Space for skaters

Thrash-a-Thon moves to Open House weekend, joining other clubs looking for a place to play

By Steve Noone
Mustang Daily

Lambda Chi fraternity has big plans for Thrash-a-Thon 15, but controversy over the location of the annual skateboarding demonstration and over use of the equipment itself must be resolved before it can take place.

A lack of community interest in last year's event prompted the fraternity to schedule this year's Thrash-a-Thon during Open House weekend in April with hopes of attracting more spectators and sponsors. However, the availability of space for the huge half-pipe ramp will be limited as booths from hundreds of Cal Poly clubs will fill the campus.

Kevin O'Laughlin, chairman of the event for Lambda Chi, hopes to find a place for the ramp that could also include a stage area.

"As of now we just don't know where it's going to be," O'Laughlin said. "We're probably not going to be able to use the (University Union Plaza) because of all the clubs. We might be able to use the parking lot by the library but I don't think the school wants to give up the parking spaces. We're also trying to get about five free bands to come in, so we'll need space for that too."

"O'Laughlin said Lambda Chi is working with the Open House coordinators to secure a highly visible location for the Thrash-a-Thon.

"The event's been kind of dying the past couple of years — it's getting harder to get local companies to sponsor it," he said. "But we have a new ramp this year.

Cal Poly looks to farm out vineyards to Gallo winery

College of Agriculture negotiates to add 150 acres of grapes

By Mike Munson
Mustang Daily

Cal Poly and the world's largest wine maker are teaming to expand the horizons of the university's growing viticulture program. The College of Agriculture is negotiating with E & J Gallo to allow the winemaker to plant a vineyard on university property near Highway 1.

Some members of the community have voiced concerns about the vineyard's environmental impact and the lack of information provided to the public.

However, Keith Patterson, professor of viticulture, said the project is simply a partnership that benefits both students and Gallo.

"Students will have the opportunity to gain first-hand experience in vineyard care and development. "Nothing takes the place of students going out and doing," Patterson said.

For its part, Gallo will gain approximately 150 acres of grapes for harvest. Patterson said the company will also be able to get an inside track on top graduates after working closely with students on the vineyard.

Modesto-based Gallo dominates the U.S. wine market. The company is responsible for 30 percent of domestic

Reward grows for missing student

Greeks raise funds to bolster Newhouse family's $10,000 reward

By Alan Dunton
Mustang Daily

Over the weekend, several Cal Poly fraternities organized and facilitated fund-raisers and two very generous people outside the community gave money to the rapidly increasing Rachel Newhouse fund.

Last week, Anaheim Angels center fielder Jim Edmonds, and his agent Dwight Mantley, pledged $52,000 to the fund, increasing the amount of reward money to $60,000. On top of that, the Alpha Gamma Rho fraternity sold parking spaces in their lot during last weekend's football game, which contributed $200 to Newhouse's fund.

Friday night, Sigma Chi, Sigma Alpha Epsilon and Beta Chi fraternities held a tri-tip barbecue at the SAE house, complete with live music from two local bands. The Rise and Sugar Daddy Swing Kings, who played for three. According to speech communication junior and SAE member Mark Wehman, the fraternities collected $5,000 dollars from people at the door and raised approximately $1,200 before Sun Luis Obispo Police shut down the alcohol free

UC report reveals harmful nature of gasoline additive

DAVIS (U-WIRE) — An extensive report conducted by the University of California to Gov. Pete Wilson concludes that the gasoline additive methyl tert-butyl ether is potentially hazardous and should be phased out of use.

The report — compiling the results of a 10-month study by a collaboration of UC researchers with a $50,000 grant — was commissioned to test the environmental and human health impacts of MTBE. The additive is intended to reduce emissions and water contamination by MTBE a cost that is not offset by a corresponding benefit.

By federal law, gas refiners must add an oxygenate such as MTBE to gasoline in order to reduce emissions. The recent passage of Senate Bill 521, introduced by California state Sen. Richard Mountain, appropriated funding in order to test the environmental and human health impacts of MTBE. The additive itself is intended to enhance gasoline combustion, thereby improving air quality.

MTBE, which was originally introduced as a fuel additive as part of the Clean Air Act under the California Phase II Reformulated Gasoline Initiative, was designed to help reduce air pollution throughout California.

The study, however, found that not only did MTBE not serve this intended purpose to any satisfactory measure, but it also contaminated water supplies due to its high solubility. The inefficacy is attributed to technological advances in automobile emission control systems, which essentially have made oxygenates like MTBE obsolete.

