Clinton offers tax credit for
college tuition could

Community college students may
deduct up to $10,000 per year.

College students might seek admission to
different private institutions, where tuition
may be lower than many private universities.

Although the CSU system has
not formally analyzed the proposal, Glasmire said more stu-
dents might seek admission to CSUs if tuition was tax
deductible. But the potential
increase in students could be less
than many private universities.

Larry Glasmire, registrar at
California State University, Sacramen-
to, said a student who attends a four-year university may
deduct up to $10,000 per year. Community college students may
be eligible if they make less than $100,000 a year.

"This is a strong incentive to
send more students to college," said Larry Glasmire, registrar at
California State University, Sacramento.

Although the CSU system has
not formally analyzed the proposal, Glasmire said more stu-

The fate of Vista Point One, an access point to popular beaches near San Simeon, will probably be decided next week by a San Francisco judge.

The Sierra Club filed a lawsuit against the California Coastal Commission on June 10, after it voted to give Vista Point One to the Hearst Corporation. Vista Point One is a parking lot and entrance area located south of San Simeon which provides access to miles of beaches on the Central Coast.

In exchange, Hearst will provide land to Cal Trans to straighten Highway One, which the agency said is need­ed to lessen the amount of accidents in that area. It will also allow the state to create two access areas on Hearst property to replace the one that would be lost.

"Judge William Cahill heard arguments from both sides last week and will decide whether the Coastal Commission had the right to agree to the land swap with the Hearst Corporation. Jim Perano, the manager of the project for Cal Trans, said the project will swap one underutilized project for two new ones with better access to beaches and more parking.

But, Mark Massara, legal counsel for the Sierra Club, said that the land swap will result in lowered access for the public. He said the new vista points created to replace the first will not provide as much access to the popu­lar Arroyo Lagoon beach.

"The Coastal Commission had no right to make that decision because it violates the original contract that created Vista Point One," Massara said.

Massara said the Sierra Club argued that the contract which created Vista Point One states that it will remain in the public trust in "perpetuity" which means "forever." The commission has the right to amend existing contracts as it sees fit," said Ralph Faust, chief legal counsel of the Coastal Commission.

"The commission has the right to amend existing contracts as it sees fit," said Ralph Faust, chief legal counsel of the Coastal Commission.

Massara said means "forever." But representatives of the state believe otherwise.

"The commission has the right to amend existing contracts as it sees fit," said Ralph Faust, chief legal counsel of the Coastal Commission.

Perano said the land swap was necessary and legal because Hearst owns all the land in the area on both sides of the highway. Although the beaches are proper­ty of the state, Hearst owns the land between the beaches and the highway. Perano said the state uses the Hearst property for the highway and the vista points by way of an easement, which is land under a contract that allows the state to use private land for certain uses. The company allows the public to cross its property to use the beaches by a voluntary agree­ment.

He said that the public will not lose out because San Luis Obispo County required the state to create two vista points to make up for the one lost in the land swap. "Vista Point Three, located at Twin Creeks, will have more parking and the road will have wider lanes and shoul­ders to accommodate people who want to pull off the road to just relax and to see the ele­phant seals," Perano said. The other new vista point, number Four, will be dedicated to allowing the public to view the seals through tours led by docents.

Massara said the seals could pose an eventual problem. He said their consideration as an endan­gered species could force the state to close down the vista points to protect the seals.

Perano said that the State Department of Fish and Game has concerns about the seals, but he said that would not be enough to shut down the access points. Massara said that the decision is expected to be appealed by the losing side.

**Battle over San Simeon points continues**

By Tim Bragg

**UPCOMING**

Wally "Famous" Amos will be appearing at Unity Church on Tuesday, Oct. 22 at 7 p.m. speaking about his newest book, "Watermelon Magic: Seeds of Wisdom, Slices of Life." For more information call 543-4230.

PFLAG (Parents, Families and Friends of Lesbians and Gays) will be having its general monthly meeting on Thursday, Oct. 24 at 7 p.m. speaking about his newest book, One interested in gaining a better understanding of our gay and lesbian family members and friends through education. For more information call 546-1116.

