Parking meters are short-timing students on the Cal Poly campus. Meters in several of the parking lots are allotting people less time for what they are paying.

"Insert coin, turn handle to the right as far as possible after each coin," the instructions read on each meter. Following this does not always yield reliable results.

One meter located outside the Graphic Arts building raised the "time expired" in three minutes after five nickels, or 15 minutes, were deposited. Another meter at the Health Center expired after two minutes. Twelve minutes of time was deposited. In each case, the meter was still ticking after the flag went up.

Additional instances are less serious. One meter at the Health Center gave eight minutes for nine minutes of time, and one Kennedy Library meter expired three minutes prematurely.

"It makes me pretty pissed... when you can't get a..."
Parking fees, fines finance campus programs

By Alexis Garbeff

Students and faculty who choose to park on campus are faced with buying a parking permit or feeding a meter. Parking permits and citation fines help fund new parking facilities and carpools at Cal Poly.

Parking fine money goes into fees and fines, according to Public Safety Program Administrator Cindy Campbell.

According to Campbell, student and staff fees, which are made up of revenue from parking permits, are used to build new parking facilities as well as maintenance and upkeep of existing parking facilities. This revenue, $1.5 million last year, is also used to pay staff that enforce parking regulations and personnel who clean structures and grounds. Money is also saved for future projects.

Student and faculty fines totaled $469,992 last year. The money collected from citations pays for alternate modes of transportation like carpools, Campbell said.

"You and I can get on the bus for free by showing our ID cards. We have for a decade. It is paid for by citation money," Campbell said.

Citation money funds transportation that is different from a single person getting in a car and driving to school. This includes carpooling, ridesharing and vanpooling.

Last year, the citation revenues fell short of completely funding the bus, and Associated Students Inc. made up the difference. According to Campbell, public safety is working with ASI to generate an alternative source of revenue to fund the bus. If an alternative source of revenue cannot be found, then there will be a minimal fee for all campus bus users.

Periodically, parking citations are increased for various reasons, Campbell said.

"We don't increase citations to raise money. We increase citations to match what is going on in our community or other (California State Universities) of our size and nature," Campbell said.

Campbell believes Cal Poly's fines are right in line with the city of San Luis Obispo as well as other campuses. Last year, the city of San Luis Obispo raised its ticket fine from $8 to $10. On Jan. 1, in accordance with the city, Cal Poly increased its fees to $10 as well.

"You know that your fines are in accordance when you see your citation numbers go down," Campbell said.

Completely, fees and fines in the city of San Luis Obispo are low compared to other CSU schools. According to the campus's effect, a parking permit is $36 for the quarter. At University of California, Santa Barbara, a permit is $74 for the quarter. At California Polytechnic University, Northridge, a permit is $63 per semester. Some other schools' fines are more than Cal Poly's as well. At Santa Barbara, an expired meter would cost a student $24. At Northridge, it would total $20.

Even though Cal Poly's fees are low, students like junior Matt Hornhuckle still find ways to avoid a ticket.

"Last year I paid a couple hundred dollars in parking tickets. I never had a parking permit," he said. "I found a spot that I could dodge the cop, but then he changed his route and I started getting all these tickets.

Pink Prize Patrol hits the road to reward

By Chris Hoffman

"I see pink on Tuesday mornings at Cal Poly, it could mean free stuff," said commuter services cashier Cassie Paulsen.

If you see pink on Tuesday mornings at Cal Poly, it could mean free stuff. This month to reward people for not driving alone.

Every Tuesday beginning Jan. 26, the patrol will pick a location and randomly hand out prizes between 7 a.m. and 9:30 a.m. to people who carpooled, bike, used other alternative transportation methods.

"This is our way of encouraging people to ridehail," said facilities planning project information coordinator Deb Ryan, one of the people behind the program. Ryan said the program is designed to reduce Cal Poly's parking problems, especially with the loss of 150 more spaces later this year due to construction of the parking structure.

"It's our way of saying we know it's going to be a bother, but we're trying to do something for you to ease the hassle for the next year," Ryan said. She said the program will run until the parking structure is completed.

"We're hoping for is that we won't have to be out there reminding people," said commuter services coordinator Jacques Paulsen, the other member of the patrol. "It will be an automatic thing...""Ah, Tuesday, I can carpool today. Why not one day?"

