency said river waters engulfed the railway station and at least a dozen other buildings in the town of Chandpur, 30 miles southeast of Dhaka.

The airport at Chittagong, Bangladesh's second-largest city, was under feet of seawater. A photographer who flew over it in an army helicopter said he saw about 5,000 people on rooftops of the airport buildings.

At least seven air force jets were in thigh-deep water on the airport tarmac, the photographer said. Air force officials in Dhaka said the planes were beyond damage.

In 1970, a typhoon claimed almost 500,000 lives in Bangladesh, on the delta of the Ganges, Brahmaputra and Meghna rivers.

The search for equal footing

Students helped by affirmative action programs tell of their successes despite the odds.

By Kelly Gregor

When "Barbara" came to Cal Poly in 1983, the odds were against her. Not only was Barbara supporting herself financially, she was also a woman, and she was black.

Barbara had gone to a Catholic high school in Los Angeles which geared students toward college. She got 'A's in most of her classes and felt prepared academically for Cal Poly. But when she entered Cal Poly, Barbara said the transition was different from what she had expected.

In many of her classes, Barbara, a computer science major, was the only black student. She said she did not get a lot of encouragement from students or instructors, partly because of the highly competitive nature of the classes and partly, she felt, because she was black.

"People always asked me, 'Are you sure this is what you want to do?" Barbara said about her choice of major. "It's really sad when the people who are supposed to be encouraging you, instead discourage you.'"

Barbara said people often assume that because she is a black woman in a predominantly white university, she must not be smart enough to have earned admission. "It does something to your ego," she said, especially since she had always done well in school.

Barbara's story is not unique. Many underrepresented students at Cal Poly have had similar difficulties. Many institutions, including Cal Poly, have implemented affirmative action programs to alleviate some of these difficulties. But as students like Barbara know, these programs don't solve all of the problems.

For one thing, affirmative action policies face plenty of opposition. The April issue of USA Today, a national college newspaper, stated that 71 percent of students polled said they do not support such policies.

Assigning these bonus points is a bone of contention for many people. "I think it's unfair," Darrin Moloznick, an economics senior said about this practice, "because it's judging someone on the basis of race or a physical trait rather than on intelligence."

Moloznick said that these programs are trying to solve a problem immediately, but that they are not benefiting all of society in the long run. He said that students should be admitted to college because of their intelligence, and when students are given an edge for nonacademic reasons, it ends up slowing down the pace of society.

Armando Pezo-Silva, director of Student Academic Services, said that there are a lot of criticisms of the programs that bring a negative connotation to affirmative action. But many of these criticisms, he said, are myths.

"We value diversity," Pezo-Silva said. "It builds racism when we focus on minorities benefiting rather than the value of diversity."

Everardo Martinez of University Outreach Services said that affirmative action programs benefit all students, not just those who are underrepresented. Martinez said that these programs are a way of making the campus population represent California's population, thereby giving students wider exposure and a richer educational environment.

"To not implement educational equity or affirmative action would hurt by continuing an ethnocentric student population and a less diverse educational foundation," Martinez said.

Affirmative action programs can have negative effects on students, Martinez said, because sometimes teachers assume that underrepresented students are not qualified for Cal Poly, but were admitted because of their gender or ethnic background.

Pezo-Silva said that the notion of underqualified students being granted special admission is "absolute nonsense." He said that all students admitted to Cal Poly are qualified.

Kelly Gregor is a journalism junior with a concentration in news/editorial. This is her first quarter reporting for Mustang Daily.
From page 5

Stated by affirmative action or Educational Opportunity Program, you meet or exceed CSU admission requirements. He said Cal Poly uses a multi-criteria basis for selecting students. This system considers more than the student’s GPA and SAT scores. It also weighs what classes the student took, as well as extracurricular activities and jobs held.

This accounts for the fact that some student are admitted to Cal Poly, while others with a higher GPA may be turned away, Pezo-Silva said.

Another myth about affirmative action, Pezo-Silva said, is that it only helps students of ethnic minority groups. Actually, the EOP program, he said, deals strictly with low income students.

“If you are wealthy,” Pezo-Silva said, “your options are open. If not, your choices are limited.”

Because Cal Poly is impacted, many students are turned away every year, Pezo-Silva said that for wealthier students, there are other, more costly, colleges available. But for lower income students, the only alternative is community college, and, he said, “that’s a dead end for under-represented students,” as only about 5 percent transfer to universities.

“JANET,” a Caucasian business student, received assistance from EOP for financial need. She said her high school did not prepare her for college, so after she graduated, she went to work as a bank teller. When she realized she did not want to work there forever, she decided to go to college, but her family had no financial help other her.

She has put herself through school by working, starting her own cleaning business and earning two scholarships.

Pezo-Silva said that other students who had always been geared for college and supported financially are often cynical of those who are not formally supported.

