Students circle like vultures, stalk anyone with keys in hand

At 8:30 a.m. the H12 and H16 parking lots are filled with student vehicles. (Below) Business junior James Allard takes the bus home from school.

MUSTANG DAILY STAFF WRITER

Two cars. One parking space. Ten minutes to class. A unique kind of Darwinism is played out in the Cal Poly parking lot each day.

Students who drive to Cal Poly must deal with the frustrations of parking. Often, they drive to school well before their classes start to ensure they will get there on time. Some students drive because they live outside San Luis Obispo and have to commute; others drive because it is the most convenient option available to them. Still, most students find parking at Cal Poly a struggle.

Ag Showcase to feature 58 companies for students

► Agribusiness clubs sponsor Cal Poly's 14th showcase in Chumash Auditorium

By Ashlee Bodenhamer
MUSTANG DAILY STAFF WRITER

Agricultural companies from across the nation will convene in Chumash Auditorium Jan. 23 for Cal Poly's 14th annual Ag Showcase.

The showcase is a career symposium where students can meet and greet more than 50 industry professionals and inquire about internship and career possibilities in agriculture.

The event, sponsored by Cal Poly's Agribusiness Management and National Ag-Marketing Association (ABM/NAMA) Club, will take place from 9 a.m. to 3 p.m.

All students and faculty are invited to join in an evening of informal networking with agriculture professionals.

Representatives from well-known names in the agriculture industry, including Foster Farms, Frito-Lay, United States Department of Agriculture and California Department of Food and Agriculture, are slated to attend.

While College of Agriculture students searching for jobs and internships will be the most obvious beneficiaries of the Ag Showcase, all majors are welcome. Numerous career possibilities lie in agricultural professions from marketing to accounting, public relations and much more.

Agribusiness senior and Ag Showcase chairman Jack Laper agreed and said the event reflects the diversity of the College of Agriculture.

On Wednesday, ABM/NAMA Club will also host 90 company representatives at an Industry Social held at Madonna Inn from 7 to 9 p.m.

All students and faculty are invited to join in an evening of informal networking with agriculture professionals.

Task force strives to alter campus culture

By Dale Quinn
MUSTANG DAILY STAFF WRITER

Students are satisfied with the results of a movement began last spring to increase diversity on campus but say that changing campus culture is a slow process.

Cal Poly President Warren Baker called for the creation of a task force to increase diversity at Cal Poly and work toward creating a more, civil campus climate after a student petition last spring.

Many students attempted to voice concerns in the past only to run out of steam by the end of the year. Business senior Elbert Hardeman said. ''Then it came to a point where we realized regardless of where we are, these things are wrong and they shouldn't happen."

''Minority students allow racism, discrimination or classism to happen at this campus, and it just rolls off our backs because we know we're at a predominantly white school and this stuff is going to happen,'' Hardeman said. "Students are satisfied with the results of a movement began last spring to increase diversity on campus but say that changing campus culture is a slow process."

Calling all spring break junkies

By Chris Welke
MUSTANG DAILY STAFF WRITER

Spring break, infamous for its association with binge-drinking, nudity and students behaving poorly, is now the subject of a new reality movie.

"Spring Break: The Movie," will premiere a reality TV show format and will follow a group of friends from their concluding weeks of the winter term, including finals, through their spring break and back to school.

"It's the first movie of its kind," said Robyn Kass, the movie's casting director. "Usually there's a script, but here we're going to do everything backwards. We're sending a group of friends to Cancun and whatever happens happens.""Spring Break: The Movie," will premiere a reality TV show format and will follow a group of friends from their concluding weeks of the winter term, including finals, through their spring break and back to school.

"It's the first movie of its kind," said Robyn Kass, the movie's casting director. "Usually there's a script, but here we're going to do everything backwards. We're sending a group of friends to Cancun and whatever happens happens."

"We expect many Cal Poly students to arrive back in town late because of the holiday, so the call will last until 11 p.m.,” said Cathleen Santarosa, casting producer for the flick.

Santarosa advises applicants to come in groups. The producers will select a single group of friends to be featured in the reality film. Unlike the casting for reality television heavyweights "Survivor" or "Big Brother," where individuals are cast one by one not knowing each other, the producers are looking for a group of friends.

