College of Education receives grant for special education program

Nick Coury  
MUSTANG DAILY

Cal Poly's College of Education was awarded a $777,000 grant to better its special education program, which will instruct future teachers on how to best work with disabled students.

The U.S. Department of Education presented the personal preparation grant to be given over a period of four years. The grant is designated to assist teacher candidates, who are full-time students enrolled in the special education credential program. Teacher candidates in the program will be eligible to receive up to $6,000 to cover tuition, books and stipends.

"Having the funding to support them (students) is important, because after four years of study most people have run up bills," said Mike Ruef, co-coordinator of the special education program and associate professor in the College of Education. "They have tapped-out in terms of what their parents will support them with, and they really need to go to work so this allows them to really get that education," page 2

Class project sparks controversy in SLO community

Brittany Ridley  
MUSTANG DAILY

Cal Poly's construction management 431 (Integrated Project Services) class has taken on a new development project, which has raised controversy from community members regarding the redevelopment of a rehabilitation center.

This fall, the students in the class accepted the challenge of rebuilding and designing the Sunny Acres rehabilitation center, located at 10660 Los Osos Valley Road, along with a neighboring housing development.

Property owner Dan DeVaul, the original owner and manager of the rehabilitation center, often recognized as the barrel-selling barn house on Los Osos Valley Road, received numerous complaints and code violations in the past 10 years, which are currently being resolved by the city.

DeVaul said he wants to work with the class to rebuild the center.

Christine Mulholland, a San Luis Obispo City Council member, presented the class to rebuild the center.

"You need to be very careful when you choose a client," Mulholland said. "Are you going to be choosing someone who understands community standards? These are our concerns as a neighborhood and this is my caution to you," she said.

Students responded to her presentation with rebuttals supporting their case and disproving many of the problems Mulholland addressed.

"We felt different than she did," DeVaul said. "It is my life matched that of the novel's protagonist.

Dan DeVaul owns the property at 10660 Los Osos Valley Road where the Sunny Acres rehabilitation facility will possibly be rebuilt with the help of a Cal Poly construction management class.

Making a Difference

The Woods Humane Society held a Wiggle-Waggle-Dog-A-Thon Saturday as part of Make A Difference Day, a national day of service asking citizens to help out in their community. Rachel Robinson and her dalmatian, Skylar, participated in the event, which was held to promote adoption services and proper care for animal enthusiasts.

There were 10 events and projects planned around San Luis Obispo County by the United Way, Cal Poly Community Center, the San Luis Obispo Board of Supervisors and City of San Luis Obispo. More to come on Make A Difference Day in Tuesday's edition.

Author Khalid Housseini came to the Christopher Cohan Center on Thursday to discuss his best-selling novel "The Kite Runner." The talk reached capacity and many students and members of the community were turned away from the doors and sent to classrooms where the speaker was shown on screens.

Housseini was born in 1965 in Kabul, Afghanistan. He drew from his own life to write about a boy growing up in an Afghanistan much different than the one many westerners imagine today. During much of the discussion he explained how his own life matched that of the novel's protagonist.

Housseini's father, an Afghan diplomat, moved his family to Paris after he requested to be transferred from the country in 1976. Several years later the family returned to Afghanistan only to experience the treatment by the Taliban.

"It is important to these people," she said. "We felt different than she did." Mulholland said.

Construction
continued from page 1
DeVaul responded to Mulholland's concerns by explaining the ideas behind his behavior and the city's response: "By going ahead and doing it my way they shut me down, but they opened a door so that I can do it legally. So I am proud of the fact that I broke ground," DeVaul said. "Not that I don't enjoy giving a poke at the establishment." As a former drug user and alcoholic, DeVaul said his agenda for the rehabilitation center was based on the fact that he is "one of them." Sunny Acres has offered Narcotic Anonymous (NA) classes, along with work and housing for all of its participants. It is an accredited organization and provides a stipend to each employee, DeVaul said.

Mulholland was concerned that flood plains will make the area for Sunny Acres unrealistic to build on. She also expressed her views on a no-growth policy and the Greenbelt Program, which was created in 1995 to save "special places limiting the edge of development." According to Mulholland, DeVaul's land is considered to have high resource values by the city and therefore should not be developed.

