Moving toward victory

Poly student raped, robbed

By Kevin Comerford
Staff Writer

The American flag tie around San Luis Obispo Mayor Ron Dunin’s neck — and the ear-to-ear smile on his face — told the story at Thursday’s meeting of the Student-Community Liaison Committee.

Dunin’s 15-year reign as mayor of San Luis Obispo is coming to an end next week. He often became emotional during the meeting.

The liaison committee is designed to maintain good relations between the community and the students. But this meeting was Dunin’s last as mayor, and it looked more like a going away party.

Dunin embraced several committee officials as they said goodbye.

He said his greatest achievement as mayor was the improvement in relations between the students on campus and the community.

“I’m very grateful to have been a representative for the community as well as for the students,” Dunin said.

Dunin was awarded honorary membership in ASA at last week’s Board of Director’s meeting. Last Thursday he received awards of appreciation from Cal Poly’s ASI as well as from Cuesta College.

The award he received from Cal Poly was a cactus in a gold-plated pot. It had personal significance to Dunin, who said his one-time cactus garden had been abandoned since he took office as mayor.

Also at Thursday’s meeting, San Luis Obispo police Chief Jim Gardiner reported the SNAP program is close to being finalized.

Gardiner said he is pleased with the favorable support the program has received from the community.

As proposed, SNAP would create a corps of students who would act as first response teams to rowdy parties.

The program is expected to go before the City Council for approval in January or February.

SCLC bids farewell to Dunin

Mayor gives emotional goodbye at Thursday meeting

This week on television, Sally Jesse Raphael and Oprah Winfrey will talk about how to have beautiful legs and look like models.

Recent editions of Cosmopolitan and Glamour have discussed everything from “the love-hate relationship with hair,” to “stay-slim party strategies for the holiday season.”

Nutri-System constantly encourages you to “nutri-size your body.” Jenny Craig says: “Lost all the weight you want for just $6 a day.”

American society is obsessed with looking perfect. Often, being beautiful means being thin. And for some people, being thin is an obsession.

Dr. Susan Updegrove, a marriage and family counselor in San Luis Obispo, said 20 percent of college-age women suffer from eating disorders.

The most common eating disorders are anorexia nervosa and bulimia. Anorexia is a condition characterized by self-imposed starvation and distortion of body image.

Updegrove said people with anorexia are often thin to the point of emaciation, but have an intense fear of gaining weight.

Bulimia is marked by recurrent episodes of binge-purge cycles in which high-calorie foods are consumed quickly and in large quantities. Vomiting, laxatives, diuretics, fasting or exercise are then used to purge the food.

According to the American College Health Association, people with bulimia may be of average or slightly above average weight. They do most of their binging and purging in secret and show rapid weight gains and losses.

Updegrove said the physical effects of these disorders can ultimately be fatal.

She said some effects of anorexia are permanent kidney damage, damage to the reproductive and fertility organs, and damage to the heart. They can lead to cardiac arrest and, ultimately, death if the disorder isn’t treated.

Updegrove said some girls begin worrying about their weight at early ages. She said statistics show girls are dieting at younger ages every year.

“The reality is that many young girls are growing up in homes where the mother is constantly on a diet or watching her weight,” Updegrove said. “The girl may think the patterns are normal because it’s all she sees. She may think in order to be considered a woman, she must be on a diet.”

“Or, the problem may have started when somebody made a comment to the girl that she was overweight,” Updegrove said. “It’s very painful and she may decide to do everything possible to make sure nobody tells her that again.”

Dave Gross laments the passing of the Space Age, and wonders what’s next.

EATING

Today: Officials say eating disorders are a common problem among college students.

Tuesday: A Poly student tells of her battle with an eating disorder.

"It becomes an internal battle with what the woman emotionally wants from her body and what her body physically needs to survive."
Vandenberg Airforce Base, CA

American Rocket Company officials unveiled a rocket motor they said was the world's largest, a graphite-epoxy tube 32 feet long.

The motor, displayed Thursday, will be moved to Edwards Air Force Base later for a series of test firings that company officials hope will speed recovery from a launch failure in 1989.