Big Purple Onion Productions will be presenting the Rocky Horror Picture Show, performed by the Zen Room Cast on Oct. 25 and 26 at 12 a.m. in the Cal Poly Theatre. Tickets are $5 in advance, $6 at the door or $8 in advance for both nights. For more information, call the Zen Room at 756-3467. The theme for the evening is Transylvanian Gothic.

KCPR 91.3 FM will present Cal Poly President Warren Barker's state of the university address Tuesday, Oct. 29 at 9 a.m. The hour-long broadcast will begin with Barker's address, followed by a question and answer session with the program's host, KCPR Programming Director David Welch.

Life exists on Mars, says physics professor

By Leslie Miyamoto
Daily Staff Writer

Life on Mars? The National Enquirer may have proof of its claims, or so Cal Poly Physics professor Richard Frankel said as he gave evidence to prove this Thursday in the Performing Arts Center lecture hall.

Frankel spoke of a paper published in the August 1996 edition of Science Magazine in which a group of scientists from NASA's Viking lander experiment. Although the lander showed there was no evidence of life with the soils it collected, it did not rule out the possibility of life at other locations on the planet.

Frankel showed slides from the Viking experiment showing deep canals and channel networks. He showed an artist's depiction of Mars at a time when the channels were full of water. He compared the photo with Earth, to show they were virtually identical blue dots in our galaxy.

"These water networks prove there was once liquid water on the planet, and a strong possibility of life. Without liquid water now, however, there can be no possibility of life," he said.

Frankel compared the evidence of life on Mars to the evolution of life on Earth. "We'll look at the air quality there, seeing what we can do to examine the jet stream across the United States."

"We'll look at the air quality, knowing the same body of air crosses the United States and we'll sample it coming in and going out," said Ed Aull, aeronautical engineering professor and co-adviser to the club.

New space system club reaches for the stars

By Leslie Miyamoto
Daily Staff Writer

A new club on campus could launch Cal Poly into orbit. The Cal Poly Space Systems Club (CPSSC) is working on a bid for the 1997 NASA Student Launch Program. If selected, the club, founded last spring by students Roberto Barrion and Rick Burnes will send an experiment into space.

The club's experiment includes sending out a sounding rocket that will reach the upper atmosphere, but is not powerful enough to orbit around the earth. It will also send out a payload — which is a set of instruments that will measure or sample the chemistry of the air — into space to examine the jet stream across the United States.

"We'll look at the air quality knowing the same body of air crosses the United States and we'll sample it coming in and going out," said Ed Aull, aeronautical engineering professor and co-adviser to the club.

From page 1 she said, "It would be very good for access that they may not otherwise have, because there is not enough financial aid in California."

Williams predicted that financial burdens would be relieved, allowing many students the opportunity of going to community college. But she also said any students that go to community college for the first two years due to financial reasons may take advantage of the tax credit by going directly to a four-year institution. Any change on the number of students would be difficult to predict.

In addition to the tuition tax credits, Clinton proposes the expansion of the College Work Study program to include one million students, up from 700,000, and increasing the Pell Grant to $2,700 for 1997. According to the Clinton proposal, all of these programs will reach 17 million students.

“Don’t you know it’s the time of year
When the witches and ghouls appear ...”
— Children’s Halloween song

Yes, friends, it is indeed the time of year when stores dress up their windows with the traditional symbols of the Halloween season. Jack-o-lanterns, goblins, Frankenstein’s monsters, ghosts and vampires adorn the storefronts of Downtown San Luis Obispo. All in a predictable manner probably prescribed by the Downtown Business Improvement Association.

And one of the central features of this seasonal display of mock horror is the witch. You know her; the long, pointy nose complete with wart; the shapeless, black or orange dress; the black, pointed cap. Once in a while she’s rather nice-looking, like the one in the window of Chili Chompers. She rather looks like Samantha on “Bewitched.”

