IRA athletic referendum debate heats up

600 fill Chumash to hear opinions in open forum

By Tracy Condron
Staff Writer

Nearly 600 students showed up at Chumash Auditorium Thursday for the open forum on the upcoming special election, Nov. 20-21.

At issue was the IRA athletic referendum.

The forum featured discussion via a pro/con panel made up of experts from both sides and a media panel consisting of local news representatives.

See related story, page 7

The pro panel was made up of Assistant Athletic Director Marilyn McNiel, Alumni Director Steve Skeckley, President of Block P Brad Ledwith, and Cal Poly football player Viren Holloway.

On the con side were math professor Bernardi Strickmeyer, a former member of the IRA Board; former physical education professor Bruce Bennett, College Republicans President Scott Van Gerder and mechanical engineering senior Frank Powell.

The open forum began with comments from both sides.

"This is not a frivolous see FORUM, page 7"

An open forum, held Thursday in Chumash Auditorium, provided students an opportunity to hear arguments for and against the IRA athletic fee referendum. A pro/con panel, right, made statements and answered questions from a media panel, left.

Bomb threat disrupts classes

School of Science and Math gets third call since August

By Scott Abbott
Staff Writer

Wednesday at approximately 11:45 a.m., the School of Science and Math received its third bomb threat since late August.

The threat caused the evacuation of the Math and Home Economics building, and Faculty Office Building North.

Both buildings were evacuated because the department office is located in the new faculty office building, while math classrooms are in the Math and Home Economics building.

The caller vaguely said there was a bomb in the building, but did not specify which building.

School dean Philip Bailey said he never expected to have to deal with bomb threats or bomb threat preparation as part of his job. But he's starting to now.

Until August, the School of Science and Math had not received a bomb threat in four years.

"The frequency of the bomb threats has Bailey thinking about creating a plan to move classes more efficiently.

"This is turning into a bomb response office."

— Philip Bailey, dean of School of Science and Math

"This is turning into a bomb response office," Bailey said. "It's getting to the point where every hour of every day I'll have to figure out where empty classes are" so evacuated classes can be moved.

"I'll end up giving a note to teachers at the beginning of each quarter telling them where to go," Bailey said.

While noon classes were canceled because of Wednesday's threat, 1 p.m. classes were relocated outside Matt Gym.

Bailey, using a bullhorn in front of the gym, directed students to areas under trees and along the sidewalk where classes were conducted.

"These things are very frustrating," Bailey said. "But you just can't take a chance."

Bomb threats, Bailey said, usually come before an exam with the aim of causing its postponement. No tests, however, were scheduled on Wednesday.

Library referendum approved for ballot

By Tracy Condron
Staff Writer

After receiving a petition signed by nearly 1,000 students, the ASI Board of Directors voted to admit a library fee increase referendum to the Nov. 20-21 election.

The proposal, however, still needs approval from the Chancellor's Office before the students can vote on it. At Wednesday's meeting, directors expressed concern that, with the election in less than a week, the proposal may not make it in time for the election.

In voting, the board divided on the issue. The end result was a 12-12 vote in favor of the library fee increase referendum.

Julie Reader, director from the School of Architecture and Environmental Design, warned the board about voting down a request from such a large group of students.

"We're becoming exclusionary," Reader said.

Some directors, however, felt that putting the fee on the November ballot was too hurried.

"This is a last-minute, big rush," said Paul Sahaguran, director from the School of Science and Math.

"One thousand students are unaware of the legal challenge (of getting this issue on the ballot)," ASI Adviser Bob Walters added, referring to the procedures required to get an issue on the ballot.

If the proposed ballot should not return in time for the election from the Chancellor's Office, it will be postponed until the spring general election, Walters said.

But ASI Executive Director Roger Conway said that placing the issue on the spring ballot poses a problem.

"A spring election just won't work," Reader said.

TOKYO (AP) — A conservative party lawmaker suggested Thursday that next month’s Pearl Harbor anniversary should be used as an opportunity to rethink Japan’s postwar constitution.

"The constitution was imposed on Japan by America, and we should stress this on the 50th anniversary of the beginning of the war with the United States," Masaaki Nakayama said in a meeting of the lower house Budget Committee.

Japan’s constitution was written, and went into effect, during the American-led Allied occupation that began in 1945 after Tokyo’s surrender in World War II. It was largely based on a draft written by American officials.

The charter is unique in that it bans "land, sea and air forces, as well as other war potential."

China won’t pressure Korea on nuclear arms

SEOUL, South Korea (AP) — On the eve of U.S. Secretary of State James A. Baker’s visit to Beijing, a senior Chinese official on Thursday flatly rejected his proposal to bring China won’t pressure Korea on nuclear arms.

