Architect honored

Esmeralda Cisneros

Famous female architect and designer Julia Morgan will be honored by Cal Poly on Friday. Morgan was the first female architect licensed in California. She worked for William Randolph Hearst on his San Simeon ranch.

The exhibit will feature original sketches and architectural plans. Designs from when she was in Paris will be included in the exhibit. The event is being sponsored by the College of Architecture and Environmental Design (CAED). The exhibition will open today at 10 a.m. in the special collections department, in the Kennedy Library. The display will be from Monday thru Friday from 10 a.m. to 2 p.m., Oct. 25 to March 25.

There will be two lectures on Morgan's career in the Orfeoia Designs when she was in Paris will be included in the exhibit. The event will be open to the public.

Campus clubs keep the faith

Victoria Sneglove, 21, suffered a severe head injury as police tried to subdue a crowd after the Red Sox Yankees game Thursday.

BOSTON (AP) — A college student died Thursday after suffering a head injury in a clash between police officers and a crowd of Red Sox fans who poured onto the street outside Fenway Park to celebrate their team's victory over the New York Yankees.

Victoria Sneglove, 21-year-old journalism major at Emerson College, was killed when a police officer hit her in the eye with a projectile. She was among 16 people injured in the melee. The injured also included a police officer.

Most of the injuries were minor, but Sneglove suffered a severe head wound as police tried to subdue the crowd, authorities said.

Mayor Tom Menino told WBZ-AM that Sneglove, of East Bridgewater, was struck by a "bean-bag" bullet. After Sneglove was found lying outside Fenway Park bleeding from the head, the Globe reported she was taken to Brigham and Women's Hospital, which said she died at 12:50 p.m.

David Procopio, a spokesman for the district attorney, said the office is investigating whether the student's injuries "were sustained in any way during crowd control measures."

Eight arrests were reported during the Boston celebration. The crowd set several small fires and numerous fights broke out, police said.

Elsewhere, 29 people were arrested at the University of Massachusetts at Amherst after revelers threw beer cans and flaming toilet paper at police. And at the University of Massachusetts at Dartmouth campus, about 2,000 people had to be dispersed by police using stun grenades.

In New Hampshire, police made about 15 disorderly-conduct arrests as crowds swarmed the campus of Plymouth State University and surrounding neighborhoods.

In the Dominican Republic, six people were injured by stray bullets shot into the air by revelers during celebrations, police said Thursday. The Red Sox's victory prompted raucous celebrations across the Dominican, home to Pedro Martinez and ALCS MVP David Ortiz. Shooting in the air is customary during sporting events celebrations in the Caribbean country.

A sleeping 13-year-old boy was shot in the leg when a bullet tore through the zinc roof of his home in the Dominican capital of Santo Domingo, police spokesman Gen. Simon Diaz said.

are and isolating ourselves from the campus community. I've realized we're called to be a part of the campus community and to love and serve them," said Naiyerah Kolkailah, biology junior.

Muslim Student Association

The Muslim Student Association meets weekly to educate students about Islam from a Muslim perspective, said Nayyarah Kolkailah, biology junior and member of the MSA.

The MSA first began at Cal Poly in the late 1960s and can be found on college campuses internationally, Kolkailah said. Twenty people are on the Cal Poly MSA emailing list and about 10 students come to the meetings. The group meets every Tuesday at 7:30 p.m. in building 20 room 148.

"We don't have a lot of Muslims on campus to base our community so small," Kolkailah said.

The MSA has a booth at Farmers' Market. MSA students hold a Flame awareness week with events and discussions and celebrates Ramadan. Ramadan is the holy month in the Muslim calendar when Muslims fast from sunrise to sunset, Kolkailah said.

"Not many people know about Islam or they learn about it from the media," Kolkailah said.

In an effort to raise money for a charity and to let students know about the MSA, the group is planning a fundraiser to help celebrate Ramadan. The group wants to find a local sponsor for everyone who fasts during Ramadan and give the proceeds to a local charity. President and electrical engineering junior Hashim Bajji said it is good for the group to help the community.

