Local documentary spotlights families dealing with mental illness

Laura Kasavan

Taking care of someone with a mental illness can be a challenge, and coping can be even more difficult when that person is a family member.

A new documentary created by local filmmakers called "The Shaken Tree" is a collection of stories from 14 families and three professionals in San Luis Obispo and Santa Barbara counties who have family members living with chronic or persistent mental illness.

The 30-minute film is a production of the local company Illumination Films. Director Mary Garcia-Lemus, a lecturer in psychology and child development at Cal Poly, said the film gives a voice to families.

"The families were amazingly courageous to go against a social stigma and to speak about it," Garcia-Lemus said.

"These families are so normal. It's not something wrong with the family, it's that someone in that family got sick."

One featured story is that of Marie Hughes, a Cal Poly psychology student whose mother and sister were both diagnosed with bipolar disorder.

Hughes was 11 when her mother attempted suicide for the second time by overdosing on medications.

Other families discuss their experiences with a variety of issues, including family members who have dealt with schizophrenia, homelessness, and some that have committed suicide.

"The journey has been similar if not the same for many of the families," Garcia-Lemus said.

"The outcomes for the family member with the illness varied but we have seen the same story for the families."

Inspiration for "The Shaken Tree" came from Janice Holmes, lead family advocate at local nonprofit agency Transitions-Mental Health Association. She has worked with all the families involved in the documentary.

Producer Jose Mejia Lemus said that the project is important because families need to stay healthy and have resources in order to help their loved ones.

"We want to reduce and eventually eliminate the stigma of mental illness," Lemus said.

"Just because someone has a mental illness doesn't mean they are a bad person. We're trying to let people to talk about it.

Local sponsors include the San Luis Obispo County Department of Behavioral Health, The Family Advocacy Program and the Gay & Lesbian Alliance of the Central Coast. Production of the film began in June and a private screening was held Oct. 3 at the San Luis Obispo Board of Supervisors Chambers.

Neil Travis, the Academy Award–winning film editor for "Dances With Wolves," gave direction early in the editing process.

Detours ahead with Higuera repavement

Marlize van Romburgh

Motorists in San Luis Obispo should expect to change their driving routes this week as Project Higuera will have several blocks downtown closed for repaving scheduled through Wednesday.

Tuesday will have Higuera Street closed from Morro Street to Broad Street, as well as Garden Street from Higuera to Marsh streets.

Chorro Street will be closed from Marsh to Monterey streets. On Wednesday, Higuera will be closed from Morro to Chorro streets.

see Higuera, page 2
Higuera
continued from page 1
be closed from Osos to Chorro streets, and Morro Street will be closed from Marsh to Monterey streets.
"Recommended navigation around the project is controlled by festive signage," said Brent Vanderhoof, administrative assistant at the San Luis Obispo Downtown Association.
"(It) directs traffic around the ongoing work and lets people know that all businesses are open and ready for patronage," he said.
"Work will be complete in time for all of our Thursday night market areas as well as this Friday's high school homecoming parade."
Project Higuera was approved by the San Luis Obispo City Council in a recent budget process after downtown Higuera Street was recognized as being in need of repairs. The expected project completion date is Nov. 5.
Upon completion, motorists can look forward to what Project Higuera's slogan promises as a "New Street, Nice Extras."
The new pavement will consist of a high-strength fiberglass surface that the city hopes will result in less cracking and increased street longevity.
As added benefits, Project Higuera will also include curb repair, revamped storm drains and fire sprinklers. There will also be "new" old-fashioned streetlights to add to the historic downtown atmosphere.
Roadwork began Sept. 4 and has resulted in partial and full street closures of selected city blocks.
Project Higuera so far has consisted of grinding off old paving and making needed repairs and installations prior to repaving.

Police unable to locate drivers in deadly crash

Chelsea J. Carter  ASSOCIATED PRESS

Nine drivers believed to have escaped a deadly tunnel inferno are unaccounted for, and authorities on Monday were scrambling to locate them.