"The city has no intentions of annexing this development. It's important when you choose projects that you look at things like the city's long-range planning," said Mulholland. "This is an academic exercise and it is kind of a far cry. You don't mitigate flood planes, you stay out of it." Co-professor Barbara Jackson and Watt disagreed with Mulholland and said the presentation seemed one-sided, and that they will make sure the student receives both sides of the story. "The land is clearly in the sphere of influence, which means an area of land the city is interested in possible annexing, and that didn't come across in Mulholland's presentation on Thursday," Jackson said. "That is why we are going to get the other side of that on Monday in class." Pan Jardini, DeVaul's personal consultant on county planning issues, will present her ideas on development possibilities and respond to Mulholland's concerns with the project in today's class.

"Pan Jardini is Dan's (DeVaul) private consultant to advise county planning issues and she asked for a special meeting with the students to 'set the record straight,' saying that to mediate wetlands and flood lands is done all the time and it's very, very common," Watt said. "Pan thought it was very important that she gave the students that additional information on Monday." According to the CM 431 class still plan on proceeding with the project, researching the best ways to work with the issues presented on Thursday, Jackson said. "There is a desperate need for a rehabilitation facility," Jackson said. "Dan (DeVaul) went about it completely the wrong way, and yet he is unwilling to wrap the idea just because he went off on a tangent and the wrong direction." Despite the disagreements, Jackson and Watt said they were both pleased with Mulholland's presentation and felt it brought up some important things for students to experience when working in development.

"We knew you couldn't get two more diametrically opposed people as Dan (DeVaul) and Christine (Mulholland), but we felt it would be wrong not to have Christine come and say her piece and this is such great training for these students," Jackson said. "For some of these students their whole career is going to be in the area of development and they are going to run into people like Christine all the time. We have to hear her view because it is one of the things we have to deal with." Regardless of the list of barriers introduced at last Thursday's class meeting, students such as construction management senior Aaryn Mustangdaily staff takes pride in publishing a daily newspaper for the Cal Poly campus and the neighboring community. Colleges revamp emergency plans

Alexandria Aaron (WASHING TO N POST)

WASHINGTON — Colleges across the nation are quickly revamping security plans for natural disaster emergencies following the closings of several universities in the Gulf Coast area prompted by Hurricane Katrina.

While many schools have detailed plans for terrorist attacks and man­made disasters, the recent hurricane season has forced university officials to reevaluate plans for natural disasters.

D.C. area schools, which have detailed plans for various crises pro­cedures, have moved to heighten awareness.

George Washington University's detailed "Incident, Response and Recovery Manual" does not yet include specifics on plans for natural disasters, but the office plans to formulate a response procedure.

Nearby Georgetown University also has plans to "initiate an effort to update and enhance the existing Emergency Preparedness Plan through training and research," vice president of university safety David Morris said in a statement.

Both George Washington University and Georgetown University provided academic assis­tance to students from various Gulf Coast schools when the universities closed including Tulane University, Loyola University, and Louisiana State University.

In a recent report, FEMA suggested that universities form offices to oversee public safety, environment, health and risk management issues to help prevent possible disasters.

The University of Maryland has already taken important steps to making its campus and students safer from natural disasters. The university is one of 10 in the nation considered "storm-ready" by the National Weather Service and the National Oceanic and Atmospheric Administration.

The federal "StormReady" pro­gram aims to encourage campuses to prepare for weather emergencies.

"Safety is a top priority for the campus," University of Maryland President C.J.D. Cote said in a state­ment. "We can't prevent storms, but we can reduce the chances that people might be injured by them."

The university has established an early warning system, an emer­gency operations center and a 24-­hour emergency communications center, and it has asked staff and camp­us police to take part in "storm­poste" training.

Federal officials have asked resi­dents in New England and the southeast to track Hurricane Wilma as it progresses up the Atlantic coast.

"Preparations should be made now ... we urge the public to take this storm seriously and to listen to state and local authorities for instructions," acting FEMA director R. David Paulson said in a press release.

Recycled concrete bill aims to raise industry's image

Justin Malvin (THE CALIFORNIA AGGIE (ST. DAViS))

DAVIS, Calif. — A newly­ approved bill authored by California Assemblyman Lois Wolk (D-Davis) is working to provide greater information to consumers and builders regarding the use of recycled concrete in modern structures.

Wolk, a member of the natural resources committee in the state Legislature, said the bill is mutual­ly beneficial for California busi­nesses as well as the environment.

"We now have another prod­uct they can go into I assume there will be a market," she said.

