Krebs trial moves on to penalty

By Janelle Foskett

The penalty phase in the Rex Allan Krebs trial begins today as prosecutors try to convince a Monterey jury that he deserves the death penalty after kidnapping, raping and murdering two female San Luis Obispo college students.

Krebs was convicted April 2 of all nine felony charges and six special circumstances involved in the murder of 20-year-old Cal Poly student Rachel Neuhouse and 22-year-old Cal Poly College student Aundrea Crawford. Because Krebs was convicted of special circumstances, he is eligible for the death penalty.

The same nine-woman, three-man jury that convicted Krebs will now hear new information from defense attorneys, who plan to call approximately 35 witnesses in the penalty phase. In total, 70 witnesses are on call to testify in this phase, which is expected to last two to four weeks.

Krebs can either receive a sentence to death by local injection or a sentence to life in prison without the chance for parole. If he receives a death sentence, he will be housed in San Quentin State Penitentiary, north of San Francisco. All of California's 572 male death row inmates are held there.

Defense attorneys had conceded in the trial's opening statements that Krebs had confessed to the crimes. They said, however, that when Krebs was only 14 years old, he developed sexual fantasies about raping his mother, whom Krebs described for leaving him with an abusive father.

Defense attorneys will try to spare Krebs life by local injection on the grounds that the 40-year-old by then would be too weak to suffer. However, defense attorneys have been unable to present evidence that Krebs would not die before being hooked up to the injectors.

The prison system has no way to determine how long it would take to execute Krebs. The execution would end only after Krebs has been declared dead. Other states have used methods of execution that do not require the use of lethal injection.

Arson suspected in local church fire

By Kat DeBakker

MUSTANG DAILY STAFF WRITER

A fire that destroyed the United Methodist Church of San Luis Obispo early Sunday morning is being investigated as a crime, according to Capt. Bart Topham of the San Luis Obispo police department.

Evidence indicating arson was found at the scene but the police department is unable to disclose what that evidence is, Topham said.

The 40-year-old building at 1515 Fredericks St. is estimated to be a total loss.

"We're not going to speculate on suspects but we can say the fire took place between 4:30 and 4:50 a.m.," Topham said.

Topham couldn't comment on the correlation between the fire and its occurrence on Easter Sunday, but said the police department was "very concerned about the timing of the fire."

Janice Serrata, trustee chair of the church, said the church was dedicated and had its very first services on April 15, 1962, exactly 39 years to the day of the fire.

Detectives, fire investigators and the FBI are all investigating the cause of the fire, Topham said.

Fifteen firefighters and support personnel from San Luis Obispo and CDP/Gunfire battled for more than three hours before gaining control of the fire, according to a city press release.

"The fire completely destroyed the sanctuary," Serrata said. "We were able to save the choir music, choir robes and ministers' robes.

Poly celebrates liberal arts

By Adam Jarman

MUSTANG DAILY EDITOR IN CHIEF

The College of Liberal Arts is running out of Cal Poly's cloud of technology and science in the Liberal Arts Week.

Liberal Arts Week kicked off Monday with the first in a faculty lecture series, "The Arrow of Time: Entropy in Perspective," presented by Larry Huggett, the Department of Philosophy.

The College of Liberal Arts is having a busy week ahead. Dean Susan Cameron said the week is designed to showcase departments and to allow students to be proud of their college on a technically based campus.

"At the university size of Cal Poly, it's important for students to be able to belong to small communities as well as the university as a whole," Cameron said. "The college is a community to belong in.

"She said that a traditional part of the Liberal Arts Week is Wednesday's awards ceremony. Cameron said this event honors the college's teachers, students and clubs of the year. The reception will be Wednesday at 6 p.m. at the Cal Poly Theatre.

Harry Hellenbrand, dean of the College of Liberal Arts, said the college council is responsible for adding events to this year's Liberal Arts Week.

"The council really sorts out what's on top of it," he said.