"The size of the group isn't important," Kass said, and "Summer break begins at 12:01 a.m."

Students at 19 universities tried out for the film at open casting calls held throughout the West Coast.

Calls were recently held at UCLA, USCD and UCSB. Universities in Oregon and Washington are also scouting.
DIVERSITY continued from page 1

was to spend more effort (on) outreach and working with schools so we have a more qualified diverse applicant pool and that's exactly what we're doing," Baker said.

Hardeman said he agrees that direct recruitment from underrepresented schools is crucial to increasing diversity at Cal Poly. When compared with other California State Universities, a similar number of minority students apply and are accepted to Cal Poly, but there is a significant decline in the number of minorities who choose to enroll at Cal Poly, Hardeman said.

This is because their only exposure to Cal Poly is the struggles of other minority students, he added.

"We have the academics, the location is beautiful, so there are other factors that Cal Poly has an institution is not facing," he said. "Hopefully this task force will deal with that." Cal Poly also lacks scholarships other institutions offer minority applicants. This factor keeps the university from attracting students from economically disadvantaged areas, Baker said.

In addition to increasing the diversity of students on campus, the task force also strives to create a more comfortable learning environment for underrepresented students.

A subcommittee within the task force is now developing a bias response policy to create a way for students to vocalize concerns regarding the campus climate.

Both the administration and the students involved agree diversity plays a critical role in higher education.

"With the diversity of population in the United States, we have the opportunity to better understand the rest of the world, and that's important economically it's important politically and it's important culturally," Baker said.

Denise Campbell, special assistant to the provost and member of the diversity task force, explained that Cal Poly has the responsibility to both "educate the diverse population of the state of California and to ensure that every student who leaves Cal Poly has a level of skill in functioning in a diverse institution."

Hardeman said Cal Poly's hands-on approach does not just refer to jobs and projects.

"It's also learn-by-doing as far as it's concerned, because a lot of those issues that you have to face within the classroom are simply a microcosm of other things we have to face within our job market," he said.

Universal Pictures feature will begin shooting in March of this year and will be released this summer.

Coming up this week

*MLK March - There will be a Martin Luther King Jr. March today on Dexter Lawn at 11 a.m.
*Snow Day - Fifteen tons of snow will be delivered to the corner of Chorro Street and Higuera Street for Farmers Market. The pile of snow is for children 2 to 10.
*Sorta Want'a Torta - The Hispanic Business Student Association will host a sandwich (torta) sale Jan. 16 on Dexter Lawn during UU Hour.
*ASI Office Hours - ASI President Jake Parnells office hours are Mondays from 12 to 1 p.m. ASI Vice President Katrina Ayers' office hours are Thursdays from 12 to 1 p.m.
Worry about your grades, not your money.

Put your money on the Union Bank of California Visa Cash Card, and you'll have one less thing to worry about. Your Visa Cash Card is like an ATM card, without the need for a traditional checking or savings account. Just put your money from your parents, student loans or job directly on your card, and use it like cash. You can use your card to buy books, gas, groceries, lattes and more. Simply visit the teller's window at a participating Union Bank branch, and pay for the amount you want on your card. You can get your mind off money. And get back to studying.
Warning: This column is about masturbation.

Embrace being a woman and all the magic that goes with it. I challenge you to hold your head high and carry your vibrator like a torch, illuminating the dark corners of conservatism.

I don't understand how you demonstrate your anger toward America by stealing one of its most popular products, wrapping it in a shrod of a particular ideology and selling it to a disenfranchised population.

It sounds like something an American company would do. There are people who agree with me, and they are appalled that the United States is encouraging such behavior.

I don't want to give the impression that I am against free enterprise or anything like that. Tawfik Mathlouthi can sell all the pop he wants. I disagree with his assertion that his son is a bad Muslim because he enjoys drinking McDonald's. McDonald's has good food. Using American tactics to protect American policies gives tacit approval to the behavior we are trying to discourage.

Avoiding jury duty at all costs

(U-WIRE) DEKALB, Ill. - Responsibility. Every time I try and avoid it, it ends up punching me in the gut like I just hit on my younger sister.