Thirty-one vehicles were involved in the pileup in the curving, darkened tunnel on Interstate 5, but the California Highway Patrol has accounted for only 23 people, including two men and a 6-year-old boy who died in the fire.

If all of them were at the wheel at the time of the crash, excluding the boy, that leaves nine unaccounted for drivers. The number could be higher if there were passengers.

Investigators are confident only three people died, but CHP Assistant District Director Doug Failing said officials were trying to determine the extent of the damage to the steel and concrete tunnel. The fire burned so intensely that it melted concrete and caused reinforced steel bars to pull away from the concrete.

State transit officials have since indicated supports to buttress the tunnel's roof.

Signs of the accident's magnitude were everywhere outside the tunnel, from the blackened, blistered walls to the smashed cantaloupes and dented cans that lay against a pillar where a produce truck smashed into it just inches deep into the ground and walls — a pattern that moved from vehicle to vehicle.

Study of 1,000 pairs of gay brothers and relatives seeks genetic clues to homosexuality

Lindsey Tanner
ASSOCIATED PRESS

Julio and Mauricio Cabrera are gay brothers who are convinced their sexual orientation is as deeply rooted as their Mexican ancestry. They are among 1,000 pairs of gay brothers taking part in the largest study to date seeking genes that may influence whether people are gay. The Caberres hope the findings will help silence critics who say homosexuality is an immoral choice.

If fresh evidence is found suggesting genes are involved, perhaps homosexuality will be viewed as no different than other genetic traits like height and hair color, said Julio, a student at DePaul University in Chicago. Adds his brother, "I think it would help a lot of folks understand us better.

The federally funded study, led by Chicago area researchers, will rely on blood or saliva samples to help scientists search for genetic clues to the origins of homosexuality. Parents and straight brothers also are being recruited.

While initial results aren't expected until next year, and won't provide a final answer, skeptics are already attacking the methods and disputing the presumed results.

Previous studies have shown that sexual orientation tends to cluster in families, though that doesn't prove genetics is involved. Extended families may share similar child-rearing practices, religion and other beliefs that could also influence sexual orientation.

Research involving identical twins, often used to study genetics since they share the same DNA, had mixed results.

One widely cited study in the 1990s found that if one member of a pair of identical twins was gay, the other had a 52 percent chance of being gay. In contrast, the result for pairs of non-twin brothers, was 9 percent. A 2000 study of Australian identical twins found a much lower chance.

Dr. Alan Sanders of Evanston Northwestern Healthcare Research Institute, the lead researcher of the new study, said he suspects there isn't one so-called "gay gene."

It is more likely there are several genes that interact with nongenetic factors, including psychological and social influences, to determine sexual orientation, said Sanders, a psychiatrist.

Still, he said, "If there's one gene that makes a sizable contribution, we have a pretty good chance of finding it.

Many gays fear that if gay genes are identified, it could result in discrimination, prenatal testing and even abortions to eliminate homosexuals. But hotly debated study, wrongly touted as locating the 'gay gene,' found that gay brothers shared genetic markers in a region on the X chromosome, which men inherit from their mothers. That implies that any genes influencing sexual orientation lie somewhere in that region.

However, he added, "If we confirm that sexual orientation is an immutable characteristic, we are much more likely to get the courts to rule against discrimination."

There is less research on lesbians, Sanders said, although some studies suggest that male and female sexual orientation may have different genetic influences.

His new research is an attempt to duplicate and expand on a study published in 1993 involving 40 pairs of gay brothers. That hotly debated study, wrongly touted as locating the "gay gene," found that gay brothers shared genetic markers in a region on the X chromosome, which men inherit from their mothers. That implies that any genes influencing sexual orientation lie somewhere in that region.

Previous attempts to duplicate those results failed, but Sanders said that with so many participants, his study has a better chance of finding the same markers and perhaps others on different chromosomes.

