Moderate earthquake gives Parkfield the shakes

By Michelle Van Der Linden and Kevin Comerford

The Central Valley town of Parkfield is still under a 72-hour earthquake alert today after a moderate tremor rattled local residents late Monday night. The earthquake shook Parkfield at 10:28 p.m. Monday and measured 4.5 on the Richter scale, according to the U.S. Geological Survey.

Construction workers climb up the new Rec Sports Center which should be completed in January

Growth could mean bigger salaries, smaller rents

By David Polk and Rod Trett

Growth may be a vulgar word to many in San Luis Obispo, but for students, growth could mean a better life.

"The more job opportunities, the more chance for students to work."

Cal Massey, mayoral candidate

The General Plan establishes guidelines for new development and allocation of resources.

Mayoral candidate Cal Massey is running on a pro-growth platform.

"The more growth you have, the more opportunity you have for employment," Massey said. "They way, they are not all having to work at service stations or fast food places."

Massey said he would like to see some kind of industry established in San Luis Obispo that could offer students better quality jobs.

"The more job opportunities, the more chance for students to work if they want to," he said.

Local developer Stanley Bell agreed.

"I feel that a reasonable rate of growth creates competition in the economy," he said.

Bell said if there is no competition for jobs and housing, students end up getting "gouged."

Tim Banducci, president of the real estate firm California West, Inc., said an average two-bedroom apartment near campus goes for $750 to $800. He estimated a three-bedroom house at $900 to $1000.

Bell said, "I don't think that is healthy for the community or the university."

San Luis Obispo Mayor Ron Dunin said that more development may not be the solution to the job crunch, "because they (students) graduate and go away."

"What we need to offer is short-term jobs which are mostly in commerce," he said.

Unemployment in San Luis Obispo County was 7.1 percent as of August 1992, according to Jon Nelson, employment program representative.

For several years, Dunin said, he has advocated the development of a research park within the city. It would be a place "where specialized jobs would be offered to students," he said.

If the students decide to stay, such a park would be there when they graduate. "It would be a great boost to the city, Cal Poly and the students," Dunin said.

In an Oct. 12 Mustang Daily interview, Allen Settle, a City Council candidate and Cal Poly political science professor, said he has been in favor of bringing Hewlett-Packard, a large electronics firm, into San Luis Obispo for years.

He said this would create jobs for students in the engineering and business sectors.

Massey said he feels that the need for housing is as important as it is for jobs.

"The supply and demand factor is going to make a difference," he said.

With the constant demand for housing from students and residents alike, "the more housing, the lower the cost of the housing; the less housing, the higher the cost," Massey said.

Bell, who is building an 85-unit housing project near South Broad Street, said he also feels more affordable housing is needed.

"If there (were) some reasonable housing prices, I think we could reduce the environmental pollution that's caused by the cars and the waste time of people commuting," he said.

Settle warned that, as development progresses, fees and taxes will go up, since 17 to 23 percent of rent goes into property taxes.

"If taxes and fees go up, rent will go up, too," he said.

**Bomb blast near Moscow McDonald's injures eight**

MOSCOW (AP) — A bomb thrown at people lined up to get into the McDonald's restaurant in central Moscow injured at least eight people, including a small girl, officials and news reports said today.

The Monday night explosion followed more than a week of protests at the restaurant by a group condemning McDonald's as "defiler of Russia." It was not yet known whether members of the group may have been involved.

Two of the victims were treated at a local hospital and released, an emergency room nurse said. The rest apparently remained hospitalized today.

One of the injured was a 5-year-old girl, said the ITAR-Tass news agency. Many were wounded in the legs and arms, the Moscow k-9 Moskovskomosst reported.

Two suspects in the blast were immediately detained, said police Capt. Alexander Biryukov.

The blast occurred shortly before 7 p.m. — a peak hour — on Pushkin Square, according to the newspaper Moskovskoe Komsomolka.

**Police find body believed to be Greens party founder**

BONN, Germany (AP) — Police have found what they believe to be the body of Kelly and her longtime companion, both with wounds that indicated violent death, were found at Kelly's home Monday by a neighbor, said police spokesman Markus Tolle.

