Impact of fees still in progress

College of Engineering
Orfalea College of Business and College of Agriculture begin to see the benefits of increase

By Laura Dietz
MUSTANG DAILY STAFF WRITER

More class sections, increased numbers of faculty and staff and upgraded labs and computer equipment are among the benefits from the college-based academic fee increase that went into effect this quarter.

Students in all six colleges approved the fee increase. It gives the College of Engineering, the College of Agriculture and the Orfalea College of Business $200 more for each full-time undergraduate student per quarter.

The deans of each college said the intent of the increase is to enhance the limited funds provided by the state. Each college spends the money according to the priorities set by students, faculty and staff who met in the spring and crafted a proposed spending plan.

College of Engineering

The College of Engineering distributes all of the money received from the increase to its departments based on the number of students enrolled, said Amy Hewes, director of publications and communications for the CENG. The money cannot be used for any administrative purposes.

Based on a rough estimate of 4,782 enrolled students, this means that an additional $596,000 per quarter will go to the college.

Though not all departments have reported their spending for the quarter, some changes have already occurred, Hewes said.

Computer engineering majors have seen immediate progress in the database lab, where there are 30 new computers, Hewes said. The materials engineering department bought a Scanning and Electron Microscope and a 3-D printer for the ceramics labs.

For the electrical engineering students, the fee increase funds five additional lecturers, and 12 more lecture sections and 35 lab sections.

Students on the fee allocation committee for mechanical engineering used the money to support additional staff, said Bill Clark, head of the mechanical engineering department.

The students agreed to finance a full-time lecturer for the year, so we have been able to hire an additional tenure track faculty who is being paid by the state budget," Clark said.

Additional faculty may be hired in winter and spring quarter, he said.

An additional development from the fee increase was an upgrade of the robotics lab, which is used by mechanical, electrical engineering and computer science majors. One faculty member worked with a student assistant over the summer to prepare the lab for fall classes. The fee increase shortened the time for developing the lab and made the course available sooner, Clark said.

All engineering students have the right to watch what was going on.

"They often have problems with getting paid," Thompson said. "And they very often have developmental delays and ongoing problems, which I am able to work with them on."

Baldwin's doctorate in special education with an emphasis on severe disabilities makes her a prime candidate to help these children.

"It gives me an academic background to knowing more about these children," she said.

But the academic understanding represents only a small portion of what Baldwin does for the children she fosters. She treats each child individually, giving him or her the love and care she needs.

Also different. She boasts the typical professor glasses, along with a purple sling made for carrying a baby that covers her entire front. Inside the pouch, a small infant clad in pink sleeps quietly as education professor Mary Ludwig Baldwin quietly goes about her business.

Baldwin acts as a foster parent for infants, many of whom she picks up directly from the neonatal intensive care unit.

"They often have problems with getting paid," Thompson said. "And they very often have developmental delays and ongoing problems, which I am able to work with them on."

Baldwin's doctorate in special education with an emphasis on severe disabilities makes her a prime candidate to help these children.

"It gives me an academic background to knowing more about these children," she said.

But the academic understanding represents only a small portion of what Baldwin does for the children she fosters. She treats each child individually, giving him or her the love and care she needs.
Baldwin joined with the intent of adopting a child rather than just fostering a baby and then sending him or her to another permanent residence.

"What happens in a 'post-adopt' situation is that you're willing to be a foster parent to a child, but social services places a child with you when they expect they will be put up for adoption because they don't seem to be great odds that they will be able to be placed with the birth parent," she said.

In a post-adopt situation, however, there is a risk that the child may still go back to his or her parents.

"I just wanted to be a mother," King said. "I was well aware of social services and their operations, so I knew that they had a lot of children who either have been abused or neglected and so they are usually available for adoption."

King explored the different options and eventually was placed with a 2-month-old baby girl. After a transition period, during which she visited the baby at the foster home, the baby came to live with King.

"She is a very happy and healthy 18-month-old," King said. "She is very active and always moving around."

There are over 2,500 foster care cases in San Luis Obispo, and foster parents are needed throughout the county.

In many cases, the goal is to keep from moving the children from their current location to avoid disrupting their lives, Baldwin said. The country is moving toward involving resource parents, who act as mentor and a stable source of guidance for the children as they grow without having to commit to adoption or longterm foster care.

Foster care relationship is mutually beneficial, Baldwin said. "The biggest benefit of doing this is feeling like you've made a difference in a child's life, no matter how small," she said. "Knowing that you gave them something that really important start in their growth and development is what really matters. When things get a little tough, I have to remind myself that is what it is all about."