Newman Catholic Center

The Newman Catholic Center is a Roman Catholic ministry that is on campus to challenge and support students in their Christian spiritual development and growth.

"I came to the Newman Center for a year - my freshman year," psychology senior Chris McImsye said. "I came to a mass and then met people here and got involved helping out with the masses. Since then, it has helped me grow in my faith and given me friendships that will last a lifetime."

The ministry began in the 1940s with Cardinal John Henry Newman. Today, the Newman Center has 728 students on its e-mailing list and an average of 75 to 100 new students each year, director of administrations for the Newman Center Linda Garcia said.

The Newman Center is located behind the Health Center at 1472 E. Football Blvd. and students are at the Center all day long. Garcia said. Garcia wants the Newman Center to be a place where students can come in and sit in the lounge, meet people and take a break from school.

The Newman Center holds mass, student-led Bible studies, a Catholicism class and Thursday night prayer and worship.

"We are really here to serve the students and want to be responsive to the needs they have," Garcia said.

There are also community service projects throughout the year. The second Sunday of each month, members of the Newman Center prepare food for a local homeless shelter called the Prado Day Center.

Morgan has the biggest collection of Morgan's work in the world. The library collects her work because of Cal Poly's history as an architecture school and because of the work she did on Heart Castle.

Assistant Dean of Collections, Nancy Loe said that most of pieces they have were donated.

"Since she didn't have any heirs, her nephew Morgan North gave us her early works," Loe said.

Heard hired Morgan in 1919 to build guest houses on his ranch. By

the time she began work on the San Simeon project she had been practicing for 20 years and had 450 residences, institutions churches, estates and community buildings to her credit.

At the San Simeon ranch she built the main building, Casa Grande, and a few guest houses. She also worked on the indoor and outdoor pools, the animal shelters and the worker's camps.

Besides her work on San Simeon, she participated in other Heart related structures like the Jolon, Santa Maria de Wynton and the Phoebe Apperson Hearst Memorial Women's dormitory at UC Berkeley.

The lectures will be given by UC Berkeley doctoral candidate Karen Neeley and Robert Blunk, AIA, principal architect with Blank Demattei Associates in Burlingame.

"I admire her residential work and knowledge of wood and wood details," Blunk said.

Blank worked on a couple of her projects. He said that her work opened the door to women in the architecture field.

Morgan was born in San Francisco in 1872. She was raised in Oakland.

She was influenced by her mother's cousin, Pierre Le Brum, to become an architect. Following the advice of her instructors she traveled to Paris to study at the Ecole des Beaux-Arts. Upon completing her studies she returned to San Francisco.

Morgan's challenges as a female architect.

Robert Blank will lecture on Morgan's designs. Blank was hired by the Hearst family to finish the Wynton project in Northern California.

LOS ANGELES — A state appellate court Thursday upheld a $600 million verdict against biotechnology company Genentech for failing to pay royalties on some drugs manufactured under a 1976 agreement with City of Hope National Medical Center. The panel ruled against Genentech's request to lower the amount of damages City of Hope was granted two years ago by a Los Angeles Superior Court jury.

The lower court said Genentech failed to pay a 2 percent royalty on drugs based on patents developed by two City of Hope physicians.

SAN DIEGO — A software company on Thursday sought to undermine suspicions that one of its products is to blame for widespread underinsurance after last year's Southern California wildfires.

CHRONICLED

-----

NEW YORK — The American Civil Liberties Union sued the FBI on Thursday, trying to get more information about the pre-election terror attacks.

The ACLU, which describes the surveillance as "excessive," and argued that the military command was at fault for failing to train his client — a veteran military policeman and a corrections officer in civilian life. In a communist society where the 78-year-old leader has played a larger-than-life role for more than four decades, the tumble was the latest reminder that Cuba's commander in chief is an aging man who will not live forever — with an elderly bride as designated successor.

