Class welcomes Walter Capps for visit

By Adrienne Gross Daily Staff Writer

Rep. Walter Capps (D-Santa Barbara) told a global communications class Thursday that education comes before partisan politics.

"You will never find a representative who is more on the side of students than I am. I am so much more an educator than a Democrat. I am so much more an educator than a politician," Capps said.

Capps was sworn into the U.S. House of Representatives on Jan. 7 as the voice of the 22nd district, which includes areas from Paso Robles to Carpinteria. Before his political career began, Capps taught religious studies at U.C. Santa Barbara for 32 years.

During his guest lecture, he encouraged student participation in the political process.

"If you want student loans, if you want anything that supports students and education, just let me know. While I'm (in Washington), I want to represent this generation," Capps said.

Grading papers? No, Congressman Capps gave a guest lecture to a global communications class Thursday that education comes before partisan politics.

Surf Club turns pro

By Jennifer Burk
Daily News Writer

What can you do with six men, one woman and one bodybuilder? Political science senior Ryan Riccitelli turned them into a competitive surfing team.

President of the Surfing Club, Riccitelli, restarted the club that fizzled out three years ago. He heard from old members that it was based on some kind of religion, and that's not what the club is all about," Riccitelli said.

The main focus for the new club is competition. The team competes in the National Scholastic Surfing Association (NSSA), which is considered the top amateur level below professional.

As the NCAA provides a place for competition in intercollegiate athletics, NSSA provides a place for shortboarders and bodybuilders to compete. Riccitelli wants to break the stereotypical surfer image and become an athlete.

"Who else would get up at the crack of dawn and get into 50 degree water," he asked.

Under the guidance of advisor Robert Griffin, associate executive director of Foundation Business, Riccitelli doused off the old Surf Club constitution and put it in use.

"Recognized as a social club, the Surf Club is not able to compete under Cal Poly's name. Until all paperwork to become a sports club is turned in and approved, the club continues without any funding or support from Cal Poly," according to Riccitelli. The NSSA has been very lenient about the team not competing under Cal Poly's name.

Spokesperson and member of the club, psychology senior Philip Raya, said they are shooting for the top. To get there they need to beat UC Santa Barbara, University of San Diego and San Diego State University, the top three schools in the Gold Coast division.

In the NSSA series, more than 20 teams compete from 15 schools. In their first competition in Huntington Beach on Nov. 2, the team came in 10th. This past weekend, they competed in San Diego and came home with a 12th place finish.

The lone woman on the team, biological science sophomore Ashley Kelsey, grew up competing in Redondo Beach. Rared fourth overall in the Gold Coast in the NSSA, Kelsey wants surfing to have the recognition it deserves.

"It lets you get to your max," McVey said. "It's really good for short-burst activities."

Steve Davis, associate professor of physical education and kinesiology, said he disagrees with the belief that sports supplements offer results.

"Most nutritional supplements are worthless because most people, vegetarians, yogurt and cheese, milk and eggs, are a good source of protein and amino acids, and the supplements capitalize on this," Davis said.

"People who market sports supplements capitalize on people's hopes of increasing their ability to perform. The anabolic steroid, usually injected into the body, will enhance use of these drugs, however, is illegal and very dangerous. Steroid use offers no advantages in terms of muscle gain," Davis said, explaining why false advertising occurs.

"Sometimes, usually in the high school and college bodybuilding arena, athletes use steroids in hopes of increasing their ability to perform. The anabolic steroid, usually injected into the body, will enhance use of these drugs, however, is illegal and very dangerous. Steroid use offers no advantages in terms of muscle gain," Davis said, explaining why false advertising occurs.

Cal Poly cheerleaders face some competition for the spotlight during half-time at sporting events.

The Mustang Band Pageantry Division of the marching band, also known as In Step, has revived its dance and tall flags team to entertain half-time audiences with fancy footwork. In Step started again fall quarter after budget cuts forced the team to take a several-year hiatus. The team's usage was "improper," forcing them to find an off-campus location.

