Unveiling of Master Plan sends Poly into future

Update tackles ongoing issues of campus housing, parking

By Karin Driesen
MUSTANG DAILY STAFF WRITER

Cal Poly released the preliminary draft of its revised Master Plan Monday, the first completely new version since 1962. Some of the issues addressed in the plan are increased student housing capacity, new parking structures to ease traffic circulation, physical campus development and an increase in summer quarter enrollment.

Designed to take the university through the next 20 years, the plan's main goal is to accommodate the flood of likely new college students in the next several years, which is known as Tidal Wave II. Up to 300,000 students are expected to enroll in college in California during that time, and campuses such as Cal Poly need to prepare for significant growth.

Provost and Vice President for Academic Affairs Paul Zingg said the plan was in response to three issues. First, it is preparation for the coming of Tidal Wave II. Second, it is based on strategic planning that is fundamentally focused on academic planning. The third reason Zingg stated bluntly: "Quite frankly, it's long overdue."

Since 1962, many revisions have been made to the current Master Plan, but a complete overhaul is needed to accommodate current needs and future growth.

The new plan would increase enrollment capacity by 17 percent to approximately 21,000 in several phases over the next two decades. Faculty and staff would also increase from 2,500 to 3,200. On-campus housing would double from 3,000 capacity to more than 6,000.

Most of the new housing would be apartment-style and is intended for older students.

California State University Chancellor Charles Reed said there are similar housing shortages at other campuses, and doubling housing in many of those cases would solve problems. He has not reviewed a copy of the Master Plan yet, but is optimistic about it.

"I've found things are moving in the right direction there," Reed said.

Parking plans for on-campus residents may include a severe restriction in freshmen students' ability to have cars on campus, said Linda Dalton, vice provost for Institutional Planning.

"We're really trying to emphasize that you can live well in San Luis Obispo with just a bike or the excellent public transportation downtown."

Police warn Grand Ave. motorists to slow speed

By Robin Nichols
MUSTANG DAILY STAFF WRITER

Motorists on Grand Avenue are being forced to slow down, thanks to a recent increase in enforcement and education by university and city police.

"We try to give extra patrol, and in the morning we have signs up periodically to remind cars to slow down," University Police Sgt. Lori Hashim said.

An e-mail was also sent to all Cal Poly students, staff and faculty by University Police in order to raise awareness of the problem.

Pacheco Elementary School crossing guard Betty Headley has noticed an increase in traffic control around the school, located on Grand Avenue, but still encountered problems.

"(Motorists) speed through and do not stop at the signs," Headley said. "They do what police call a SETUP — one lane or another will be stopped and (drivers) think they can go around. It's pretty scary. (I stay because) I love the kids. Students leaving (Cal Poly) are talking on the phone, eating a snack — the last thing on their minds is an old lady and 5-year-old kids."

Pacheco Elementary School is not the only location that faces speeding cars. Traffic in front of Yosemite Hall is directed by a light, but there are still cars that drive through at an estimated 40 mph, said Yosemite resident Tara Heikens.

"I think the reason people go so fast is because it's such a wide road. I always go slow because I know people

Counselors devote day to test stress

By Robin Nichols
MUSTANG DAILY STAFF WRITER

Anxiety is the most common mental illness in the country, and many college students go undiagnosed for years.

In an attempt to combat statistics, Cal Poly will participate in National Anxiety Screening Day on Wednesday by offering information and a self-test questionnaire at a University Union Plaza booth.

"We're trying to emphasize that you can live well in San Luis Obispo with just a bike or the excellent public transportation downtown," Dalton said. "We want to see MASTER PLAN, page 2

Counseling Center provides services to students

Counseling professor Peter Rodman, one of Bossuyt's academic supervisors.

A search was being conducted by local police officers at the Manu National Park, said Rodman, who flew to Peru on Sunday.

The death is the second tragedy involving UC Davis researchers this year.