New restaurant brings European flavor

Shawns on Main serves Spanish-style tapas, or small plates normally found in bars abroad.

Melissa L. Dorcak

Shawns on Main is anything but mainstream. The new restaurant on Main Street in Morro Bay is a refreshing change from the conventional American style of dining.

Shawns On Main serves tapas, or small plates. These appetizer portions are commonly served in Spanish bars, and Shawn seeks to mimic this idea with its delicious melting pot of flavors.

This trendy, upscale restaurant seems like it was on its way to San Francisco but got a flat tire in Morro Bay. It's an ideal date destination but with a hefty price tag.

The menu features a blend of European dishes fused with Asian, Mexican and Mediterranean undertones. The wine selection is impressive, and the servers are willing and able to make suggestions.

Presentation plays a large role in the dining experience at Shawn's. The food tastes as good as it looks. The chef combines and contrasts different textures and flavors to develop unique dishes. For example, the Maryland crab cake is placed over a fan of cucumber slices with a dollop of mango chutney and a crispy crab hamburger on the way home. The meals are filled with color and diversity. But due to the small portions, it may be necessary to stop for a late night snack rather than a full meal.

If money is no concern, the chef's menu is the way to go. The chef plans a five-course sampling of select menu items. Then, each course is paired with a glass of wine. This runs for $45 per person. Perhaps the most desirable aspect of Shawn's is its non-American approach to dining.

If one plans on having a private conversation, Shawn's might not be the place to go because the seating area is small — and that's an understatement. About 12 tables are stuffed together to create a very intimate setting.

For example, the Maryland crab cake is placed over a fan of cucumber slices with a dollop of mango chutney and a crispy crab hamburger on the way home.

Dinner starts with an amuse-bouche, which is a bite-sized gift from the chef. It's designed to excite the palate before the meal. One example is grilled calamari topped with garlic, but the amuse-bouche changes every night.

Jimmy Eat World lose direction with latest emo release

Ryan J. Gauthier

Jimmy Eat World have been around since the mid-1990s, but the band just recently began to garner true praise. Their first big success was their second major label release, 1999's "Clarity." It was an instant hit across college radio stations with tracks like "Lucky Devil Mint" and "Bisect" finding a real niche with fans of emo music. Then, in 2001, everything changed. The band released "Bleed American" under the Dreamworks label, and fans found catchy pop rock. Both fans and the music media praised "The Middle," Jimmy Eat World's second single from the disc. It could easily be considered the song of the summer for 2002, as it was omnipresent on the airways. The band's newest album, "Futures," finds the members confused as to whom they want it to be. Fans of "Bleed American" will be let down, as the group seems to forget that it was ever made. It must've just been their "awkward phase," because they've almost completely reverted to songs that sound straight off of "Clarity." A lot of the new material sounds like they recorded it in 1999, put it in a time capsule and opened it last week. The only way really to describe this collection of songs that makes up the bulk of "Futures" is to call it uninspired and generic. Normally this would spell doom for an album, but there's some light at the end of this tunnel of bland music. Of the 11 tracks on this record, eight fit into the first category described. What about the other three? Well, they're actually good. The first single is "Pain," a heavier tune. Well, heavy for Jimmy Eat World. That's like saying Michael Bolton's new release has a really indie feel to it... not that it couldn't, it's just not his typical style. It seems like they were aiming for the sort of raw sound that people liked so much on recent releases by the Strokes or the Hives, but they don't really pull it off as well as one would hope. The song has some nice guitar work and a pretty decent bridge as well. As is the case with most of the band's hits, the chorus is incredibly catchy and gets ingrained into the listener's head. The focus of the song is rather unclear, but apparently Jim Adkins (lead vocals/guitar) is feeling rather self-conscious: "Anyone can see my every flaw / It's not hard." He sings of "white pills" that "take (his) pain away," Confusing indeed. That aside, this is a great song. The two other somewhat original songs on this release are "Futures" and "Nothing's Wrong." They are both in the same vein as "Pain," utilizing a harder guitar-driven sound. In particular, "Nothing's Wrong" has some fairly heavy riffs that sound nothing like previous work by the band. While not incredibly memorable, they are still decent tracks and stand out as different in a sea of plain songs. As always, Adkins croons along while Tim Linton (guitar/vocals) harmonizes shamelessly. Harmony is a great thing to have in songs, but it just seems a bit much at times. Give your voice a break, Timmy. You're not needed on every single chorus. One of the oddest things to be found on "Futures" is "Night Drive," It starts off as an acoustic guitar with some light coming over it, but somewhere along the line a clap is added in along with the baseline. At first it seems unreal, yet for some baffling reason the band thought it'd be cool to toss one in. Well, it's not. From here on the rule will be, "Unless it's rap, cut the clap." End of story. This record has no unique features, quite frankly. If Jimmy Eat World at least tried to differentiate themselves from the 50 other bands that sound just like them, maybe it would work. As it is, they're just not getting the job done. Fans of the band will likely label this their best release yet, but it's just not. It comes off as forgettable and dull music. As Adkins pleads, "Please don't tell me this has been in vain." Sorry Jim... better luck next time.
Food pyramid meant to be guide