Case in point: My winter break experience with the U.S. justice system.

This summer I received a notice that I had been called for jury duty. With school upon us, I was able to defer. However, like the rest of us, I was able to do so, my jury service was inevitable. On Dec. 9, 2002, I would report for jury duty with the simplest mission: Avoid it at all costs.

Of course, they anticipated this mindset in one of the many notices I was sent in the mail. Their guilt trip was of expert quality. With school upon us, I was able to defer. However, like the rest of us, I was able to do so, my jury service was inevitable.

"Serving on a jury is one of the most important ways in which an American gets to see her or his country. Avoiding jury duty because you are busy or work may seem important in the short term, but in the long term, it is not a good reason and hurts the country. Jury service reinforces and makes real the need for law," Ouch. These guys running this "scam" were good. I soon felt un-American for even thinking about not doing my duty.

Like any good American, I asked what would my president do in this situation? No, not Al Gore (who had been my president until a few days ago) but Bill Clinton. "I don't think I would do it," he said on "Saturday Night Live" and uttered the phrase "we've got a great show tonight." I meant the actual president. I was told that Bill Clinton had always had the attitude that he might someday be called on to serve and that he didn't think he could avoid jury duty.

That I was served by having someone as immature and selfish as me on a jury was not amusing.

Analyst: Davis overstated budget shortfall by $8.5B

By Alexa H. Bluth
ASSOCIATED PRESS WRITER

SACRAMENTO — Lawmakers could be spared making some $3 billion in spending cuts or tax hikes because Gov. Gray Davis is overstating the state's two-year budget shortfall by $8.5 billion, California's nonpartisan legislative analyst said Wednesday.

Legislative Analyst Elizabeth Hill estimated the state's revenues will be $26.1 billion short over the next 18 months — in contrast to Davis' predictions that the state faces a $34.6 billion deficit.

While the actual size of the projected deficits differs by $8.5 billion, Hill and the Davis administration have claimed Davis inflated the size of the deficit to justify raising taxes.

Hill's report stoked the political debate over the actual size of California's deficit, which has dissolved into technical questions about accounting and predicting the fiscal future. Republican lawmakers have claimed Davis inflated the size of the deficit to justify raising taxes.

Hill said Davis' budget cuts some programs that weren't legally required to receive state money.

Also, Hill said her office was optimistic about an economic recovery than the Davis administration. She predicted improvement in the middle of this year, whereas the administration, which uses a University of California, Los Angeles, projection model, forecasts the slump will continue until early 2004.

Hill's report stoked the political debate over the actual size of California's deficit, which has dissolved into technical questions about accounting and predicting the fiscal future. Republican lawmakers have claimed Davis inflated the size of the deficit to justify raising taxes.

Davis defended his budget predictions, saying that hundreds of professionals in the Finance Department came up with the number and "there is really no very little disagreement between the analyst and the Finance Department as to the size of the problem."

"It would be thrilling if the analysis was right because my problem would be $3 billion less than I think it is," Davis said during a speech in Sacramento to the California Newspaper Publishers Association. "But nobody knows for sure what the economy will do 18 months from now."

The top economist for the Legislature's 120 members, Hill forecast in November a $21 billion deficit, but based her new number on more recent economic information. She will have a more-complete analysis in February.

In her initial analysis of the $96.4 billion plan for the 2003-04 budget Davis released last week, Hill said her office used a different method to determine which programs must legally be funded on a continuing basis.

"I would be thrilled if the analyst was right because my problem would be $3 billion less than I think it is," Davis said during a speech in Sacramento to the California Newspaper Publishers Association. "But nobody knows for sure what the economy will do 18 months from now."

The soft, black sand gives under your feet and the warm tropical sun's rays filter between the towering palm trees, casting shadows that dance upon the ground. Without much strain you can see fish dart to and fro in the warm waters. The beach is bustling with people, both locals and tourists. Looking into the ocean, surfers can be seen lining up far from shore. Their golden bodies invite the sun as they are clad in nothing but swim trunks and string bikinis.