**Election may strain Democratic state’s ties to GOP Washington**

LOS ANGELES — Republicans are more firmly in charge in Washington. The Democrats rule in California.

Even before Tuesday’s election, California’s leading Democrats complained that the Bush administration was ignoring California on energy and water issues, particularly compared to the attention lavished on the state by the Clinton administration.

California Democrats only strengthened their hold on power Tuesday. They swept statewide offices, retained control of the state Legislature and added a Democrat to the state’s congressional delegation, already a majority in favor of Democrats.

“We shouldn’t expect more attention as a result of this election,” said Sherry Bird Jeffe, a political scientist at the University of Southern California.

California is central to Democratic presidential hopes. Its 55 electoral votes are more than a fifth of what is needed to win.

Bush proved he could win without California.

Loving for a kinder, gentler dating era

As we get older, stuff that we took for granted will start to crumble and fade... but one thing our generation never has to mourn is the loss of chivalry, courtship and dating. Why? Because it's already dead.

That funeral took place long before we were born, when our mothers were wearing tight jeans and Farrah Fawcett had a Perm and Ortho-Tricycline like tic-tacs. Our fathers, swaggering around in polyester with full heads of hair, were demonized for repressing women. In the crostree of that war, fought with picket signs and bra burnings, certain dating norms were shot to a bloody pulp.

Some grew suspicious of men and their motives: "I can open my car door!" "Don't you call me 'baby'?" "I'm not your property!" "I want sex! WITHOUT marriage!"

This kind of rhetoric confused and challenged many men until they were just exhausted. Don't get me wrong: I think the feminist revolution was fantastic. Without it, I'd probably be career-focused, addicted to Oprah and Chardonnay.

But no social uprising is without consequence. I think men got so fed up with trying and failing to understand and please women that they simply gave up. It wasn't to clip it to come up with new strategies because the social climate was constantly changing. There weren't any safe angles to play, so they realized women would eventually come to them.

And we women did.

Boys, let me tell you a little secret: Girls hate to chase you. We hate more than Pauly Shore movies, more than Tijuana food poisoning.

More than parking in the horse unit. Being aggressive in the bedroom, however, is a whole different kind of whiskey General Grant drinks, and Patch Adams became interested in medicine.

True, the stigmatic climate was constantly changing. There weren't any safe angles to play, so they realized women would eventually come to them.

Lone from this world is permanent. Not wealth, not beauty and not even the great and terrible reigns of Acrebeochef & Fich. As we get older, stuff that we took for granted will start to crumble and fade... and I'm already squirming away money for Botox injections and chemical peels. But one thing our generation never has to mourn is the loss of chivalry, courtship and dating. Why? Because it's already dead.

If you haven't found the career in your dreams in your first four months in the real world, just remember you have 40 more years of working to go. To quote a song about a very famous duck made legendary by an enterprising cartoonist, "Go on and try your luck."
Wrong to steal, print Cobain's thoughts

I have always kept a journal, and one of my biggest fears is that it will end up in the hands of the wrong person.

So when I heard that Kurt Cobain of the band Nirvana was to have his most personal and intimate thoughts released in a new book, "Journals," I was disgust....

As a fan of Nirvana, it is not difficult recalling the shocking day, April 8, 1994, when MTV broadcast the news that Kurt Cobain was dead. A younger generation was left wondering why the grunge blond-haired, tied-died shirt and Converse-wearing musician took his own life.

Eight-and-a-half years later, the question is the same, and buying this book is not going to give people the answer as to why.

Instead, it is appealing that people just about everywhere will be analyzing and dissecting Cobain's nightmare ideology about life.

The 23-volume book is a collection of Cobain's 23 spiral nine-dozen journals, starting in 1987 and ending with his suicide in April 1994. The diary entries include letters, hand memos, drawings and early handwritten versions of the Nirvana songs, including the hit "Smells like Teen Spirit." It also has entries mentioning his drug addiction, his love life and his ailments within the music industry.

We already know that Cobain was a messed up heroin addict who was constantly tortured by the media. The release of these not-meant-for-public-journals only contributes to the way he felt about the circus of the media and his privacy.

It is creepy to think that Love is making money off her dead husband...handing over Cobain's soul to the entire world, that is just sick.