I'm sure you've all seen and can recognize the ubiquitous Food Guide Pyramid.

It's on bread packages, cereal boxes, billboards — it's all over the place. But how many of us actually apply it to our everyday lives, or even understand it?

Let's review the basics of the pyramid. Each of the five basic regions represent the macronutrient groups, including rice, pasta, bread, oats, cereal, etc. The pyramid recommends eating six to 11 servings of grains each day; however, this does not mean that one should strive to reach the max. The 11 serving limit is calculated for an active, adult male consuming about 2,800 calories.

Consequently, the key to understanding the Food Guide Pyramid is knowing what your body needs.

For instance, a sedentary female should consume about 1,600 calories a day, and her grain intake should fall in the lower end of the recommended range — about six servings each day. If you fall somewhere in between, you can estimate what your needs are based on activity level, gender and body size.

If this seems vague, it's because it is. The Food Guide Pyramid is meant to be exactly that — a guide.

One of the criticisms of the current Food Guide Pyramid is that it fails to specify exactly what a serving size should be. For example, one serving is equivalent to one slice of bread, a half cup of cereal or a half cup of cooked rice or pasta. Most Americans severely overestimate serving sizes, which is one of the leading causes of obesity in the United States.

According to the USDA, one pancake should be four inches in diameter, or smaller than a CD.

Fruits and vegetables make up the second level of the Food Guide Pyramid. For each serving, you will want to aim for nine servings a day. This may seem like a huge amount, but in reality servings are much smaller than the average person may think. One serving constitutes a half cup of cooked or raw fresh vegetables, one medium piece of whole fruit or six ounces of 100 percent fruit juice. Dieticians recommend starting out slowly when adding fruits and vegetables to the diet.

The pyramid calls for two to three servings from the milk group and two to three servings of the meat or meat substitute group. One serving of meat is equal to three ounces, or about the size of a deck of cards. A milk serving is equal to one glass, or eight fluid ounces. For those of you who prefer vegetarian items, a half cup of tofu or a golf-ball size amount of peanut butter (two tablespoons) can be substituted for meat.

Morgan, stick to engineering, not government policies

Morgan Elam in his recent letter to the editor ("Plato feared democracy, perhaps we should too") displayed an appalling lack of understanding toward the contribution of religion to society. Wise still, he displayed a level of bigotry that is shameful for an educated adult.

Elam seems to propose that voting rights ought to be restricted to those individuals whose education and background is similar to his own. Religious faith and belief in providence are a "bane of progress." Elam stereotypes anyone of faith as "mystic," (that's always a fun word to use) "hypocritical freaks." His letter would suggest that whatever problems the world faces are the results of "idiot" who don't have the same beliefs as he does.