Prosecutor Wolfgang Kamp told reporters outside the house in Tannenbusch, a Bonn suburb, that the bodies of Kelly, 44, and partner Gert Bastian, 49, had been there for a "long time," complicating identification.

The cause of death, was uncertain, he said, murder, murder-suicide or double suicide were all possibilities.

The Greens formed in 1979 with a largely "counterculture" constituency, but quickly became influential in national politics.

**U.S. gets secret documents, may help find Vietnam MIAs**

WASHINGTON (AP) — U.S. officials on a trip to Vietnam have gained access to previously secret documents, including thousands of photographs, that may contain the key to the fate of Americans missing in the Vietnam War, government sources said today.

Intelligence officials are "working night and day" to glean from the documents clues to what became of U.S. servicemen who were captured or killed, said one official, speaking only on condition of anonymity.

If positive identifications are made, families of the missing servicemen will be notified first, the officials said. President Bush is to be briefed on the results Thursday, followed by a public announcement.

"We've gotten new information, and the character is such that it may be a whole new vein" of evidence about those listed as prisoners of war or missing in action, during that war, said one official.

The United States had long suspected that such information, which is said to include more than 4,000 photos, existed in Vietnam. But the trip over the weekend to Hanoi by retired Gen. John Vessey Jr. and Sen. John McCain, R-Ariz., was the first time its existence has been officially acknowledged.

Vessey is President Bush's special emissary for POW-MIA affairs, and McCain is a former Vietnam prisoner of war and a member of the Senate's Select Committee on POW-MIA Affairs.

In addition to the photos, there may be other documentation that could shed light on the fate of POWs and MIAs. That could include reports of aircraft shoot-downs, prisoner lists or other data, the officials said.

One official said the information appears to be the most important breakthrough in the long POW-MIA effort in two decades.

In a joint communiqué issued Monday, Vessey and Vietnamese officials said accelerated cooperation on resolving the cases of the missing will bring more rapid movement by the United States toward normalization of relations with Vietnam.

The Washington Post first reported the discovery today, saying the photographic archive "was discovered by means that officials refused to disclose."

**Earthquake retrofit set for S.F.-Oakland Bridge**

SAN FRANCISCO (AP) — The San Francisco-Oakland Bay Bridge, which lost part of its upper deck in the Loma Prieta quake, will undergo 18 months of quake-proofing, state transportation officials said.

The work expected to start in the spring won't interfere with the 250,000 vehicles that cross the span each day, officials said.

Caltrans will spend about $200 million over the next two years on the retrofit of the 300-mile-potential structure.

Plans for the retrofit were released Monday when the University of California issued the results of a study commissioned by Caltrans after the 7.1-magnitude Loma Prieta quake closed the 0.5-mile bridge for a month in 1989.

UC seismologist Bruce Bolt said his seismic analysis indicated the bridge had to be sturdy enough to take a 7.3-magnitude quake from the Hayward Fault, about 5 miles away, or an 8.3-magnitude trembler from the San Andreas, about 20 miles away.

Lindhurst high suspect says he wanted to wound, not kill

MARYSVILLE (AP) — The dropout accused of killing four people in the Lindhurst high school siege last May told a sheriff's deputy he wanted to show how the school and one of its teachers had mistreated him, according to a grand jury transcript.

"Actually, I didn't plan to kill anyone," Eric Houston, 19, told a Yuba County sheriff's detective in a videotaped interview the morning after the rampage.

"I thought about shooting and wounding a couple of people ... enough to get the point across."

The Yuba County grand jury last month indicted Houston on four counts of first-degree murder, 10 counts of attempted murder, three counts of assault with a deadly weapon and one count of false imprisonment following the bloody 8½-hour siege.

He talked about how he had a limousine and a date and Mr. Bren had bullied him so he couldn't go to the prom, testified Jode Hendrix, 18.