"The most violating thing I've felt this year is not the media's invasions of the dream group, but the rape of my personal thoughts," one Cobain entry reads. "Ripped out of pages from my stay in hospitals and aero-

Letters to the editor

Every last vote counts

Editor,

Don't think your vote counts. Think again. At 12:01 a.m. Tuesday, the Cal Poly election site (vote2000.ss.ca.gov) reported a tight race between the Democratic and Republican candidates for the office of state controller (77 percent of precincts reported).

Although the Democrat Steve Westly was in the lead, the Republican counterpart trailed by only 5,500 votes, a tiny margin given that nearly 5 million Californians had voted for this office.

Perhaps I’ll eat these words, but I will say with some confidence that most Cal Poly students have no idea what a state controller does. I will further propose that most Cal Poly students voted along party lines when voting for this office.

Assuming that 45 percent of Cal Poly students voted in yesterday’s election (see Tuesday’s Mustang Daily front page survey results), then the 8,000 of us who voted could have easily affected the 5,500-vote spread and possibly the outcome of the state controller race. Now if we could only know what the state controller does.

Eli Snell is an electrical engineering grad student.

Better solutions to the ‘downtown problems’

Editor,

I have read about my exceptionally flat, exhilarating window magic trick, an event that I would like to forget about, three times now in your newspaper. Yes, I am the individual that was pushed through the window at SLO Brew.

The window was never broken at Mother’s.

I find it amusing that every time the story is told, it gets better and more inter-
esting. I think the last mention called it the "craziest fight downtown."

It is a shame that everything that has been said has been hearay stated by indi-

Rachelle Ackley is a journalism senior and Mustang Daily staff writer.

The college would not offer as

the majority of the money went

toward increased class availability

through new faculty hires.

"We have hired for this year a

number of visitors, and we are in the

process of hiring 10 new tenure-track

positions," Swartz said.

The college would not offer as

numbers without the increase

the number requested by the university, but she

and some students still experience

schedule conflicts.

"Some students are still having

problems with getting a teacher at a

specific time, but there are only so many

sections the faculty can teach," Swartz said.

"The goal is to graduate

in four years and set students up

to succeed. That's our job."

Business junior Ray Motta said

that he has not seen much change

due to the fee increase, although he

has heard that more classes are available.

"I took a priority and I did not get

the professor I wanted for one of my

classes, but I think more people will see

the change by the time I am out of

here," he said.

The fee advisory committee for the

college decided to spend all the

money centrally, meaning the spend-

ing will not be broken down by

department, Swartz said. This is due to

the interplay between majors and

support services that all students use.

"Students are concerned about the

time to receive their degree and the

committee's spending addresses the

issue," Swartz said. To aid in a timely

graduation, money is being spent to

increase the support for students.

This includes improving the advis-

ing center, computer labs and indus-

trial technology labs. The advising

center now has peer advisers and an

additional professional academic

adviser.

The redesigned Web site provides

advising information at any time,

Swartz said, and both the computer

labs and industrial technology labs

have more student assistants.

The fee has influenced the number

of units students take, Associate

Dean Doug Cerf said.

"I have noticed that the number of

student credit units is going up," he

said. "Definitely students have been

impacted by it."

bers and $25 for non-members.
The battle for “Queen of the Alps” plods along each year in a small village in the Swiss Alps where Heron cows battle for dominance. The week-long festival attracts tourists and underscores the close relationship between residents and cows. But here on Poly’s agriculture campus, where the scent of cow hangs in the air, would the sport ever catch on? Ag major Abbey Kingdon examines our relationship with cows.
Opening a can of bovine whoop ass

By Abbey Kingdon

The Swiss cow fight might look vicious, but with their short horns and slow movement the fight is more like a Sumo battle, the victor winning by staying her ground.

The Swiss breed of cattle used in cow fighting, Herens, are bred especially for this sport as well as meat and milk production, according to the Oklahoma State University animal science Web site. This triple-purpose dairy cow, according to the science Web site, is due in part to our dependence on fast-paced entertainment society," Wooten said. "In the 21st century, we should have advanced far beyond treating animals like props or toys."

Animals (PETA) are against all use of animals in entertainment. "Displays of human domination toward mass-animal contact may be out of favor with the enlightened public," said Anna Williams, political science senior. "Maybe I would feel differently if I was raised with cows."

