Homeland Security National attack on computers launched

By Ted Bridis, Associated Press

WASHINGTON — The Homeland Security Department's first simulation of a terrorist attack on computer, banking and utility systems exposed problems with the ways victimized industries communicated vital information during the crisis, the government's new cybersecurity chief said Monday.

Experts inside government and the Institute for Security Technology Studies at Dartmouth College are still formally evaluating results of the so-called "Luminous" exercise, carried out over five days late in October. It simulated physical and computer attacks on banks, power companies and the oil and gas industry, among others.

"There were some gaps," said Amit Yoran, the newly hired chief of the agency's National Cyber-Security Division. "The information flow between various sectors was not as smooth as we would perhaps have liked."

Congressional lawmakers are interviewing an establishment about legislation covering the free exercise thereof; or abridge the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for redress of grievances.

— first amendment to the U.S. Constitution

A likely reason their demonstrations are unpopular is the test of their signs.

The signs expose the condemnation of a list of things that "make them sick," including "child molesting homosexuals, couch-potato Christians, rebellious women and Jews that are from the Synagogue of Satan."

Neither of the activists received administrative approval or permission to hold their demonstration.

"The Constitution is all the permission I need," Warner said. Steve Garcia, UU program assistant, said groups do not need permission to demonstrate in the UU unless they have a booth.

"My gift is prophetic in nature," he said. "I was the worst sinner at one point. I became a Christian. I know what sinning is about. I'm a sinner, straight up."

"Thanksgiving represents everything America is all about," Fumia said. "It is about being with your family, eating, and drinking manhurats."

Students share holiday thoughts

Before students head home for Thanksgiving they reflect on what they are thankful for this year.

By Caitlin O'Farrell

As Thanksgiving approaches it is time to re-evaluate what is really important in life.

Each family has different traditions, menus choices and destinations for the holiday.

The one thing everyone has in common is something, whether trivial or deeply personal, to be thankful for.

"I am thankful to be alive because last year I almost died," agrisbusiness senior Antone Chicca said.

"Going home is like going to winter camp," Industrial technology senior Jordan Thomas said. "I like it when it's colder because it's more from Tahoe, likes going home because it's colder."

"I am so happy to be awake this morning," said Amir Antone Chicca said. "I am thankful to be alive because last year I almost died."

The government's performance is "certainly a B-plus, better than my personal expectations." Mock attacks during the exercise tried to broadly disrupt services and communications across major industrial sectors, to make consumers lose economic confidence, Yoran said. It modeled bona fide cyberattacks on communication facilities outside Washington and cyberattacks aimed at companies and other networks. Even before the Sept. 11, 2001, terror attacks, the government organized computer-defense efforts around early-warning centers separately operated by banks, water utilities, telecommunications companies and the electric industry. But critics have long pointed to problems with the centers that don't allow centers exchange information with each other, making it too far difficult for banks to describe their internal problems with a power utility or with other financial institutions that also may be under attack. In some cases, Yoran said, the exercise exposed problems as simple as uncertainty about which companies and industries can be contacted in the middle of the night with urgent information about an ongoing attack; most mock failures occurred during the day. In some cases, victim companies weren't told explicitly about an attack; sometimes news might spread from place to place, such as emails purportedly from a company's employees who simply couldn't access their bank accounts. Yoran said the exercise affirmed that troublesome interdependencies exist throughout the nation's most important systems. A broad power outage could also bring down key telecommunications or power networks, disrupting repair efforts. Homeland Security officials said it was the largest-scale exercise carried out with the agency. Officials at the National Security Council and departments of Defense and Treasury also were involved.

As the demonstration progressed, onlookers challenged Warner and Baldwin's message by quoting Bible scripture; one man even held up a protest sign reading, "Jesus is sad about this" and "Please don't feed the Christian animal," referring to text on Baldwin's sign. Baldwin apologized repeatedly to the protesters and rationalized his actions, observing to one minority student, "You either are a Christian or you aren't a hypocrite." At one point an angry passerby flipped Baldwin's sign, while another group of students knelt to pray. Baldwin said Cal Poly students' reaction to their demonstration is typical of what they see on other college campuses. "But maybe the students here are a little worse," he said. "Lot's of Christian phony's."