"With this motor firing, we really are demonstrating a major shift in technology," said Paul Estey, president of Camarillo-based American Rocket.

"We're hoping to raise the interest of volunteers to more than 100 countries.

They will undergo three months of additional training, particularly in the Russian language, before going off to Russia. They have the traditional Peace Corps idealism. But unlike most of their predecessors, the volunteers to the former home of communism.

They'll arrive in Moscow on Saturday and then split up, with some going to Vladivostok and others to Saratov. They will undergo three months of additional training, particularly in the Russian language, before heading to individual communities.

Last week, 60 volunteers headed for Ukraine. Peace Corps officials said that by the end of the year they hope to have people in Armenia, Uzbekistan, Kazakhstan and Kyrgyzstan.

Forty-three other volunteers are working in Estonia, Latvia and Lithuania.

Peace Corps in Russia

Washington, D.C.

They have the traditional Peace Corps idealism. But these Peace Corps volunteers have a post Cold War mission: to bring the capitalist experience to Russia. Since the Peace Corps was founded in 1961 by President John F. Kennedy, it has sent more than 135,000 volunteers to more than 100 countries.

Unlike most of their predecessors, the volunteers going to Russia have business backgrounds and hope to assist people trying to bring capitalism to the former home of communism.

Forty-three other volunteers are working in Estonia, Latvia and Lithuania.

UC adopts fee increase

San Francisco, CA

The University of California Board of Regents approved student fee hikes of 20 percent for next fall and voted to go ahead with plans for a 10th campus in the San Joaquin Valley.

The hikes will raise by $605 the fees paid by in-state students next, to $3,849 a year.

UC President Jack Peltason said the increase will cover about 25 percent of the university's $955 million shortfall.

Workforce reductions would cover another 50 percent of the deficit and the remainder will be offset by cuts in non-salary expenses like books and equipment purchases, he said.

In other business, the regents adopted new five-year contracts to manage the nation's two nuclear weapons labs.

The lab votes, with a single objection by Lt. Gov. Leo McCarthy, capped a debate over the post-Cold War role of the Los Alamos and Lawrence Livermore national laboratories — and the university's continued involvement with weapons research.

Skepticism also came from the Recreation and Park Commission, which voted to go ahead with plans for a 10th campus in the San Joaquin Valley.

The hikes will raise by $605 the fees paid by in-state students next, to $3,849 a year.

The failure was blamed on a fuel valve that failed to open.

"Had that flight succeeded we'd be a completely different company," said George Whittinghill, director of marketing.

"The company suffered a setback in 1989, when a small hybrid rocket poised for launch caught fire before liftoff, tipped over and slowly burned up.

Assault policy changes hoped for by next fall

Controversial CSU document makes victim, defendant face off in hearing

By Kelly Gregor

Significant adjustments in the California State University's controversial policy on sexual assault are still almost a year away.

Executive Order 148 is a 20-year-old document that spells out disciplinary procedures for crimes on campus. All CSU campuses are bound to the document, which has been criticized for the hearing procedures it outlines.

The order calls for a closed hearing in which the student charged with a crime sits down with his or her accuser and a hearing officer. Both students may make their case and question the other student.

Critics say this system is insensitive to the accuser, discouraging him or her from pursuing the case.

Cal Poly Vice President of Student Affairs Hazel Scott has worked with Order 148 for nearly two years, and she said changes going in the document are in the works.

"Recently, operationally, (148) has been problematic on a number of campuses for a host of reasons," Scott said. "But in practice, it meets the letter of the law."

Scott said student affairs officers throughout the CSU system have wanted legal counsel to review Executive Order 148 for the past two years. Last spring, a revised document was sent to the Chancellor's Office. Judicial officers from each campus contributed to this document.

"We're going to streamline the procedures. (148 is a) discretionary action," Scott said of the revised document. "We've made recommendations to assure the rights of the victim as well as the accused. We have to make sure the accused has due process, but factored into that is the rights of the victim or survivor."

The document has been forwarded to CSU legal counsel to be checked for compliance with state and federal laws.

Linda MaxAllister of the CSU General Counsel's Office said the document is now under review. Before it would not estimate how long the review will take.