"Cows would not work here at Cal Poly because we are as well as men and milk production, according to the Oklahoma State University animal science Web site. This triple-purpose Armadillo, says cow fighting is his family's livelihood. Bugenig said he knew nothing about the Swiss tradition. In the West Coast Rodeo Company, bulls perform for about 10 years before retirement, so the Bugenig family knows their bucking stock well. "People think you want to see any animal contact as a form of entertainment is increasing. Regardless of the fact that farms are the only) stars of the cow fighting ring."

organizations that don't want to see any animal contact are against all use of animals for human entertainment. "Displays of human domination in the form of ridiculous amusements like cow fights are out of favor with the enlightened public," said Anna Rhodes, Animals in Entertainment specialist for PETA. "In the 21st century, we should have advanced far beyond treating animals like props or toys."

Enlightened students at Cal Poly will graduate and enter the work world. The work world won't involve contact with cows, and even farm managers will spend more time with computers than cows. Those out of the agriculture loop might only see cows while driving rural highways or visits. Perhaps, their children will point at dairy cows grazing in a bunch atop a knoll, and ask the road. The parents explain that milk and cheese come from these happy cows. At 40 mph, the children in the car might only see the docile second tier of the food pyramid, never knowing the competitive potential that lies beneath the black and white hides.
The teenage duo of Peterson and Naughton captured the attention of many, with their beautiful pictures and vivid stories published in Surfer magazine.

By Olga Berdial

Irish surfer Allan Duke takes in empty Baja perfection at Punta Abejones during a trip with "The Far Shore" subjects Craig Peterson and Kevin Naughton. This 1980 photo sent hundreds of Californians homes stand at this once-empty spot.

"The Far Shore" is a mix of original Super-8 film and photographs shot by Peterson, and present-day commentary shot by Schell. The teenage duo of Peterson and Naughton captured the attention of many, with their beautiful pictures and vivid stories published in Surfer magazine.

"Hearing the stories, seeing the great places they traveled, the cultures they encountered and the beautiful, beautiful aesthetic photos they were showing, I just knew they had all the right elements to make an interesting film," Schell said.

I was able to talk to Schell about the process that made his master's thesis film "The Far Shore" so appealing.

"Mustangs Daily: Before Peterson and Naughton agreed to the movie, did they set any terms?"

Greg Schell: Of course. They wanted me to prove my worthiness by traveling with them so we scheduled this trip to El Salvador. They wanted me to go down and do the hard-core traveler thing where we were staying in bungalows and sleeping in hammocks dealing with bandits. There are a lot of bandits in El Salvador, so you have to be very discreet about your actions. There are a lot of guys that will jump out on the street with machetes and take everything that you own. So you have to be fairly cautious when you're in that part of the world. So it was right after the El Salvador trip that I really won their approval.

MD: Did Kevin and Craig approach Surfer magazine with the idea, or did the magazine approach them?

GS: Kevin and Craig went to Central America in early 1972, and while they were there, they wrote an article and sent it to Surfer magazine and Surfer published the article, then asked Kevin and Craig to continue. They would usually get a check from Surfer that would get them a little money to go to the next place. It didn't often arrive on time, so many times they had to kind of figure out how to sustain their existence. Craig tells a story about having to sell some of his film just to stay alive. They had to deep on top of a whorehouse in Africa, just because there was no other place that would allow them to stay for free.

MD: What is the ultimate message you're conveying in this movie? What is it about in the end?

GS: I think the real message is that you have two men on the road, experiencing this vast and unexplored world, and they're wielding surfboards and cameras. Basically, the theme is this idea that travel is an exciting thing but it can also be a dangerous thing. So I think when people walk away from this movie, they think, "Wow, what an adventure these two people had." And it really is an adventure.

MD: So it's a movie that everyone would enjoy, not just surfers?

GS: In a way you can look at this as a surfing movie, but you can also look at it as an anthropological document. You have these two guys traveling through all these cultures and you're showing some things that are really alien to the Western world, in terms of the Ghana fishing village and dancing wine in a jeep in the Basque country of Spain. You know, all these crazy scenarios that make up this entire voyage.

Top, Tito Rosenberg and Kevin Naughton paddle across a river in West Africa circa 1974. Many explorations were to be dangerous adventures. Bottom, a campsite with high-tide trenches dug around the tents to divert the tidal push. Peterson and Naughton camped here for a week with no surf. On their way back from El Salvador, they had to be fairly cautious, as they were staying in bungalows and sleeping in hammocks dealing with bandits.

"Hearing the stories, seeing the great places they traveled, the cultures they encountered and the beautiful, beautiful aesthetic photos they were showing, I just knew they had all the right elements to make an interesting film," Schell said.