On March 27, scorpion expert Gary Polis, chairman of the UCD environmental sciences department, his assistant and three visiting Japanese scientists drowned off the Baja California coast in Mexico.

Bossuyt's father, chemical engineer Luc Bossuyt, died in the July 1996 crash of TWA Flight 800 off Long Island. His company and family created the Luc Bossuyt-Bristol-Meyers Squibb Endowment to pay UC Davis biology students attending scientific meetings.

Bossuyt earned his undergraduate degree in biology and chemistry in 1990 from Earlham College in Richmond, Ind. Before entering graduate school, he worked at the Bush Children's Center for Severely Emotionally Disturbed Children in San Francisco.

He is survived by his mother, Myra, of Tempe, Ariz., and his brother, Stephen, of Los Angeles.

Your Body

Former student-athlete trying to outrun her eating disorders

By Victoria Walsh

MUSTANG DAILY STAFF WRITER

Erin was a runner and a competitive swimmer before eating disorders destroyed her body’s ability to compete. Tough on her. No matter how good she was, she always saw herself as being huge. “I was competing against girls that were a lot shorter, even skinnier, and they were quicker than I was,” Erin said. “I knew that I was good, but I could never move past the image that I was just taking up space.”

Pressure from her family, especially her grandmother, took its toll. Soon Erin was skipping meals, purging more and spending less time with her family. “Not eating just became a coping device with me,” she said. “I’d get in a fight with my mom, and I wouldn’t eat. I’d fight with my boyfriend, and I’d run. It seemed like it was the only thing I had control over.”

For a long time, her daily diet would consist of popcorn and diet soda. “Sometimes I would taste something different and then spit it out,” she said. Diet pills and laxatives were bought on a regular basis. Drug use was also a factor in controlling her appetite. “I stopped smoking pot because it would make me hungry,” Erin said. “I started using other drugs then, uppers and speed, anything to stuff my hunger. I was smoking cigarettes all the time, at least a pack a day.”

Her family was aware of her problems. They would check her into hospital after hospital, trying any solution to stop her from harming her self. Sometimes there would be good months, and she wouldn’t feel the need to make herself throw up, or she would sit down and eat a full meal, not just taste it.

“A few times, I actually would gain some weight and begin to think a little more positively about the whole thing,” she said. “But then something would happen, some thing would trigger it and I would fall right back into the same routine as before.”

Erin said she’s been in and out of more than 15 hospitals during her battle with eating disorders. “The thing was, for the most part, I was never in an actual eating disorder ward, I was always in the ‘psych’ ward. The difference with that is everyone could diagnose me with my problems, but no one could tell me how to treat it. That’s what I needed and badly what that’s what I found.”

Erin’s lowest weight was 108 pounds when she checked into the Remuda Ranch in Arizona, a center for women with eating disorders. Erin learned that the average body-fat percentage for women is between 26 and 22 percent, but hers was 1 percent. At her lowest point, on the plane to the Remuda Ranch, she tried to light a cigarette. “I was basically delusional. I didn’t care where I was, where I was going, I was living on nothing,” she said. The Remuda Ranch focuses on women, their body image and lots of therapy. According to its Web site, women are required to go through 12 hours of treatment each week in addition to meeting with an individual therapist every day. A patient can spend 45 days at Remuda for women with eating disorders. Erin learned that the average body-fat percentage for women is between 26 and 22 percent. “Sometimes I would taste something different and then spit it out.”

A former student-athlete, Erin Mittersenn, is a 20-year-old student-athlete trying to outrun her eating disorders, working with monitor equipment. Erin is in a nursing assistant program where she works with the elderly by bathing and showering them. “Next year, I’m going back to Remuda to work there,” Erin said. Most girls envied her lean frame, but Erin would gladly trade bodies if it meant living a normal life without her problems. Trouble is, she’s worked too hard and come too far to give it all up. Erin said, “I know I can’t use food or my weight to control my problems.”