As a result, the study suggests a gradual phase-out of MTBE from California gasoline. It also offers a number of encouraging strategies to care for currently contaminated ground water and surface water supplies, as well as ideas for the prevention of further contamination.

UC members selected to work on the project included professors and postgraduate researchers from UC Davis, UCL A, UC Berkeley and UC Santa Barbara.

even though the new ramp is less complex than the one it replaces, Edwon said Lambda Chi may still be reestimating the amount of work required. The structure must be dismantled from its current location at a skate park in Pismo, transported to campus, rebuilt for one day of skating, then taken down and shipped back again. It's not a simple thing to do, he said. "It's not like a house where if it's not perfect it's okay. They've got to know how to build a ramp for people who ride at 10 miles an hour. Today these dudes on the ramp are just going crazy, and so it's got to be safe. Those guys at the feverity — they're great guys, but they're not skaters. With something like this you've got to start small and then add a little every year. If they get too much going on, there's no way they could pull it. The more simple it is the better."

The Thrash-a-Thon is an annual fund-raiser for the Mimi Russell Foundation, a scholarship program for students in the nutrition program at Cal Poly, sponsored by local and national businesses in the skating market, who pay to have their logos on the ramp and make flys for the event. O'Laughlin said national companies, like Airwalk, will send members from skate teams to participate in the event, which attracts pro and amateur skaters from all over California.

RAMP continued from page 1

and it's a little bigger than last year. And with the bands, we hope this year's event will draw a couple thousand people.

Rob Edwon manages Solutions (a skateboard shop in Pismo Beach) and owns the ramp Lambda Chi will be using for Thrash-a-Thon 15. According to Edwon, the new ramp will replace the one that was destroyed by the weather after last year's Thrash-a-Thon.

"It was wiped out, it was destroyed by the weather after last year's event," he said. "They've got to start small and then add a little every year. If they get too much going on, there's no way they could pull it. The more simple it is the better."
Campus groups would benefit from priority

By Lauren Nowenwest

Many Cal Poly students struggle to CAPTURE the classes they need, but some groups find themselves at the front of the line more often than others. According to Associate Registrar Marcia Friedman, some athletics, student government, reservation class registration, and other groups receive priority registration. "We have to think in terms of what is best for the majority of students on campus," Waterbury said. Waterbury added that on a quarterly basis, SI instructors might receive priority because they need to attend and take notes in the class they are leading student-tutoring sessions for. Waterbury said that the six ASI officers have priority so that they are able to arrange times that they can meet with other committee members. Eligible disabled students receive it because of legislation protecting them from discrimination and enabling them to receive the same opportunities as students without disabilities. 

"We have to make adjustments for them so that they are not affected by their disabilities," Waterbury said. All priority registration requests must be submitted to the registrar by a staff or faculty supervisor at least a week before the CAPTURE system opens. Resident adviser Matt Millbury, a mechanical engineering junior, said that ASI should have priority registration. "I think we have one of the most demanding schedules of students on campus." Millbury said, adding that he estimates ASI works between 35 and 65 hours per week.

Millbury said last year he tried to pursue this issue but discontinued his efforts because he didn't feel there was enough support. "(Some people) didn't think there is any reason for us to have it. They were rather opposed to it," Millbury said. Millbury said he thinks that if like athletes, ASI brought hands and name recognition to Cal Poly, they might gain priority registration. "My supervisors tell me that we have tried numerous times and been denied," Millbury said.

Danielle Beauchanais, an ecology and systematic biology senior and Rose Float Club member said that priority registration might help committee officers because they need to attend meetings which take place twice weekly. If they have bad priorities, members can't make it to the vital meetings," Beauchamais said.

Beauchanais said applying for priority registration might prompt campus officials to keep a closer eye on the student-run club. She added that the priority registration is sometimes abused. "We don't want to be one of those groups," Beauchanais said. Music department chairman professor John Russell said the department has prepared a study as to how the marching band could function at a Division I level, thus increasing the size and importance of the band. "The issue of (priority registration) is addressed in the study," Russell said. Patterson said the downward spiral in public comment regarding the project. "There was no mention of this project ever brought before the campus planning committee," Patterson said. Although Cal Poly's actual viticultural program is young, the university has played a major role in state wine production for decades. According to Michael Barr, director of advanced education at the College of Agriculture, Cal Poly has educated many of the leaders in the California wine industry.