That’s another thing we have to look forward to this season — reruns and movies: “Hocus Pocus,” “The Witches,” “The Witches of Eastwick,” “Witchboard,” etc., ad nauseam.

And Barnes and Noble has thoughtfully put out a display of Halloweenish books, including “How to Turn Your Ex-boyfriend into a Toad and Other Spells” and the requisite Penguin anthologies of stories about vampires, ghosts and ... witches.

For those of you who haven’t decided yet on what your costume shall be, for advertising Farmer’s Market and the Rocky Horror Picture show, Beverly’s has a selection of patterns.

If you don’t like that version of witchy attire, try sandals, jeans and a blue-green mock turtleneck. At least, that’s what I’m wearing today.

I can tell myself not to be outraged by the above transgressions, but my sense of justice is an irritant. “Lady, forgive them for they know not what they do.” But, I must confess, I still get offended by the common portrayal of my religion.

I call on those businesses to do justice to those who history has treated so unfairly. We Wiccans believe the Goddess is in her Crone aspect this time of year. If you need a bag image, let it be the Crone. Let us not designate the memories of those tortured and killed for senseless grudges at power.

Dawn Pillsbury is a journalism senior and practicing Wiccan. She invites discussion of women’s spirituality issues. Her e-mail address is daphibu.

Another one skips the bus...

By Mark Armstrong

This was supposed to be a commentary about things that used to be free, but aren’t free anymore.

I was supposed to be ranting and raving about the injustices of a 25-cent bus fare, and then calling for the hovering parking police of Cal Poly to increase the parking tickets and keep our beloved bus service open for another year.

But this will not be so. This will be about red tape, bureaucracy and hands that are tied.

Hands that were supposed to help us get from point A to point B without having to pull out our wallets for anything but our IDs.

As reported in Mustang Daily on Friday, Cal Poly may have to cut out some of SLO Transit’s funding for the free bus service that we’ve all enjoyed for more than 10 years.

That could, in turn, cut SLO Transit’s revenues, which could cut out my free ride to school everyday, which could make me get off my lazy butt and go find a bike.

The city of San Luis Obispo wants more money from the school that provides almost 60 percent of its ridership and Cal Poly has almost no options. It has no more money to spare for public transportation. According to Commuter Services Coordinator Jacques Paulsen, the CUS system basically will not allow funding for the buses to come from other areas, like parking permit fees for instance.

The common argument has been that receiving public transportation from parking ticket money is like Alcoholics Anonymous meetings sponsored by Olde English malt liquor. It’s kind of a backward idea. Cal Poly is enticing people to come on campus and violate the parking laws so they can push alternative transportation.

But there’s nothing Cal Poly can really do right now to change where the money comes from. A little glimmer of hope appears in the possibilities of the Cal Poly Plan and what that money could be used for, and hopefully the CUS will eventually loosen its chokehold on how Cal Poly spends its money.

The city of San Luis Obispo hasn’t been much help, either. SLO Transit is hurting, and the city needs to up the ante for Cal Poly to continue its free bus system. Some city councilmembers want what amounts to the full 50 cents for each rider.

If SLO Transit starts charging students, the move will be a serious setback for the Rideshare and commuter service programs in San Luis Obispo, and it will make the new parking structure even more enticing.

Meanwhile, the city is spending millions of dollars to buy open space — that has little chance of being developed, and now it wants Cal Poly to keep footing most of the bill. Isn’t there some sort of bulk rate we should be getting?

Students will not ride the bus if the fares go up from zero. We have too much laundry to do to shell out more of our precious change for a ride to school. So let’s not get rattled off the bus and voice your opinion to ASI, because walking to school from Laguna Lake could be ugly.

Mark Armstrong is a journalism junior and the Daily Managing Editor. He faithfully brings a doughnut and a smile for the bus driver every morning he rides the bus to school.
MARS: Information not complete evidence

From page 3

MARS: Information not complete evidence for life on Mars, but it is consistent with evidence of life.

Frankel said the scientists' information is not complete evidence for life on Mars, but it is consistent with evidence of life. "This evidence is not overwhelming," he said. "DNA would be overwhelming evidence."

