Cat walk sends labor message

By Melissa McFarland
MUSTANG DAILY STAFF WRITER

Today students across the state will demand that California universities eliminate sweatshop labor in the production of college apparel.

Cal Poly's own chapter of United Students Against Sweatshops will take part through a fashion show. As models walk the runway in college apparel, announcements will announce the harsh labor conditions under which the clothing was made. The show will be presented in the University Union Plaza at 11 a.m.

Chris Collins, a USAS member and political science senior, will be one of the show's emcees.

"The fashion show is a fun thing to do that presents a really serious issue happening right here at Cal Poly," Collins said.

Collins said other schools, like Duke and University of California universities, have already signed codes of conduct. He hopes Cal Poly will follow suit.

Cal Poly recently joined the Fair Labor Association (FLA), which is aligned with Nike, Liz Claiborne and Kathy Lee Gillford clothing. Despite the progress, Collins said, it's not enough.

"The schools in the association can sell a Kathy Lee sweater that reads 'sweatshop free,' but is that really the case? How do the schools know? Let's be sure that it is," he said. "Hopefully (Cal Poly President Warren Baker) will address this in a legitimate way and deal with this issue publicly — without smoke screens."

Dan Carpenter, El Corral Bikeshop's clothing buyer, said investigating sweatshop practices is difficult but necessary.

"We're the campus community to know we are on top of it and aware of it," Carpenter said. "We contacted all our manufacturers to make sure these practices were being dealt with, and we continue to do business with those who are aware of it and are making strides. If we knew a company had sweatshops, we'd move away from them. Certainly we're not encouraging any of our manufacturers to continue those practices, if they are engaging in them."

Collins was one of 80 students from 20 schools throughout California who united at the October California Students Against Sweatshops Conference.

Calendar boys drop Speedos

By Alexis Garbeff
MUSTANG DAILY NEWS EDITOR

Last year they were holding their balls, this year they're letting them hang.

The Cal Poly men's water polo team is in the spotlight again with a less controversial, but no means less risqué, calendar released this week.

Last year's calendar featured a photo of the entire team unclothed with water polo balls barely covering parts that are usually concealed. After the photo was published, Rec Sports disapproved.

The team then approached Associated Students Inc., which granted permission to distribute the calendar. Rec Sports intervened before the calendar's publication and digitally placed Speedos on a few players.

This year's cover shot exposes just as much skin — without the Speedos — and this year's picture is a little more risqué, but it's not out of scope.

Breihan said the calendar was controversial last year because a picture got out before gaining approval by Rec Sports.

"This year we got everything approved," Breihan said. "And this year's picture is a little more risqué, but it's not out of scope."

The only problem the team ran into this year was with its banned slogan — "Last year we were holding our balls; this year we are letting them hang."

Breihan gave up posing in front of the camera to produce the second calendar, a $10,000 production, for one of his business partnerships.

Radar tracks U.S. 101 speeders

By Jenny Ferrari
MUSTANG DAILY STAFF WRITER

Those who drive on U.S. Highway 101 now have another reason to obey the 65 mph speed limit.

Monday, the California Highway Patrol's San Luis Obispo area office began radar enforcement of the speed limit along the San Luis Obispo portion of U.S. 101.

A 30-day conditioning period was initiated last month to allow motorists to adjust to the new enforcement tool.

Currently, 10 CHP areas along the U.S. 101 use radar to assist with speed enforcement.

County Sheriff Pat Hedges said the radar enforcement program is beneficial because it will help San Luis Obispo CHP control speeds along the highway.

"Using radar will provide the CHP with a tool to improve its effectiveness in reducing speed," Hedges said. "I think it's been shown that excessive speed on highways can result in injuries and death."

Pat Hedges

Fad diets not so health fabulous

Think back to the good ol' days of Milli Vanilli, pegged pants and hair-bear bangs. Those things sound pretty silly today, don't they?

The same holds true for the multitude of fad diet books on the market today. The problem is, Americans continue to waste their money following health fads against the advice of experts.

Sure, some of the books are written by doctors, a sign of health expertise. But one-third of U.S. medical schools offer courses in nutrition, and most doctors just can't devote enough time to learn about it.

Registered dietitians and those holding advanced degrees in nutrition are great sources of accurate nutrition information. Not one dietitian would recommend anyone pursue a fad diet.

A common element in all fad diets is the exclusion of certain foods or food groups. For example, the "cabbage soup diet" prevents one from consuming beneficial nutrients found in other foods. Unbalanced diets cause a variety of problems—constipation, diarrhea and bloating, to name a few. In addition to uncomfortable side effects to fad dieting, dangerous health consequences often result. For example, the low-carbohydrate diets can cause kidney and liver damage in individuals who diet for a long time.