Barnes started In Step again fall quarter after budget cuts forced the team to take a several-year hiatus. The team's usage was "improper," forcing them to find an off-campus location. Her efforts resulted in responses from 30 eager dancers who wanted to perform again at Cal Poly. To attract dancers, Barnes spent two weeks calling fliers around campus.

The newly formed team, however, found time to choreograph a short routine that it performed at two basketball games and at the homecoming game. "We had dancers and tall flags performing separately, so it didn't mix," Barnes said. "I had dancers twirling flags and flag twirlers dancing. I had a lot of people doing what they normally didn't do."

Journalism junior Nicole Belt joined the dance team fall quarter and said that she enjoys the experience. "I came on not really knowing what to expect," she said. "I expected that it would be like being on a dance team and making up our own routines. It's very organized and we have a choreographer." So far this quarter, In Step has performed at two basketball games and anticipated dancing at many more.

"Our goal is to dance with style and have fun," Nicole Belt and Emily Cavanah bust a move with the Cal Poly Dance Team in Mott Gym.

Hazing allegations lead to suspension at Texas A&M

Building a better planet through theft

"KOIT HORNeyer"  
I was briefly amused by the Daily's open display of journalistic bias on Jan. 27. The so-called "Green Issue" was scru­rifically titled inasmuch as it ap­ply described the color a rational person would turn after reading its contents. On almost every page the Daily asserted the evils of progress and informed us of those intemperate souls such as the Sierra Club working day and night to reduce the beauty of our state of barbarism. Last year, I wrote a column entitled "Own the Whales," in which I delineated my belief that our environmental prob­lems are a direct result of too much public space rather than too little.

Essentially, public space invites the "tragedy of the commons" where any­one can use a resource but no one has any direct incentive to preserve it. The fact that air quality and water sources are not claimable as property means that no one can claim damages when resources are irresponsibly impacted.

In almost every article in the "Green Issue," the public/private failure reared its ugly head. Private land was depicted as dangerous and public land was depicted as a panacea. One article described the planned development at San Simeon by the Hearst Corpor­ation. In this case, the county has deliberately used zoning laws to elim­i­nate the property rights of the land­owner. What gives government the right to dictate the use of resources on private land? The whole concept of ownership implies that the owner con­trols what is done with the property.

One might argue that the needs of the community outweigh the rights of individuals. Putting aside the fact that the "public good" argument has been used by numerous dictators, past and present, the concept is clearly illusory. Proponents of regulation believe that society possesses rights which none of the parts of society possess.

What is society but a collection of individuals? If it isn't right for individu­als to commit theft (which is what land-use restrictions amount to), can it be right for groups of individu­als to commit theft? One might fantasy­ize that society is composed of more than just people — like the traditions or morals of society. But values are not intrinsic. When we talk of values, we must ask "Of value to whom?" Since only individuals can have values and individuals have no "right to steal," it is obvious that the idea that society embodies traditions as well as people

Letters to the Editor

As an educated reader, I had hoped for a sound pro­choice argument defining Sheri Holmes' response to Mary Alterio.

"There is no sign of a heartbeat, therefore it isn't a living organism," weakened your point. Also, focusing on a woman's right to choose, instead ofechuing Ms.

Allorio's intelligence, might be bene­ficial to our "choice" position.

Meghan Williams

women want tone, lean bodies as opposed to muscular strength desired by men.

Physical education junior Erin Suydam said she works out for the overall health benefits.

"I work out because it's good for me," Suydam said.

Jaakola said he believes most Cal Poly students know how to workout properly.

"Most students have the general idea, but there's always room for improvement," Jaakola said.

Jaakola recommends that students design a workout program that lasts an hour, work with a workout partner and stick with it.

Davis places more importance on being fit and flexible rather than having tremendous strength.

"We live in an automated society," Davis said. "Aerobic fitness is more important than strength."

Capps from page 1

Lutrin said, "There are two dimensions here. One is the problem of money. The other is internal. A lot of faculty and programs say you have to take my class before you can get out of here."

Social science senior Kerry Zimmerman asked Capps, a member of the International Relations Committee, what he thought about the government's failure to pay past dues to the United Nations.