I am sure Elam probably thought his letter sounded pretty witty. I thought his attempts at humor showed arrogance and his lack of understanding showed ignorance. Not all religious people are embodied by the inarticulate southern yokel who Elam's letter would like you to despise. And since Elam's remarks are especially critical of Christians, it would be helpful for him to know that not all Christians have the same political ideology.

Perhaps Elam should have been more direct and simply stated that only those people who view the world through his eyes should be permitted to vote. Let's hope he sticks to engineering and not government policies.

Christopher Weber
Architect,saver

In fact, Plato most feared ignorance in democracy

In response to "Plato feared democracy ..." Mr. Elam, I would like to address the blatant disregard for logic and reasoning in your article.

You are shocked that 'residents of southern states are allowed to vote.'
You base this on the quote from one person that he heard on television regarding Jesus and President Bush. Rather than construct an argument attacking what he actually said, you chose to attack him as a person calling him an 'idiot' and 'bane of progress.' This is known as the ad hominem fallacy.

You then took his ideology and applied it to the whole of the South and to campus crowds. This is not only poor inductive reasoning but it is based on anecdotal evidence — big no-no's in the world of logic. This is equivalent to me arguing that because you, a general engineering student, posited an ill-formed, illogical and invalid argument, that all GE students are incapable of forming coherent and cogent arguments. That clearly doesn't work. So, I suggest you retake ENGL 145 and re-read Plato's Republic, because Plato most feared IGNORANCE in democracy.

Truth Wizards: They know a lie when they hear it

Randolph E. Schmid
ASSOCIATED PRESS

WASHINGTON — The clue isn’t as obvious in Pinocchio’s nose, but there’s a small group of individuals who can detect the subtle signs that people are lying when they lie.

The vast majority of people don’t notice those flickers of falsehood, but psychology professor Maureen O’ Sullivan has found a few that can find the fibbers nearly every time.

Of 13,000 people tested for the ability to detect deception, “we found 31, who we call wizards, who are usually able to tell whether the person is lying, whether she is an opinion, how someone is feeling or about a theft,” she said.

O’Sullivan, who teaches at the University of San Francisco, discussed her findings Thursday at the American Psychological Association’s 23rd Annual Science Reporters Conference.

O’Sullivan conducts seminars for police officers and others on how to detect lying, and said observing the wizards helps researchers detect further studies.

“We hope that by studying our wizards, we’ll learn more about the kinds of behaviors and ways of thinking and talking that can betray a liar to an experienced interview,” she said.

Asked if the wizards could be used in real-life situations, she said that has been suggested but there are no formal programs to use them currently.

And, she cautioned that even the best of them is not 100 percent accurate.
Fans know Darrell Jones as a Mustangs wide receiver and prime target on offense. But do they really know him?

Esmeralda Cisneros
MUSTANG STAFF

There's no doubt that Cal Poly football is stocked with talent. But the stars that roll off everyone's tongue as of late is Darrell Jones.

Jones sports an impressive football resume at Cal Poly. As a freshman in 2001, he impacted the team by proving to be one of the quickest players, earning him the NCAA Division l-AA Special Teams Player of the Year.

As a sophomore and third year, he was started and third year, he was started and was one o f the quickest players, earning him the NCAA Division l-AA Special Teams Player of the Year. He finishes his last season for the team with 27 catches, 416 yards, five touchdowns.

By his second and third year, he was starting every game.

Now he's well-known for his talent on the field. But when he's not in the game, he's plenty busy.

Jones' typical day includes classes, practice, meetings and lifting weights two to three times a week. This schedule does not include the time he goes to rehab for his ankle.

Despite his ankle injury, he still plays to the fullest.

Jones started to play football when he was in fourth grade, according to his mother's recollection.

"I look up to him — he has been my inspiration," Jones said.

According to Jones, Grayson was one of the best players in the game, he's plenty busy.

