Students contest aspect of fee vote

By Dena Horton
MUSTANG DAILY STAFF WRITER

Millions of dollars in funding, a crucial decision for students, is waiting for President Warren Baker’s final approval. As the fee initiative itself moves further, the minds of many students are distracted by the contesting of the college fee increase.

Contested vote

In a memorandum sent to Assistant Director of Student Life and Leadership, Patricia Harris and then forwarded to Interim Vice President of Student Affairs Bob Detwiler, six people officially contested the college-funded fee initiative itself moves forward with making a recommendation to the president to support the contesting of the fee increase.

The election was not ‘open, fair and transparent’ as the complex, the secret is out. MTV’s “Road Rules,” is coming to Cal Poly today at 2 p.m. to complete its final mission.

“Road Rules” participants are competing for a trip around the world in a “Blind Faith Mission” at the upper field of the Sports Complex. All students are invited to attend and watch the “Road Rules” players perform the final challenge.

“This season is a campus-to-campus tour, and Cal Poly was chosen for the final mission to be completed here,” said Diana Czopp, Associated Students Inc. events coordinator.

MTV is not releasing details about the “Blind Faith Mission,” but the final episode is part of the upcoming season that begins this summer. Liberal studies senior Ben Eller and journalism sophomore Katrina Telfer will host the finale episode of “Road Rules.” The eleventh season starts in June, with tomorrow’s episode airing in August.

Study details dangers of college drinking

By Jennifer Thomson
MUSTANG DAILY STAFF WRITER

Cal Poly Health and Counseling Services has a warning for students: Don’t drink beverages you didn’t open yourself, leave the drink unaudited, designate a sober person when you go to parties, clubs or bars, and have a plan to periodically check up on each other.

All of these cautionary statements are in light of the fact that college students drink, and most drink heavily. A recent study shows that more than 40 percent of U.S. college students binge drink. The March issue of the Journal of American College Health reported that underage students drink 48 percent of the alcohol consumed on campus. The study was funded by the Robert Wood Johnson Foundation.

The Thoughtful Lifestyle Choices Team (TLC) at the Cal Poly Health Center supported these statistics. The TLC team said that it sees a lot of freshmen come through its doors, many of whom reside in the dorms.

“Lots of kids binge drink,” said Ryan Brosn, TLC team member.

“We deal with it all the time.”

The report said that students under 21 in states with stricter underage drinking laws and those who lived in substance-free dorms or with their parents were less likely to drink. Since Cal Poly is a dry campus, alcohol use is not permitted in residence halls.

New fountain will spout centennial spirit

By Amber Hodge
MUSTANG DAILY STAFF WRITER

Students who want to leave something behind to remember their time spent at Cal Poly will get their chance with the upcoming creation of a fountain meant to commemorate the university’s 100th birthday.

Not only will students have the chance to have their names engraved on a plaque or near the monument, but they will also have the chance to design it.

The Student Centennial Fountain is a present from the students to the university, said Melissa Varvak, project coordinator.

As part of Cal Poly’s Master Plan, the Centennial Fountain will be located on the Centennial Green, which will replace the science building, or spider building, after it is torn down in the next few years.

“This is going to be the center spot on campus in the next 20 years,” Varvak said. “I thought it would be cool if the students got to design it.”

Students can turn in design proposals for the fountain through April 29. The proposals will then be showcased in Club 222 in the UC from May 6 to May 10. All Cal Poly students will have an opportunity to see FOUNTAIN, page 2

‘Road Rules’ drives to Poly for final mission

By Dawn Rapp
MUSTANG DAILY STAFF WRITER

For students wondering why crates are mysteriously sitting up at the Sports Complex, the secret is out. MTV’s “Road Rules” is coming to Cal Poly today at 2 p.m. to complete its final mission.

“Road Rules” participants are competing for a trip around the world in a “Blind Faith Mission” at the upper field of the Sports Complex. All students are invited to attend and watch the “Road Rules” players perform the final challenge.