The biggest problem with fad diets is their false claims of weight loss. Most people will lose weight during the first two to four weeks of any diet. The only weight lost is water weight, which is regained shortly thereafter. Plus, many of these diets are simply unfeasible to carry out for long periods of time.

Americans should become educated of the dangers and uselessness of following fad diet books. To prevent yourself from becoming overweight, start (or continue) to exercise and consume a well-balanced diet that follows the Food Guide Pyramid. Only those who are truly overweight or obese should attempt to go on diets. For an accurate and safe way to lose weight, consult a registered dietitian (see the American Dietetic Association's web site at www.eatright.org/find.html).

Professing Christianity is chic in the political realm

In God we trust. Such are the words inscribed on our American currency. Yet given the amount of dollars spent thus far in the presidential campaigns, one would be inclined to think the trust is built more on the money itself rather than the words written on it.

Or is it?

This has become increasingly more chic for political candidates to publicize their faiths in God. Both George W. Bush and Al Gore are certainly making their beliefs known. Bush, says he found God 14 years ago; Gore quotes Mother Teresa.

Is the cause of this new trend because religious confessions tie into their respective political platforms, or are candidates playing to the majority of American voters who believe in God?

Not long ago, it was chic for musicians to thank God during their acceptance speeches at awards ceremonies. My favorite was when Boys II Men group members — who rose to the top singing “I’ll Make Love To You” and other similar hits — made a point of professing their Christianity during their acceptance speech.

This God chic trend has now carried over into the political realm. While it is important to know the ethics and morals of the man who may run the country, professing of these values and morals often comes without context.

Instead of, “Well, I wouldn’t approve a lawlegalizing heroin because that goes against the religious beliefs I stand for,” candidates are simply announcing their faiths. “Hey — by the way, I’m Christian — just thought I’d throw that out there. Oh, and don’t forget to vote for me in November 2000.”

It’s great to connect spiritually with a candidate, but voters need more — they need to know that the politician’s religious roots will contribute to their leadership in office. Professing God cannot be the whole point of a campaign.

As for the separation of church and state, neutrality is ultimately to blame. As for security, the person behind the trigger is the issue, not the device they are holding.

Mr. Oakley suggests our society hold the people who own or sell the guns responsible. To a certain point I agree, but what about the色调 that was passed to me from my father, which was built in Belgium in the ’90s? If someone breaks into my safe and takes it, do we blame the manufacturer of the safe, the company in Belgium, my dad or me? The point is, the person who pulled the trigger is ultimately to blame. As for securing firearms, all of mine are unloaded in a locked gun safe, but a determined 12-year-old with time and a big hammer can get into almost anything.

Are there people who should not own guns? ABSOLUTELY. But can we make a “guilty until proven innocent” assumption that I someday going to devastate a schoolyard because I enjoy hunting and target shooting? NO. Enforce the laws we have, make efficient use of a background check system and educate those who don’t understand the responsibility of firearms ownership. But don’t scorn and blame law-abiding citizens.

I urge people to become more informed about guns and gun ownership. A rational discussion of this topic is going to help more than knee-jerk legislation or outright fear of guns.

Dave Moreno is a mathematics graduate student.

Letters to the editor

Guns are tools, use wisely

Editor,

I am writing to compliment the Mustang Daily and its staff on a recent series of articles about gun ownership and personal responsibility, specifically Scott Oakley’s commentary (“It’s your responsibility...”, Nov. 15) I am a firearms owner and I take my right and responsibility very seriously. It is good to see a treatment of the issue in the media that is not blatantly anti-gun.

However, there are a few points that need to be addressed.

At its most basic level, a gun is simply a tool and assorted mechanisms designed to direct aank of lead and copper at high speed. There is nothing intrinsically good or evil about a firearm; it is simply a tool. Only in application does it become a weapon. The person behind the trigger is the issue, not the device they are holding.

Mr. Oakley suggests our society hold the people who own or sell the guns used in crimes responsible. To a certain point I agree, but what about the色调 that was passed to me from my father, which was built in Belgium in the ’90s? If someone breaks into my safe and takes it, do we blame the manufacturer of the safe, the company in Belgium, my dad or me? The point is, the person who pulled the trigger is ultimately to blame. As for securing firearms, all of mine are unloaded in a locked gun safe, but a determined 12-year-old with time and a big hammer can get into almost anything.