"I think we ought to pay the bill, but I'd like to see a strong recommendation for (United Nations) reform," responded Capps.

Capps' speech was cut short by a 20-minute time limit, but said he will keep in touch and visit again soon.

"I came to Cal Poly many times during the fall," Capps said. "I came back because now I represent you folks."
“It takes a lot of hard work and there’s a lot of hard workers on the team,” Barnes said. “I think it has a good future.”

Belts agreed and said she hopes to see the team expand.

“Right now we are trying to perform every chance we get,” she said. “My hope is that by next year Cal Poly students will know there is a dance team and will know what we’re about.”

In Step performs at basketball games and will be at the Mardi Gras parade this Saturday.

Surfers and beach swimmers should beware of entering the ocean after it rains, there is the possibility of getting sick after hitting the waves.

“Mike Doherty, supervising health environmental specialist for the division of environmental health in San Luis Obispo, said that San Luis Creek is the main discharge into the Avila Beach area. The creek drains watershed all the way from Cuesta Grade. Included in this is anything that has been picked up in gutters on the street in rural areas.

“Anything that can be washed into the creek probably is during a storm,” Doherty said. “Cow manure, dead manure, car oil, and anything else empties right into the creek from the street.”

To monitor this, the Department of Environmental Health takes five water samples weekly to determine the count of chlorplasm bacteria. The samples indicate whether the water meets the standards or not. The department uses Avila as the point for these samples because the conditions are expected to be the same at any beach that has creek influence including Pismo, Oceano, and Morro Bay.

“Gravity prevails,” Doherty said, “and because of this, there will always be a connection between urban runoff and the beach.”

To warn beachgoers of this problem, Doherty said warnings are posted at all beach access points in the county advising swimmers to stay out of the water.

Kolb said the general principle of staying out of the water after a big storm is good to follow anywhere, even in San Luis Obispo.

“I’ve been surfing for 20 years, and I personally wait up to three days after a storm before I go back into the water,” Kolb said.

Urban runoff has been causing major health risks for many years, but there are still a number of people within the community who are unaware of the risks associated with the ocean after a storm.

Rhonda Partida, an animal science junior at Cal Poly, has been an avid beachgoer since she moved to San Luis Obispo three years ago. It wasn’t until early December that she realized what is in the ocean after a storm.

“It had been raining for a week straight, and then next thing you know, it was a hot sunny day,” Partida said. “So, we took advantage of the break in the weather and went to (Shell Beach) for a swim. The next week, I was sicker than I’ve ever been, and my doctor told me that I must have picked it up from the bacteria in the ocean.”

On Wednesday, Feb. 19 at 6:30 p.m., the Surfrider Foundation will be speaking on the bacteria and health effects occurring in the ocean. The meeting is in Grover Beach at 101 Grand Ave.

HAZING from page 3
Kirk said Walker's death initi­ated an investigation, since the department is required by state statute to investigate any unat­ tended death. Kirk said the sheriff's depart­ment's investigation will not be concluded until a secondary foren­sics pathologist's report arrives. The case will then be presented to the grand jury, which will deter­mine if any criminal offense occurred based on the testimony and evidence. Kirk said when criminal statutes such as hazing are viol­ated certain elements need to be proven to determine if there was a criminal offense. One of the elements the grand jury will need to prove is the "cul­pable mental state" of the frater­nity members — whether they intentionally, knowingly or reck­lessly contributed to Walker's death.

Price said the University is responsible only for investigating policy violations and is not responsible for investigating criminal activities.

University regulations define hazing as "any intentional, know­ ing or reckless act occurring on or off the campus of Texas A&M University, by one person alone or acting with others, directed against a student, that endangers the mental or physical health or safety of a student for the purpose of pledging, being initiated, affiliated with, holding office in, or maintaining membership in any organization..."

When the University investi­gation is over, the case will be referred to the Interfraternity Council Judicial Board. If an individ­ual is responsible for hazing, the department of Student Life's Student Judicial Services will handle the case.