“This season is a campus-to-campus tour, and Cal Poly was chosen for the final mission to be completed here,” said Diana Czopp, Associated Students Inc. events coordinator.

"This 'Road Rules' is following the same structure as other seasons, but its missions are based around college campuses."

Jason Horowitz
MTV location manager

"Road Rules" tour because of its aesthetically pleasing campus and good relations with MTV, Corzii said.

"We've had a fairly successful reputation with MTV and Campus Invasion Tours," Corzii said.

Students are encouraged to wear Cal Poly attire and to be enthusiastic, Horowitz said. No cameras or video devices will be allowed near the event because attendees will be witnessing the final outcome.

The event begins at 2 p.m. but will continue until sundown and students can come and go as they please. The competition will take place at the dirt lot across from Baggett Stadium, above the soccer fields at the Sports Complex. The final episode of season eleven of "Road Rules" will be aired sometime in August.

STUDY
continued from page 1

All of a sudden, you come to college and you're faced with alcohol everywhere."

Amy Golladay
recreation administration freshman

because of the prevalence of alcohol at parties and functions surrounding campus, it is hard not to drink.

The survey included more than 10,000 students from more than 100 four-year private and public colleges spread across 38 states that had been included in similar College Alcohol Study surveys conducted in 1993, 1997 and 1999. The study also found that 44 percent of all students between the ages of 18 and 23 had engaged in binge drinking in 2001. This figure was almost exactly the same as had been observed in each of the prior study years.

TO WATCH A ROAD RULES MISSION WITH THIS SEASON’S CAST!!

COME to the UPPER FIELD @ the SPORTS COMPLEX - across from BAGGETT STADIUM

THIS WEDNESDAY, APRIL 17TH at 2pm

WEAR A CAL POLY T-SHIRT!!!

PLEASE NOTE: do not bring still cameras or video cameras, as there will be no photographing allowed. Thanks for your understanding.
First wild condor egg since 1984 hatches

LOS ANGELES — A pair of California condors has done what others of their species have been unable to accomplish for 18 years: lay, brood and hatch their own egg outside of captivity. Biologists and wildlife officials are thrilled and hope that this breakthrough is indicative of a prosperous future for the species.

The tennis-ball-sized chick hatched last week in the Los Padres National Forest in Ventura County. Biologists monitored the egg for two months and say that the parents are taking good care of it. Many times condors are too rough with their chicks and end up tearing them apart during disputes over which parent gets to feed it. There are some fears that other predatory birds will kill the chick. If the chick survives, it should ready to fly in six months.

In 1982, scientists began collecting condor eggs from the wild. The last condor egg hatching in the wild occurred in 1984. In 1995, the captive condor-breeding program began.

The last condor egg acted on its own and that the act was considered a joke, but an investigation is being launched. Before the origin of the call was discovered, the Federal Bureau of Investigation warned Washington, D.C., bank branches of an "unspecified" bomb threat. The prosecutor believes that the motive for the homicide is unknown. The brother said that the bomb was found in the Los Angeles area about 100 feet from the family's home. The boy was reported as missing Monday evening after the brother and sister said they could not find him after a game of hide-and-seek. The motive for the homicide is unknown. The brother said that the bomb was found in the Los Angeles area about 100 feet from the family's home. The boy was reported as missing Monday evening after the brother and sister said they could not find him after a game of hide-and-seek. The motive for the homicide is unknown. Odd, new technology aids dwindling farmland

By Sarah E. Thien
MUSTANG DAILY STAFF WRITER

It's time to talk about food. Not the typical cooking tips, recipes or health advice usually given on these pages — it's time to talk about something deeper, like where the food comes from.

Though most people don't think about it very often, food does exist before it reaches grocery store shelves. In fact, it has a complex existence before it ever gets to that point, and the journey is more complicated every day.