I was able to talk to Schell about the process that made his master's thesis film "The Far Shore" so appealing.

"Mustangs Daily: Before Peterson and Naughton agreed to the movie, did they set any terms?"

Greg Schell: Of course. They wanted me to prove my worthiness by traveling with them so we scheduled this trip to El Salvador. They wanted me to go down and do the hard-core traveler thing where we were staying in bungalows and sleeping in hammocks dealing with bandits. There are a lot of bandits in El Salvador, so you have to be very discreet about your actions. There are a lot of guys that will jump out on the street with machetes and take everything that you own. FEES 2
continued from page 6

Multicultural Agriculture Program Center, Dean David Weber. About half of this has been spent already and where it was needed, new equipment was bought up front, he said.

The rest is divided and spent by department according to the number of enrolled students. For larger departments like agronomy, this is an additional $500,000.

Input from students surveyed prior to the writing of the spending proposal guided the committees in prioritizing needs, said James Ahern, agronomy professor. He said students on the department fee allocation committee gave priority to making more sections available.

Two new tenure-track faculty have already started teaching, and one additional member will begin winter quarter. Spending for the department according to the number of enrolled students. For larger departments like agronomy, this is an additional $500,000. A veteran echoed the sentiment, "I am very disappointed. A lot of people here have done a tremendous amount of work to bring the Olympics to San Francisco and I really do think that in the international presence San Francisco would have fared better than New York," Muncie said.

The decision was met by the saddened sighs of about 300 people who gathered in the rotunda at San Francisco’s City Hall to hear the announcement of New York City as host for the 2012 Olympics.

"It was very emotional, it was like waiting in the starting gate," Muncie said. He said there are about 450 Olympic athletes in the Bay Area.

"My heart breaks for the athletes, because it would have been a much fairer competition," said Bev Beckley, a member of the 1960 U.S. ski team.

Weather was one of the major issues in San Francisco’s favor as was the level of diversity that exists in the Bay Area. Greg Massias worked with the Bay Area Sports Organizing Committee as a former competitor and member of the 1980, 1984 and 1988 U.S. fencing teams. “I think we had the best situation, that’s just how the USOC saw it,” he said.

Jorme Rattenbach, a U.S. Olympic Taekwondo official, felt the same way. "I am not even sure I am over it yet," he said. "I was so confident we would get the games here, because we have so much to offer. What do they have there that we don’t have here?"

Core Weaver, who works at the San Francisco Convention and Visitors Bureau, was just as disappointed as the athletes. "It’s a little crushing, especially coming off the of the world series disappointment, but we’ll come back, it will happen for us, we have a great city and a lot to offer," she said.

Inside City Hall posters were placed along the perimeter created by 12 artists from all over the Bay Area. The 12 artists were to be symbolic of the 2012 summer games, according to design "unique" Rick Thorp, from the BASCO.

One poster was created by retired San Jose State University faculty member Stan Smith who taught for 27 years in the graphic design program. In the center of the rotunda a television had been set up with a live feed from Colorado Springs for the announcement and to show the video "Bridge to the Future," which was shown to the USOC on Saturday.

The video showed hash images of San Francisco, Yosemite, Napa and Big Sur as well as San Jose Mayor Ron Gonzales and San Francisco Mayor Willie Brown.

Local celebrities like Huey Lewis, Brenda Chastain and Olympian Michael Johnson appeared and Tony Bennett’s love song to the city, "I Left My Heart In San Francisco," was featured.

In the video, San Francisco was described as "softer side of America," making voter participation down by almost 8 percent in the county.

"The reason I voted was to not have Gray Davis in there, or Bill Simon. I voted for a third-party canditate," said Heidi Deucecaster, third year graphic design student. English junior Gabriel Valdovinos felt the propositions were the most important items on Tuesday’s ballot.

“A lot of money is being put on the voters’ plate — almost $3 billion,” he said. “When it comes to state elections, your vote definitely counts.”

Los Angeles County suffered a major image setback during the March primary this year when 121 polling places opened late, and one never opened.
Lien has been wracked with injuries. She has been plagued by recurring injuries to both her knees, lower back, and an ankle. The injuries have deprived her of the opportunity to use training with extra intensity. She refuses to acknowledge her skills, saying she’s always thinking of ways to improve.