Hellenbrand said the College of Liberal Arts is different from others in that the department-related activities, such as the bands, television and radio stations are more visible than the clubs.

"Our clubs are not as major as most of the action," he said.

Angie Hacker, College of Liberal Arts representative to the Associated Students Inc. Board of Directors, said today's faculty auction will be a fun event for both students and faculty.

"It's a way for students and faculty to just kind of have fun together," she said.

The auction will be this Saturday at 11 a.m. at the University Union Stage. Hacker said professors will auction off a variety of things, ranging from dinner to car washes, as well as memorabilia.

The activities are designed to merge with Open House this coming weekend, Cameron said.

"Liberal Arts Week just leads into Open House as far as we are concerned," she said, commenting that the celebration has traditionally been the week before Open House. She said the week is especially timed this year because of the Centennial Celebration.

"As the week progresses, we bring in a lot of people from the outside," Hellenbrand said.

This year's week is different than those of past years, Cameron said.

"There are more faculty lectures this year than in the past," she said, adding see LIBERAL ARTS, page 2

Philosophy colloquium opportunity for discussion

By Michelle Hatfield

MUSTANG DAILY STAFF WRITER

The philosophy department's second annual spring quarter colloquium will give the community an opportunity to exchange views with professors about their research.

The colloquium will be Wednesday and Thursday and will consist of five philosophy professors talking about research they have worked on or are working on currently. The presentations are free and open to the public.

"The point of the colloquium is to highlight research that our faculty is working on," said Linda Bonstard, philosophy department chair. "It allows us to study philosophy at a much more technical level."

Professor Francisco Flores will start the series Wednesday at 9:30 a.m. with a presentation titled "A Time for Change: General Relativity and the Metaphysics of Time."

Flore's speech will be about the concept of time.

"I was that I could expose students to the most interesting concepts of contemporary physics," he said.

At 10:40 a.m., lecturer Rachel Fen, will talk about sexual objectification.

Her speech is called "Kantian Sex, Feminist Slavkans, and Sexual Objectification."

Bonstard said Fen's topic concerns many college students today.

"Sexual objectification is important to young men and women because this is the time when they are developing views on sexuality," she said.

Tuesday begins at 9:30 a.m. with professor Judy Saltman's presentation, "Centennial and Millennium: The Hidden Meaning of Circles."

Professor Simon Evanis starts his see PHILOSOPHY, page 2
from the lower part of the building, but many things were lost that had a lot of sentimental value."

Among the lost items was a bell that was at least 100 years old and came from another church that was built in the 1800s, said Somers. The church contained an operating fire alarm system but was not protected by fire sprinklers, according to the press release. The building was constructed prior to the city's ordinance requiring sprinklers.

"I really want to compliment the fire and police departments for being there," Somers said. "They did everything they could to save it. I've been very impressed at the community output.

Concerned city residents and neighbors watched Monday afternoon as construction workers and church volunteers separated soot-covered hymnals and other salvageable items from the rubble.

"We saw (the fire) on the news this morning and couldn't believe it," said Byrle Schoepf, a city resident. "I've been in the church a few times. Those stained-glass windows were really something."

The church is insured and will be rebuilt, Somers said, but is being torn down due to health and safety issues. Services will still be held Sunday mornings at 10 in the social hall in the parking lot below the church.

"If anyone wants to do anything to help, they can keep us in their prayers or they can make a cash donation," Somers said.

A fund for the church has been set up at Mid-State bank on Broad Street, account #071751821.

A tired, hungry team, bloody injuries and a struggle to be the best may sound like an episode of "Survivor," but it's not. For five Cal Poly engineering students last quarter, it was a senior project.

The team designed and built a robot for The Learning Channel's (TLC) televised robot competition, "Robotica," which premiered this month. Despite their confidence in the machine, its performance did not meet their expectations.

"For (the team), it was really awful," said Nicole Lowe, business senior and team spokeswoman. "Everything that could go wrong did."