Just like any other industry in the United States, the food industry has been touched by technology. Some of this technology is developmental — attempting to figure out what the consumer wants before they actually want it. The remainder of novel concepts is about survival.

It begins on the farm, where agriculture currently faces issues like urban sprawl, rising costs and an increase in big business. Mechanical innovations in the 1950s brought the number of farm workers in the United States from 10 million down to 3 million by 1997. The average age of a farmer today is 53 years old, and not many of these workers have children willing to take over the family business. This becomes a problem in a society where land is more valuable for housing and business development than it is as food production, which becomes a problem with the increasing number of hungry mouths to feed.

Crop science professor John C. Phillips said that this trend has been evident for years. "It's a well-documented fact that the total acreage of farmland is going down," he said. "Farmers have no choice but to maintain production on a smaller amount of land." This is where technology comes in. In order to produce the same amount of food with less land, farmers have had to innovate. Genetically modified seeds, hormones for cows and antibiotics for chickens are some of the ways that technology has filled the void left by the dwindling farmland.

Farmers who can't keep up, either because they're set in their ways or can't afford to change, are driven out of business, taken over by large corporations.

Phillips said that he estimates that four companies now produce more than 85 percent of the country's grains, because small farms could not make a profit. After leaving the farm, food enters the production stage, becoming the TV dinners, microwave popcorn and other processed products that the American public knows and loves. Efficiency in food production has become more important in recent years, just as it has in the farming industry. Food science professor Tom Neuhaus said that increased efficiency is the prime motivation of many people in the food industry.

"We've all been eating irradiated food with radiation to kill the germs. Neuhaus said that irradiation is already used on most spices and that the meat industry wants to use it, too.

Food science senior Jennifer Vierra said she has no problems with irradiation technology. "We've all been eating irradiated food and nobody's glowing green," she said. Vierra is president of the food science club and a member of the Institute of Food Technologists. Members of the Institute of Food Technologists work in food development, coming up with new products to satisfy consumer needs. This year the club is working on a fudge pop made with tofu. Vierra said that most students in the food science department are pro-technology. She said the best technology to come out in recent years is genetically modified plants.
Recipe of the Week

Double Mocha Smoothie

1 tray of frozen coffee cubes
3 scoops frozen coffee yogurt
3 tablespoons chocolate syrup
1/4 cup half and half
1/2 cup milk
1/2 teaspoon pure vanilla extract

In a blender, process six coffee cubes, frozen yogurt, chocolate syrup, half and half, milk and vanilla extract until smooth.
Serve in a tall glass.

Food & Politics

By Meredith Rogers

Vegetarians: who many of you have wondered what the family has a craving for Whoppers, when your sports team steps at a strip mall with nothing but Burger King and Taco Bell in sight, or when you are traveling with friends who put their cravings for grease and fat over your pleas for something healthy? Now, instead of feeling uncomfortable watching everyone else eat while your stomach yearns for something more nutritious, we present "all vegetables," we noticed something fluorescent orange, and we concluded it must be a carrot. We finished the veggie burger, which tasted good, but didn’t fill me up. However, my appetite is far from standard, since I ran every day and had run about 65 minutes that day. Maybe some tips could fill the void, but I’m still a health nut, and I don’t eat anything deep-fried.

In conclusion, the BK Veggie wasn’t outstanding, but it would sure satisfy the vegetarian community is in strong support of the BK Veggie. The rationale is it a good way to escape the Burger King smell as soon as possible. However, I was still anxious to try the BK Veggie. "Of course!" he exclaimed. We pulled apart the wrapper, but the employees could not locate them. The sign advertising the BK Veggie stated that it contains 19 grams of fat — that’s the only nutrient everyone is interested in anyway. For comparison, a Burger King cheeseburger contains 21 grams of fat, and the Burger King Whopper contains 23.