China is without opening up the Arctic National Wildlife Refuge — will depend on a stable dialogue to find a solution to this problem, but we do not wish to see any international pressure," Baker and Qien were among the ministers attending the two-day, 15-nation Asia-Pacific Economic Cooperation conference. See WORLD, page 7

Sunlight spurs cancer by crippling key gene

NEW YORK (AP) — Ultraviolet light in sunlight encourages development of a common skin cancer by disabling a protective gene, says a study that revealed the sun’s chemical fingerprint in the altered genetic material.

The study is the first to report this direct evidence of sunlight-induced damage in a human skin cancer, said study co-author Douglas Brash.

Researchers noted that multiple genetic changes are needed to produce cancer, and said that since people tend to get most of their sun exposure during youth, the damage to the protective gene might occur more than 50 years before the cancer appears.

"It’s one step along the way to the cancer," said Brash, an assistant professor of therapeutic radiology at the Yale University School of Medicine.

It is not clear whether sunlight is responsible for any of the other mutations needed to produce the cancer, he said Thursday.

Chevron has plans for exploration in Alaska

ANCHORAGE, Alaska (AP) — Chevron USA Inc. says it is finalizing plans to invest $500 million in oil exploration and development projects in Alaska over the next five years — if conditions are right.

One third of the money will go toward exploration and two thirds to development, said Ray E. Galvin, who is set to become president of the San Francisco-based Chevron Exploration and Production Co. Inc. in Jan.

He spoke to the annual gathering of the Alaska Oil and Gas Association in Anchorage on Wednesday.

"The spending plays out — and this is without opening up the Arctic National Wildlife Refuge — will depend on a stable regulatory, environmental and economic climate," Galvin said. "We’re hopeful the

Scientists look for enemies of whitefly

RIVERBIDE, Calif. (AP) — University of California scientists are searching for natural enemies of a new strain of whitefly that threatens $500 million worth of crops in Southern California.

They hope to discover insects, viruses, bacteria or parasites that will halt the progression of the hungry whitefly, dubbed "superbug" for its swift reproduction, big appetite and the wide range of crops it attacks.

The search may take several years and defeating the fly may require basic changes in how farmers grow crops in the sun-baked fields that depend heavily on pesticides, researchers said.

Some blame the overuse of pesticides for creating the latest pest problem, but others say it is too soon to tell why the whitefly exists and proliferates the way it does.

“No single approach is going to work,” said Thomas Perrin, a UC Riverside entomologist.

Man is rewarded for commandeering a bus

SAN FRANCISCO (AP) — A good Samaritan who tried to commandeer a bus that was being driven erratically says he wouldn’t do it again after all the hassle that followed.

Sammy Kaiser Jr. of Dublin was awarded a $275,000 settlement Wednesday stemming from the wild ride that began at the Concord BART station last Nov. 29.

Kaiser, 29, of Dublin, said he intervened after he and 12 other passengers became speeding, ran a stop sign and narrowly missed hitting a pedestrian.

Kaiser said he suffered a broken jaw when Webb punched him after he tried to get Webb to stop the bus.

At a Wednesday news conference, Kaiser said his medical bills came to $22,000 and lawyer fees topped $100,000.

Education program targets sexual abuse

Poly students join SAVE project to teach awareness to local kids

By Holly Gilbert
Staff Writer

Cal Poly students are donating their time to participate in a program which educates children about sexual abuse.

Sexual abuse is a serious problem in today's society, said Bobbie Loomis, education director for Sexual Assault Victim Education.

"Too often we think of rape," but sexual abuse can also include fondling, exposing yourself or even showing pornographic material to children, Loomis said.

SAVE is a program designed to inform and educate children about how serious this problem is, Loomis said.

The goal is to present SAVE as "a very non-threatening, positive, entertaining presentation that entertains children, yet teaches them a new skill," said Dee Dee Tub of SAVE.

She said this program is a way of planting the seed of a new concept that children have rights even though they are young and small.

SAVE presents a 20-minute program called "Good Days and Bad Days." The program is performed once a year at each preschool, kindergarten and day-care center that requests it.

SAVE sends out two people, one a Cal Poly student, to each school. The Cal Poly student is dressed like a child. The student, dressed in overalls, represents a little boy and a little girl. As a boy, the student wears a baseball cap and, as a girl, the student wears a ribbon in her hair, Loomis said.

The adult educator reads a storybook about touching while the Cal Poly student acts out the scenes from the book.

Loomis said this book explains how there is good touching and bad touching. The book also teaches the children that they are not to tell anyone what happened.

I am sick of hearing about AIDS. For the past week, newspapers across the United States have been inundated with articles about Magic John testing positive for the HIV virus.