To exercise effectively, the body must be fueled properly. Adequate amounts of protein, carbohydrates and fat should be consumed to maintain and improve strength, speed and stamina.

Carbohydrates are always the staple of a sports diet. Many athletes consume less than their bodies require. Carbohydrates are the primary source of energy and will help maximize activity and endurance exercise.

Carbohydrates should be eaten at each meal and also before, during and after exercise. At meals, carbohydrates should take up about two-thirds of the plate. If you consume fewer carbohydrates before exercise, this will reduce muscle energy storage and help prevent fatigue. Carbs eaten following exercise can improve muscle energy storage rebuild.

Foods with carbs include bread, rice, corn, pasta, crackers, fruit, juices, vegetables and dried beans.

Protein helps with muscle growth and repairs. It also boosts the immune system. Many people either consume too much or too little protein.

If you are having problems implementing it into meals, try adding a cup of nonfat dry milk to soups or shakes.

Good sources of protein include poultry, vegetables, fish, eggs, grains, cheese and soy products.

Fat can actually help aid with exercise. Fat intake affects performance and duration. Just make sure that you are eating the right kinds of fats. Animal fats should be eaten in moderation. Focus on consuming more nuts, olive oil, tuna and salmon.

It is important to always include carbs, protein and fats in your diet and in every meal. Don’t follow diets that limit or eliminate nutrients. Listen to your body and analyze your performance following diet changes.

Remembering the people behind bars

I was hot in Pleasant Valley State Prison's "D" Yard this weekend. The wind kept the full force of the heat away, but the conditions were still  managed to make the seat roll down my back and make my skin cherry red.

This past weekend, I was a part of Bill Glass Ministries, a nonprofit organization that allows players to visit inmates across the United States. My group of about 170 men went to a facility an hour's drive from Fresno.

My first visit made the walls happen. Friday. One minute I was outside the fence, the next I was standing in the yard, surrounded by hundreds of men in blue and white. (I was in ram — we visitors were forbidden to wear any shade of blue.)

Several men doing pull-ups had just come crawling up one arm, across their chest and down the other side. A few walked with canes or were in wheelchairs. One man said "Hi to me; that's how I met Cowboy.

Obviously, Cowboy isn't his real name, but that's what everybody called him, so I did, too. We chatted for a while about our hometowns, life on the inside and life on the outside.

It was time for dinner. The team members are fish with the inmates and we  went back to the hotel in Fresno.

On Saturday, we visited the prison again. Cowboy showed me a picture of his wife and daughter. We chatted for a while about the "cellie." I tried to explain the rules of Ultimate Frisbee; he told me how to make the necessary equipment.

Most of the men I spoke to said they were thankful for the visit. Some inmates quickly forgotten by the public. It is true to say that  they are normal people who make a mistake, but the saying is not far off. Most of the men I talked to, like Cowboy, don't make excuses or blame others.

For instance, several inmates who had been behind bars for almost a year — I realized my insane schedule was only in our own country. I'm not sure how much longer I can do that. To a large extent, the American stereotype holds true. It seems we have no interest in learning about any culture that has a population of fewer than 100 million or is more than 5,000 miles away.

The Travel Industry Association of America, only 7.9 percent of Americans traveled overseas in 1998. In comparison, Tourism Futures International in New Zealand counted a third of their population of 3.5 million as having traveled overseas in 1997. Out of the 7.9 percent of Americans who traveled overseas, 85 percent of them went to the United Kingdom, which doesn't really count as broadening your horizons.

Traveling to "the motherland" is about as close as you can get to America without being at home. Our obvious lack of knowledge about other cultures is exemplified by other cultures' knowledge of ours. Garry and Nikki know most of the current events that have happened recently in the United States and have a general understanding of the way our government is run. In one of my favorite episodes, Jay Leno asked an unknown person on the street where Plymouth Rock was located. After hearing people answer Japan, Montana and New York, I realized that our knowledge of current events regarding far-off places such as East Timor and Chechnya is probably minimal. How can we understand what is going on if we don't even know where it is?