Scott said she expects to see the new draft of the order by spring.

"We should have a new Executive Order 148 enacted by fall of '93," she said.

It is not certain how the changes will affect Cal Poly. Scott said Cal Poly policies regarding crime on campus, specifically the sexual assault policy, will be largely unchanged. It is the disciplinary actions, she said, that will be different.

Julie Salamon, author of "The Devil's Candy: The Bonfire of the Vanities," spoke in the University Union Thursday night. It was the inaugural speech of the Cal Poly Lyceum, a new campus speaker's forum.

Salamon has worked at the Wall Street Journal since 1983. She has also written for The New York Times, The New Yorker and several film journals.

ASSAULT POLICY CHANGES

HOPED FOR BY NEXT FALL

Controversial CSU document makes victim, defendant face off in hearing

By Craig Abernathy

It was money and greed that did in Hollywood's adaptation of "The Bonfire of the Vanities," Julie Salamon, author of "The Devil's Candy: The Bonfire of the Vanities," said Thursday night.

"It was money and greed that did in Hollywood's adaptation of "The Bonfire of the Vanities," Salamon said at the Cal Poly Lyceum Thursday night. It was the inaugural speech of the Cal Poly Lyceum, a new campus speaker's forum.

Salamon has worked at the Wall Street Journal since 1983. She has also written for The New York Times, The New Yorker and several film journals.

Julie Salamon
Wall Street Journal

Salamon described DePalma as "a very honorable person, in a weird sort of way." According to Salamon, DePalma needed to score a big hit after his "Casualties of War" flopped at the box office.

Salamon said the script for "Bonfire" had been pushed through several movie studios before Warner Brothers finally agreed to take the picture.

"All of the studios agreed that it was a great story, but none of them believed it could be made into a movie," she said.

DePalma agreed to direct the movie, even after it had been rejected by many other directors.

"(He) took the job because he needed a hit," she said.

"The first script was nauseating," she said. "The rewrite was better than the first one, but still wasn't that good."

While making "Bonfire," Salamon said money concerns were a major contributor to the movie's failure. "It was money and greed, even though the film was budgeted around $50 million."

"Money ruled all of the decisions," she said. "(DePalma) took the job because he needed a hit."

"(DePalma) took the job because he needed a hit."
The coming age of limitations

By Dave Gross

Did you enjoy the Space Age as much as I did? Sputnik, Mercury, Man on the Moon, Skylab, as much as I did? Sputnik, Mercury approaching. No small potatoes there. And then... well, not much, think of what has happened between Apollo 11 landed than between Sputnik 11 landed in 1959 and the landing in 1969. The Space Age is dead; long may it live the next millennium. What should we call it?

I believe that our millennium will be remembered as the Age of Expansion. Nearly divided by the European discovery of the New World and ended by our first tentative steps on the Moon's surface.

The signs of this new age are already in sight. The first 1900 years of the Age of Expansion consisted of a steadily increasing growth in knowledge. Science was seen as not only a weapon for battling ignorance, but a crowbar with which to pry open Nature and steal the last of her secrets.

And so the end of the millennium approached, an optimism prevailed, with the belief that this new age would be more fruitful, and the answer to the question, and that it was only a matter of time before all of the knowledge was in our reach and Nature would have nothing left to hide.

But as the 20th Century went on, it was found that vast amounts of knowledge were going to be permanently off-limits. In Quantum Physics, in number theory, in chaos theory, the discoveries of new knowledge that our predecessors did not have access to were overshadowed by the discovery that some information simply could not be known. There is not much information we don't know, but there is a lot we won't know.

Limitations like this haven't impeded the popular consciousness, and most people still feel, and will still feel for years that a new and more well-placed instruments will be the keys to open the last few locks to the Secrets of the Universe. The scientists in their white smocks and their complex filigrees of wires and instruments, the barely-fallible priesthood of the religion called Progress, will continue to break through the barriers. They alway have before, haven't they?

The bigger limitation, and the one that would have seemed most unlikely to a citizen of even a century ago, is the environmental one. The next century in which humanit y will be forced to decide if our planet will not be fertile soil for our children any longer if our rate of population growth holds, if our consumption of atmosphere-damaging chemicals continues, if our pollution and poisoning of it becomes an increasingly important areas persists.