"You could go into a store and drown down a list of wines that are associated with Cal Poly names," Barr said.
Underage drinking is not the problem

Last week the San Luis Obispo Police Department held a press conference in which they cited underage drinking as the cause of the disappearance of Rachel Newhouse. They went on to assert that this most recent tragedy highlights the problem of underage drinking in San Luis Obispo.

This underage drinking was then, as per usual, linked with those god darn fraternities and their sorority cohorts. The Greeks, I suppose, are as good a scapegoat as any, but it is doubtful that they are the real root of the problem.

The San Luis Obispo Police Department, and the community at large, should take into consideration that whether or not a woman, intoxicated or not, is twenty one, will have little to do with whether or not she is assaulted or abducted.

In other words, a difference of one year in age would have made little difference on that fateful Thursday night, or on any other night a woman is assaulted or taken from us.

I respectfully suggest that the police department is missing the big picture here, and that is this: Instead of worrying about the party at Lambda Lambda Lambda, the real concern should focus on how our students and other youth are getting home from these parties. The police should shift their respective role in our community from enforcement to community policing or ensuring citizen safety.

Instead of chasing noise violations the police need to redefine their role in our community. This type of redefinition is taking place throughout our nation, not only in college towns, but in cities and counties nationwide. The effort has become one of safety education and privacy from enforcement to community policing or ensuring citizen safety.

Instead of chasing noise violations the police need to redefine their role in our community. This type of redefinition is taking place throughout our nation, not only in college towns, but in cities and counties nationwide. The effort has become one of safety education and privacy from enforcement to community policing or ensuring citizen safety.

Finally, this is not an assault on our law enforcement officers; rather this is a recommendation, one that I hope the law enforcement takes to heart. The way to prevent the tragedy of last Thursday, and the numerous crime that takes place is not simply a bad person on their way through town. San Luis must be made aware of the possibility dangers that can and do present themselves in our community. Our police can help by taking a more proactive approach to this problem through community policing. Aron DeFerrari is a political science sophomore.

Rachel Newhouse's disappearance is a tragedy to this community, and it should not be taken lightly. Looking for a scapegoat, however, is not going to help the situation.

If more people would focus their time and efforts to locate her, rather than blame innocent people and groups, I'm sure we'd all feel a lot safer.

Michelle Selberg is a business administration senior.

Stop pointing fingers

Editor: Sally Sparkman's letter "Friends don't let friends walk home alone," on Nov. 19, seems to me to be quite a stray from the truth. I had the understanding that Newhouse's friends were unaware of her departure from Tortilla Flats the night of her disappearance. Also, in defense of her friends, I must admit that I have walked home, unescorted and sometimes intoxicated on many occasions and my friends could not have stopped me if they had tried. People do abnormal things when they are not of sound mind, which cannot be avoided.

The businesses at clubs are not obligated to babysit the patrons of the establishment. They are hired for the best interest of the club, not the people that are too drunk to wait for a ride. If this were the case, there would be no clubs due to their liabilities for their patrons.

Fraternities and sororities are not to blame either. As a member of the Greek community, I am very well aware of the options that I have for a safe ride home, including a service offered to me every weekend through my sorority. Fraternities and sororities have also teamed up to offer safe walks home from the Rec Center, University Union, and the library, so that students have some peace of mind walking home from school late at night.

Additionally, there are various services that are run by the community, such as Ride On, that offer safe rides at a minimum cost.

Rachel Newhouse's disappearance is a tragedy to this community, and it should not be taken lightly. Looking for a scapegoat, however, is not going to help the situation. If more people would focus their time and efforts to locate her, rather than blame innocent people and groups, I'm sure we'd all feel a lot safer.

Michelle Selberg is a business administration senior.

Hindsight is 20/20

Editor: In response to the article titled "Friends Don't Let Friends walk home alone" by Sally Sparkman, we the "friends" of Rachel Newhouse found the article very disconcerting because of the level of ignorance exhibited. You expressed very callous judgments about people you have never met and situations in which you are unacquainted.

There is no doubt that every single one of us wishes that we were with Rachel throughout the entire evening, but does the fact that we weren't mean that we don't care about her well being and safety? In hindsight it is easy to say what the "friends" of Rachel Newhouse should have done, or what the "rest of you" should have done, or what the "tough and authoritative" bouncers should have done but there are situations which can not possibly be anticipated.