Likewise, they have been filled with informational articles regarding the HIV and the AIDS virus. The Mustang Daily is no exception to this phenomenon.

Is this necessary? Is the public at large really so stupid or ignorant as to warrant this coverage? I think not.

In fact, I think the whole AIDS issue is a case of mass hysteria. This disease is ramifying through society in a way that is particularly insidious, highly contagious and extremely difficult to prevent or control. The Mustang Daily is no exception to this phenomenon.

virus. The Mustang Daily is no
massive misconceptions and un-
gnorant as to warrant this
public at large really so stupid or
are commonly used in media
taining AIDS with this
disease.

AIDS is not the first disease to threaten this population. In fact, other diseases have caused the same panic. AIDs continues to remain rather insigni-
ificant.

For instance, 50,000 deaths in America each year caused by Coronary Heart Disease, the leading cause of death in America. In contrast, the number of deaths attributed to the AIDS virus is only 125,169 for the past 10 years!

This figure isn’t even close to any of the top causes of death in this country. With AIDS, more and more funds are poured into AIDS research. This is research money that could be better used.

Certainly AIDS has the possibility of expanding in great numbers and having devastating effects on our nation. However, with some common sense and responsible behavior, AIDS could soon be seen as a disease of the past.

Mustang boosters, athletics will make play on referendum

Student group said they will spread word, boosters will voice opinion

By Ted Holz
Staff Writer

Next week's vote on the fate of Cal Poly sports programs has mobilized its supporters. Some of the most vocal proponents of the sports referendum have been alumni and members of Block P, a group of representatives from each sport.

During the 1987 referendum for athletic scholarships the Mustang Boosters, known then as SUMAT, spent more than $10,000 on their campaign.

"There was a strong concern by the boosters and the university that this would be an issue that should really be decided by the students," he said.

The only organized campaign by any alumni group is "to fill that stadium on Saturday," Sanderson said, referring to the game against Portland State that could be the football program's last.

However, Mustang Daily has learned the boosters have spent nearly $300 on advertising in support of the referendum.

Sanderson could not be reached for comment on the ads which were placed in Mustang Daily.

In 1987 there was a request for the $10,000 by the athletic department for a pro-referendum campaign, Sanderson said.

"They've not made that request since," he said.

Steve Stockley, director of alumni relations, said he has received a lot of input from alumni.

"They had the vision to recognize that it is important to the university," he said.

Sanderson said the referendum is frustrating to alumni and the community, "because I think they feel they're outside looking in."

Sanderson said he has received hundreds of phone calls regarding the referendum.

Brad Ledwith, president of Block P, said his organization has sought to increase the flow of information.

"When people are informed, they are able to make a better decision," he said.

Block P produced a flyer summarizing the issues of the referendum.

The members have been talking to as many people as possible, Ledwith said.

"There has been a lot of positive feedback" to his group's efforts, Ledwith said.

Recruited from the crib

Cal Poly player from Italy was born, raised on soccer

By Christy Rinauro
Staff Writer

Cremona played in only four games his freshman year. This season he was given the all-league honor for scoring 10 goals in 19 CCAA games, said Assistant Coach Glen Fens.

"For me, that first goal was an icebreaker," Cremona said. "I felt I had overcome a psychological barrier of knowing I'd never scored before."

"Then, it finally happened, and from there on, I felt I was finally able to focus on my trajectory and visualize what I needed to do in front of the net."

Cremona has been in front of the net all his life. Born in Italy, he first experimented with the ball. At age four. He began playing organized soccer at age eight.

Cremona said that in Italy, soccer recruitment by professional teams begins as soon as a child's foot connects with the ball.

The better the child plays, the more he is talked about. When the child turns 14, recruiters buy his interest for the future, and the child starts playing on farm teams. At 17 years or so, salary is discussed.

"Basically, in Italy, you become a commodity when you're 14," Cremona said. "They start seeing your ability as revenue for them and their clubs. When you're 14, you're either bought or you're done with soccer."

Cremona was one of the talked-about kids. He considers his aggressive play of his first year a channeling of energy.

He said his neighborhood in Italy was rough, competitive and full of children.

He learned to convert his anger into his soccer playing, and that appealed to the professional recruiters.

"If I wasn't playing soccer, I would have been getting into trouble," Cremona said. "Soccer really let me unwind and let me have a good time."

"I've had the chance to be involved in the soccer world for the past 10 years. National media exposure has been a big plus for the program.

"I've had the chance to be involved in the soccer world for the past 10 years. National media exposure has been a big plus for the program."

― Wolfgang Gartner, head coach

"Basically, in Italy, you become a soccer player when you're 14."