Ryan said she and Paulsen will be handing out the prizes, wearing pink visors and "some kind of pink identifying clothing." They say the color pink was chosen because it's not associated with any other traffic activity and is easily visible.

Prizes are planned to include keno rentals, roller-skating passes, deep-sea fishing trips, whale-watching trips, banana-bike rentals, massage gift certificates, water bottles for bike riders, tickets to athletic events and food gift certificates.

"All of it is being donated," Ryan said. "We have not spent a penny and will not spend a penny. We have a very generous community, especially when they hear 'ridesharing' and 'traffic' and 'parking' and that sort of thing."

Close to 175 prizes have been donated so far, Ryan said, and she expects more in the future. The prizes aren't just for students, but faculty and staff also.

Paulsen points out there are many methods of transportation, besides driving alone. "A lot of times you hear the word 'ridesharing' and you think 'carpool,' and it isn't necessarily it can be walking, it can be taking your bike."

About the only alternative transportation methods that won't count are in-line skating and skateboarding, because they are illegal on Cal Poly grounds.

People who already use alternate transportation seem to like the idea of the patrol. "It will accelerate people wanting to..." take an alternative method of transportation," said groundkeeper John Price, who walks to Cal Poly. "Big prizes. That'd be good."

Some students may try to use different transportation for the chances of a prize. "Sure," business senior Christine Sengo said. "I live kind of far out, but I guess I'd try." Other students, though, don't plan on changing their habits. "There's just nobody I could carpool with," recreation administration junior Brian Liten said.

Kinesiology senior Kelly Osborne echoed the sentiment, saying she would "probably not" change her driving.

Even people who drive by themselves, however, won't be completely left out. If single drivers fill out a survey about why they drive alone, they will be eligible for a quarterly drawing to win prizes.

"What it will do is make them aware that there's another way," Ryan explained. "By being out there... and seeing us... it's very likely that somewhere along the line they're going to think differently about it, and that's what counts."

Paulsen hopes that the patrol will encourage people to ride solo even after the parking structure is finished. "By making them aware now that there's another way to do it... just maybe when that structure goes down, they'll still consider the alternatives. And that's the real goal."
Asbestos slows construction

By Julie O'Shea and Joellen Smith
Mustang Daily

The start of the new millennium, 936 additional parking spaces behind the Recreation Center will give student and faculty drivers less of a headache each morning. And by the start of fall quarter, engineering students will be able to enjoy the benefits of advanced technology laboratories being built adjacent to Kennedy Library.

Construction on the buildings, which broke ground last fall, is going smoothly, said Katherine Dunklas, project manager. There have been no major problems, and both parking spaces are expected to be finished on schedule.

"We have at least a year to go, but we are excited that the process has begun," said Cindy Campbell, parking and commuter services administrator for Public Safety Services, about the construction of the parking structure.

Neither of the million-dollar projects being built will cost them a nickel, said Franny Mohr, project coordinator.

"We go out immediately and pull the mechanism out of (the parking meter), put a new mechanism in, and come back, time it, check it, and find out if what you're saying is factual," Cindy Campbell, parking and commuter services program administrator.

"We don't want to have malfunctioning meters, we don't want to have meters that don't time appropriately," Campbell said. "It's not good business."

Parking lots with digital parking meters are more accurate. These lots include Administration, Foundation, Facility Services, and the Campus Store. The meters are battery operated and are set by an internal clock once a day. All major cities have gone to the electronic meter system, said Barry Reid of MacKay Meters, the company that manufactures the universities meters.

"If the meter is not working, it will shut itself down," Reid replied. "That shouldn't happen."

"Part of the project was to remove an asbestos coating that was in the tennis courts. That part took long..."

E & J GALLO WINERY

is looking for quality people for our
Winemaking and Research and Development Departments

Join us for a discussion about the opportunities available for those with Biology, Food Science Enology, Modern Biology, or related majors at the

Ag Showcase, Thursday, January 21, 1999
9:30 a.m. to 3:00 p.m.
in the
Chumash Auditorium, University Union Bldg. #65.

E & J Gallo Winery is an equal opportunity employer.
From dreams to dinner, a day in the mind of a columnist

I walk down the hall of the high-rise building I live in, looking for my classroom. Was it on the 88th floor or the 89th floor? There are a few kids sitting in the back of the classroom. They are all crowded around some kid's pet cat which happens to have two heads. I decide that I don't want to hang out there when one of the heads looks at me.