Two hazing incidents have occurred at A&M during the 1996­97 school year.

In November, Kappa Alpha fraternity was disciplined until 1999, after a pledge suffered seri­ous injury at a Kappa Alpha rally on Oct. 14, 1996, in Robertson County. On Dec. 13, 1996, Corps of Cadets Company B-2 violated hazing and drinking policies at an off-campus party where alcohol was served to minors and a senior allegedly struck a freshman. The company was subsequently dis­banded.

Poor officiating costs rugby team two games

By Melissa M. Geider
Daily Assistant Managing Editor

There are only two types of losses in the world of sports: a good one and a bad one. The good loss is one that comes after a team plays its best and still comes out of the game short of the points necessary to win. The bad loss happens when a team loses not because it played poorly, but because it was never given a fair chance to win.

Such was the lack of the Cal Poly Rugby team this weekend — it had a bad loss. Actually, it had two bad losses: one Friday against University of Arizona, 21-19, and one Sunday against Arizona State, 26-18.

Talk about an unlucky weekend.

In both games, the Mustangs played their best but still didn’t hold the fate of the game in their hands. Head coach Charles Zanoli said the games’ referees had control over the game and that had officiating affected the Mustangs greatly.

“Our game is speed, pace and quickness,” he said. “We weren’t able to do that, ever see in the four years I have played,” he said. “We can accept a loss when the team loses, but I can’t accept a loss that is out of our control.”

Zanoli said the Mustangs had the skills and the momentum to best both of the Arizona teams.

“We had a very good pace, we were into our own patterned game,” he said. “We were picked apart by poor refereeing.”

Cal Poly was so picked apart by poor refereeing that one of its players said, “It’s a shame we had more mental than physical problems.”

Again, a series of penalties plagued the Mustangs during the second half. ASU converted on three 3-point penalties, and scored off two tries to steal the win from Cal Poly, 26-18.

Also during that game, Meyers was ejected from the game by officials for dangerous play. Zanoli said this was, “hard to believe because Meyers is not like that.”

Zanoli also said recent rule changes may be one reason why officiating was not up to par. This year he said new rules have been implemented to try to “quicken up the game.”

“There is a lot of interpretation now,” Zanoli said. “In general, the rule changes try to make it a more wide-open game, but with whirlies blown and disrupting the pace and flow, it makes it worse. (The Mustangs) tried everything they could.”

Zanoli added that the new interpretations of the rules hurt his team, “especially from an entry-level referee (whose) interpretation was horridous.”

Quinn agreed and said that new rules are causing a communication between the officials and players about how or why penalties are being called and how they actually affect the teams.

Not surprisingly, both Quinn and Zanoli, along with the rest of the rugby team, said they were angry with the results of the games. Both also said that they would take that anger and use it to Cal Poly’s advantage in upcoming games.

Wrestlers sweep, win title

The Cal Poly wrestling team had a successful weekend, defeating both San Francisco State, 25-13, and Stanford, 25-6, while also capturing the team title in the 21st Annual California Collegiate Wrestling Invitational.

Wrestling

At the Invitational Friday, three Mustangs won individual titles, while eight Cal Poly wrestlers appeared in the tournament.

Tyson Rondeau (118), David Wells (158) and Jeremiah Miller (167) all captured titles in their weight class. Rondeau (118) and Gail Miller (126) started the match off by pinning each of their opponents, giving the Mustangs a lead they would not relinquish.

Rondeau decisioned his Fresno State opponent, 4-3, while Wells and Miller had to battle teammates for their titles.

Wells decided teammate Joe Hart, 9-3, while Jeremiah Miller decisioned teammate Jason Pratt, 8-0.

Cal Poly narrowly defeated Fresno State for the team title. Fresno had a tournament high four champions, but the Mustangs had more wrestlers appear, which gave them 90 points to Fresno’s 77.

Prior to the tournament, Cal Poly defeated San Francisco State, winning six of the ten weight classes. Rondeau (118) and Gail Miller (126) started the match off by pinning each of their opponents, giving the Mustangs a lead they would not relinquish.