Some limits will be forced upon us, others we can go further — some will be because we must, not because we want.

Psychologically we have yet to face up to the future, but we are beginning to learn the latter. Already we have begun to accept that there is limits to our urge to war. Our weapons have become so terrible that the known results of using them are enough to keep us from using them. The Age of Limitation may be the first age known to us in which a weapon has been developed but not used. Which goes to show that the Age of Limitations is not necessarily such a bad thing. The feeling of omnipotence and limitlessness that the Age of Expansion brought us also served to divorce us from our mortality and humanity.

The fool, didn't his mother tell him there was no God? Look at what science would always find a way to get us out of trouble has made us unimpressed with specters of future calamity (overpopulation, the greenhouse effect, etc). Learning to respect the fact that we are flesh and blood and limited may just help us recognize with the Earth again. Not in some rare fantasy, new-age goddes ceremony, but in recognition of our mortality. Not a pessimistic reflection on inevitable death, but an acceptance that we are mortal and not alone the cycles that govern this world. I apologize if I'm starting to sound like a Luddite or a Linnaeus's Cafe crystal phallic guru. It's hard to talk to someone about respecting their animal nature and respecting the Earth without sounding like you're asking them to go hug a redwood with Robert Bly. And talking about limitations, well, that's just plain un-American.

It's not a pessimistic message unless it is taken that way. It certainly doesn't spell the end of our science or technology. We will continue to map genomes and probe the atoms and hurl the better benefactor. That our urge to discover will be tempered by limits, such as the limits on pollution, will only mean that we can bewünsche restrained by having to take out the trash rather than let it pile up and stink in our homes.

And some vistas still appear unlimited, or at least mostly uncharted. The mind, philosophy, spirituality, even scratch the surface of the dimensions.

We are unsatisfied with the present and can only hope that the future will overcome the limitations of the past. That the future keeps arriving and keeps being unsatisfying ought to be a clue to us that we should reason our progress-paradigms in favor of something that will allow us some happiness in the here-and-now, rather than the vicarious pleasure based on the imagination of our descendants living in a world in which all problems are solved.

So I'm optimistic that the Age of Limitations will eventually be resolved. Not more satisfying than the belief that we were born with the capability to be both omnipotent and omniscient.

So I'm optimistic that the Age of Limitations will be resolved. Not more satisfying than the belief that we were born with the capability to be both omnipotent and omniscient.

plasters how we look on the outside as opposed to what we are on the inside," she added.

"It all comes down to fitting in tight jeans," she said. Dr. Eliza Axelrod, a clinical psychologist at UCLA's Psychology Services, agreed that eating disorders are directly related to the American culture.

"Children grow up playing with Barbie dolls and think that's the way they should look," she said. "If Barbie were life-size, she would have the bust of a woman, the waist of a child and the hips of a teenager. It's anatomically impossible."

Axelrod said one in 100 people suffer from anorexia and as many as eight in 100 people suffer from bulimia.

She said, although the majority of eating disorder cases involve women, the number of men being affected has also increased.

Axelrod said sports such as wrestling and long-distance running can promote eating disorders in men.

"Many times there is a history of physical or sexual abuse in the women's family," she said. "She may feel she has no control in her life and so focuses on controlling her weight because it is the one thing she can regulate in her life."

Axelrod said an eating disorder could be only the tip of the iceberg and might be indicative of other psychological problems.

Poly’s x-country title streak stops at 10

By Kristie McCall
Staff Writer

Cal Poly women’s cross country team’s 10-year winning streak was snapped Saturday by a third place finish at the NCAA Division II championships.

The streak — from 1982 to 1991 — was the longest in the history of NCAA women’s championships.

Adams State, Western State, both of Colorado, finished ahead of Cal Poly in the competition at Slippery Rock, Pa.

The Mustangs had difficulty adjusting to temperatures in the 40s, not to mention a wet course from the rain.

“Conditions were very difficult for all the athletes,” she said. “It was a typically muggy day when anything can happen.”