We notice that the controls for the elevator are really for traveling in time. The further down we go, the further back in time we will arrive. We all decide to go down to the ground floor and see what New York was like during New Year's Eve on December 31, 1999.

When the doors open, though, we realize that we have accidentally gone down to the basement, to a time before this particular elevator was invented. A mad scientist starts chasing us so that we will tell him our time-traveling secrets.

Darn! It's already 8:45! I still have to drive and park next to Campus Bottle. I haven't written that parking permit yet. I really don't want to deal with meter mands and Public Safety. At least I haven't helped them finance a new golf cart, like my friend Mark Derrall has. I keep making sure my pager is working, because my girlfriend is going to tell me whether she got that cool job.

I am glad that I get to take a class as ridiculous as statistics. This is seriously a jetson's classroom.

Everyone is seated in front of a computer terminal and you can't see the professor. You can only see his gigantic head on the screen. I was really surprised when a lot of women told me they had a hard time in this class. Maybe it has to do with math-type classes being taught from a male point of view. Still no pane.

Pain from the Avenue and wade through the credit card line. I am broke so I get one bean and cheese burrito from Tapann's. Yum! My God! Yum! This rice is not that cool job.

Porville has. I keep making sure my printer is working, but it's from someone else.

Between the men's and women's Kitchens, I am yad that I need to take a class as ridiculous as statistics. This is seriously a jetson's classroom.

Jon Wilson is a philosophy senior.

The seven days of creation: a bachelor's story

In the beginning the bachelor created the dinner. And behold, the dinner was without blenish or imperfection, and it was abundant. And the bachelor did look upon the dinner he had made, and he saw that it was very good, and that he could not finish it in all its abundance. He therefore did place the dinner in the refrigerator and did place darkness over it, whereas he immediately forgot about it. And there was evening, and there was morning - the first day.

And the bachelor spake, saying, "Let us return to the fridge and consume the dinner, for it is very good." He did walk to the fridge to seek the dinner, and behold, the bachelor's roommate did invite him to Farmer's Market for dinner.

The bachelor remembered not the dinner, nor did he consume it. And the flavor was gone from the dinner, and there was evening, and there was morning - the second day.

Again the bachelor spake, saying, "Let us now go unto the fridge and find something to eat." And it was so - he did find and consume parts of a Dominio's pizza, but he remembered not the dinner. And the dinner begat spores and mold, which were fruitful and did multiply. And there was evening, and there was morning - the third day.

And the bachelor did go unto Mammoth to ski, and remembered not the dinner. And the spores were strong, and did increase in number, each according to its kind. In those days, the spores did begin to call upon the name of the bachelor, but he heeded them not. And there was evening, and there was morn¬ing - the fourth day.

The bachelor returned from the mountain, but behold, he was too exhausted to go unto dinner. And the spores did tell him to return to the dinner, bringing forth livestock and crops and every kind of living thing, each according to its kind and in its season. War did break out between the spores of the mashed potatoes and the spores of the turkeys, and the turkey spores fled before their enemies. And the mashed-potato spores did come and put their cities to waste. And there was evening, and there was morning - the fifth day.

The bachelor had a date, and did spend the entire day baring gifts for his date. And the spores did develop mass communications, along with an Internet and a public transit system. And behold, the spores believed that there might be life in other refrigerators, and did launch a satellite to communicate with them. They also did find a cure for spine cancer. And there was evening, and there was morning - the sixth day.

On the seventh day, the bachelor remembered the dinner, and that it had been very good. And he did return to the refrigerator and did find the spores in all their wealth and splendor. And behold, they were a stench in his nostrils, an abomination before him, and his anger burned against them. The bachelor did curse the spores, saying: "Cursed are you among microorgan¬isms! Because you have made my dinner abhorrent. So shall I make you abhorrent to all who see you. An object of horror so that no one can say, 'This is mold.'" And the bachelor did put them down the garbage disposal, spooned their spores nor mold nor mushroom. And after he had destroyed them, he did purge the dinner's plate with bleach, and soap, and X-14, and sulfuric acid, and paint thinner. Then the bachelor turned from his fierce anger.

That is why the bachelor does not cook more than he can eat, a tradition that remains to this day.

Nate French is a math senior.