Charley Rea, CIRM interim executive director, said the bill provides quality assurance to con­sumers, which is beneficial for builders.

"Basically, the bottom line is to help promote the use of recycled materials," Rea said. "If someone wants to build using recycled material, they want to know the product they are using is a quality product."

Rea noted that the bill does not require the use of recycled mater­i­als in new buildings, but just clarifies existing industry regulations.

"This doesn't necessarily change what anyone is doing. You would only be (using recycled materials) if it makes sense," Rea said. "There are already industry standards out there. This puts it in one place if someone wants to build."

Concrete is a mixture of Portland cement, stone known as aggregate and water. The bill out­lines the use of recycled concrete from demolition or construction sites in place of fresh aggregate.

John Bolander, a University of California at Davis professor of civil and environmental engineer­ing, said recycled concrete is "totally acceptable," for use in some, but not all, new structures.

"We've been known for a long time concrete could be crushed and used," Bolander said. "Structures that don't carry much weight can be candidates.

He noted that somewhere between 5 and 10 percent of all man-made concrete comes from the production of concrete and it significantly impacts the environment.

Bolander said the bill helps cement companies compete in the building materials market by gen­erating good publicity.

"Concrete has a number of competitors competing on a man­made steel," he said. "Each group wants to project an environmental image." It's sort of a good publicity play.

Wolk said the need for a bill such as Assembly Bill 574 has been present for some time, but previ­ous legislation did not pass because of influence from a past governa­torial administration.
Housseini continued from page 1

Soviet invasion.

Housseini's father then requested political asylum and the family moved to San Jose. There the family experienced poverty for the first time. The formerly wealthy family was then forced to collect food stamps to survive.

"My father's greatest fear was that an Afghan would see him in the supermarket using food stamps to pay for our food," Housseini said.

Housseini then attended Santa Clara University and pursued a medical degree at UC San Diego. Through

He enjoyed writing in his youth, medical school and an internship at Cedars Sinai in Los Angeles kept him too busy to follow his passion. Housseini did not write again until after marriage and his subsequent move to the Bay Area.

Housseini explored many of the book's lead characters, like Hassan, who was modeled after a female servant that a young Housseini taught to read. He then explained how his own wedding was like Amir's in the novel.

The audience seemed particularly interested in how Housseini met his wife, Amie, at his parents' party and then proposed the next week.

"When I asked her she said she needed more time. I said 'How about a hall h Carey? She said 'OK. I called her back and she said yes,'” Housseini said.

The last question particularly interested the audience: "What actor would you like to play Amir (the protagonist) if a movie was made?"

Housseini said, "There is no actor that I would want to play Amir. However, we are casting for the movie right now and the director and I are in agreement that the part should be played by an unknown Afghan actor." The audience responded with applause.

Incoming freshmen and transfer students were assigned to read "The Kite Runner" the summer before attending Cal Poly. They then participated in group discussions about the novel during WOR week. Cal Poly's Patricia Ponce coordinated the program and then asked Housseini to speak at the school.

Eric Fong, an industrial technology freshman, could only get in to hear the question and answer portion because the hall was filled to capacity.

"He told his speak and how eloquent he was, it was a real job. I liked the book so much," said Fong. Many community members also came to hear Housseini speak.

"We read this at a woman's book group and came together, Jennifer Duvall, a writer of San Luis Obispo and Los Osos said. "I liked the questions and answers portion, he seemed so humble and very real. I'm a writer too so when he talked about wanting to change his writing it really resonated with me. The hardest thing is to let go of your work. Married after 30 minutes, what a good man."

Where are our armed prophets?

Eighty-eight years ago to the day, the world woke to the height of the Russian Revolution and the beginning of a long slog to Russian superpower status. Often ignored, was the raw intellectual and tireless contributions of one of Russia's early leaders. Leon Trotsky showed up at Lenin's door in London when he was 21 and penniless (Lenin's wife had to cover his cab fare). Ten years later, on October 24th, Trotsky issued his famous Order No. 1, which said: "All procrastination and hesitation will be regarded as treason to the revolution."

Trotsky's other practical contributions are impressive enough. They included the strategic planning of the Revolution, the establishment of Pravda, the Red Army and many of the economic policies adopted by his antagonist, Joseph Stalin. What's more interesting to less radical (and less historically inclined) students like me was his innate ability of prediction.