"Robotica" is based on Cal Poly's Mechanical Engineering Society (M.E.S.S.) televised robot competition, "Rohotica," which premiered this fall on the Learning Channel's (TLC) educational television network.

By Whitney Kellogg

Supplement Direct

"Rohotica," which premiered this fall on the Learning Channel's (TLC) educational television network, was cut from "Survivor," but it's not. For five Cal Poly engineering students last quarter, it was a senior project.

The team designed and built a robot, named Noll, after Noll Engineering, a financial supporter. The box-shaped machine weighted 210 pounds. It was built to disable the other robot.

"Noll" after Noll Engineering, a financial supporter, the team entered in The Learning Channel's 'Robotica' competition. Cal Poly's team will be on 'Robotica' Wednesday at 9 p.m. on TLC.

The club looks forward to using the robots they built and the experience gained from their competition to attract more students to the Cal Poly Robotics Club.

The team worked feverishly to weld the robot, named Noll, after a financial supporter, the team entered in The Learning Channel's 'Robotica' competition. Cal Poly's team will be on 'Robotica' Wednesday at 9 p.m. on TLC.

The team spent about $10,000 producing the robot. Companies in the community donated parts and services, but team members paid at least $5,000 themselves.

- They ended up putting a lot of their personal money into it," Lowe said. "Everyone had their credit card maxed out."

- The students named the robot "Noll" after Noll Engineering, a financial supporter. The box-shaped machine weighted 210 pounds. It was built to disable the other robot.

- The team members arrived at ABC's studios in Hollywood on March 2 to compete on the show's second episode, but seven weeks of hard work were over within a few minutes of the first stage of competition.

The robot broke down a few feet into an eight-lip race. Noll spun in circles while its competitor smashed into it. Due to a rule change producers made after the first day of competition, the team could not use their weapons to disable the other robot.

- "The worst part was, when we were stuck there everybody said, 'Throw the hammer, throw the hammer,' but we couldn't use the weapons," Stephanie said.

- The show allotted 50 minutes to fix Noll, but the machine was still inoperable when the time ran out. The students worked feverishly to weld the machine back together, injuring themselves in the process. One student smashed his thumbnail open. Another cut the pad of his finger and superglued it shut to avoid a trip to the emergency room.

After 45 minutes and a 10-point deduction, the team accepted defeat.

"We put it down on paper right, but it wasn't assembled correctly," Stephanie said. "We had an hour of testing before we put it on the track. I was learning to drive the thing while we were in the pit."

The team will reassemble the robot and plans to enter it in competition on "Robotica" this summer or fall, where they think it will be more successful.

"We built a fighting robot and took it to a race," Dexter said.

The episode of "Robotica" featuring Cal Poly's team will air Wednesday at 9 p.m. on TLC.
Community finds healing after tragedy

Most people have somewhere that is home to them. Somewhere that they can go home and feel at home, at ease with who they are and where they are in life. Home is a place where you keep your heart and your memories, and that you know will always be there. So what happens when you go home and suddenly home isn’t there anymore? What would you do if your home burned down? Where would you go? Do you have neighbors that would take you in? Friends, relatives? How would you get there? How would you replace everything you have lost? Sure, insurance might cover some of all of the possessions you lose, but what if that sense of security you felt when you got home? Could insurance replace that? What would you do?

Easter morning at 7:45 a.m. I found me in the car on the way to church. I was about a mile from the church when I realized that a strange odor I had noticed in the distance was in fact smoke. My first thought was, “How sad, someone’s house is on fire on Easter.” As I got closer, I realized that it looked close to my church, Mt. Carmel Lutheran. Then I thought, “God, it looks like it’s coming from the Methodist church” (which is right next door to Mt. Carmel). I turned the corner and saw the fire. It was the Methodist church.

It was a scene straight from a movie. The fire truck had its ladder all the way up, and it was spewing water from the top. All that was left was the flaming, smoking rafters of the church, which looked like a bulb slowly at 12:30, when I left church, it was still smoldering. I wish I knew how the fire started, but the online version of the Boulder’s “Tribune” doesn’t stretch out the fire, surprisingly enough.