Hold that thought. Although most of us think of this setting when we think of surfing, the act of catching a wave and the boards themselves blur the line between art and sport. If it is an art, then which components—the board's design, the colors on the board or the act of waveriding—make it an art?
The art in surfing: board design, waveriding and cool paint jobs

Tim Cowan, general manager of Wavelengths surf shop in Morro Bay, has been surfing for 22 years. When he was a child, he would spend hours playing with his toys, dreaming of one day being able to surf. He was inspired by the colorful history of surfing and the evolution of surfboards. Cowan has been surfing for 22 years.

Surfing was a part of their heritage, religion and culture, Cowan said. When the missionaries went to Hawai‘i, they suppressed surfing because they felt it got in the way of converting the Hawaiians to Christianity.

When surfing made a comeback in the early 20th century, the boards were huge and made out of wood. In the 1920s hollow surfboards were created, a technique that shaped early 20th-century surfing, Cowan said. From the late 1940s to the early 50s,бало boards were huge and fins were eventually added. Balsa was a much lighter wood than all of the materials they had used before and was easier to shape, Cowan said.

In the mid-1950s came the use of polyurethane foam, which is what surfboards are made of today, Cowan said. In the beginning the foam was really inconsistent. It wasn’t until the advent of the technique of blowing foam into molds that they were able to get the consistent right.

In the 1960s, a surfing explosion hit. It was the era of foam boards and the beaches were packed. Mass-produced boards known as pop-outs made a brief appearance, sold by such mainstream manufacturers as Sears and Wards, Cowan said.

In the late 1980s and early 90s, the CNC shaping machine was created. It cuts out the rocker (the curve) of the surfboard, one of the hardest parts of the board to reproduce, Cowan said. "It cut about an hour out of shaping time," he said. "All the shaper has to do is shape the board, the rails and the nose and tail."

Although the boards have changed a lot in a short period of time, we can expect this trend to continue as we progress into the future. Scott Hulet, editor of The Surfer’s Journal, has been surfing for the past 24 years. Over the years he has watched the industry grow in popularity as well as size.

"What was once a secret avocation has become highly visible," Hulet said. "Surfboard shapers use skill and a surfer’s input to produce the final product."

Scott Hulet, editor, The Surfer’s Journal

Surfboard shapers use skill and a surfer’s input to produce the final product.

A brief history of surfboard design and manufacturing:

- The Polynesians and Hawaiians were surfing, Cowan said.
- Surfboards have been around since roughly 1700 and used to be carved from redwood.
- When the missionaries went to Hawai‘i, they suppressed surfing because they felt it got in the way of converting the Hawaiians to Christianity.
- Surfing was a part of their heritage, religion and culture, Cowan said. When the missionaries went to Hawai‘i, they suppressed surfing because they felt it got in the way of converting the Hawaiians to Christianity.

Students grab gadgets, let go of personal time

By Abbey Kingdon

Emili Burfieid is motivated to get to the gym this quarter. Her place among the sweating bodies at the Cal Poly Rec Center is not the first week phase of a New-Year’s resolution. Her focus is much more simple and, quite frankly, small.

“The reason she goes to the gym can fit into the palm of her hand, like a shiny lead-blue stone. When she presses the silver buttons on her new gadget, the grind of exercise machines are masked by her favorite song and she even forgets her own pain, courtesy of an MP3 player. The gym is actually a pleasant experience after weeks of immobility.”

The Cal Poly campus is populated with technology like Burfeid’s devices that make communication and entertainment more accessible. Cal Poly students inundated with lecture notes and books now sift their way through excess gadgets.

“Some wonder what effect the rapidly evolving technology trend has on our lives and what we are leaving behind,” said psychology professor Dan Levi. “I am tired of walking into people talking on their cell phones.”

In the early 1980s, Levi researched the effectiveness of e-mail with companies looking for additive communication – communication that does not decrease human contact.

“Twenty years ago it was additive, but not anymore,” he said.

E-mail is an effective communication medium, but people in the professional world are finding that they are communicating more but less satisfied with their communication, Levi said.

In the college world, students have non-routine and non-permanent lifestyles.

“My friends are hard to get a hold of,” said Burfeid, an agricultural education and animal science senior. “Cell phones keep people together.”