Not every observer was vehemently against the demonstration, however. "I think that if we're going to protect freedom of speech, then we should protect the radicals on both sides," political science senior Diego Espuza said. Steve Jones, Campus Crusade member and university spokesman, said more, he appreciated what the demonstrators were trying to do, but didn't agree with their method. "I wish more Christians on campus had the open, loving attitude that these guys are doing," he said. "But I wish they did it with more love and gentleness." Eckrote emphasized the importance of free speech on campus. "If it wasn't like the message, just walk away," he said. 

--Mustang Daily staff writer Josh Petray contributed to this story.

### WEATHER

Warm weather nearly year-round, many Cal Poly students come from parts of California where they have experienced varying weather conditions. In Fall 2002, 24 percent of Cal Poly students came from the San Francisco Bay Area, 16 percent came from the Los Angeles area and neighboring counties, and 14 percent were natives to the Central Coast. Out of state residents constituted close to 16 percent of the student body. These figures show that nearly 80 percent of students are from areas where the weather is drastically different when they go home for winter break. Business administration junior Ashley Woodring came to Cal Poly from Edmond, Okla. "I hate the cold," said Woodring. "It snows there in the winter, and in the summer it's just as hot, if not hotter, with 100 percent humidity." I picked Cal Poly for the weather," she said. "Since all my warm clothes are at home, my parents are going to pack a box of sweaters to me when I come back for winter quarter." Even though for most people it's colder when they go home for breaks, it's not true for everybody. "I'm too cold or rainy or wet down there," said electrical engineering senior Jessica Bell from Arcadia. "I remember in high school winter break was one of the warmer times of the summer, so we'd go to the beach a couple of days over the break. It's cold here though," she said. "And windy and rainy and gross."

### STUDY

Increased speed limits lead to more deaths

By Dee-Ann Durbin

WASHINGTON -- States that raised their speed limits to 75 mph or more have seen a big jump in traffic deaths, according to a report Monday by an auto safety group. Some 1,800 more people died between 1996 and 1999 in states with higher speed limits on rural interstates, the study said, compiled by the Insurance Institute for Highway Safety, funded by insurers. It was based on data collected by the Land Transport Safety Authorities of New Zealand. Congress upheld the 55 mph national speed limit in November 1994. An institute researcher said New Zealand did the study because groups are questioning whether to raise the country's speed limit, which is 100 kilometers per hour -- about 62 mph. "There's a significant societal cost," said Allan Williams, the institute's chief scientist, who said drivers often think a speeding ticket is the worst that can happen. Supporters of higher speed limits pointed out that federal highway data show the nation's vehicle fatality rate fell each year from 1996 and 1999 from 1.69 deaths per million miles traveled to 1.55 deaths. "We've moved toward a transportation system where cars are a lot safer and there are better measures like guard rails on highways," said Stephen Moore, a proponent of limited government and president of the Club for Growth. "We've made it safer to drive at faster speeds.

Institute researcher Susan Ferguson agreed that other factors are making highways safer, and that the nation's death rate dropped as a whole. "The study says 12 states that raised limits to 75 mph -- all in the Midwest and West -- had 18 percent more deaths per mile driven than states with 65-mph limits. That's approximately 750 more deaths.

In states which raised their limits to 70 mph include California, Florida, North Carolina, Mississippi and New York. The percent increase was some 1,100 additional deaths.

The report didn't examine the effects of other trends, such as the tendency to drive to rural, natural areas where cities are far apart. Nor did it account for any decrease in number of sport utility vehicles on the road in the late 1990s. A separate review of 21 states by the institute found drivers are traveling faster than before, since the institute began collecting data in 1987. Researchers observed in Colorado, which has a 75 mph speed limit, one in four drivers going above 80 mph. In Arizona, where the speed limit is 70 mph, one in five drivers was clocked at 80 mph.

The institute's study of speeds in Georgia, Massachusetts, Maryland, New Mexico, California and Arizona also found that rates are raised on rural interstates, speeding increasing on urban interstates. Average travel speeds on urban interstates in Atlanta, Boston and Washington were the same as in the late 1990s. The study is also the first to measure speeds in rural interstates, even though the speed limits on those urban interstates were 55 mph. In Atlanta, 78 percent of drivers on one urban interstate exceeded 72 mph, the report found.

Institute President Brian O'Neill said the study's tolerance of speed limits and advertising that encourages drivers to speed is part of the problem. He pointed out that most don't invite consumers to "burn rubber." To drivers to obey speed limits, he said: "Most drivers aren't helping with ads that equate going fast with having fun," O'Neill said.