Trotsky wrote volumes of treatises, books, critiques and letters explaining the hows and whys of world events. In 1924, during an age of American pacifism and isolationism, he wrote: "We are entering an epoch of the aggressive unfolding of American militarism." Around the same time he prophesized that the century would be marked by conflict between the political and economic systems of the US and USSR. In 1933, he appealed to the German labour party to not let a candidate named Adolf Hitler take power without a fight: "One of the decisive moments in history is approaching ... if fascism comes to power it will ride like a terrific tank over your skulls and spines." Even before the US recognized the sovereignty of the Soviet Union he was pushing for an alliance between the two countries to address the rise of fascism in Germany. His contemporaries accused him of war mongering and his pleas fell on deaf ears. History was to vindicate his prophecy with depressing accuracy.

Today in our country we have a dearth of what Machiavelli would call Trotsky armed prophets. The political and military leadership who hold formidable power in this country display their ineptitude at every turn of the road. They preferred to believe those who trumpeted that a US invasion of Iraq would be followed by flowers of welcome over those who pleaded raw military power was not enough to occupy a nation. Not were high-tech weather satellites and the opinion of competent engineers enough for our leadership to anticipate the effects of a hurricane.

Many Americans may not have admired what became of Trotsky's plan for the Soviet Union, but at least he succeeded to see his revolution produce something change. It would be more reassuring if our political leadership had nefarious changes in mind like controlling the world supply of oil or spreading a religious doctrine. But this leadership, heavy in muscle, seems to lack the gray matter needed to execute such a plan.

Not surprisingly, modern neo-conservatives actually consider themselves armed prophets since they anticipate rather than react to world events. They claim to have the "moral courage" to stand apart when popular opinion turns against them. Yet anyone can claim to know the future course of events; it's that painful thing called reality that separates prophets from fools.

A brave new movement

In the wake of bad publicity that followed the Cal Poly Salma Club-
ners that sadly ended in a censur-
ship issue ... (hey, I'm not at all
suggesting that we emulate
Berkeley or anything, but what
about the Free Amendment? Were
all the political science majors on a
field trip that day?) ... I've wit-
nessed a brave new movement
about campus recently. It looks as if
the Cal Poly College Republicans
were not intimidated by the "sexu-
altion" issue and have held to the
time-honored traditions of using a
crowd of women to generate
positive advertising during this
upcoming election term. With a
cowboy theme and a shoot-em-up
attitude, sometimes it just might
work to put a simple message
behind a few politically-minded
young women with a nice set of

Game three

Seventeen served with his sport coat back on and a disappointed demeanor.

The game wasn't 10 points old before Stevenson's coat came off for a second time, and his fiery charac-

ter followed. The Mustangs started game three with matched enthusi- 

asm, beating the Gauchos on several rallies with an acrobatic display of 

digs and assists.

But serving errors and Cal Poly's inability to mount a consistent attack 

meant another frustrating game.

"You've gotta want it, you've gotta want it," Stevenson pleaded to 

his team with the Mustangs down 11-8 during the third game.

But the team didn't respond, 

dropping the final match 30-23 and 

leaving the team with an emotional 

void to solve before upcoming 

games at Long Beach State and UC 

Irvine.

"We didn't really have the 

courage tonight," Stevenson said 

after the game. "Courage is really a 

key component in this day and age 

and I don't think we had that. 

What you saw was the weaknesses 

of a program in transition."

Gregory said the game plan was to 

keep the ball away from Cal Poly's 

Kristin Jackson. Gregory thought 

she could exploit a weakness on 

the Mustangs' left side.

After the win, Gregory had plenty 
of positive comments about Cal Poly 

and its turnaround.

"It's marvelous," she said. "I mean 

they've got the big setter (Chelsea 

Haven), the lefty (Kylie Atherstone), 

and (Vanessa) Gilliam coming back 

with a bang. And they believe."

Before the game, Stevenson said 

his team had a great chance of win­

ning, but in the wake of the loss, he 

saw his team at a crossroads.

It was a disappointing homecoming for coach Jon Stevenson. Stevenson graduated from UCSB in 1980 and went on to play professional volleyball.

"I think we're going into our most 

difficult weekend at Long Beach and 

Irvine," Stevenson said. "We need to

beat Long Beach first, and if we win 

the game, I think we'll beat Irvine. But if we

lose, I think we'll be in trouble."

continued from page 8

Russell carried the ball three 

times for 23 yards and a touch- 

down. He also had two receptions 

for 34 yards.