― Lorenzo Cremona, soccer player

At Cal Poly, Cremona had been switched to a defensive player for the first time. He said because of his size, Head Coach Wolfgang Gartner placed him on defense. But last year, when 6'4" forward Ryan Moller player joined the team, Cremona said Gartner saw he could accommodate that kind of size in the front line.

"What really helped me out was that Ryan came on the team, and Gartner saw another six-foot-plus person playing of forward."

This season, Cremona has started in the last four games of the season playing at forward.

"This year he's blossomed into a great forward," said Fens. "He learns a lot from watching the game from the bench. When he gets on the field, it's like he's a step ahead."

"He's a different player than the rest," Fens said. "He's a more finessed player."

Fens added that Cremona is rare to see a soccer player put the ball into the net as accurately and regularly as Cremona does.

"Every season I return to play soccer at Cal Poly next fall, he will continue training while he finishes his education."

"Followling graduation, Cremona plans to try out for an Italian Division I team to play professional soccer. Cremona says he'll continue to play soccer until someone tells him otherwise."

AS! informs crowd about $11 programs referendum

By Tracy Condron

ASI took over the open forum after the IRA discussion to review the other issues facing students on next week's ballot.

ASI Vice President of Finance Shawn Reeves and Chairman of the Board Dennis Albani opened discussion on the ASI $11 fee referendum. Reeves discussed the ASI programs which are asking for money.

These programs are Student Community Services, Program Board, Multicultural Center, Board of Directors and Sports Club Council.

After a brief presentation, the audience was permitted to ask questions of Reeves, Albani, Chairman of the IRA task force Bruce Sherman and Dave Outwater, director from the School of Science and Math.

It was asked why AS! decided to put the referendum in the same election as the IRA referendum.

Reeves said that voting for all of the fees at the same time will give students a chance of what they want to pay for.

"Everyone knows what's happening with all of their student fees," Reeves said.

The panel also was asked why students have to pay for all.

Reeves said ASI has tried to seek out corporate sponsorship and has been unsuccessful.

"The ability to generate fees is somewhat limited," Outwater added. "ASI is the students."

He stressed the fact that students yourself to keep in mind that ASI is a student organization, run by students.

A concern brought before ASI was that there was not much time to educate students about the ASI referendum.

Albani said ASI has been working hard to distribute a report on the referendum.

"We have six days left," Albani said. "We're ready to talk and get people involved."

"I may develop as a result of sexual abuse. This abuse often leads to Mustang D as having a shot from the doctor SAVE follow-up with parents and teachers," Loomis said.

Loomis said. Lori Blanc of Sigma Kappa said this is her first year as an alumnus, there is little they can do to help," Loomis said. She said promiscuity, early pregnancy, also affect how a woman raises her own child, Loomis said. She understands it is important to understand the referendum is their last chance to support the issue and vote their conscience," Shocksley said.

"We’re telling people in the community that this is their last chance to support the football team," Sanderson said.

Sanderson said that not only has there been no increase in donations because of the referendum, there has actually been a decrease.

"It’s hard to support something when you don’t know if you’re going to have it," Sanderson said.

From page 4
"The idea is to teach them that it is OK to say no," she added.

"By looking at the statistics there is obviously a huge problem," Tish said.

According to statistics, one in four girls is sexually abused by the time she is 18. It is almost as bad with boys, Loomis said.

Eighty-five percent to 90 percent of abused children are abused by someone they know, and half the time it is the father or stepfather of these children, said, Loomis. Unfortunately it happens in the best of homes, it hits every socioeconomic level.

Tish said, "hopefully by hearing it ("Good Days, Bad Days"), the children know it is not their fault and can grow up as a healthy adult.

"Good Days, Bad Days" began in 1984 and developed out of SAVE. SAVE was started 10 years ago as an auxiliary for SART — Suspected Abuse Response Team. SART is a group of professionals that deal with rape victims and child abuse, Loomis said. Once a person has reported a crime to police, the victim is directed to SART at San Luis Obispo General Hospital where the person is examined by a doctor and nurse.

SAVE has covered about 100 schools and day-care centers within the county for the past few years, but is cutting down "Good Days, Bad Days" to about 35 to 40 preschools, Tish said.

The county has a new program where teachers integrate the subject of touching into their regular curriculum. This will provide a lot of repetition throughout the year," she said. The program will offer other topics as well such as safety rules talking to strangers and buckling up in the car.
Special Election

What? 3 separate Fee Increases

When? November 20th, 21st
9:00am - 4:00pm
(Night Locations 4:00pm - 7:30pm)

Where? Polling Locations are:
Dexter Lawn, Campus Store, Ag. Bridge, and Post Office Kiosk. (Night & Day locations: Kennedy Library and the University Union)

For more Info., See ASI information pamphlets located at the U.U. information desk and in the library.