How do any of your observations help us now? We should've, "could'a", and "would'a" done things differently if we could have predicted this occurrence, but instead of concentrating on unalterable situations, we have chosen to focus our efforts on productive uses of our energy. There is nothing to blame but what is presently preventing Rachel to return — whatever that may be.

As far as the statement "Do not live your life as a spectator with people who are too self-centered to take responsible action, then express shock when things like this happen" we feel this statement is so extremely narrow, unfounded, and insulting not only to us but to all members of the community.

This statement is not worthy of any acknowledgement. We also feel implied, although we are not involved in the Greek system, to recognize the great efforts in which they take to provide designated drivers for their members and others who are in need of that service.

Rachel is a very smart girl who has exhibited caution and discretion throughout her life. Please do not discredit her ability to look after herself and make adult decisions.

Sally, you have no idea what kind of people we are and although we feel no need to prove ourselves to you, we hope our responses to your editorial brings you some enlightenment. Thanks for your insensitive criticism during this time of hurt.

We wish you could only understand what a horrible feeling it is to discover one of your closest friends has vanished.

Friends of Rachel Newhouse.

Mustang Daily
Reno was rude

Editor:

Just a quick little clarification on the boze situation at the Reno foot­ball game. I agreed with you John, when you said that beer and football are like peas and carrots. As is, as well as other sports fans, enjoy having a cold one while watching a game. However, you missed the point when Heather complained about the Reno fans. She was not implying that the boze seemed to attract the group of drunk, crude frat boys that we all know and love. Picture this, John; You’re at an out-of-town football game with 50 of your closest friends, putting on a kick-ass field show that you have been working on since before school started. As the football game progresses, it becomes clear that our football team probably won’t come out on top. You are pouring your heart into cheering the team on, even though they are getting slaughtered on the field. After being told to “Shut the F**k up” by the drunk frat boys in the parking lot, you see your girl­friend being sexually insulted by a group of drunks and boozes. All the while, you have the ever-so-threatening gang of sixth grade home­-wannabes telling you that “you F**king suck”. However, you love beer so much that you take it all with a grain of salt and just accept the fact that the Reno fans are all juvenile of how awesome the Mustang Band is compared to the Wolf Pack Band.

I am not against school rivalries or any other kind of rivalry. I think it enhances the spirit created at foot­ball games and other social activities. I am, however, against being told that I have to “shut up” just because my football team happens to be down by a few points. I am also against sexual comments made towards my girl­friend, especially when these com­ments are made by a bunch of drunk boys who are behaving with the mentality of a pack of horn gorillas. Alcohol attracts that type of crowd to football games, and this reflects poorly on the university. Don’t let it happen to Cal Poly.

Jeff Napier, an aeronautical engi­neering junior, is a Mustang Band member.

Defending Reno

Editor:

Being a student at The University of Nevada, Reno, I felt that I had to stand up to a letter printed not the Mustang Daily written by Heather Jensen. The letter was just reprinted in The Sagurban, UNR’s newspaper. Not only are Jensen’s version of the facts quite slanted, but they are com­pletely derogatory to UNR as the quality university that it is.

I would like to start off by saying that there were some obvious people at the game. There are loud, disrespect­ful people everywhere we go. Cal Poly included. These people may have been disrespectful to your band, but they were by no means the majority of the people attending the game. I happen to feel that some josting between opposing schools is expected. This is another fact of life. Two teams or schools that are about to meet in competi­tion aren’t going to be completely cool and friendly to one another. Jensen then also managed to for­get to mention that Cal Poly’s band managed to select the main tailgating area of the stadium to march through. I arrived just as the band was leaving.

Obviously, there were people in this area that were quite intoxicated, but since again, they were not the majority. I feel this was probably disrespectful of our fans. It was also a mistake not to be the band. If it wasn’t to please, I would stay away from the area with the tapped kegs and the groups of intoxicated people.

I think that Ms. Jensen was exaggerating heavily when she commented that “you could literally smell the alcohol” at the stadium. Sure, there was alcohol there. As much as some people would like to forget about it, alcohol and sporting events are and probably will always be joined. I sat in the stands at midfield, about 50 feet above a beer vending stand. There was a steady flow of consum­ers throughout the game, but there were nowhere near the amount of people Jensen described.

When she commented that the results didn’t come from students because “they didn’t even leave the alcohol stands and watch the game,” Jensen clearly must have been watch­ing another game. UNR was very upset at the poor stereotyping that we all look to avoid and blew them way out of proportion. UNR is not a dry campus, as there will occasionally be intoxicated people in attendance at sporting events.