Bush, Clinton start race’s stretch run

(AP) — Bill Clinton summoned supporters Tuesday to "end trickle-down economics" by casting the Republicans as he set out on the final lap of his marathon quest for the White House. President Bush stressed he was all things to all people. You simply cannot have a pattern of deception, and you cannot separate the character of the presidency from the character of the president," Bush said in Norcross, Ga., as he set out on a two-day train tour. Not surprisingly, Clinton saw both issues differently, "Fight on for more months, he said. He cannot run on his record. He has no plan for the future, so his only approach is to trash me. "I think the American people are sick of them, just sick of them," Clinton said. After months of talk about the economy, foreign policy surfaced as a minor theme. Besides Bush said the GOP campaign might have to turn away 14,000 qualified high school graduates this summer gave him a rare opportunity for his senior project. It only has taken Senkevich three years to graduate from Cal Poly. He said he wants to go to graduate school and get his master's degree in material science and then maybe go on to earn his doctorate degree. Senkevich said that his experience in the IMAC facility this summer gave him a rare opportunity to get an inside look at the Nanostruct Research Center (SMAC) facility of the Solid State Photonics Division at Oak Ridge. His research consisted of two main topics: the synthesis of nanocrystalline diamonds and to study nitrogen ion-implantation into silicon carbide. Both substances are forms of experimental semiconductors. He used the latter study for his senior project. SACRAMENTO (AP) — California’s public universities will have to turn away 14,000 qualified high school graduates annually by the year 2000 unless colleges are built or expanded, a new state study says. 195 Higuera Street at South Street Group and Club Discounts Available 7:00pm open 24 hours Serving Hawaiian Kona Coffee No room for college freshmen Student takes part in research program Student takes part in research program EATING AT THE CAFETERIA

By Annie Brinan Staff Writer A Cal Poly senior was one of 49 students from throughout the country to take part in the U.S. Department of Energy’s Student Research Program last summer at the Oak Ridge National Laboratory in Oak Ridge, Tenn. John J. Senkevich, a chemistry major from Morgan Hill, and Rosa, participated in the 10-week program. It is designed to offer hands-on training with federal researchers and state-of-the-art equipment not usually found in most campus laboratories. Senkevich, 20, did his research in the Surface Modification, Characterisation and Collater, Department of Chemistry (SMAC) Facility of the Solid State Photonics Division at Oak Ridge. His research consisted of two main topics: the synthesis of monocrystalline diamonds and to study nitrogen ion-implantation into monocrystalline, cubic-
City politics are going to hell

By Bryan Bailey

San Luis Obispo is in big trouble.

Yes, this is an obvious over-statement for those of you who have been keeping up with current events. Yes, the country is in a recession; yes, we're going to have a dreary for president no matter which war we vote. I'm well aware of that.

The trouble I'm talking about is truly "biblical" proportions. As a matter of fact, the trouble is biblical.

If you need more hints to know I'm talking about the intermingling of religion and politics into a primordial soup of assorted vices, you might be more than mere Guests there.

You've missed the ocean.

What's happening in San Luis Obispo right now is an embarrassing tirade in the name of Democracy. Actually, strike that. Democracy has nothing to do with it.

When a candidate for mayor can openly declare he wants to bar homosexuals from teaching, and says he will actively pursue that end once given the political power, it's time to head for the political corner. True, you can't force religious practice, what a pre-meeting prayer isn't a mandatory, to be sure, but just because everybody else jumps off the ledge, I suspect it isn't entirely the fault of San Luis's political pot that they are being dragged into the moral morass of biblical mysticism. They are, after all, merely riding the wildly fluctuating cost-tails of the national candidates, whose "family values" guarantees them a sound to us like a thinly veiled "moral issue," platform support for shards of the crucifix. Moral issues reflect contemporary political climate and the Bible as a yardstick of culture.

The trouble I'm talking about is when the Constitution was signed to know that the founding fathers wanted to keep religion as far out of the political ball-park as possible.

For all the political idiot-savants out there, maybe I should refresh some memories.

Amendment I (first on the Founding father's "list ten things we can't afford to omit")

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof.

San Luis Obispo is currently faced with a mayoral candidate who has made noises about opening each city council meeting with a prayer, and other candidates who, amazingly enough, have as yet voiced no hard-line opposition to these rumblings. If a pre-meeting prayer isn't a forced religious practice, what is it?

How about the required instruction of "scientific creationism" in place of evolution, then? Hey, fine. I'd like to learn a little about that as well, but not to the exclusion of all other philosophies -- which is exactly what that doctrine is, a philosophy, nothing more. Commonly held, to be sure, but just because everybody else jumps off the ledge, I'm sure I'll be crucified just for drawing this comparison, but I see the same thing happening here as when David Duke put in his bid for a seat as governor of Louisiana. People took him seriously, whether it was seriously, was like a thinly veiled "moral issue," platform support for shards of the crucifix. Moral issues reflect contemporary political climate and the Bible as a yardstick of culture.