Are there people who should not own guns? ABSOLUTELY. But can we make a “guilty until proven innocent” assumption that I someday going to devastate a schoolyard because I enjoy hunting and target shooting? NO. Enforce the laws we have, make efficient use of a background check system and educate those who don’t understand the responsibility of firearms ownership. But don’t scorn and blame law-abiding citizens.

I urge people to become more informed about guns and gun ownership. A rational discussion of this topic is going to help more than knee-jerk legislation or outright fear of guns.

War is a necessary evil, not glorified celebration

Editor,

I am writing in response to the liberal dogma spewed out in Jesse McGowan’s Nov. 15 letter about Veteran’s Day (“Don’t glorify war.”). Firstly, Veteran’s Day is not a glorification of militarism as you see, but rather an honoring of the brave soldiers who have fought for our country in various conflicts over the past few generations. We are not “dismissing” dead veterans by promoting a culture that helped kill them,” for we have a duty to honor these courageous souls as well. It’s called Memorial Day.

As for war in general, we must accept it as a necessary evil — at least for now. Would you, Jesse, rather be speaking German now? Would you like to be using chopsticks or home instead of knives and forks? Would you rather be “voting” for a communist leader who happens to be the only candidate? Or maybe you think we should still have slavery. Oh, I know, you wish we were still under Persian control.

But ah! We don’t need war! After all, we can just sit down and talk, work out our problems peacefully, right? Moshinshi, Hussein and Milosevic are definitely some of the more reasonable individuals to rear their ugly heads during this century.

War is no game, and I don’t believe any Americans or Cal Poly students intend to portray it as a game. But as long as people with power disagree, there will be unavoidable conflict. What we can do as citizens is offer support to those who have served our country and fought to preserve the ideals on which it was founded. And we should honor the memories of those who have given their lives to preserve our ideals.

Jerrry Gathers is an engineering sophomore.

Commentary

Everyone has an addiction of some kind. Some people are addicted to alcohol, wine to chocolate. Some, according to Robert Palmer, are addicted to love. But consumption based on want or desire is an entirely different thing than that based on necessity. The federal government doesn’t seem to understand that.

Reported in an Associated Press article last week, a federal judge ruled that medical necessity isn’t a legitimate article last week, a federal judge ruled that medical necessity isn’t a legitimate defense for two critically ill men charged with growing and distributing marijuana. Todd McCormick and Peter McWilliams say they used medicinal marijuana. The federal government disagrees. What the government doesn’t realize is that using marijuana for medicinal purposes doesn’t fall under the category of illicit use, which the government aims to prevent.

Medicinal marijuana isn’t a cure, but a way to ease the pain, just like morphine, codeine, Vicodin or any other painkiller. Sure, there are opportunities for abuse, just as other drugs are abused by some. But is that worth the pain so many people live with day after day? The vast majority of people who will profit from medicinal marijuana aren’t your average pot smokers. These people won’t be sitting around at a friend’s house charging Natural Light and watching Jerry Springer break up rival trash cans on television while they pack a bowl. These people are smoking pot to live.

The use of medicinal marijuana will not cause public street to be besoged by hysteric smokers smoking haze where law and order once prevailed. These people are very sick; they have cancer, AIDS, multiple sclerosis and other debilitating diseases. They are struggling to live, and smoking marijuana is helping them in their struggle. If people with critical illnesses want to smoke a joint, let them. These people are dying — it can’t make their condition any worse.

Even if the marijuana benefits were only imagined, at least they will get some kind of comfort out of it (if only mental) during times of great stress and excepting pain.

Why not let critically ill people smoke a joint if it helps the day go by? There are many organizations that grant wishes to the dying. These wishes won’t cure an illness, but they will lift a person’s spirits and take their mind off being sick. Allowing sick people to smoke marijuana in order to keep their medications down protects the people (and is cheaper for the organization) than taking them to Disney World or throwing the Rockstar Boys to hospital beds. Making the use of medicinal marijuana legal will actually make smoking pot safer for those who need it. According to the California Narcotic Officers’ Association’s position on medicinal marijuana: “Common sense dictates that it is not good medical practice to allow a substance to be used as medicine if that product is 1) not FDA approved, 2) ingested by smoking, 3) made up of hundreds of different chemicals, 4) not subject to quality-control standards, 5) not governed by daily dose criteria, 7) offered in unknown strengths (THC) from 1 to 10 percent, 8) self-prescribed and self-administered by the patient.”

Legitimating medicinal marijuana will allow doctors and nurses to administer the drug in clinics, where the marijuana prescribed would not be bought off the streets, but instead be cultivated for strictly medicinal purposes. The strength and frequency of the dose would be monitored, and the patient would use marijuana under medical supervision. This situation would wipe out most of the CNAO’s objections. Street dealers selling pot of questionable origin won’t pop up in record numbers since the truly sick will get their marijuana from legitimate dispensers that can ensure the quality of the medicine. Making medicinal marijuana legal would not endanger society, but instead make living in it easier for the critically ill.