So where am I going with this? The point of this column isn’t just about the church burning down, it’s about the loss of a home, and the gathering together of a community to begin the healing process. Yes, it is just a building, and people don’t worship a building, they worship God.

And Sunday was a poignant reminder that we all worship the same God. The people from the Methodist church came down the hill, and we all stood there, the service together, four pastors, five microphones, and a lot of people. There were tears, and there were a few laughs (Who gets the offers to save the day all, in a wonderful, healing service. That is what community is all about – it’s about sharing, it’s about caring, and it’s about healing when the pain is inevitable.

Christians believe that Easter is a day to celebrate new life and the resurrection of Christ, a renewal of the covenant that God made with us. For us, it was a day to celebrate not only our belief of renewal, but also a sense of community renewed, a community coming together in the face of tragedy.

As the Methodist pastor explained in his sermon, “Easter is when God calls us into our lives to bring in a new home – We’re going to let that building go and build a new one because we are a people of redemption.” Redemption and healing aren’t just personal, they’re something for everyone to participate in and share. I’m proud to be a member of a community that is willing to step up to the plate and offer support to those who need it. I think that as a people of grace today need to take this to heart – it’s not just about religion, it’s about following the golden rule. Will you do unto someone else as you would hope they would do unto you? I hope so. Easter isn’t just one day a year, it can be every day of the year. Happy Easter, everyone.

Kari Savala

After all the fuss in March over the Missouri Ku Klux Klan being allowed to participate in the Adopt-A-Highway program, the KKK ended up being kicked out for not picking up a single piece of trash.

That’s right, the members of the KKK couldn’t even bring themselves to hold up their end of the deal. In neglecting to pick up trash, they made a mockery not only of their own beliefs, but also of the First Amendment that protected them and their right to organize hate in the first place.

"The Constitution, as originally written and intended, is the finest system of government ever conceived by man." This is a direct quote from the official Web site of the American Knights of the Ku Klux Klan. Most people wouldn’t find it hard to believe that the KKK would do such a thing as profess allegiance to a body of government and then turn around and stab that body in the back repeatedly. However, those people might have difficulty believing that members of the KKK honestly believe that they are the "good Christians" and "believers in love, not hatred," which they proclaim to be in their official mission statement on their Web site.

Apparently most, if not all, of the members of the KKK are illiterate. Nothing demonstrates love more than placing the sign of a white power organization on one of the segments of highway where black children are bused to school. Nothing shows allegiance to the Constitution more than using the First Amendment as a defense for evil in one of its most vile forms. "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof, or abridging the freedom of speech, or of the press, or of the people peacefully to assemble, and to petition the government for a redress of grievances." This is the exact text of the First Amendment to the Constitution that defended the Ku Klux Klan’s apparent public act of treason. The founding fathers are probably spinning in their graves knowing that the amendment they wrote would later be used as justification to harass black children on their way to school.

In being kicked out of the Adopt-A-Highway program, the only thing the members of the KKK have accomplished is making themselves appear more offensive to the general public than they ever have before. Most people probably didn’t even think that was possible.

Maybe the goal of the KKK is to accumulate some sort of laundry list of negative traits, and adding "deadheads who can’t even pick up trash" is just one step on the way to complete atrocity.

Aside from being morally deficient, uneducated and hypocritical, I honestly don’t know what other negative traits the organization can lay claim to.

Walk Bike Zone represents forward motion

As I walked through campus the other day, I was passed by a speedy student on a bike. I didn’t really think about it until later when I first noticed the new “Walk Bike Zone” signs that seemed to be everywhere. I laughed to myself as I wondered who would pay attention to the signs. But then, I started wondering why we had to walk our bikes at all. I only ride my bike to school occasionally, but after seeing all those signs, I realized that I wanted to ride my bike whenever I wanted. I decided to look into the issue, but what I found surprised me.