The time has come for San Luis to take a stand against the farcical comedy playing itself out on the political stage. The voters of America forced the presidential candidates to address issues; let's force ours to address reality.

Separation of church and state is a fundamental freedom guaranteed to every U.S. citizen, and it is being seriously affected, which is fronted from more than one political corner. True, you can't separate the man from his religion in many cases; however, if you don't separate religion from politics, we're in for one hell of a long ride.

LETTERS TO THE EDITOR

Food-ban motive questioned

Campus Dining's moratorium on club food sales because of lost profits made me wonder just what their profits are. For financial year 1992, Campus Dining's revenue was $61.4 million, gross profit was $6.37 million and total income was $565,491. For the school year 1991-92, club food sales revenue totaled $5,000. Yes, only 0.8 percent of revenue comes this way. I found some other interesting facts in the Foundation's Audited financial statements for the year ended June 30, 1992.

Like El Correo Bookstore: revenue of $15.47 million, gross profit of $3.39 million, and income of $65,000,000. Total income of the Foundation (including losses in Swanton Pacific Ranch, other Ag projects and Vocational Education) was $427,697. This down from $780,482 in prior year.

The total assets of the Foundation total more than $40.4 million (up last year from $35.9 million). Short-term investments total $8.68 million, and long-term investments total $31.52 million.

Want to know more? Cal Poly Foundation is a non-profit corporation. This means financial info is available to the public either at building 15 or in the library reserve room under Cal Poly.

**GROWTH**

From page 1

will go up," he said.
Rent will not be the only thing going up if San Luis Obispo continues to grow, Settle said.

"The water rate doubled in the last three years. Sewer rates tripled in the last three years," he said. "(All) because service capacity was exceeded."

These are the issues that directly affect students, he added.

Student City Council candidate Brent Petersen echoed Settle's concern.

"What this (high growth rate) means for students is that the same amount of fire and police protection and resources such as water would have to be distributed to more people," he said. "Students would help subsidize future growth with no benefit to themselves."

Petersen said a decrease in the priority of bike lanes is a distinct possibility in the face of rapid growth.

"A high growth rate will increase the traffic congestion along downtown arteries and other major roads, thereby making it difficult to justify conversion of vehicular lanes to bike lanes," he said.

"Because the currently proposed developments would come at a cost to the city, there would be fewer funds available for bike lane installation and maintenance as the city would be providing new roads for the added growth," he said.

**EARTHQUAKE**

From page 1

absolutely no way of knowing how it's going to behave now," he said.
Meanwhile, Cal Poly students said the quake rattled their nerves, water glasses and tennis games.

Animal science major John Koenigsgarber said he was studying at Farmboy's when the earthquake hit.

"The water in my glass started to move around," Koenigsgarber said. "It was just a little one. I'm from the Bay Area, so it really didn't bother me. I'd felt them like that before."

Agribusiness major Tom Selfridge was playing tennis, when suddenly, "The court started to sway a little bit."

"The lights rattled, and I knew exactly what was happening," he said. "I stopped playing because I wasn't sure if there was something else to come."

What else may come is exactly what worried agribusiness major Erik Navone. The quake broke a water pipe in his backyard, he said.

"It made me think whether this earthquake is an indication of what's to come," Navone said. "It made me a little bit nervous because I didn't trust the house I was in. It rattled me a little bit, but thank God it wasn't that long."

The Associated Press contributed to this story.

**PARKFIELD**

From page 1

to the right," he said, "you need to grab your hat and run for the door because it is going to be a big one."

Parkfield resident Candy Bear said the earthquake, estimated to be six miles deep, surprised her. She said the quake made her three-month-old daughter stop crying because the baby thought someone was rocking her cradle.

Resident Barbara Varian said she jumped out of bed and yelled "Holy shit!" when the quake began.

Still, Varian remained relatively calm.

"I wasn't scared at all," she said. "I feel a lot safer in the country than in the city."

This story was reported by Brinon in Parkfield and written by Hubbell in San Luis Obispo.