"When Darrell Jones gets the ball, and he gets it often, he wants to keep it. Jones has 30 receptions for 545 yards with three touchdowns and an 18.2 average. On special teams he has 283 yards and a touchdown.

When Darrell Jones gets the ball, and he gets it often, he wants to keep it. Jones has 30 receptions for 545 yards with three touchdowns and an 18.2 average. On special teams he has 283 yards and a touchdown.

One of his favorite bars is SLO Brew, among others in the area. Jones said it helps him "escape reality."

"I call going out keeping my sanity, clearing up my mind" Jones said.

In all his years playing football, Jones has had the NFL in mind. If given the option he'd like to play for a California team, but no matter what happens, Jones plans to be around sports of all his life.

For now, Jones is primarily focused on two goals before his time at Cal Poly.

"Even if I get drafted I will finish school, I made that promise to my mother," Jones said.

One is finishing school, the other is getting Cal Poly a football title.

Meet Mr. Jones

FOOTBALL

The Mustangs are headed to Fargo, do you know why?

In the pursuit of preserving its perfect overall record, Cal Poly faces North Dakota State (5-2), Saturday at the Fargodome.

Cal Poly (6-0), ranked No. 5 in the ESPN/USA Today and No. 6 in The Sports Network poll following a 38-21 non-conference victory over Texas State last Saturday before a record crowd of 9,352 homecoming fans in Mustang Stadium, goes back out on the road in a Great West Football Conference contest.

Kickoff in the Fargodome (18:17, 700 yards), is set for 11 a.m. against North Dakota State, in its first year of transition to Division I, jumped to a 20-0 halftime lead en route to a 27-21 victory over Southern Utah in a Great West Football Conference game Saturday before 15,449 in the Fargodome.

Senior quarterback Tony Stauss drew two touchdown passes while Craig Dahl intercepted a pair of passes to spark the Bison to the homecoming win. Jeanus, North Dakota State's senior completion leader, completed 23 of 30 passes for 191 yards with no interceptions. The Bison were held to 53 yard rushing, the lowest in 24 years. Travis White rushed eight times for 91 yards while Kyle Steffen gained 43 yards on 13 trips.

The Mustangs took a break from conference play and defeated Texas State 38-21 last Saturday, jumping to a 1-4-0 lead in the first seven minutes and maintaining a seven to 14-point lead the rest of the way. Cal Poly is off to a 6-0 start for the first time since the 1997 squad won in seven games en route to a 10-1 mark.

Against Texas State, junior quarterback Anthony Garnett, in his second start, drew four touchdown passes and ran for another, accounting for all five Cal Poly scores. Garnett completed 11 of 15 passes for 336 yards, hitting Jason Holmes, Darrell Jones, Adam Martinez and Jonah Russell with TD passes.

Cal Poly's next opponent is North Dakota State posted a 47-0 victory in a second-round NCAA Division I playoff game in 1990 and a 26-10 win in 1992, both games in Fargo. Senior Byungsoo Yoon is a perfect 24-0-for-40 on PAT kicks so far and is 4-for-7 on field goal tries (19, 26, 40, 43, 23 yards).

North Dakota State is coached by Craig Bohl who was an assistant coach at Nebraska, North Dakota State, Tuba, Wisconsin, Rice and Duke. He was a reserve defensive back at Nebraska from 1977-79 under Tom Osborne.

Big West Honors

Two players from Cal Poly and one from North Dakota State earned Great West Football Conference player of the week honors for their performances in games on Saturday, Oct. 16.

Garnett was named offensive player of the week while Beck picked up Defensive Player of the Week honors for his performance in Saturday's game.

Beck logged a season-high in tackles in Cal Poly's win over Texas State and had seven solo stops and 15 tackles for loss yardage. Cal Poly's defense held Texas State, ranked seventh in the nation in rushing offense, to just 91 yards on the ground, 158 yards below the Bobcats' average for the season.

Selected as special teams player of the week was Bison placekicker Cory-Vantian.