Frankel said the scientists are courageous for opening the door for others to further explore the findings.

"I'm not arguing with their evidence, just with their interpretation of it," he said. "If I have evidence that proves it's wrong, it's in my own interest to knock it down."

Before Frankel and others can further explore this issue, more evidence is needed. Viking experiments are too expensive and the possibility of finding more meteorites like the one found in Antarctica will take years.

"This is one of those great science stories that won't be decided for many years to come," he said. "I doubt it will be in my lifetime, though. I hope so, because I can't wait to see what this will lead to."

San Luis Obispo is improving in its attempts to gain a title belt for culture. Thursday night the Performing Arts Center (PAC) contended in a 12-round battle with its veteran opponent Bob Dylan. The heavyweight, a traveling Broadway production of the Who's rock opera "Tommy," held up its fists with a brave and exciting performance.

This is one of those great science stories that won't be decided for many years to come," he said. "I doubt it will be in my lifetime, though. I hope so, because I can't wait to see what this will lead to."

By Matt Berger
Arts Weekly Editor

THEATER REVIEW

But among the non-veteran crowd and the classily confined of the venue, the flashy production lost the battle by decision.

"Tommy" began, lights flashing and music blaring, in the early 1940s with a man saying goodbye to his newlywed wife as he goes off to fight in World War II.

The brave Captain Walker was immediately captured in a POW camp. Back home he had lost contact with his wife and his new son, Tommy. The war ends and he comes home to find his wife with another man. In a jealous rage, and shouted song, Walker (Jason Fleck) kills his replacement.

Bob Dole focusing on California

By Doug Willis
Associated Press

SACRAMENTO — As former chairman of the California Democratic Party, Phil Angelides is far from being an impartial observer of the current presidential campaign.

But Angelides hit the nail on the head with his analysis that Republican nominee Bob Dole is targeting California during the final weeks of the campaign because all of Dole's other options to catch up are even worse.

"It reminds me of (Democratic presidential nominee) Walter Mondale in 1984. People asked, 'Why are you spending so much time in California, Ronald Reagan's home state?' The answer, when you got down to it, was 'Where else are they going to go?'

Nobody expects Dole to fare as well as Mondale in 1984. People asked, 'Why are you spending so much time in California, Ronald Reagan's home state?' The answer, when you got down to it, was 'Where else are they going to go?'

This is one of those great science stories that won't be decided for many years to come," he said. "I doubt it will be in my lifetime, though. I hope so, because I can't wait to see what this will lead to."

Hewlett-Packard and Cal Poly... A winning partnership

Hewlett-Packard hired more than 60 grads from Cal Poly last year. We expect this year to be as good or better and we'd like to talk to you about the exciting opportunities we have at HP.

We are interviewing for December, March and June BS/BA and MS/MBA grads in the EE/EL, CPE, CSC, ME, IE and BUS/MIS fields for career positions throughout HP in the U.S.

On Campus
October 23rd & 24th

If you didn't get your Student Data Summary to the Career Services Center by October 2nd, there's still a chance to get an interview with HP.

Please attend our Interview Orientation on Tuesday, October 22nd in the Chumash Auditorium from 6:00 - 9:00 p.m. We will be filling out our schedules that evening. Hope to see you there.

Hewlett-Packard Company is an equal opportunity employer dedicated to affirmative action and work force diversity.
SPACE: Cal Poly might receive one of six bids

Avila is optimistic about the experiment and said Cal Poly has a great chance of receiving one of the six available bids. "I think we're going to win this thing," he said. "I think we'll be very competitive." Avila has a good reason to be confident. The club is working with three companies in the industry: Orbital Sciences Corporation (OSC), CALSTAR and Space Information Labs (SIL).

OSC, manufacturers of the Pegasus and Taurus space-launch vehicles, is heavily involved with the project and is offering NASA a two-for-one deal if CPSSC is selected.