Japan faces tradition changes

Professor tells lunchtime seminar
women want a four-year education

By Jodi Ross
Staff Writer

The traditional educational philosophy for women in Japan seems to be changing, a Cal Poly professor said Monday.

Barbara Mori, a social science professor, spoke at the Women's Studies Lunchtime Seminar Monday afternoon.

Mori lived in Japan for eight years and worked there as a teacher for two years. She has dedicated many years to studying the role of women and how they fit into the education system in Japan.

Traditionally, Mori said, Japanese women have been seen as "good wives and good mothers," but that's changing.

Today, women are challenging this. They want to continue their education before they start a family.

Between 1950 and 1991, 90 percent of the graduates from junior colleges were women.

However, in Japan there is no chance for women to continue on in school after receiving a two-year degree. Women now want to receive a four-year degree.

Mori added that, because women want to go into a four-year system, ideas have changed. Japan has seen a change in the demographics of its population, caused by a decrease in birth rate.

There also has been a change in the marriage rate. The average age when Japanese couples get married is between 23 and 26. In the 1960s, the average age was 20-23.

According to Mori, Japanese women "reflect themselves in different ways than in the traditional ways."

"This is the beginning of a point of change," she said. "The young women are beginning to voice their opinion."

Although Mori said there are "great similarities" between the educational systems of America and Japan, she added that the American system was "no influence" on Japanese education.

Carolyn J. Stetson, director of the Women's Studies Program, said the seminar is designed to "award a Women's Studies scholarship, to encourage further research in the field of women's studies and to create a community that is interested in issues having to do with women."

CAMPUSSES

From page 3

colleges and universities couldn't accommodate the overflow.

There is room for about 12,000 to 14,000 new students on independent campuses.

UC and CSU are talking about thousands and thousands of unaccommodated students, the question becomes where do they go?" said Jeanne Stahr Ludwig, the analyst who conducted the study.

Another concern is that African American and Latino students are just beginning to qualify for university admission in greater numbers and that they will be part of the system.

By 2000, the number of Latino students eligible for admission to UC and CSU will more than double to 26,000 a year.

ENGINEERING GRADUATES

Here's Where You Come In

VMX was created by entrepreneurial engineers whose ideas have evolved into the billion dollar voice processing industry. Since our founding in 1978, we have led the industry with innovations like voice messaging, call processing, interactive voice response and mixed media messaging. Be an important part of our future. It's an unprecedented opportunity to advance your knowledge while helping us create the next generation of voice processing innovations.

Software Engineers

Many of our software needs involve development and support of real-time control software within a multiprocessor environment for call processing, voice messaging and other communication products. Using Sun workstations in a UNIX environment, we're developing new products to work on a multiple platforms including Motorola 68010 and Intel x86 processors.

Requires a BS/MS in VLSI, proficiency in C and assembly language programming, plus good communication skills.

For consideration, please sign up for our on-campus interviews, fax resume, or write for additional information. VMX College Relations Department, 2115 Ocean Drive, San Jose, CA 95123-2032, FAX (408) 441-7027, VMX is an equal opportunity employer.

**Man robs to pay for vacation**

Mustang Daily Staff Report

A Bakersfield man was found guilty Monday of attempting to murder a man he robbed and shot at a Paso Robles rest area. According to a press release, 22-year-old Steven Anthony Gonzales of Bakersfield was also found guilty of second-degree robbery for the Dec. 26, 1991 attack on Stockton resident Pablo Bernardino Prado.

Gonzales and two accomplices were taking a pleasure trip to the coast and had planned to finance the trip by robbing people along the way. On their return trip, the trio stopped at the Shandon Rest Stop, east of Paso Robles, just after midnight. Mark Scarbrough, one of the alleged accomplices, testified the group had not yet robbed anyone and was in need of gas money.

The other accomplice, a woman, contacted Prado, who was resting nearby in his pickup truck. She told them their own truck had stalled and that they needed help.

After Prado helped Gonzales push-start the truck, Gonzales brandished a small-caliber revolver and a stun gun and demanded money from Prado.

Prado testified that after he gave Gonzales his wallet, he was told to go to a dark area of the rest stop, where Gonzales shot him in the back.

Gonzales is set to be sentenced Nov. 16 at 9 a.m.