“I don’t know if I ever hit my stride,” Lien says. “I just play volleyball.” She remains surprised that she was named to the All-American team. “I mean, I’ll still play, but it’s not like I’m going to go and tell everybody that I played in college.”

Lien will be leaving behind a sport that’s supported her for nearly 10 years. The youngest of seven children, all more than 6 feet tall, she has played since seventh grade. “I’ve been ‘Oh yeah. I’m gonna go to college and play volleyball. I’m gonna get an education and work with disabled children.’ Yet now that I’m actually here, graduating in June, it’s more nervous excitement.”

“I don’t know if I ever hit my stride,” Lien says. “I just play volleyball.” She remains surprised that she was named to the All-American team. “I mean, I’ll still play, but it’s not like I’m going to go and tell everybody that I played in college.” Lien will be leaving behind a sport that’s supported her for nearly 10 years. I’m gonna get an education and work with disabled children.’ Yet now that I’m actually here, graduating in June, it’s more nervous excitement.”

It’s a new feeling for Lien. “I don’t think I’d ever be nervous,” she says, “and I’m anxious. What’s going to be out there? I have no clue. One year from now, where will I be?”

A New C-4 Class for Winter Quarter
HUMANITIES X335: FANATICISM
Tues and Thurs 2-4
Taught by Professor Paul Miklowitz
Since September 11, fanaticism has dramatically emerged as the principal threat to the security of the world’s one remaining “superpower.” What was previously an interesting but marginal phenomenon is suddenly the subject of headlines every day, no longer an exotic aberration Americans can afford to ignore. But what is fanaticism? Is it entirely irrational, or does it have its own kind of “logic”? If the fanatic’s agenda can be defended by means of “reason,” how do we rescue reason from such infamy? Or should we even try? Is the “modern” faith in reason as the guarantor of liberty and justice for all “old hat”? What is the relation between rational “truth” and irrational conviction? Between reason and faith? And if faith can make legitimate claims on our credulity, what becomes of “truth”? HUMANITIES X335 FANATICISM will address these and related questions from an interdisciplinary perspective. Building on the philosophical foundations upon which such questions must rest, we will also look at literature, drama, film, and even some bizarre unclassifiable texts in order to better understand the perverse appeal of the fanatic’s passionate intensity when the best in contemporary Western culture seem to lack all conviction.

“He is a big impact player and there’s a good chance that he’ll get a lot of minutes,” Bromley said.

“A lot of good things have happened to us,” he said. “We have a lot of experience and we have a lot of talent.”

November 7, 2002

Marty Duncan.

“The Mustangs will play their first exhibition game against the Son Blue Angels at 7 p.m. Friday in Mont Hall.”

“The Mustangs will play their first exhibition game against the Son Blue Angels at 7 p.m. Friday in Mont Hall.”

She refused to acknowledge her skills, saying she’s always thinking of ways to improve. “I don’t know if I ever hit my stride,” Lien says. “I just play volleyball.”

A New C-4 Class for Winter Quarter
HUMANITIES X335: FANATICISM
Tues and Thurs 2-4
Taught by Professor Paul Miklowitz
Since September 11, fanaticism has dramatically emerged as the principal threat to the security of the world’s one remaining “superpower.” What was previously an interesting but marginal phenomenon is suddenly the subject of headlines every day, no longer an exotic aberration Americans can afford to ignore. But what is fanaticism? Is it entirely irrational, or does it have its own kind of “logic”? If the fanatic’s agenda can be defended by means of “reason,” how do we rescue reason from such infamy? Or should we even try? Is the “modern” faith in reason as the guarantor of liberty and justice for all “old hat”? What is the relation between rational “truth” and irrational conviction? Between reason and faith? And if faith can make legitimate claims on our credulity, what becomes of “truth”? HUMANITIES X335 FANATICISM will address these and related questions from an interdisciplinary perspective. Building on the philosophical foundations upon which such questions must rest, we will also look at literature, drama, film, and even some bizarre unclassifiable texts in order to better understand the perverse appeal of the fanatic’s passionate intensity when the best in contemporary Western culture seem to lack all conviction.

Cal Poly's 2001 Female Athlete of the Year wants Cal Poly. Injuries have sidelined her, admits. "I kind of lost the reason I was playing." After all, she's seemingly been at it forever. Volleyball has commanded tremendous amounts of her time at Cal Poly. Injuries have sidelined her, time and again.

Now, it's her senior season. Not too many games remain. The Mustangs' shot at qualifying for the upcoming tournament is up in the air. They missed it last year. Lien woul...