The Walk Bike Zone went into effect April 2. At first, I considered sitting, but after seeing all those students tickets for this violation, University Police and Commuter and Access Services decided to change things around a bit. With the Walk Bike Zone, there are now more bike racks available in the middle of campus, so students can take their bikes closer to their classes. As a result, some students improved and locked up their bikes in illegal areas. Andersen said there was one area in particular which this happened quite frequently. Unfortunately, this area included a wheelchair ramp that was being obstructed by the numerous bikes locked to the handrail. This was obviously a problem.

But instead of continuing to give students tickets for this violation, University Police and Commuter and Access Services decided to change things around a bit. With the Walk Bike Zone, there are now more bike racks available in the middle of campus, so students can take their bikes closer to their classes. Although I never get creative by locking my bike to a tree or phone booth, I did hate having to lock it up at a bike rack far from my class, especially if I was on campus at night.

When I think back to that day, when the speedy bike passed me, I realized that having the freedom to ride on campus would be nice, but it’s not realistic yet. I know that if we all lived the lifestyle of my freedoms around campus, but I soon realized that it was actually an extension of these freedoms. The Walk Bike Zone actually replaces the NO Bike Zone previously in effect in these areas.

Debbi Andersen, Cal Poly’s Commuter and Access Services coordinator, said the Walk Bike Zone was implemented to encourage the use of the bikes in the heart of campus — just not for riding. Because of the previous NO Bike Zone, there were very few bike racks available in the middle of campus. Many students were forced to lock up their bikes in areas far from their classes. As a result, some students improvised and locked up their bikes in illegal areas.

I firmly believe that, with the help of some signs, painted lines and bike racks, we could eventually be a campus where bikers and walkers can coexist peacefully. And until then, let’s appreciate the Walk Bike Zone for the new bike racks. This means fewer scavenger hunts for bikes, and fewer bikes chained to the pay phone we need to use.

Cal Poly is just like any other institution. To get the freedoms we really want, we have to take it step by step and appreciate the little victories along the way.

Letter to the editor

Don’t drink and drive

Editor,

As a working student, paying my own way through school, I try to experience college in an entirely different way than those whose parents are paying for most of their education. I am fully aware that I come into contact with people, most of whom our student body will not meet, and I usually enjoy this unique part of my life.

However, over the last weekend, I realized that even you can take your hikes closer to your classes.

Andersen pointed out, with the high number of people walking, it just isn’t conducive to let students ride bikes in the same area — at least not yet.

Fresno State again.

"There's always a revenge factor," Martinez said. "You never want to drop two to a team you're only going to play twice during the year."

The Mustangs' offense hasn't been playing poorly, Martinez said. Instead, they've been the victims of circumstance.

"It hurts us when we have runners on second and third with nobody out and we end up lining into a double play or hit a line drive right back to the pitcher," he said.

The Mustangs hope that Sunday's offensive outburst will be a preview of things to come. The team is keeping its head up in perspective.

"The fact that we lost two in a row and then came back and blanked them in the third game pretty much sums it up," said senior right fielder Phil Thompson. "Our offense had a two-game funk, nobody's hard pressed. Every team has it up and down and right now this is a down time for us. Nobody is thinking, 'Oh, crap, we're not as good as we thought.'"

Tonight's game begins at 7 p.m. attagett Stadium.

This is Blankenbecler's third year pitching for Mustangs. Every year, she gets more and more stats and improves her statistics. As of Monday morning, Blankenbecler has pitched 111 innings for the Mustangs. The next closest pitcher has 66.1 innings.

Boyer said Blankenbecler's improvements come from her personal desire to get better.

"What sets Terra apart (from other players) is her own decision to continually get better," Boyer said. "She wants the team to do well."

Catcher Cara Schubert agreed that this is Blankenbecler's best season yet.

"She's doing very well," Schubert said. "She continues to do better, which helps us out."