If these markers appear in gay brothers but not their straight brothers or parents, that would suggest a link to sexual orientation. The study is designed to find genetic markers, not to explain any genetic role in behavior.

And Sanders said even if he finds no evidence, that won't mean genetics play no role; it may simply mean that individual genes have a smaller effect.
Rice struggles to overcome hurdles on both sides in latest Mideast peace mission

Matthew Lee
ASSOCIATED PRESS

Secretary of State Condoleezza Rice, right, and Israeli Defense Minister Ehud Barak meet in Jerusalem.

U.S. Secretary of State Condoleezza Rice, right, and Israeli Defense Minister Ehud Barak had a joint news conference Monday, declining to speak to reporters.

"Without a document to resolve this conflict, we can't go to the conference next month," he said. "Olmert is looking for a public relations conference and not for true normalization with Arab countries. We will not help him in this." Barak said Rice had come to Jerusalem after Algeria, Lebanon, Syria, France, Russia and the U.S., said Rice, described the situation in Lebanon as a "real problem" that could lead to a "dangerous situation" in the region.

The comments from Barak, who later headed to Washington for talks with the Bush administration, came despite long-standing Palestinian demands for a reduced Israel presence in the West Bank. Rice is on her third trip to the region since June, when the United States began to try to revive peace efforts following the end of the Israeli-Qualan war. Rice said Foreign Minister Tzipi Livni would lead negotiations with the Palestinian team led by Ahmed Qurei, the Palestinian prime minister.

Rice's visit to the region comes after a decision by the Security Council last week to authorize an international investigation into the July 28 clash between an Israeli helicopter and a Hezbollah missile that killed at least 16 people. Rice said she hoped the investigation would "provide clarity and transparency." The council voted unanimously to authorize an international inquiry into the incident, which involved Israeli and Lebanese forces.

Rice also met with Israeli Defense Minister Ehud Barak, who later agreed to a joint statement saying the military's freedom of movement in the West Bank was "a fundamental principle that must be demanded in the future." The comments from Barak, who later headed to Washington for talks with the Bush administration, came despite long-standing Palestinian demands for a reduced Israel presence in the West Bank. ‘Suburbia’ spreads to Poly

Laura Kasavan

Not every man could stop a bullet with his hand, but Curtis Adams is an exception.

The Las Vegas headliner who performs using a mix of illusions, death-defying stunts and dance will entertain at the Performing Arts Center’s Harman Hall at 7:30 p.m. Oct. 21.

Adams described his show “Magic That Rocks” as having fire, magic and a natural rock and roll energy that will hit the audience as the music hits them.

Adams said that whether you like magic or not, his show has something for everyone.

“Magic That Rocks” is free of nudity and profanity. And although much of the magic industry has gone dark to draw crowds, Adams said that his show is more personality-driven.

“We want to be the hero and through magic, restore people’s faith in the impossible,” Adams said.

When Adams is not busy performing on the road, he said that his goal is to give back to people. He often visits children’s hospitals and takes the magic to them. Recently he performed some large illusions at a small theater in North Las Vegas for underprivileged children.

“I want to get out there and make a difference,” Adams said.

When Adams is not busy performing on the road, he said that his goal is to give back to people. He often visits children’s hospitals and takes the magic to them. Recently he performed some large illusions at a small theater in North Las Vegas for underprivileged children.

“Like a Justin Timberlake concert meets David Copperfield meets AC/DC” illusion, Curtis Adams will perform Oct. 21 at the Performing Arts Center.

At 13, Adams began doing illusions at cabaret shows. Doors opened when, at 17, he was selected by magician Lance Burton to appear on FOX’s “Young Magicians Showcase.”

The photography exhibit currently in the University Union Gallery is literally a hit. Associated Students Inc. is featuring the striking works of Eric Herrmann, an art and design junior. The theme of the show, "Impact," focuses on "the split second when two objects fuse together in a dazzling display of visual excitement that happens so quickly it is rarely seen by the human eye.