The voters of California have said, by passing Proposition 215 in 1996, that marijuana use for medicinal purposes is OK with them. By continuing to prosecute people like McCormick, Peter McWilliams, who suffers from both AIDS and cancer, the federal government is in essence saying that the people’s will is not important. The “medical necessity” defend is that U.S. District Judge George King objected to “is not available as a matter of law” because Congress didn’t recognize any medical benefits of marijuana.

The federal government is basically slamming its nose into state laws, giving the impression that public opinion is the least of its concerns. The government is concerned about issues not relevant to medicinal use. There is no threat associated with allowing the seriously ill to smoke pot. The government shouldn’t worry about foster-living children smoking marijuana, influencing future generations to partake in pot smoking or encouraging adverse effects on a smoker’s health. Face it — these people are dying. Their habits will die with them. The way the government can do is make things a better while they’re still here.

National Winners

Continued from page 8

Holtman, Avery Blackwell, Ryan Hayes, Paulo Carvalho, David Beals and Dave Ulhart. The race consists of 10 kilometers (6.2 miles) to determine the National Championship team and individual.

Both Holtman and Conover were excited about where the program was headed. Holtman said that when he began running with the team five years ago, nobody even considered racing for the National Championship. Conover has seen this accomplishment coming, although he has to happen in only a few years was a surprise.

"When I arrived here, they had a lot of promise," Conover said. "One of our coaching goals was to get to the National race. It's great that it is happening so quickly."

Big Unit wins Cy Young

NEW YORK (AP) — Randy Johnson became only the second pitcher to win Cy Young Awards in both leagues, beating out Houston's Mike Hampton on Monday in the National League vote.

Johnson, a foot-10 left-hander for the Arizona Diamondbacks, led the league in ERA and led the major leagues in strikeouts.

The "Big Unit" received 20 first-place votes, 11 seconds and one third for 134 points in balloting by the Baseball Writers' Association of America.

"I'd like to think this award isn't solely based on wins and losses," said Johnson, 17-9 with a 2.48 ERA. "There were a few players who came up during the course of the year and said 'I feel this was the best year I had in my career.'

Johnson, who led the NL in complete games with 12, had 304 strikeouts in 271 2/3 innings. He finished 19-7.

Men's cross country headed to NCAA final

By Adam Russo
MUSTANG DAILY SPORTS EDITOR

Led by Adam Boothe's top-10 finish at Saturday's Western Regional, the men's cross country team became the second Cal Poly program to make the NCAA Division I championships in the past week.

The team received an at-large berth in the 11-team field for the National Championship race Nov. 22 in Indianapolis. The Mustangs will make their first appearance at the NCAA National's since moving to Division I in 1994. Cal Poly was one of only six teams chosen from the Western Region to compete in the race.

"This is definitely a big step for the program," assistant coach Mark Conover said. "We lived out a training program over the summer. That program also included a plan for nationals."

Head coach Terry Crawford, who won Big West Conference Coach of the Year, is very pleased with the team's progress.

"This is a great achievement for the program in such a short amount of time," Crawford said in a press release. "The guys deserve a lot of credit for their commitment and for reaching their goals this season."

Cal Poly made the National Championship race after placing fifth at the West Regional in Portland. Boothe, the Big West Conference Champion, finished ninth overall at the regional with a time of 30 minutes, 52 seconds.

He trailed the regional winner, Oregon's Steve Fein, by only 22 seconds.

The experience gained from staff Big West competition and a regional appearance could prove quite advantageous for the Mustangs at the National Championship race.

"Our regional is one of the toughest in the nation," Conover said. "But it will take our greatest effort at the national race."

Senior Darren Holman agreed with Conover.

"Our region is very tough," Holman said. "But it's not like we haven't faced the best already."

The Mustangs will be sending seven runners, including Boothe, to see NATIONALS, page 7

Senior Darren Holman will be running for the NCAA national title.

49ers, Mariucci have had enough of Phillips

SANTA CLARA (AP) — Like most everything else this season, the guess is no.

Troubled running back Lawrence Phillips, the MVP of NFL Europe, has failed his last down with the San Francisco 49ers. Monday, coach Steve Mariucci announced he had suspended Phillips on salary cap ramifications.

Phillips waived once the team gets compensation from the league on salary cap ramifications.