Gorten had a huge game, until 

the interceptions. He finished with 

210 yards on 15 for 23 pass- 

ings, two touchdowns and two 

interceptions.

For the first time this season Chris Geoce finished with no sacks during the game. Goece finished with five tackles, just one

sack.

Kenny Chicoine had 11 tackles for the Mustangs as well as one 

forced fumble. Shortwell and 

Courtney Brown had interceptions 

for the Mustangs.

The Mustangs play University of 

California, Davis on Saturday at 

1:00 p.m. at Toomey Field.
Cal Poly's Central Coast road trip

Frank Stranzl
MONTANA FIRE

As the Cal Poly volleyball team departed Saturday afternoon the sun was shining, but the scene down U.S. Highway 101 quickly transformed into a frigid atmosphere. Chilly fog set as far as the eye could see, and falling temperatures set the tone for the road trip to UC Santa Barbara.

The Gauchos have won the Big West three years running and a fourth is well within reach. Coach Kathy Gregory is the winningest coach in Big West history.

For as Cal Poly, coach Jon Stevenson said the Mustangs are capable of achieving and surpassing what the Gauchos have achieved in the past two decades. He foresees rapid development and the emergence of Cal Poly onto the national volleyball scene.

To Stevenson's credit, there is already a statistic improvement from a year ago. The Mustangs won just five games in 2004, far worse than their 13-5 record this season.

Tradition versus a burgeoning program, UCSB versus Cal Poly.

Game one
A lighthearted exchange between Stevenson and Gregory brought a smile to Stevenson's face, but the grin disappeared as the whistle blew.

Cal Poly jumped to a 4-2 lead, but the Gauchos responded with a five-point run to lead 7-4. Parity was clear as the teams exchanged games.

At 10-10, Vanessa Gillies sent a thunderous spike down the center of the Gauchos' side just as Gregory called a UCSC timeout to regroup down 17-15.

The Gauchos weren't done. Cal Poly's Athlery Papenfus served the ball long, bringing the score to 26-23 in favor of the Mustangs and began a seven-point Gauchos run. The crowd came to its feet after Sandell tapped a ball over a trio of Mustang blockers to knot the score at 26, a defining moment in the Mustangs' failure to regroup.

The Gauchos took the next point to lead 27-26 and a much less jubilant Stevenson was forced to use another timeout.

The momentum had swung and the Mustangs, who looked like the better team to that point, were lost on the court. The Gauchos took game one 30-27.

Free Mustang serving errors and seven kills by Sandell seemed to be the team's downfall.

Game two
When Cal Poly beat the Gauchos last year, it was anything but. This season, it was another story as the upset Mustangs seemed insulated by the process of the three-years-running defending Big West Champions. A different Mustang was the new kid on the block.

The Gauchos couldn't find a rhythm early in game two. It was all UCSC at the outset. The Mustangs trailed as many as twelve before making a game of it. To regroup from a characteristic error from Cal Poly libero Kristin Jackson said it all. Santa Barbara's Emily Hendrickson sent a serve directly to Jackson who stuck her arms out, expecting to bump the ball toward the Mustangs' front line, but instead the ball glanced behind her and onto the floor. Jackson's look of disgust showed the Mustangs' frustration.

The Mustangs mounted several comebacks only to be silenced by a Sandell kill, a controversial call and a mishit. Going into the break, it seemed as if the Mustangs would be taking an early bus ride home.

The Gauchos won game two 30-27.

No. 3 Cal Poly falls 36-27 in Missoula

SPORTS INFORMATION REPORT

The No. 3 ranked Cal Poly football team lost in the fourth quarter to No. 9 Montana on Saturday 36-27.

In the final 27 minutes, Montana's Tyler Johnson, J.R. Wallis and Lex Hilliard scored touchdowns to give the Grizzlies the victory.

At halftime, the Mustangs trailed Montana 17-14, but roared back early in the second half to take the lead. Cal Poly's kicker Nick Cornelius tied the game with a 40-yard field goal. Quarterback Anthony Garrett threw a 39-yard scoring pass to wide receiver Ronnie Barden gaining Cal Poly a 24-17 lead in the third quarter.

There were nine turnovers during the game, four by Cal Poly and five by Montana. Though previous-