News

5 - Day Forecast
WASHINGTON — Federal health officials are debating if it’s time to put emergency contraception — also called the morning-after pill — on pharmacy shelves next to the aspirin, for newborns and without access to lawyers, some for nearly two years.

The Food and Drug Administration says emergency contraception is very safe to use, but the question is whether women will understand exactly how and when to take it without any professional advice.

NEW YORK — Phone companies reported brisk business Monday as cell phone users took advantage of new federal rules allowing them to switch carriers on the first day, after fleeing half naked into the bitter cold. The students — from Asia, Africa and Latin America — had just arrived in Moscow and were being held in the dorm awaiting medical checks before starting classes.

Witnesses said dozens of fire engines were slow to reach the blaze, engulfing the building at People’s Friendship University. It burned for more than three hours, though Moscow fire safety department spokesman Yevgeny Bulychev insisted that firefighters arrived on time and did their job well.

Yegor Zagreb, Croatia — Croatia’s nationalist leaders negotiated with potential coalition partners and sought to burnish the party’s radical image Monday after soundly defeating a pro-Western government in parliamentary elections.

The Croatian Democratic Union swung the country to the right Sunday by winning the bulk of capital’s 20 seats to boost its vast majority in the legislature, with 62 seats, however it still needs support from smaller parties to ensure an outright majority of 75 seats.

President Stipe Mesic suggested he would give the party, known by its Croatian acronym HDZ, a mandate to form a government, saying it appeared to have a “consuming majority.” Zagreb also conceded Monday that the party desires a chance to form a government.

HONG KONG — Hong Kong voters turned out in record numbers to hand the territory’s top pro-Beijing party a stunning defeat in local elections — a show of force by pro-democracy forces ahead of legislative polling next year.

The record turnout Sunday was bad news for the pro-Beijing and pro-government Democratic Alliance for the Betterment of Hong Kong, or DAB, which said it got 62 contested seats, down from 21 last time.

More than 1 million people voted Sunday, a 44 percent turnout. But the number of seats and the percentage were records. 96 percent turned out in the 1999 District Council elections. The DAB said it maintained its core of support but was overcome by a wave of newly registered voters who sided with the Democrats.

VIENNA, Austria — Breaking days of deadlock, the United States and key European countries agreed Monday on how to balance condemnation of Iran’s past nuclear transgressions with recognition of its newfound openness, diplomats said.

The diplomats, who spoke on condition of anonymity, said a draft resolution was formally submitted to the board of governors of the International Atomic Energy Agency two days before it was to resume a meeting adored Fridays to allow time to bridge the rift.

The diplomat said the draft included a “trigger mechanism” demanded by the United States in the form of a clause initially threatening Security Council action should Iran be found guilty of “further significant failures” — new evidence of clandestine activities or failure to honor its new commitments to the IAEA.

— Associated Press

WORLDS

Roundup

MOSCOW — A pre-dawn fire swept through a rundown Soviet dormitory for quarantined foreign students Monday, trapping many behind permanently locked exits and claiming at least five lives from the five-story building.

Thirty-six students died and nearly 200 were injured, some from faxtime after Könnerie fires broke out the night cold. The students — from Asia, Africa and Latin America — had just arrived in Moscow and were being held in the dorm awaiting medical checks before starting classes.

Witnesses said dozens of fire engines were slow to reach the blaze, engulfing the building at People’s Friendship University. It burned for more than three hours, though Moscow fire safety department spokesman Yevgeny Bulychev insisted that firefighters arrived on time and did their job well.

PALO ALTO — Intel Corp. said Monday it has demonstrated a tiny computer chip built with the next generation of manufacturing technology — called 65-nanometer circuit design — which it expects will be ready for use in 2005.

The 65-nanometer module is significant because of its size, a nanometer is a mere billionth of a meter, meaning 10 million 65-nanometer transistors could fit on the tip of a ball-point pen.

Intel Corp. said the development of the new circuits revives its confidence that Moore’s Law, which predicts the steady improvement in chip performance, remains in place for at least another 10 years.

WASHINGTON — The government has freed 20 prisoners from its Guantanamo Bay prison only if their governments promise to continue to imprison and to accept the total released to more than 80, and plans to send dozens more home after fleeing half naked into the bitter cold. The students — from Asia, Africa and Latin America — had just arrived in Moscow and were being held in the dorm awaiting medical checks before starting classes.

Witnesses said dozens of fire engines were slow to reach the blaze, engulfing the building at People’s Friendship University. It burned for more than three hours, though Moscow fire safety department spokesman Yevgeny Bulychev insisted that firefighters arrived on time and did their job well.