Our order number was called, and our first thought was to escape the Burger King smell as soon as possible. However, I was still hungry, so we ordered the BK Veggie. "Of course!" he exclaimed. We pulled apart the wrapper, but the employees could not locate them. The sign advertising the BK Veggie stated that it contains 19 grams of fat — that’s the only nutrient everyone is interested in anyway. For comparison, a Burger King cheeseburger contains 21 grams of fat, and the Burger King Whopper contains 23.

Students faculty can prevent more tragedies from occurring here

Despite its location in a quiet, beautiful part of California, Cal Poly is not immune to tragedies like the recent student deaths that shocked the campus community. We are always diminished and unalterably changed by the loss of any member of our university family, and it is particularly disheartening when we lose students to accidents or occurrences that were truly preventable.

Like many other universities, Cal Poly is afflicted by alcohol and substance abuse problems. It is no secret that the university's student body is in an education race with the nation's institutions of higher education in the midst of a national alcohol abuse epidemic. A study issued last week by the National Institute on Alcohol Abuse and Alcoholism (NIAAA) reports that drinking by college students contributes to approximately 1,400 deaths, 500,000 related injuries and 70,000 sexual assaults each year. The NIAAA also noted that 40 percent of college students are binge drinkers.

These troubling statistics plainly underscore a worsening problem. This preventable epidemic exacts a terrible and irreversible toll on Cal Poly, other universities and our nation in so many ways. The most obvious and profound are those deaths and injuries from related accidents and crimes. A less visible but just as costly price we pay because of this social crisis includes problems with academic performance, employment, relationships and overall productivity.

During the last year, Cal Poly has increased its efforts to deal with these problems. We increased staffing in the Health and Counseling Center added staff to work with our Greek organizations and launched a "social norms" campaign to let students know the truth: that most of their classmates are either moderate in their use of alcohol or abstain from its use. The university also published statements calling attention to ways we can work to overcome these problems of student alcohol abuse. These efforts, however, are not enough.

If we are to make any progress on reducing the risk of alcohol-related accidents and crimes, we must become personally involved.

To Cal Poly's faculty and staff. We urge you to watch for the signs that students are struggling with problems related to alcohol and substance abuse. The university has numerous resources such as those at Health and Counseling Services (765-2511) or on the Web at http://hes.calpoly.edu/hcs.html. Suggestions and referrals can be made that are non-judgmental and non-punitive.

To Cal Poly students: The university will continue to offer resources and support, but perhaps you are the best hope for each other. Better than any report or survey or public president can tell you, you know what you are going on — and why. You also understand the best way to protect one another. It is vital that you take opportunities to come together as a community to get friends, peers or perhaps yourself any help that is needed. This can be as simple as volunteering to drive a friend who is impaired, using the buddy system or refusing to serve alcohol to someone who is underage. It can also be as considerate as finding a way to get yourself into a counseling program.

Each year, Cal Poly students and employees provide hundreds of hours of thousands volunteering in our community to make it a better place to live for everyone. We can think of no better way to make an immediate and lasting improvement in our community than for us to commit ourselves to altering existing current attitudes and behaviors. It is necessary to unite and gain a cautious awareness about the problems we face as a campus community. To do that, it is necessary to find those friends and founded ones from facing further tragedies like the recent losses we have experienced at Cal Poly.

Warren J. Baker is president of Cal Poly and Angela Hacker is president of ASI.

Students faculty can prevent more tragedies from occurring here

Letter to the editor

Claims against El Corral are ridiculous

Editor,

Peter Keller's claim (Mustang Daily, April 16) that it is "ridiculous that there is a 400-500 percent profit being made on textbooks in this bookstore" is itself patently ridiculous. I have served on the El Corral Bookstore Advisory Committee and know that the profit isn't even close to what Keller asserts. And isn't the responsibility of a reporter and editorial staff to check the veracity of statements made by the subject of an article?