Letter policy

Columns, cartoons and letters reflect the views of their authors and do not necessarily reflect those of Mustang Daily. Mustang Daily encourages comments on editorial policy and university affairs. Letters should be typewritten, double-spaced and include a name, major, year in school and phone number. They can be mailed, faxed, delivered or e-mailed to opinion@mustangdaily.calpoly.edu. Shorter letters received by email will be given preference. Kettlers exceeding 600 words may not be printed.
The curse of the credit card ladies

It's raining credit card companies in the The Concrete Jungle, and I'm tired of getting wet.

For the past week and a half, I've been verbally pelted by raspy-voiced, middle-aged women hawking credit cards in the University Union. No, I don't want freebee Frisbees. Plane tickets to Tahiti? I'll pass, thanks.

No more credit card ladies? Now we're talking.

I'd like to know who lets these companies on campus to track down unsuspecting students. I'd like to know who hires those persistent women to represent their companies.

One question, though, really burns me inside: Who the hell tails tor it?

Busy students like you and me actually get sucked in. They see "Free Stuff" and lose all sell-control. They even put up with the cackling women. Then they hang around with a clipboard until every last application box is checked.

Please tell me these students actually need credit cards. Don't tell me they want the cards because the tree shirt Uxiks good with jeans.

Furthermore, I hope sucker students know the catch. There's always a catch, especially when free tickets to Tahiti are involved.

You'd think the Cal Poly "decision-makers" would be embarrassed to host this evil credit card ploy. But, then again, Cal Poly is one of them. The Alumni Association hires a persistent woman for themselves to accost passers-by with credit card offers. I'll admit, the war among credit-card ladies makes for great between-class entertainment. But it's time for students to save themselves.

Card companies will pull the plug on their Cal Poly tour if students simply say no. The raspy-voiced women will go home with all the free stuff they came with and never set up another folding table at Cal Poly.

Maybe then Cal Poly will learn ...

Andy Castagnola is a Mustang Daily staff writer and a Journalism Junior who has a hard time fighting credit card temptation.

Programs help save earth for next generation

Editor:

I am amazed at some of the things I have read in the opinion section of Mustang Daily, but never so much as when I read "The EPA is pro-environment, but anti-people," on Monday, Jan. 11.

It seems Mr. Ruhge is only concerned with his "pockethook," and the world could turn into a wasteland without him giving it a second thought. "The country's going broke. We can't afford such a luxury as saving species."

This is just one of the many greedy, uncaring points he tries to make. Trying to save species of animals that we are destroying is not a luxury — it is an obligation. When one species dies out, there are repercussions. A link in the food chain is gone. The earth is not something to be put on a priority list after money. It is every person's duty to try at least leave the earth the way he or she found it.

Mr. Ruhge says programs like the Endangered Species Act, air quality, water quality, and pollution site cleanup "must be changed or eliminated." I hope no one ever has to live in this world Mr. Ruhge would have. I am happy to pay for programs like these and to know that there are environmental rules out there. I want the next generation to have a clean and healthy environment to live in.

Wendy Martin is an environmental engineering freshman.
continued from page 3

Both students and faculty will be allowed to park in the new structure with a valid Cal Poly permit. It has not been decided if there will be certain levels designated staff only.

About 150 parking spaces will be lost permanently in order to build the parking construction ramp, Campbell said. Public Safety Services has been able to maintain most of the parking along Grand Avenue for now.

Campbell said she has yet to receive any complaints from students or faculty members about the loss of spaces. She encourages any student or faculty member to talk to her if they have any concerns about parking on campus.

“We fully recognize that (the construction) adds to an uncomfortable situation already, but we think the end result... will bring a good solution to the campus,” Campbell said. Campbell agreed with Dunklau’s comment that students should take alternative methods to driving to school, such as biking, walking, or taking the bus.

“The local transit is a wonderful option that a lot of schools don’t have,” Campbell said. “We really hope that people take advantage and (use the bus). Especially this year.”

Accident injures student

By Rachel Robertshaw
Mustang Daily

A Cal Poly student was injured when his motorcycle was hit by a car on Perimeter Road Thursday morning.

Jerald Russell, a 21-year-old environmental engineering senior from Grover Beach, was driving south bound on Perimeter Road when his 1996 Harley Davidson collided with a 1988 BMW, driven by Edward Sullivan, also of Grover Beach.

Sullivan was attempting to make an illegal U-turn when he hit Russell, who was on his way to class, police said.

Russell’s right leg was fractured in the accident.