Van Sant film examines tragedies of school violence through students' eyes

By Jared Rubinstein
SOUTH DAKOTA UNIVERSITY

MEDFORD, Mass. — Few people would trust MTV to publish a thoughtful novel, but that is exactly what happened when the same network that produces Total Request Live published "The Perks of Being a Wallflower" by Stephen Chbosky.

The novel is a glimpse of teenage pop culture in the early 1990s. The result is similar to the techno remix of a classical masterpiece, offering its own fresh perspective to an old favorite. "The Perks of Being a Wallflower" is similar to your classic coming-of-age story; however, it revives this tired genre through a vivid portrayal of modern adolescence.

The individuality of this book is obvious from the first page. Its unusual form of narration reveals the plot through a series of letters to an unknown recipient. Charlie, the individual who writes these letters, begins them with the introduction, "Dear friend." This cryptic opener, which is never fully explained, adds a personal touch, strongly tying the reader to the protagonist through revealed emotion.

Charlie candidly admits everything, including his confused and emotionally-charged thoughts. Though the reader is instantaneously immersed in Charlie's introspective world.

Charlie, a high school freshman, is a wallflower because he stays on the sidelines of social interaction. Both sensitive and shy, he prefers reading books and observing others to the development of actual personal relationships, and his only friends are upperclassmen. Charlie is every bit as intellectually mature, but naive when it comes to social interaction. Not knowing how to be honest with people, he ends up dating a girl who he doesn't like at all, having a crush on a girl he never courts, and letting a boy kiss him, even though he feels no sexual or romantic interest in the same sex.

Despite Charlie's social naivety and status as a wallflower, he has a fascinating social life. He attends "The Rocky Horror Picture Show" weekly, where his friends dress up as the film's characters and act out the zany roles of the story. He experiments with drugs, tests the waters with girls, and makes his own mixtapes. From the novel's first page to its last, Charlie undergoes deep character development and learns more about the subtle world around him.

The novel is a coming-of-age story that explores themes of identity, friendship, and the challenges of growing up in a complex world. Charlie, a shy and introspective high school freshman, finds himself on the outside of the social circle. He forms friendships with upperclassmen and discovers a love of reading and literature. The novel is both a reflection on the author's own experiences and a commentary on the challenges faced by many young adults today.

This image is potent and symbolic of the novel as a whole. Charlie's life as a reclusive youth is nostalgically priceless.
New Cornell University units rival traditional stores like Cal Poly's Insomniac U

By Steve Hill

A new service at Cornell University may make off-campus video rental trips a thing of the past. MovieBox, a video rental vending machine, was introduced to the Cornell campus in two locations, first in September, the second in mid-October. The service offers more than 200 new release films for Cornell University student Olivia Haedt uses one of the MovieBox rental machines that was recently installed on campus.

Richard Freeman, "I get to sit in my room and be comfortable — no traveling." On the Cal Poly campus, students have a non-vending machine alternative to MovieBox. Insomniac U, an offshoot of local video store Insomniac Video, may not be open 24 hours a day, but still gives students a non-corporate alternative to renting their films.

English junior Tony Quintiliani, an employee of Insomniac U, noted that, while a vending machine would be convenient, it does not offer the human interaction and input that a video store does. "(MovieBox) doesn’t offer you an opinion on what’s a good movie or not," Quintiliani said. "We just give you a more rounded taste of what’s out there."

Quintiliani did admit that installing a MovieBox system on campus would "probably take away from (business) drastically."

The premise behind MovieBox is simple: a 24-hour rental costs $3.75, but comes to $4.05 with tax. Students need credit cards, which insures that rentals are returned on time; if not, late fees are charged to the credit card.

On the other hand, Insomniac U charges $3 for 2-day new release rentals and $2 for 3-day regular rentals.

Each machine typically retails for $20,000 and was purchased from a privately owned company, Movies Around the Clock, which offers the service of fully computerized movie-rental universitie costs $25,000. "I'd probably use it for new releases, but when I'm looking for an older movie I like to look at it, pick it up and read the summary on the back," Campbell said. And for some, it just comes down to familiarity.