Boyer, who has coached the Mustangs for 13 years, said that despite Blankenbecler's even temper, she does not like to lose.

"Even with the losses, Blankenbecler wouldn't give up the sport for anything," Boyer said. "Except for my roommate, all my best friends are on the team," she said. "The girls on the team are awesome. It's the best team I've ever been on. We have a great time, win or lose."

Even though Blankenbecler doesn't know what her future holds, Boyer knows she'll do well.

"She's very ambitious," Boyer said. "She can do anything she puts her mind to. She'll have several job offers when she graduates."

**Cal Poly softball’s dependable arm**

By Michelle Hatfield

MUSTANG DAILY STAFF WRITER

Whether her last game was a complete game no-hitter or a nail-biting loss, Cal Poly softball pitcher Terra Blankenhecler comes to play every time she steps onto the mound.

"Overall, she’s been very consistent this year," said head coach Lisa Boyer. "Terra throws back right. She’s not as easy to hit if she doesn’t complete a game. If it’s what's best for the team, she’s fine with that.”

Blankenhecler, a business junior, had two tremendous games against UC Santa Barbara last week — a 9-5 loss and a complete game shutout to improve to 9-8-1 on the season.

She also came away with a win over nationally ranked Oregon State March 9. Boyer said that the 3-2 win was especially big since it was against a ranked team.

Blankenhecler was honored last week by being named Big West Co-Pitcher of the Week for the week ending April 1.

The 21-year-old said the secret to her success is her determination throughout the off-season to work out and get better.

"During the off-season, I worked hard," Blankenhecler said. "It just doesn’t come naturally to me. I saw my pitching coach twice a week.”

Blankenhecler, originally from Salinas, first got into softball because she thought she would enjoy it.

"I thought it would be fun,” she said. "My friend went out and played. Once I got started, I realized that I liked it. And I got good. When you’re good at something, it’s fun.”

At North Monterey County High School, Blankenhecler played three years of varsity softball, but began pitching when she was in fifth grade. She played Little League softball starting in fifth grade and began playing in a travel softball league when she was 13.

Once it was time to pick a college, Blankenhecler looked at Colorado State, University of Massachusetts, and Cal Poly. She said she wanted to stay in California.

“i knew that I wanted to play softball,” Blankenhecler said. "I also wanted to stay in the state. Knowing that Cal Poly was building a new stadium was also a plus.”

Terra Blankenhecler has pitched six shutouts and 12 complete games in 23 appearances for the softball team this season.

Second meeting for Cal Poly, Fresno State

By Ryan Ballard

MUSTANG DAILY STAFF WRITER

The Cal Poly baseball team was lucky to have anti-lock brakes as it managed to stop its skid this weekend before ending up in a fiery crash.

The Mustangs struggled at the plate the first two games of its series against UC Riverside, but managed to get in off-speed pitching going in the last game, salvaging the series with a 9-5 win, avoiding a sweep.

With the heart of the Big West schedule looming in the near future, the team must quickly regroup tonight against non-conference opponent Fresno State.

The Bulldogs (26-14) defeated the Mustangs (23-15) by a score of 8-5 in the previous meeting on March 27.

Even with the game being non-conference, it is still important to the Mustangs’ chances of making the NCAA Championships, said head coach Rich Price.

This is one of the more important Tuesday games we’ll play this season,” Price said. “The fact that they beat us the first time we played, and if they beat us again, we’ll be 2-5 against us. If we get in a situation where it’s us and them at the end of the season and it’s down to five teams on the West Coast, they’ll have the advantage.”

Junior Greg Bocli will take the hill for the Mustangs. Bocli is 3-1 this year, including two consecutive wins over Bethany College.

Not all was bad for the Mustangs against Riverside. Junior third baseman Chris Martinez had an outstanding weekend at the plate. Martinez was 6 for 7, for a .857 batting average and had a .889 on-base percentage.

Martinez looks forward to playing Fresno State next week and getting revenge.