According to police, Sullivan came onto campus on Grand Avenue and turned left onto South Perimeter Road. He pulled up by the west curb to pick up his daughter, a Cal Poly student, in front of the University Union.

Apparently, Sullivan checked for traffic but didn’t see the motorcycle coming down South Perimeter Road, and pulled out to make a U-turn, witnesses said.

Sullivan saw the motorcycle just an instant before the collision, according to Sgt. Bob Schumacher.

The motorcycle was hit with the front left of the car, and the force of impact knocked Russell to the ground, police said.

When campus police arrived at the scene, onlookers had already come to assistance, Schumacher said.

“Some people were keeping him calm, and some university employees had taken the initiative to help with directing traffic,” he said. “They continued to do this even after we arrived.”

Psychology senior Briana Clark was at the scene before the paramedics arrived.

“I was very impressed by the help of people passing by,” she said. “They were a real help to the victim.”

According to police, the car was only traveling about two or three mph, and Russell was going about 15 mph.

Schumacher said that campus Police were at the scene two minutes after the call came in. He estimated the ambulance took about eight to ten minutes. Schumacher said this is normal response time for an accident.

Clark said that it seemed like a long time before the paramedics were at the scene. “I was very surprised at how long it took the ambulance to arrive.”

Russell was taken to Sierra Vista Hospital.

Schumacher said this is one of the most serious accidents that he has seen at Cal Poly.

“It’s not the general type of accident we see at Cal Poly,” Schumacher said. “We probably have about 25 accidents reported each year-most of them minor.”

Sullivan will be cited for a vehicle code violation, for making an illegal U-turn.

Schumacher encourages students to drive safely at all times.

“You have to really follow the rules, especially in a crowded environment like we have here at Cal Poly.”
Wrestlers dominate Vikings

By Jen Stevenson

Cal Poly wrestling fans were not disappointed Wednesday night as the Mustangs scored their second Pac-10 win of the season, stomping the Portland State Vikings into the mats in 26-9, and setting themselves up nicely for their upcoming five-match road trip.

The highlight of the evening came in the last match when senior David Wells (174 lbs.) jumped up two weight classes to wrestle at the 197-pound level and then promptly pinned Portland State's R.J. Gillespie in the 165-pound class due to injury in their last trip.

"I knew he pretty much had a move," said Wells. "So I knew we had to get him off the mat and then he's pretty fast, so I knew I had to get him down quick and the move was there."

Wells said he was happy with the results of the competition.

"It was a nice match for us," said Wells. "We had some guys that really performed well. It was a good night with some good team wins."

An ecstatic Wells threw his arms up in triumph in celebration of his victory and the overall team performance.

Freshman Steve Strange was in top form as he wrestled R.J. Gillespie in the 165-pound class to an 8-2 win, pushing the Mustangs up to 159-3. Strange's win was followed by a 9-2 victory from freshman Cedric Haymon, raising the score to 22-9 and pushing the Mustangs up to 19-6.

"He took the lead in talking to them and making the decision to take them on board," McCutcheon said. "It would make us a lot more competitive." McCutcheon said the new coaches will be able to help with the overall team performance.

Wells said he was happy with the overall team performance.

"We wanted to get everybody going up against the boys at BYU and Boise State, University of California, Davis, Stanford, and San Francisco State. This weekend the Mustangs wrestle BYU on Saturday night with some good team wins."

Wells said he was happy with the overall team performance.

"We needed to keep working hard, and we need to keep working hard to keep improving," said Wells.
Cal Poly athlete of the week

Mustang Daily

This week’s athlete of the week honors go to junior heavyweight wrestler Fun McGee. McGee pinned Leo Sanadov of Portland State improving his record to 11-5 on the season.

Most notably, he won the deciding match in the 19-18 victory over University of Oregon. It was Cal Poly's first Pac-10 victory of the year.

****

Swimmer Jen Dyer and women’s basketball player Caroline Rolle receive honorable mention this week.

Dyer, a junior, won the 200 IM and the 200 Back at home to help Cal Poly defeat Loyola Marymount.

Dyer was also on the first-place 400 Medley Relay team, which defeated both Loyola Marymount and CSU Northridge.

Rolle, a freshman, recorded a career-high of 14 rebounds and eight points at Boise State. She also had a game-high of 12 rebounds at Idaho.

Rolle leads the team in scoring with 12.4 ppg and in rebounding with 7.6 rpg. In nine games, she has scored 10 or more points, and she has two double-doubles on the year.