This deal offers an additional sounding rocket rail launch capability from Vandenberg Air Force Base. In other words, if CPSSC is selected by NASA, it will launch two rockets instead of NASA's one to increase research capabilities.

"We want to launch one rocket from Wallops Island, Virginia, and one from Vandenberg Air Force Base to measure the two types of atmosphere from different sides of the country," Avila said. If chosen, the club will receive up to $35,000 over a 30-month period for the design, construction and flight, including analysis of data taken.

Yet funding for this project will probably exceed that amount. "That probably does not cover the project," Avila said. "But, there are no worries in coming up with the money because OSC is very committed." A requirement for acceptance into the program depends on interdisciplinary faculty and student involvement. Students interested in space-experiment projects are encouraged to get involved.

"It's a great opportunity for students to do senior projects," said Barrion, a recent aeronautical engineering graduate. Burns agreed.

"Engineering science and mathematics, chemistry, physics, aeronautical engineering, business, public relations -- it pretty much covers the spectrum," said the mechanical engineering senior.

Regardless of whether CPSSC is selected for the bid, the project will continue since OSC wants the project completed.

"Even if we don't get selected, OSC wants to do this and will put money towards this," Avila said.

CPSSC will be notified as early as March 1997 if it received a bid and the launch will take place sometime during the summers of 1997 through 1999. NASA will supply the rockets and was looking for proposals and experiments and the sounding rockets will be launched from the Wallops Flight Facility of the NASA Goddard Space Flight Center.

There will be a club meeting today in SB-217 at 7pm. For more information contact Rick Barnes via e-mail at rharnes.
DUSTER: Encouraged affirmative action awareness with Prop. 209

Duster said he believes the changes represent the population of California which has become multiracial and multi-racial.

Duster said the primary critical argument against affirmative action is that it is simply not fair. The argument stems from the belief that it is not constitutional to judge race or sex where decisions of granting loans, employment and education are made to meet quotas.

"Affirmative action is thousands of programs. You could not reduce this program by calling it quotas, you would have to be an ideologue," he said. "Goals and timetables are not the same as quotas."

Environmental engineering senior Gail Batan had a few things to say regarding the issue of Affirmative Action and Proposition 209.

"I think that a lot of people on this campus don't know the truth about what affirmative action is about," she said. "It's not about quotas, quotas are illegal."

Duster predicted that Proposition 209 will pass because the proposition is currently leading in the polls by 12 to 15 points. Duster also predicted there will be a decline in enrollment of African-Americans and Latinos at UC Berkeley and UCLA as a result.

New wildfire with 'big potential' closes state parks, Highway 1

BIG SUR — A new wildfire along the scenic Big Sur coastline more than doubled in size Saturday, sending vacationers and residents packing and closing two state parks and California Highway 1.

Strong winds and steep, often inaccessible terrain caused the fire to spread quickly through the area's thick forests of redwoods. By 6 p.m., the fire had burned 650 acres.

Although the blaze destroyed one travel trailer and threatened more than 30 others, officials evacuated the residents of about 25 homes Saturday morning, but by nightfall most evacuees were allowed to return home.

The so-called "Sur Fire," which was burning about 30 miles south of Monterey and Carmel, started Friday afternoon and was burning Saturday in the Pfeiffer-Big Sur State Park and to the east into the Ventana Wilderness.

Los Padres National Forest fire information officer Larry Hornberger said foresters' predictions of higher humidity levels for the rest of the weekend should help full containment. The fire is 45 percent contained by Saturday evening.

"Things tend to be looking better," Hornberger said. "But we still don't have an estimated containment time."

Officials quickly shut down state parks and wilderness areas, including the Andrew Molera State Park, which is being used as a fire headquarters. They also closed a portion of state Highway 1 about 10 miles north of the fire, near Malpaso Creek, and south of the fire, near Big Creek.

About 960 firefighters were at the scene Saturday night, Hornberger said. Many had been fighting an arson wildfire about 60 miles south of Monterey and Carmel. That fire, which was contained Tuesday, blackened about 26,000 acres of the Los Padres National Forest and the Fort Hunter-Liggett Army reservation.