Every piece in the exhibit portrays a moment of impact between an object and clear water in vivid color on a stark black background. In an eye-catching and almost impossible presentation, the water sprays in all directions upon contact.

The top row of the display includes photos of splashing water in brilliant colors running the gamut for an art and design major to display his art on campus.

"The resulting effects were simple but sweet. The opening of the show Wednesday evening attracted a crowd of around 50 students. "It's an exciting display that's great for any viewer," Kristin Savage, ASI Events outreach coordinator, said of the show. "It's also an excellent opportunity for an art and design major to display his art on campus."

Herrmann's interest in photography began in high school about eight years ago when he took shots for his high school yearbook. He then took his first photos for fun and it developed into "a minor obsession."

While his previous pieces included landscape shots and travel pictures, he now enjoys studio photography, as well as capturing powerful pictures of people and objects. He is also interested in abstract shots.

"I've converted my garage into a studio," Herrmann said. "The walls are all white so I can use them as backgrounds for my pictures."

Herrmann gave special thanks to Kyle Nekimken, Steven Hasegawa, and Danielle O'Neill for assisting him in the creation of his pieces. The show is on display until Nov. 9 in the UU Gallery, located in the Epicenter on the second story of the UU.

Photos by art and design junior Eric Herrmann are on display now through Nov. 9 in the UU Gallery. The focus of the exhibit, entitled "Impact," is the split second when two objects collide.

J-Lo is back, 'brave'

Melissa Vega
THE DAILY CAMPUS (H. CONNECTICUT)

Finally, after countless perfume bottles, clothing lines, restaurants and a few failed movie attempts, Jennifer Lopez is back to doing what she does best: recording music. Now, she returns with her new solo album entitled, "Brave." The disc features a return to the funky disco sound of her previous album, "Six." Her attempts at other business reminded the masses why we loved her music so much. It's what she was born to do.

The first track, titled "Stay Together," is a pop-feel track that at first would seem lacking lyrically, but the beat is perfect to dance to. However, as you listen closer it seems to be mocking the Hollywood style of making up and breaking up with lyrics such as, "Stay together, that's the new trend."

Her transitions in-between tracks and her toe-tapping rhythm can't help but make you want to jump out onto a dance floor.

The track, "Do It Well," which also has a bonus remix on the album with the rapper Ludacris, reminds one of the song "Get It Right," and is relieving to hear, especially after listening to her collaboration with husband, singer Marc Anthony. Every cut on the album is fresh and upbeat and she returns to the glory days of her original bestsellers, such as "If You Had My Love" and "Waiting For Tonight."

In one of the smartest decisions she has made on an album, Lopez included pianos and orchestras in the beats of her songs. A classy move on her part, it gives every track a certain spunk that is showing up in more and more pop music on the scene. In particular, the song, "Never Gonna Give Up," is primarily backed by violins, and it matches perfectly with the percussion, kicking up her standards to an all-new high.

Keeping in tone with her '70s style on the album, she also slows it down slightly with the track, "I Need Love" and "Wrong When You're Gone."

Her past failures aside, she is back on her game and through the month of October, Lopez will be touring the West Coast to promote the album, so fans from the East Coast will have to pick up the album and wait for the tour to come their way. And with all the talk about Lopez possibly being pregnant with twins, she could not have released the new album at a better time.

Dance clubs should get ready, because Lopez is back with her original sound, and hopefully, here to stay.

mustangdaily.net

It's the best thing since sliced bread.

(Hey, it'll give you something to talk to Mom about.)
In an era when the heat of the so-called "culture wars" has helped foster a rather debased, pervasive black-and-white, us-against-them mentality regarding both history and contemporary public policy, it may be quite tempting to overlook the complexity and humanity of those on the opposite side of a political struggle. Moral ambiguity, after all, is hardly an ingredient for great drama and insight in the realm of political talk radio and cable news. Consequently, producers stick to the steadfast foundation of drama upon layers of drama which makes it all the more entertaining (and bearable) for us. Without being charged with a particularly gruesome crime. But as he watches the case unfold, he begins to suspect her role in the crime might not fit into the traditional categories of guilty or not guilty, and that her inexplicable refusal to defend herself might be rooted in an element of their affair long ago, the significance of which he is able to grasp only in retrospect.