But English junior Evan Chambers keeps a sense of sanity by getting away from all the gadgets.

“Much of the technologies we (students) use are just toys, and we will grow out of them,” he said.

“Technology has not only permeated relationships, but also houses and hold appliances and utilities, are set up to run like smart houses, which are called Smart Houses, he said.

But people really need a refrigerator that orders milk for them? Each new device, while opening up a whole new world to us, encroaches on our personal time.

“Each person must decide to what point he or she wants all of this,” Levi said.

“Technology has not only permeated relationships, but also house-holds. A Japanese computer, recently introduced toilets with Internet access. A chemical reading of one’s urine is taken and emailed to the doctor, Levi said. The toilets, along with thermostats and other house-hold appliances and utilities, are set up to run like smart houses, he said.

“Each person must decide to what point he or she wants all of this,” Levi said.
PARKING
continued from page 1

"Parking is horrible," said Carine Zoellner, an ecology and systematic biology senior who lives in Los Osos. "There are no spaces, and you have to get here really early if you do want a space."

As enrollment increases at Cal Poly, the number of parking spaces available on campus will not grow at the same rate. This means more students will have to find alternative methods of getting to campus.

Cal Poly's Master Plan deals with increased enrollment by making the core of campus pedestrian. This means parking lots located within the core, including the parking located next to the library, will be converted into academic buildings, said Doby Anderson, with Parking and Commuter Access Services.

"The Master Plan tells us the core will be academic, so students can still walk to class within 10 minutes," Anderson said. "But, in order to build those buildings within the core of campus we're going to have to eliminate parking."

The Master Plan will deal with this loss of parking with the construction of two additional parking structures, one located north of Highland Drive on Via Carta, and another located adjacent to the football field on California Boulevard. However, more students will still have to use alternative transportation.

The primary way Cal Poly encourages students to use alternative transportation is by increasing and improving bus routes. Parking services currently gives the city $250,000 per year and guarantees the county that they will buy $35,000 worth of Central Coast Area Transit (CCAT) passes per year to keep these routes at zero fare for students.

The money that keeps the bus free for students, as well as the money for the construction of additional parking spaces, comes entirely from parking fees and fines. No general fund money is used for parking.

In addition, Cal Poly is currently working with the city to improve bus routes for students. The first step has already been taken. An Oakland based consultant, Urbana, determined that buses could better serve their riders, which are primarily Cal Poly students, Anderson said.

With most students living within a few miles of the campus, SLO Transit and Cal Poly are also developing short circuit bus routes that will run closer to campus and serve students that live in these areas. Surveys will be distributed as early as March to get student feedback to indicate how a short circuit bus route will best benefit students.

Many students also face the issue of walking to Cal Poly for night classes. While English sophomore Sara Barron enjoys walking to school, she does not like walking in the dark.

"I hate walking at night," she said. "It's kind of creepy."

To accommodate these students bus routes will begin to run later in the evenings. Also the construction of a transit hub near Mott Gym will begin in the next two or three weeks, providing a central location for students to obtain information about bus routes and creating further incentive for students to ride the bus.

Anderson said.

The Master Plan also provides for the construction of bike routes across campus and for the connection to bike routes that run through city. However, consulting groups must examine traffic throughout the school and a bike path can best benefit students before construction can begin. Furthermore, the university's stance on bicycles is the same as with any other vehicle on campus.

"You ride your bicycle to campus and you walk from class to class," Anderson said. "We don't have appropriate bike paths for you to ride that bike between classes. We encourage the bicycle to come to campus, but park it in the core of campus and walk from class to class."
Sports

“She’s the most competitive player on the team.”

Faith Mimnaugh
Cal Poly head coach

“If I had a daughter, I would want her to be just like Kari,” Mimnaugh said.

Some of Duperron’s highlights while on the Cal Poly team have been ending UC Santa Barbara’s conference winning streak during her sophomore year, and also winning her first Big West Tournament game. Duperron also scored a career-high 17 points last month against Arizona State in a non-conference game.

Another highlight for Duperron was a chance to play her sister in conference games. Her sister played on the UC Irvine team.

Duperron hopes to make many more highlights as the Mustangs make a run toward the Big West Tournament.