Officials have not pinpointed the cause of the latest fire, Hornberger said. The American Red Cross set up an evacuation center for residents at the Captain Cooper School in Big Sur.

WIN D RIVER SYSTEMS

Wind River Systems is a strong believer in working with colleges and universities around the world. We established our intern program in the early '90s. The success of this program has been extraordinary and is continually expanding. A number of our current full-time employees began with us in the intern program.

MAJORS IN COMPUTER SCIENCE, COMPUTER ENGINEERING AND ELECTRICAL ENGINEERING ARE STRONGLY ENCOURAGED TO APPLY.

APPLICATION PROCEDURE:
Contact your internship/Co-op program/placement coordinator at your school. They will let you know when we will be on campus and what the interview process will be, and if you are applying for an internship, what the credit system will be. You may also send your resume along with two references and your transcripts to:

ATTN: L AURIE HARPER

OUR ENVIRONMENT IS CHALLENGING, FUN, VERY OPEN, CASUAL, AND WILL BE A SOLID TECHNOLOGICAL BEGINNING FOR YOUR CAREER! For full time employees we offer tremendous benefits: medical, dental and vision coverage, three weeks vacation, a five week fully paid sabbatical after five years, 401k, stock options, etc. We have a cool recreation room, hot tub, free soda and juice, and parties to reward everyone for their hard work.

CHECK US OUT AT WW W.WRS.COM.
You slam on the brakes and pull the wheel hard to the right, the sounds of horns blaring from every direction. OK, that one was too close, way too close. That other driver didn't even look before changing lanes. They call them the express lanes, but you think "extinction lanes" is really more appropriate. Today seems worse than usual. Almost like it's Celebrate Driving Month or something and you're in the parade. No matter. You're almost at the restaurant. A very chic, very you-know restaurant that you cannot afford. It is here that you are meeting your well-intentioned friend whose cousin twice-removed is in town. Cousin needs a date. Cousin is just right for you! Your friend claims. Sure. That's what your friend said about Dream Date Y last month. The dream ended at the police station. Don't ask. "Sorry," you tell your friend, "I'm booked." Friend laughs. Friend knows you are never booked. An hour later you're cruising for parking. Five blocks. Six. Seven. Eight. Suddenly, you see it. A space. A real, live legal parking space. With...can it be? Time left on the meter. You slow to a stop. Flip your blinker. Stick your arm out the window for good measure. Sure, it's a tricky parallel parking problem, but hey, you're a mathematician. You calculate, then begin the backup. Suddenly out of nowhere, it comes: a cheesy little red sports car zipping into your space, the driver laughing maniacally.

Your blood pressure rises.
DOLCE: Needs California to win 1996 election

From page 5

From page 5 poorly as Mondale, who lost 49 states. The latest compilation of state polls has Dole leading in 13 states with 101 electoral votes, and running neck-and-neck with President Clinton in another 11 states with 112 electoral votes. But that still leaves Dole far short of the 270 Electoral College votes needed to win the presidency, and California's 54 votes are the biggest prize among the 28 states leaning toward Clinton. The Dole campaign's decision to beef up its efforts in California came a day after a Field Poll reported Dole cutting Clinton's margin here from 22 percent in early September to 10 points in late October.

DOLCE's chief California strategist, Ken Khachigian, had been saying for weeks that the gap here was only 8 to 10 percent. He said the Field Poll didn't change the campaign's strategy, but that it improved the "public environment" by reinforcing the image that Clinton's lead is slipping.

But Mervin Field, whose poll gave Dole's campaign that public boost, says that is an inaccurate interpretation of his poll. The margin did narrow from 55-53 to 48-52.

The program finished with lunch and a Cal Poly staff and student panel. John Payne and Anshanti Branch were among the Cal Poly students who offered advice and took questions. Academic Adviser Gregory Roberts and assistant men's basketball coach Brian Loyd also took part.

The panel addressed topics such as fraternities, roommates, class attendance, affirmative action and Proposition 209. Special Projects Coordinator Bryan later concluded, "I think it was very successful — everything went smooth."