"I use this spot (Insomniac U) for all my video rental needs," said physics sophomore Brenton Palazzolo, who rents from the store every week. "I prefer local business... If this place wasn’t here, I’d say (MovieBox) was awesome." — University Wire contributed to this report

Abstinence-only won't prevent pregnancy

The time between fall and winter is especially lovely in California. The air is getting brisk, the autumn leaves that have turned shades of crimson and yellow have started to fall and the Central Coast has come the closest we will ever get to an early autumn snowfall. While there is no doubt that this weather is extraordinarily cozy and presents a perfect opportunity for lovers to take a romantic walk up Bishop's Peak or through downtown San Luis Obispo, I love this weather for another reason altogether. As beautiful as the falling leaves are in California, it is reminiscent of another fallin that is equally lovely to me: the power of the Democrats in Washington. Currently, the Republicans control the White House, the House of Representatives, the Senate, a majority of state legislators and Governor's mansions. In addition, the Supreme Court leans slightly to the right. However, I wouldn't feel so sorry for the Democrats because if you listen to Ted Kennedy, you will soon find that the Democrats are doing fine because they can still filibuster at will.

"A close vote on whether to end debate passed the Senate to 79-29. Only 62 votes were needed to avoid a filibuster." — CNN

Well I guess I spoke to soon. Who knew you really couldn't count on filibusters as an anchor for political clout? To answer my own rhetorical question: apparently Kennedy, a senator for over 42 years. However, don't feel that all is lost, the Democrats still have the 2004 elections coming up, and they can always fall back on their staples of education, the environment and healthcare to win back some seats. I mean it's not like they have anything to lose.

"Republicans' reform filibuster, key Medicare bill expected to pass." — CNN

Whops, sorry about that. We really didn't mean to take the education issue away from you in 2000, and who knew we would take healthcare away in 2004? You guys can keep the environmental lobby though; they wouldn't support us or our single handedness back to life the baby harp seals that Kennedy hit when his car went over the cliff. You guys can keep those people. Don't feel bad though, you can have much success by only using the environment as an election platform, just look at how well the Green Party does.

Don't fret, you guys could still spin this win as a political windfall. Unless you did something extraordi­narily hypocritical, like trying to kill abortion bills, you would feel good about yourself. I mean, you guys wouldn't try to kill a bill that offered prescription drugs, covers 75 to 95 percent of prescription drugs costs after the premium and waves the premium for low-income senior citizens. Oh wait. That is exactly what the Dems did! God, fall is a beautiful time of year.

Opinion

Is the season for waning Democrats

Everybody's doing it.

Oh no, I did just tromp on the feet of those who simul­taneously attach the word "sex" to the all-to-familiar concept of "abstinence." Well, it's the age-old taboo was given a voice and a chance to speak to the truth to teenagers who are most drawn to discover the mystery of its nature.

They are planning to spend more than $100 million on abstinence-only education programs, intended to convince sex­crazed teens that just saying "No" is the way to go. But there is a real problem here. These programs plan to only inform students that engaging in sexual activity outside of marriage is likely to have harmful psychological — and physical effects. Contraceptives will not be taught. But the government seems to feel they can pick and choose what is morally "right" for our youth. That's funny. I was under the assumption America kept religion and education separate. The "wait until marriage" idea is based on the assumption America kept religion and education separate.

Societies are supposed to be a place where accurate, whole, unbiased facts are taught. But the government seems to feel they can pick and choose what is morally "right" for our youth. That's funny. I was under the assumption America kept religion and education separate. The "wait until marriage" idea is based on the assumption America kept religion and education separate.

Braves pitching legend Warren Spahn dead at 82 years old

Spahn helped pitch the Braves to three NL pennants in 1948, 1957 and 1958. The Braves played the World Series against the New York Yankees in the latter two years, winning the first one and losing the second.

A workhorse who pitched until he was 46, Spahn won 20 games 13 times, matching Christy Mathewson for the most in NL history.

Spahn was a 14-time All-Star who pitched 21 seasons in a career interrupted by World War II.

He began pitching in the majors in 1942, when the Braves were in Boston, and stayed with the team through its move to Milwaukee in 1953. He left the Braves after the 1964 season, ending his career the following year with the San Francisco Giants and the New York Mets.

Yankees manager Joe Torre was a young catcher with the Braves when Spahn was at the top of his game.

"Warren Spahn was a fighter and a winner," Torre said. "He made catching in the big leagues a lot easier for me because he took me under his wing along with Lew Burdette. One of my biggest thrills to this day was catching his 300th victory in 1961."

Spahn was elected to the Hall of Fame in 1973, his first year of eligibility with nearly 81 percent of the vote.