I’m sure that even though Cal Poly is a “dry campus” there are still some intoxicated people at your sporting events and other functions. There were some people that acted inappropri­ately, and for this I would like to apologize, but making overall assump­tions about the entire student body based on observations of several people is also wrong.

Chris Burgess is a student at the University of Nevada, Reno.

Liberal Arts

Editor:

Last week in his column, “Liberal Love,” Eddie Drake proved he makes a better Liberal Arts dean than I. “Why major in liberal arts?” he asks.

Because such majors produce “free thinkers with innovative ideas and personal motivation,” he answers.

Let me take a shot at this. “Why? Because at the end of the liberal arts rainbow, California expects its population to grow by about eight percent from the mid­1990s to 2025. Yet did you know that forecasts predict demand for nearly 50 percent more technical writers, 30 percent more public writers, 50 percent more artists, and 30 percent more secondary school teachers over the same period? Or that openings in professions that emerge out of the social sciences are expected to grow by nearly 39 percent, while positions in law and related occupations might increase by 30 percent?” I could go on, but you get the picture. As interest­ing as this is, I think, that employers in 50 of the fastest growing profes­sions in California — from account­ants to teachers — have identified liberal arts skills — writing, speaking, problem-solving, and cultural aware­ness — as crucial to the success of these organizations and employees.

Now, I won’t lie to you. If God has hard­wired you to be a computer engineer, go for it. You’ll be loved even this. But we all need to come to terms with who we are, not whom others tell us we should be. Major in the liberal arts if you aspire that. Examine closely the outcomes that professors have articulated for the program that interests you. Check with advis­ors about pertinent internships,ships, minors, and coops. And visit the Career Center to begin transforming all these experiences into a personalized professional resume and plan for future work and/or study. As Drake implied, use all these resources to convert the main advantages of the liberal arts — free thinking and personal exploration — into that great adventure, the pursuit of hap­piness.

Harry Hellenbrand is dean of the College of Liberal Arts.
Wozniak leads Mustangs in rout

By Joe Nolan
Mustang Daily

The Mustangs are led by Mike Wozniak hitting open jumpers, but the 33 points he scored Saturday was more than they had ever gotten from their guard.

The 33 points were a career best for the junior who led the Mustangs (1-1) to a 96-66 romp over visiting Simon Fraser (0-6). Twenty-one of his points were on three-pointers where he was seven of 11.

Wozniak said the number of points he has doesn’t change his approach on the court.

“My mental strategy never changes,” he said. “I just try to be assertive and aggressive and hit open shots.”

Head coach Jeff Schneider said Wozniak is very pleased with Wozniak’s performance, as well as the rest of his team.

“We was tremendous,” Schneider said. “I thought we played extremely effective.”

The Mustangs got off to a 9-0 start and never looked back. The smallest lead the Mustangs had was 22-15 time with Wozniak leading the Mustangs with 25 points.

One area where Schneider was particularly happy with was the full-court press the Mustangs used which caused 32 Simon Fraser turnovers.

“We go into every game with the idea that we’d like to get about 35 deflections per game,” Schneider said. “I think we got something like 35 tonight.”

Senior point guard Ben Larson said that’s the style of play the Mustangs are best at.

“When we’re attacking, we’re at our strongest,” said Larson, who had seven assists.

Schneider said Jabbar Washington was the main reason the press was so effective.

“(Washington) really got us going in our press. Without Jabbar, the pressure wouldn’t have been as good.”

— Jeff Schneider
head basketball coach

WOMEN
continued from page 8

half the Mustangs were up 46-32, led by freshman forward Caroline Rowses.

Rowses dominated the game, scoring a career-high 22 points in only 22 minutes of play, while senior guard Kristie Griffin shot 15 points and grabbed eight rebounds.

Brown had a double-double with 12 points and 10 rebounds.

Cal Poly stumbled in the second half, as Loyola Marymount pulled it together and narrowed the Mustangs’ lead to a mere few points, 69-64, with five minutes left in the game.

The Lions were led by senior center Julie Jarosz, who scored 20 points in 19 minutes of play. Freshman guard Rosa Bensouici wasn’t far behind, with 17 points and 10 rebounds.

“Just didn’t get into a good offensive flow,” Mimnaugh said. “I didn’t think that we executed very well and some of our shots just didn’t drop.”

Junior guard Sherilyn Frazier blamed the Mustangs’ faltering on inexperience.