If success is measured by students who formed a positive impression of Cal Poly and the teacher education program, then the enthusiasm and attentiveness that filled the room indicates that Bryan is right.

Morningdale High School senior Shantika Lewis said she had never before considered going to Cal Poly, but now plans to apply. "It's been a real good experience," Lewis said. "I went to other colleges and it wasn't like this."

CROSS COUNTRY: Finished third overall

From page 12

The team finished third behind Adam's State and U.C. Santa Barbara.

"Our team goal wasn't to beat Santa Barbara, it was to have our top five run within 30 seconds of one another," Engel said. "You never know who our top five is going to be. Rick Espenida and Dave Mitchell really stepped up and filled the No. 2 and No. 3 positions."

Engel also was pleased with the progress the team makes with Barbara.

"I think it's a good thing, because who knows what the weather will be like in Boise," Becker said. "This wind will be no problem for what we could have them."

FOOTBALL: Patterson said he will continue to alternate Young, Allshouse

From page 12

Head coach Andre Patterson was pleased with how the running back situation has turned out considering last season's star running back Antonie Warren is redshirting this season due to a broken right arm he sustained in Idaho State. Warren was the seventh Mustang to post 1,000 in a season, the first since 1983, and is ranked sixth in yards with 1,845.

Patterson said he would continue to alternate Young and Allshouse in the backfield.

"I think it helps both guys out, neither one of them have to go in there and take a beating," Patterson said. "As long as they're productive and we're getting large rushing yards, it will be successful and it doesn't always have to go to one guy."

Alternating players is something that has gotten to be a trend for the Mustangs. After the running back situation, there is still the quarterback situation to contend with. Since the beginning of the season, Patterson has been alternating between junior quarterbacks Alii Abrew and Nate Ecklund.

Both Ecklund and Abrew have been plagued with injuries this season. Ecklund separated his left shoulder during Cal Poly's game with Weber State Sept. 21 and was out of commission for two weeks while Abrew had a hurt right wrist, which he continues to recover from. Ecklund made his return to the field two weeks ago, but he was put on limited practice last week because he reinjured it against St. Mary's.

Although Abrew started against Southern Utah, he only lasted until the second quarter when Patterson put Ecklund in.

"Actually I was a little surprised, since Alii was playing really well, but it just happened I got my chance and I made the most of it," Ecklund said.

While both his quarterbacks aren't fully healed, Patterson still thinks the Mustangs have the upper hand on their opponents.

"Alli went in and did the best he could. He wasn't real effective at times so we threw Nate in and gave him a shot and again that's positive for us," Patterson said. "Some schools don't have that advantage, they just have to live with what's going on out there and we don't. Nate stepped in and did a great job finishing up the football game."

The Mustangs were 10-19 with 169 yards, while Abrew went 5-13 for 141 yards against Southern Utah.

If the Mustangs' offensive situation was the least of Patterson's worries going into Saturday's game, there was the Thunderbirds' "hammer" offense to worry about. With two rushers who have averaged over 100 yards, Southern Utah has produced the top rushing offense in the country with 327.8 per game.

"Our whole defensive scheme was completely different," Allshouse said. "We had six linebackers in and two defensive linemen, so we changed the linebackers for the linemen and they put together a great package so we were able to stop them (Southern Utah)."

Patterson had to change his lineup to try to contain Southern Utah.

"What we tried to do was keep the assignments as simple as possible for the players," he said. "But whenever you play an option team, it's a chess match, because as soon as they see how you are picking up the dive, they change their blocking assignments so then we come out and stuff 'em."

"What happens a lot of times is.." See FOOTBALL page 11

From page 10

that the defensive guys get frustrat­
ed, because they aren't used to guys driving the ball all the way down the field like that," Patterson said of the Thunderbirds' "ham­borne" offense.

"Then you get to keep them from getting frustrated and just say hey, we're going to make an adjustment and you'll be all right in the next series and you just got to hope that somebody doesn't give up a big play—which we did a couple of times—but that's what happens when you play that type of an offensive." 