On a completely separate note, I just returned from a visit to the Kenneth Library, where I observed a student riding his skateboard in the double door leading to the reserve room. When I walked up to the student and asked him if he knew that riding a skateboard anywhere on campus is prohibited, he replied "Yes, but I do it every day anyway." His justification was that he has been riding since he was a younger and knows how to ride safely. Could someone please explain to me egregious oppositional behavior on the part of a set people who believe that society's rules apply to every one but themselves. I just don't get it.

Jay Devore is professor and chair of the statistics department.

Sonia Szotzki, editor in chief

Haymon survives and succeeds at Nationals

By Nick Hopping

To appreciate Cedric Haymon’s accomplishments, a tile going to have to put away his 6-foot-3, 220-pound frame.

Imagine yourself in a warm-up room more than 3,200 miles away from home, the floor covered in mats, surrounded by the best collegiate wrestlers in the nation, preparing for what possibly could be his last collegiate season. All the athletes in the room realized that the season came down to a few days, because for better or worse, that's what people will remember.

Six months of training and afternoon practice, countless road trips to tournaments, and victories and defeats came down to this: the NCAA Division I Wrestling Championships on March 21 to 23 in Albany, New York.

After losing his previous bout in the championship quarterfinals 6-4 to Nate Parker of Oklahoma, Haymon found himself in the decided consolation bracket, facing elimination and going up against the nation’s seventh-ranked wrestler from the University of Iowa.

The scene played out like a classic movie: Minutes before his next bout, Haymon was on the floor of the arena and immediately thrust into the spotlight of roughly 15,000 wrestling fans from all over the country, all dreaming of athletes from 10 different schools. There were two bouts occurring simultaneously.

In the match that Haymon was about to face, the nation's 12th-ranked wrestler — a weapon — survival of the fittest, if you will.

On the mat there were no teammates, no friends, no family. Just Haymon and his opponent set for a seven-minute battle to determine who would live to go on to the NCAA tournament.

For five minutes, Haymon汗出一身的，不，多多少少还是会出一点汗。他翻过身来，发现周围已经没有人了。他静静地躺在那里，感受着体内的变化。他的细胞在努力地修复着损伤，血液在身体中循环，提供所需的营养。他慢慢地调整呼吸，让自己适应这个新的环境。他闭上眼睛，脑海中浮现出之前训练的场景。他想起了教练的鼓励，想起了队友的支持。他深吸一口气，开始准备。

“...Cal Poly has the potential to be a bigger and much better athletic program if the students would just show some support.”

Six months of morning and afternoon practices, countless road trips to tournaments, and victories and defeats came down to this...

By Mark Maske

The Washington Redskins' new management team of owner Daniel Snyder, coach Steve Spurrier and Vice President of Football Operations Joe Mendes is making its mark as much for the free agents it's refused to sign as for those it has. And it's paid off in a big way.

Snyder's phone rang right after Washington Redskins' last pick in the NFL draft, when a scout from a Western Division I-A school offered the Redskins a quarterback who had been drafted by the Cincinnati Bengals.

"I don't know if it's true or not," Snyder said. "But I told them, 'We're not interested in your quarterback. We're interested in your scout.'"

Snyder, coach Steve Spurrier and Operations Joe Mendes is making its mark as much for the free agents it's refused to sign as for those it has. And it's paid off in a big way.

Snyder says the one-time Gators were signed with the Philadelphia Eagles and the Redskins didn't intend to sign Chazamo, who retired from the NFL last year after being acquired of a sexual assault charge.

Snyder says he's happy with the results of free agency. The Redskins wanted to re-sign center Cory Raymer, guard Dave Scott, defensive tackle Kenard Lang and linebacker Shann Babers, but they bowed out of the bidding when Raymer and Lang received contract offers elsewhere that the Redskins regarded as too high. Scott chose to play in New York for family reasons, and Babers signed with the Philadelphia Eagles.