“Because we’re so young we try to push, push, push, all the time instead of being more patient,” she said. “But when they came back, we settled down and then took over from there.”

“Cal Poly fought against the slowly gaining Lions in the remaining minutes of the game, and finished with a nine-point lead.

We got a little more attentive,” Mimnaugh said. “It was really proud of our team’s effort. We just hung in there, rolled tough mentally, really buckled down again and get back to business.”

Rowses said the team’s tenacity allowed them to claim the victory.

“We didn’t give up,” Rowses said. “We pushed it to them on our press, we also pounded inside and even though they had some big girls, we didn’t shy away from that, we went to the hoop.

Our outside shooting picked up, that helped when we couldn’t get a shot.”

Following the Mustangs’ victory, both Mimnaugh and team members expressed their satisfaction with the team’s unity and playing ability.

“I thought it was a really nengkap team effort,” Mimnaugh said. “We had some really bright spots in our transitions. I thought that everyone had a really balanced scoring attack.”

“I’m really pleased,” she said. “I can’t tell you what a nengkap bunch of young women it is that I’m working with. They are awesome, they work so hard and they’re learning so quickly about what we’d like to do on the court.

I couldn’t have been more blessed than to work with this group.”

Rowses said she could not name just one player as being the major influence in the team’s win.

“Some nights it’s just one person,” she said. “But when it’s everybody, that’s what makes the game. Today was a team effort, everybody had something that was just sweet on them.”

“I’m so excited about the season,” Rowses said. “I’m really pumped for this team. We are on our won up and we are working hard just to get better every time we play.”

Frazier said she feels the team is on its way to a winning season.

“This is probably our best start since I’ve been here,” Frazier said.

“I feels good to win because we played together. It was shaky towards the end, but we came together and we did a good job.”
Noble, was having a career day in the first half. He racked up 159 yards on 26 carries and two touchdowns in the first two quarters. Seventy of Noble's senior cornerback Ed Wynn. "We half of playing defense," said quarterback C'hi Newsom (10 for and only allowed Noble to tally up 30 and two touchdowns in the second half. The Mustang defense stepped up and only allowed Noble to tally up 30 more rushing yards and didn't let the Flames score. The ineffective play of quarterback Christin Newsom (10 for 25 with three interceptions) didn't help either.

"We just did a better job in the second half of playing defense," said senior cornerback Ed Wynn. "We changed our defense and went back to like we were playing in the begin­ ning of the season." Wynn finished the season with a total of 616 yards in kickoff returns, seven yards shy of the school's all-time season record. His 30 kickoff returns this year are a new school record. Wynn and the special teams played an integral role in the outcome of the game. Three of the four kickoff returns by the team went for 30 yards or more enabling the offense to start with excellent field position. However, the special teams did allow the Flames to score their only second half touchdown. An Alan Belke punt at the start of the fourth quarter was blocked by free safety Trey Miller and recovered in the end zone by Flames' linebacker Larry Jordan. The touchdown tied the score at 15 but a Bielke field goal and a late 13-yard shovel pass by Henry to tight end Keith Harter with two minutes left sealed the game. Even with an injured groin and a noticeable limp, Young still rushed for a touchdown and 109 yards. He also caught three passes for 101 yards and one touchdown. "Gutsy perfor­ mance by him," Welsh said. Young was taken out in the middle of the fourth quarter and finished the season with 943 rushing yards. "If we would have started the sea­ son how we ended them the end result might have been better," said Welsh as he summed up the 3-8 season. The last time Cal Poly won only three games was in 1967. "On the other side, I think our guys played hard to the end," he said.

ON TARGET: Quarterback Chad Henry completed 12 of 27 passes for 289 yards including four touchdown passes.

**WOMEN'S BASKETBALL BEATS LOYOLA, 85-74**

**By Jen Stevenson**

Mustang Daily

It was an exciting night for Cal Poly women's basketball this Friday, as they beat Loyola Marymount 84-75 for their second win of the season.

The Mustangs set the pace immediately, when sophomore Stephanie Brown scored 18 seconds into the game. Cal Poly turned right around and pressed the Lions, causing them to call a timeout after only 50 seconds of play.

Our pressure really took Loyola Marymount off their game, said head coach Faith Mimnaugh. They were really effective at moving the game inside, they had so much strength on the boards and they were great three-point shooters. So we really had to try and take as many ticks off the clock as we could and our defensive sets and our press really served to accomplish that.

The Mustangs continued to keep the pressure on Loyola Marymount, and the Lions' offense suffered as