Patterson had to make several offensive and defensive changes during the second half.

"Offensively we just needed to execute...we were just making bad choices at where to throw the ball and there was some protection break downs," he said. "It was the way I thought it was going to be, in that they were going to make adjustments of who we have picking up what, and then they are going to move around because of that...we have to be reactive to that.

"I can't read his (Southern Utah's coach Rich Ellerson) mind. I may know what play he's going to run, but I may not know how he's going to block it until after they do," Patterson added. "So every time we would come off the field, I took the defense aside and then they would say this is what they are doing and then we would make an adjustment." 

Patterson used one of the final plays of the game as an example on how he had to make quick adjustments and decisions.

"On the last drive, we held them on the fourth down, they ran a four-back veer dive three times in a row because they were setting up the QB fake out of it where you can fake it to the full­
back and then the quarterback pulls it out and runs with it," he explained. "When they called the timeout that gave me a chance to get our guys onto it, that's why we stuffed them for the loss, because I knew that was the play they were going to run so we could make the adjustment right there and stop it.

"Now if they hadn't called timeout, then may be have hit that play because I couldn't have made the adjust­
ment to how they were blocking us.

"That's what happens when you play that type of an offense, that's what makes it difficult," he added. "Unless you happen to be a better athlete on defense than they have on offense, then it doesn't matter what you do, you are going to make some plays." 

Everyone on the team was prepared for Southern Utah's offense, Allhouse said.

"We came out and we knew that this was going to be an option team so we knew they were going to be running down the field and holding the ball and wasting a lot of time," he said. "But we stuck together, defense held strong and offense came back out, and when we needed it we got on the board."

All in all, the Mustangs were able to contain the Thunderbird's and that has affected the team's mood greatly.

"It's great (Cal Poly's mood); we've won two games in a row, they are excited about that. We have a chance next week, if we can win, to get ourselves back to 500," Patterson said. "That's two second halves in a row where our offense has come out and taken control of the game, and I think they are excited about that."

Saturday's win against Southern Utah has pumped the Mustangs up for their upcoming matchup with Western Illinois.

"We are going to go back there and try to get it done," Patterson said.

Sports

In a battle between land and air, the Southern Utah Thunderbirds weren't able to take flight Saturday afternoon with the Cal Poly Mustang football team holding them down, 45-34.

**Football**

Cal Poly (3-4) notched its second consecutive win, the longest it has had all season, at Mustang Stadium, with the help of its backfield. Both senior running back Mike Allhouse and freshman running back Craig Young scored two touchdowns apiece while sophomore running back Keith Washington rushed for 54 yards on four carries and scored once.

Young, who rushed for 150 yards on 23 carries against Southern Utah, was named NCAA Division I-AA Independent Player of the Week after he had 26 carries for 283 yards and two touchdowns—which included a school and I-AA best 75-yard run with 4:01 left in the third quarter.

Both Young and Allhouse wouldn't take all the credit for their performances Saturday.

"I think for us to both have two touchdowns, that shows how great of a job the offensive line was doing blocking, and it also shows how the receivers were doing a good job blocking and that we were running the ball real hard," Young said.

Allhouse, who rushed for 81 yards on 12 carries, echoed Young.

"The O line, offensive line, did great, tremendous, all the running backs will tell you that. It was all in the offensive line," he said. "They opened up the holes and it was all running like it was supposed to."

Young still hurting, replaced in second half by Elvis Grbac

SAN FRANCISCO (AP) — San Francisco 49ers quarterback Steve Young, apparently still feeling the effects of a groin strain, was replaced in the second half of Sunday's game against Cincinnati.

Young had returned after a three-week absence, but struggled as the 49ers trailed 21-0 to the Bengals when he was replaced by Elvis Grbac.

Young appeared to be limping and was unable to outrun Cincinnati linebacker Steve Tovar on his last play before being pulled. He was sacked twice on his final series and threw an interception on the 49ers' first play of the game.