Though I enjoyed having my kiwi friends come to visit, I spent a vast majority of the time being embarrassed by my friends' (and America's) lack of global awareness. America is falling in its relationship with other countries. As a world power, we are constantly giving. We generate fashion, trends and entertainment that become the examples to the rest of the world. Unfortunately, we fail to receive global perspectives and knowledge from other countries.

Instead of breeding cultured, informed citizens, we turn out people who have trouble locating Plymouth Rock.

Down with ASI clichés

Eddie Drake is a political science junior and former ASI chair candidate.

Editorial rushed to judgment on Brown Editor

"John Culver is a political science senior."

Your editorial on Carl Brown ("Our comment: Carl Brown must resign if convicted.") May 11) illustrates what happens when one thinker with the little head rather than the little heart. You go up on a sanatorium lunch tray and you're frustrated that neither President Baker nor Provost Zing will tell you how right or how wrong this is. Mr. President, have you ever thought about learning about it reflect positively on our society as a whole. I see nothing wrong with using humor to get the message across. So don't be afraid. Just give people some food for thought. They may have other ways to go $3 for their very own tote key chain. Whether choosing to ignore the obvious facts or claim that "mutually exclusive" groups such as the aforementioned are not going to sway. Their message is only going to get stronger and more prevalent.

Have you ever seen students slipping in and out of science labs at odd hours, designing rockets, processing cheese or milk, or feverishly working in front of computer screens? Most likely many of them are working with faculty in finding the answers to problems that can only be solved by thinking outside of the box, and that's something Cal Poly students do very well.

Cal Poly received about $11 million a year in grants from the government, industry and the non-profit sector for research projects that improve their products and services and the way they do business. The researchers' jobs are made easier by the Sponsored Programs office, which administrators those grants and contracts, maintains project accounts, and provides financial reports.

Creating software, designing "smart" roadways, developing new cheese and milk products (have you heard about Moo Juice?) monitoring ecosystems, preserving natural resources, building robots, you name it, students have done it. As much as this type of research helps society, it helps you even more. Professionals are picking your brain, asking for your ideas, seeking your creativity and you're earning money at the same time.

Think about how cool that kind of experience looks on your resume. It'll definitely help you get that high-paying job with the company that has no dress code.

"Top to bottom, we're the best. Everybody contributes to the team." — Randy Warren

Wheelmen head coach

The team's best achievement comes from the WCCC, which is the strongest conference in the United States.

"Our conference is the best," Warren said. "Winning today shows that we're the best team in the nation because it takes us into account our whole team, not just individuals." But Warren stressed that all of the riders contributed to the victory. Cyclists scored points in every category.

"Top to bottom, we're the best. Everybody contributes to the team," Warren said.

**Belfour still listed in San Jose**

SAN JOSE (AP) — Ed Belfour is a hated man in San Jose, and it's not just because he shut out the Sharks in the first two games of their playoff series with the Dallas Stars.

The Dallas goalie is regarded as a traitor by Sharks fans because he spurned a contract offer after getting traded to San Jose in 1997, playing only 13 games for the Sharks before signing a free-agent deal with the Stars.

When Belfour returned to San Jose since then, he has been the focus of anger by Sharks fans. He will be even more reviled this time because he has played a key role in the Sharks' first-round series defeat by the Stars.

Sharks coach Daryl Sutter told his team Sunday not to worry about Belfour next season.

"You lose your captain, your goal-scorer and your top minutes player," Sutter said. "But he's not going to be. I think it's definitely the start of something new for us." Belfour was serenaded with "You lose your captain, you lose your goal-scorer and you lose your top minutes player." Belfour said he was happy with the game he had in Game 7 and that he was ready to move on to the next game.