"We need to know exactly where this puts us," Mariucci said. "Frustrated by lack of playing time after losing the starting job to Charlie Garner, Phillips refused to practice Wednesday and Friday, citing a hamstring injury. That didn't sit well with Mariucci, especially after he learned Phillips had not visited the training room for treatment. Mariucci did not take Phillips to New Orleans for Sunday's game against the Saints, a 24-6 loss. He made the decision himself after practice Friday and discussed the situation with his staff."

Running backs coach Tony Rothman, like Phillips a former Nebraska standout, was particularly outspoken. When Phillips refused to practice with the offense Friday, Rothman got upset and told Mariucci he would not travel to New Orleans if Phillips was on the team.

"Why should I practice?" Phillips said. "You're not going to play me anyway.

No matter, Mariucci had seen enough.

"It got to a point where we were unable to work together," he said. "I made up my mind Friday that we would part ways. We don't have any regrets. We gave it our best shot."

Aside from scoring a late touchdown in a Monday night game against Arizona, Phillips was ineffective and used mostly on kickoff returns. In that same game, his failure to pick up a blit: resulted in a losing season and possibly corresponding concussion.

Once Garner won the starting spot, Phillips' effort and attitude deteriorated.

"It didn't sit well with Lawrence, and he couldn't handle that," Mariucci said.

Phillips finished with 144 yards and two touchdowns on 30 carries, caught 15 passes for 152 yards and returned 19 kickoffs for 415 yards, including a 73-yarder against Pittsburgh two weeks ago.

Since losing Young to a concussion in the third game against Arizona, the 49ers (3-6) have dropped five consecutive games, the longest drought since the franchise moved from San Francisco.

Since winning Young to a concussion in the third game against Arizona, the 49ers (3-6) have dropped five consecutive games, the most since 1980, and have failed to score an offensive touchdown in 12 quarters — believed to be the longest drought since the franchise joined the NFL in 1950.

The five-time Super Bowl champions are so desperate for a quarterback, they will bring in 38-year-old Jeff Hostetler for a visit Tuesday. Mariucci has already spoken to him.

"I cannot predict where it will go," he said.

Briefs

Padres deal relief pitcher

MIAMI (AP) — The Florida Marlins bolstered their bullpen Monday by acquiring reliever Dan Miceli from the San Diego Padres for starter Brian Meadows.

The deal was part of the Padres' effort to slash their payroll of $48 million last season. Miceli made $1.1 million in 1999 and is due to earn $1.5 million in 2000. Meadows made $250,000 last year and is not yet eligible for salary arbitration.

Meadows, 24, led the Marlins in wins the past two seasons but wasn't expected to be part of their rotation in 2000. Miceli, 29, gives Florida an experienced setup man for closer Antonio Alfonseca.

"Mozeli is the type of pitcher we've been wanting to add to our staff," Marlins general manager Dave Domonowski said. "He's a veteran who can bring stability to our bullpen."

Mozeli went 4-5 with a 4.80 ERA this year. He was 10-5 with a 3.22 ERA for the Padres in 1998, when they won the National League pennant.

It's time for beer at Poly sports events

It's time to drink beer.

I realize this idea may jeopardize any respect I've accumulated during my two-plus years writing for the Mustang Daily, but it needs to be said — maybe even more than once.

"Now I would never expect the athletic department to publicly support this stance, but the fans need to be able to drink before and during athletic events."

They say baseball is the American pastime, and if that's true, drinking is a close second. I know a lot of people don't want to admit this, but part of what makes athletics great is the atmosphere. You get to a football game a good three or four hours before kickoff. You dig through the cooler for an ice-cold beer, while one buddy makes sure the hot dogs are crisp and black. Later you toss the football around reminiscing about that 35-yard touch down reception. You've all done it before, you get the point.

The obvious drawback is drunk fans starting fights, but the solution to that problem is simple security. While everyone realizes the potentially dangerous situation, no one ever mentions the positive benefits of alcohol at athletic events.

Attendance would rise. Students are going to drink and they need a place, other than their own house, to do it. Tailgating in a town that doesn't offer many exciting events would provide a perfect mix. It would increase the heckling and create a stronger home-field advantage. Take, for example, Shoenheiser Stadium where Cal Poly and the San Luis Blues both share a baseball field. The semi-professional Blues, who are comprised of a similar talent-base, greatly out-draw the Mustangs thanks to their own beer at Poly games.

Sports Trivia

Yesterday's Answer:

Dominique Wilkins was the only Atlanta Hawk to win the NBA scoring title.

Congrats Adam Eng!

Today's Question:

Which former Green Bay Packer was the first ex-NFL player to coach in the Super Bowl?

Please include your name. The first correct answer received via e-mail will be printed in the next issue of the paper.