“They immediately write you off,” she said.

When people come to us, they said lined up in the banking industry after graduation, you people said “You won’t cut it”, but yet, look what I’ve done,” Janet said.

Sampos has worked with both Barbara and Janet as a teacher and academic advisor through Student Academic Services. She said that both women have displayed hard work and high achievement.

Barbara, Somppi said, was “not the student who came here with every advantage, every option open.” She said Barbara was a self-supporter who has been very successful, despite the obstacles she faced.

Somppi said Janet was the kind of student who was always involved in class and has tried to benefit from everything she could. “She tried to do much, much more than just go to school,” Somppi said.

Cal Poly proves to be a valid challenge to most students. Somppi said that when you add to that an ethnicity differences, a gender difference and a need to work, the demands placed on the student can be too much. Cal Poly does not always respond to these demands, she said.

The assumption is often made that affirmative action students do not complete school. Pezo-Silva said that graduation rates for these students are hard to determine because there have been no studies to track them.

Martinez said that if these students do have more financial obstacles than other students, then they should be helped in order to succeed.

“Hard to identify what caused what,” Martinez said.

In 1985, Martinez said that demands from California’s private industry and the changing population all added up to a need for a different sort of people. It’s time to re-examine the rules,”

'Special Kids' workshop held
Parents of children with disabilites are invited to attend a workshop hosted by the Office of the San Luis Obispo County Superintendent of Schools, Special Education Local Plan Area (SEIPLA), on Friday and Saturday, May 10 and 11. The workshop on Friday will be from 7 to 10 p.m. and Saturday from 9 a.m. to 4 p.m. It will be presented by "Friends of Advocates fro Special Kids" (TASK), based in Anaheim, California.

CoREAK holds banquet
The Cal Poly Pilipino Cultural Exchange will present Panahon Na 1991, its annual banquet and show, on May 11 at 6 p.m. in the UU's Chumash Auditorium. The theme for the evening will be "Huwag Nating Kaalaman" (Let's Not Forget). The festivities will feature dinner with a variety of Filipino dishes, an elaborate show and a dance. Anyone interested in Filipino culture is invited to attend.

Tickets for Panahon Na 1991 are being sold at the ticket office in the U.U. They can also be obtained by calling Jeanette Quack at 545-8168. Advanced tickets are $15 for adults and $14 for senior citizens and children under 12. All tickets are $16 at the door.

The Pilipino Cultural Exchange is affiliated with Cal Poly's ASI.

MECHA honors Cinco De Mayo
The Cuesta College chapter of MECHA, a ChicanoLatino Student Organization, is planning an event on two days in celebration of Cinco de Mayo. On May 5, a Cinco De Mayo will be recognized as one signifies liberty, justice and equality in Mexico.

On Monday, May 6 two groups of students in front of the library on campus from 10:30 to 11:30 a.m. The groups are the Marichi Jailaniense from Grupo alas and the Ballet Folklorico from Grover City Elementary School.

Continuing recognition of Cinco De Mayo, MECHA will sponsor an all-day soccer tournament on the Cuesta College Field on Saturday, May 11. Four or five teams of the Central Coast Soccer League will participate in the tournament beginning at 8 a.m. The games will also celebrate Mother's Day with May 10 being Mother's Day in Mexico.

All six Mustang singles players were named to the California Collegiate Athletic Association all-conference team and No. 3 singles Max Allman reached the semifinals at a tournament in Ojai last weekend.

Allman played in the independent intercollegiate tournament at Ojai. He lost in the semi-final to Jacapa Lamonica of USC and Rob Grant of Arizona in the first round 6-4, 6-4.

The Mustangs No. 2 doubles team of Allman-Ollivier reached the semifinals before bowing out to the eventual champions, the No. 1 doubles team from Cal Poly Pomona. They lost to Eric Glad and Frank Chavez of Pomona 6-7 (8-6), 6-3, 6-2. Allman-Ollivier won all their matches in straight sets to reach the semifinals.

Allman-Ollivier lost in the second round in three sets to Pac-10, No. 1 doubles player from Cal Baptist College, 7-5, 4-6, 6-1.

Cal Poly begins defense of its national title May 10 in Oklahoma. They are No. 2 in the Division II national rankings behind UC Davis, last year's NCAA Division II national runner-up.

The Mustangs lost their last weekend gave Cal Poly a 27-17 overall record and a 7-9 mark in the California Collegiate Athletic Association.

In doubles play Havrilenko-Sasao lost to a Pac-10 conference mixed team of Chad Rouzer from USC and Rob Grant of Arizona in the first round 6-4, 6-4.

In singles play Havrilenko-Sasao lost to a Pac-10 conference mixed team of Chad Rouzer from USC and Rob Grant of Arizona in the first round 6-4, 6-4.