Cal Poly first-year head coach Terry Crawford said the adverse conditions made for a tough race.

“The conditions were very difficult for all the athletes,” she said. “It was a typically muggy day when anything can happen.”

Cal Poly’s Jennifer Leonawra fell prey to the conditions. Leonawra took a fall in the last 300 meters of the race to finish 11th in 19:14.07.

Cal Poly, however, finished ahead of Cal Poly in the 30th place in the women’s national championships.

By Brad Hamilton
Staff Writer

The foot-stomping and top-of-the-lung screaming of a crowd of 541 said it all. Cal Poly stepped out of its three-game losing skid at home by beating Sacramento State, 5-13, 21-16, 15-9, 15-12, at Mott Gym.

“Unbelievable,” Cal Poly head coach Craig Cummings said about the crowd which filled Mott Gym with cheers and screams. “We put a seventh person on the court. When we were down 5-11 at the end of the first game, the crowd forced us to fight. We made adjustments. We battled back and won.”

Cal Poly, who defeated the Hornets earlier in the season, defeated them again in three games. The Mustangs, who have won 10 straight matches, will face No. 17 Oregon on Friday to see if they can continue their winning streak.

In game one, the Mustangs were down 11-5 but battled back to win 15-13. They took the second game 21-16 and the third game 15-9.

Cal Poly’s Jeffrey stretched on a dig in Saturday’s Mustang victory over Santa Clara to snap a three-game losing streak.

By Steve Pierce/Mustang Daily

By Kevin Comerford
Staff Writer

Cal Poly’s wrestling team opened its season Saturday in impressive fashion by ousting U.C. Davis for a 36-4 win.

Despite being on the road, the Mustangs won eight of the 10 matches, including four on technical falls.

Mustang Dale Hannover at 126 pounds recorded the only pin of the day near the midway point of the second period.

Heavyweight Seth Woodhill flattened his opponent 14-0, and was credited with one of the technical falls.

The other matches which saw the Mustangs come out on top were Joey Damsby (119 pounds), Pat Morrisey (142), Jake Gainer (150), Don Miller (158), Allen Gainer (167) and Eric Schwartz (177).

Morrisey racked up the most points as he won a 26-10 decision over Davis’ Chad Stewart.

The two Mustangs who suffered losses were Mike Gutierrez (134) and Charles Liddell (190).

Cal Poly is coming off a disappointing season season which improved them to the sixth place finish in the Pac-10.

The Mustangs will next compete in the Las Vegas Tournament at Las Vegas on Dec. 4-5.

Cal Poly’s Jennifer Jeffrey on a dig in Saturday’s Mustang victory over Santa Clara to snap a three-game losing streak.

By Steve Pierce/Mustang Daily

Cal Poly's wrestling team opened its season Saturday in impressive fashion by ousting U.C. Davis for a 36-4 win.

Despite being on the road, the Mustangs won eight of the 10 matches, including four on technical falls.

Mustang Dale Hannover at 126 pounds recorded the only pin of the day near the midway point of the second period.

Heavyweight Seth Woodhill flattened his opponent 14-0, and was credited with one of the technical falls.

The other matches which saw the Mustangs come out on top were Joey Damsby (119 pounds), Pat Morrisey (142), Jake Gainer (150), Don Miller (158), Allen Gainer (167) and Eric Schwartz (177).

Morrisey racked up the most points as he won a 26-10 decision over Davis’ Chad Stewart.

The two Mustangs who suffered losses were Mike Gutierrez (134) and Charles Liddell (190).

Cal Poly is coming off a disappointing season season which improved them to the sixth place finish in the Pac-10.

The Mustangs will next compete in the Las Vegas Tournament at Las Vegas on Dec. 4-5.

The trio teamed up with Scott Swoboda to win the meet’s final race, the 400 free relay 3:14.78.

Other Mustang winners included Scott Gawai in the 200 medley (2:02.41) and Jeff Simpson in the 200 breaststroke (2:17.82).

The Mustang women easily dominated their meet as they were led by the two-win effort of Anne Oberg. She posted victories in the 100 free (55.40) and 200 free (2:01.58).