The Sharks and Stars are tied 3-3 in their first-round series with San Jose leading 2-1 in the best-of-seven format.

Wheelermen qualify for nationals

By Christine Powell
MUSTANG DAILY STAFF WRITER

The Cal Poly Wheelermen won the Western Collegiate Cycling Conference this weekend, qualifying cyclists to compete at nationals later this month.

Cal Poly is one of five teams in the WCCC that qualified to compete along with UC Davis, Stanford, UCLA and UCSD.

A total of 15 cyclists, five men and five women, will go on to compete in Athens, Ohio, May 12 to 14. Standout competitors include nutritional science senior Steve Kottick, business senior Scott Gordon and architectural engineering senior Anna Lang.

Cal Poly has competed in nationals every year since the first competition was held in 1998, and the Mustangs have consistently placed in the top five. In 1992 they won, and last year they placed second, just after University of Colorado at Boulder.

Randy Warren, adviser/coach of the Wheelermen, considers the victory this weekend to be the

Former football standout Warren lands job in CFL

MUSTANG DAILY STAFF REPORT

Former Cal Poly football standout Antonio Warren has signed a two-year contract with the Calgary Stampeders of the Canadian Football League.

Warren played at Cal Poly from 1994-98 and is currently the second all-time in career rushing yards at Cal Poly with 3,834. He set the school record for career rushing attempts with 718 and is second in career rushing touchdowns with 30.

Warren was offered a contract after he ran a 4.3 second 40-yard sprint for the team. "I feel good and feel relieved," Warren said in a press release. "They liked my hands and want to use me as a possible receiver out of the backfield."

Calgary went 12-6 last season and reached the finals of the Grey Cup, the CFL equivalent of the NFL postseason, before losing to the Hamilton TigerCats 32-21.

Warren still holds the Cal Poly record for career rushing attempts with 718 and is second in career rushing touchdowns with 30.

A midterm that requires no studying

Since most of us are being bombarded this week with midterms that we couldn’t possibly care less about, I thought it would be a perfect time to give one of my own.

Some will be multiple choice, others true/false and others not even questions (I’m the teacher, I can do that). Keep your own score.

1. (five points) The Sports Complex will be finished: a. in August b. in September c. in October d. before the parking garage

2. (five points) Best place to find former Cal Poly baseball players: a. in the minor leagues b. in the classroom c. finishing their education d. out in the work force e. behind the first base dugout at San Luis Obispo Stadium

3. (five points) The best way for a club sport to get recognition in the newspaper is: a. win a national title b. win a regional title c. send a story to the editor d. none of the above

UCLA players set to enter draft

LOS ANGELES (AP) — UCLA sophomores Jerome Moiso and Jafere Rush informed the school Monday that they will enter the NBA draft.

Moiso, a 6-foot-10 swingman, was the Bruins’ leading rebounder last season, averaging 7.6 a game, and was second in scoring at 13.0 points.

A native of Guadeloupe, West Indies, Moiso played in all 33 games and had 10 double-doubles.

"This was a difficult decision for me," Moiso said in a statement released by UCLA. "Playing in the NBA has been a goal of mine and I feel this is the time for me to take the next step."

Rush, a 6-foot-7 forward, was suspended by the NCAA for 24 games for taking improper payments from an AAU coach in his native Kansas City, Mo.

When Rush returned to the lineup late in the season, he helped the Bruins, who were in danger of not making the NCAA tournament, close the regular season strong and then advance to the third round where they were beaten by Iowa State.

Schedule

FRIDAY

• Baseball vs. Sacramento State
  • at Sacramento State • 2 p.m.

SATURDAY

• Softball vs. Sacramento State
  • at Cal Poly • noon/2 p.m.
  • Baseball vs. Sacramento State
  • at Sacramento State • 1 p.m.

SUNDAY

• Softball vs. Sacramento State
  • at Sacramento • noon
  • Baseball vs. Sacramento State