“She is truly an inspiration on the team,” Mimnaugh said.

MEN continued from page 12

just in time for conference play; after a 1-4 start they have rolled off seven consecutive victories, including three in a row in the Big West.

Pacific plays a slower brand of basketball, typically only on big men like 6-foot-9-inch freshman forward Christian Manker and 6-foot-8-inch sophomore center-forward Matt Kemper to score. Beanley thinks Cal Poly’s big players, including center Phil Johnson and junior Varnie Dennis, match up better against a slower team.

Senior guard Demetrious Jackson is the Tigers’ leading scorer, averaging 14.6 points per game, but is coming off a two-point performance in Saturday’s win against Northern. The Matadors have struggled against top-15 teams this season, scoring only 75 points in two losses to Arizona State.

Junior guard Jordan Fortier is the Matadors’ top scorer, averaging 13.3 points per game. The Matadors have been ending UC Santa Barbara’s conference winning streak during her sophomore year, and also winning her first Big West Tournament game. Duperron also scored a career-high 17 points last month against Arizona State in a non-conference game.

Cal Poly's Kari Duperron
From walk-on to stardom

By Courtney Witt
MUSTANG DAILY STAFF WRITER

Kari Duperron has basketball in her bones. Starting in an all-boy league at age 7, the four-year point guard for the Cal Poly women's basketball team knows what it's like to have to fight to stay in the game.

Duperron, a business senior, had to decide early on how important basketball was to her. She was faced with the decision of attending a school that offered a scholarship or come to Cal Poly without one and accomplish her goal of playing on a Division I team.

She decided to come to Cal Poly, determined that she could make it. Duperron's ability on the court showed how capable she was, even from the beginning, said Cal Poly head coach Faith Mimnaugh.

"If there is a weakness in her game, she is the first one back on the courts after practice to improve it," Mimnaugh said. "Her drive has never diminished since she began on the team."

As team captain of the team for two years, Duperron continually pushes herself to do the best that she can.

"She is the most competitive player on the team," Mimnaugh said. "She works to be the best that she can be to make the team the best that it can be."

It is hard to find someone that looks out for others the way that Kari does. At the beginning of Duperron's sophomore year at Cal Poly, Mimnaugh came to get her out of study hall to tell her that she would receive a scholarship.

"I worked 50 hours a week over the summer at two jobs to raise money for my sophomore year and it was such a relief to know that it had all paid off," Duperron said. A scholarship is not all that motivates Duperron. It is also the encouragement from the people in her life that keeps her going every day.

"There are so many people that motivate me, but especially my dad," she said. "He put the dream in my head since I was little and encourages me to do well, even if I am having a bad day."

Her teammates also motivate her.

"When you have people that care about you so much and want the best for you, you just want to stay a part of it," Duperron said.

Duperron lets little things push her. Cal Poly guard Catrina Taylor said. "Something that really makes Kari unique is that she doesn't need constant acknowledgment of others."

"When you have people that care about you so much and want the best for you, you just want to stay a part of it," Taylor said.

Duperron has a drive that causes her to do things without needing the acknowledgment of others.

Cal Poly Men's Basketball
Mustangs try to regroup at home

Team hoping to recover from last week's humbling 0-2 road trip
By Sean Martin
MUSTANG DAILY STAFF WRITER

The Cal Poly men's basketball team returns home this week to play two pivotal Big West Conference contests against a pair of teams, Pacific and Cal State Northridge, who couldn't be more opposite if all their names were Laurel and Hardy.

The Mustangs sank to the .500 mark in Big West play after going 0-2 on their recent trip to Utah State and Idaho. These upcoming games could help right the ship.

"We have a big week this week and it's a tough prep week," Bromley said. "The two styles are both ends of the spectrum."

First up are the conference-leading University of Pacific Tigers (9-4 overall, 3-0 Big West), who the Mustangs face at 7 p.m. today in Mott Gym. Someone awoken these sleeping Tigers, see MEN, page 11

Cal Poly forward Jared Patterson and the rest of the Mustang front line will play a key role in the Mustangs' two home games this weekend. Cal Poly hosts Pacific in Mott Gym tonight at 7.