Bernhard Schlink's haunting love story/courtship drama set in a postwar Germany is hardly an ingredient for a provocative 'The Reader'...
Editorial:

Go ahead Daily readers, speak up!

Alright, readers, it’s time we had that argument about last year, but we’ll do it again just to make things clear.

Let me start off with this — the opinions section is a public forum. Anyone who is a member of the public community can write in, as long as the submitted material is coherent, it will be published on this page. Sometimes that’s in the form of a letter, sometimes it’s a guest commentary. While the rest of the newspaper is strictly written by Mustang Daily reporters and select ftt’dancers, this page is open.

That being said, there is a system to how things work around here. You want (and) write letters and guest commentaries, (about 500 words) and we publish them as we review them. We won’t take them out of order, but they will be published as they come in and if you don’t give us a title for your submission, we’ll give one.

While we reserve the right to edit your material, check out the “Letters section to the left), we will only edit it for grammar, profanity and length. If we think you are going overboard with F-bombs, we will notify you that your content should be changed ASAP or we will change it for you. But your opinions itself will never be edited, no matter how coherent, or “out there” it is. Once again, this is a public forum and you are free to say what you want — just keep it coherent.

So far, the response we’ve had this year is incredible. Since the first day of fall quarter up until today, we have received 43 letters and free guest commentaries (thanks to the ENGL 102 class). Compare that to the same point last year when 58 letters and guest opinion commentaries had been printed since the first day of school. Needless to say, this year’s results have been much better than what we hoped for.

In fact, to accommodate the demand for the opinion section, we are adding pages. On Wednesdays and Thursdays, you can get a double dose of all that is opinion. If the trend keeps up, we’ll offer a third page on other days as well.

In short, we’re doing what we can. Your letter might not get printed the day after you send it, but we will do our best to make sure that it gets in the newspaper in a timely fashion.

The Mustang Daily thrives on the feedback we get from readers. Send us a letter anytime you have something to say — it certainly doesn’t have to be in response to what you see printed in the paper, but can be a local, national or international issue that you feel strongly about. And if you feel really strongly about it, go ahead and send us a guest commentary.

In addition to the growing number of letters, we also have one, but three editorial cartoons now. You can check out these cartoons throughout the week in the paper or go online to see them all.

In resistance. Earlier research found that people who were served an artificially-sweet­

ated beverage were more likely to eat more pizza at a meal than those who had that soda, says Prof. Harry Bailey.

"The acidity is strong enough to actually etch the enamel and cause teeth to feel rough and slightly pommus," Bailey says. "This explains why cola is known for their ability to stain teeth."

"Regular consumption is the main problem because you start to associate the soda with one or two hours for the enamel to re-mineralize itself."

The sodas that have the highest amount of acid are Cola drinks, like Diet Coke with a pH of 2.63 and 2.49, respectively. Battery acid has a pH of 1.0, Mountain Dew has the larg­

est amount of sugar with a whopping 11 teaspoons per can. "Sugar causes dental caries, which leads to a significant demineralization of bone mass," says Dr. Andrea Clarke, a family and women’s health practitio­

ner in Napa, Calif.

In other words, calcium is being pulled from your body to match the ph level in the soft drinks they are drinking.

"Multiple studies have been conducted on the rela­

tionship regarding bone health and soda intake and they have proven that soda consumption does indeed decrease bone density, especially for young women," Clarke says. A large, long-term study and data from older women showed that moderate bone density could lead to early-onset osteoporosis.

What the researcher says:

"Soft drinks, especially colas, cause an increase in phosphate levels and a decrease in calcium levels, which contrib­
utes to the bone-mineral density problem," says Prof. L. Clark, D.D.S., from Napa, Calif.

"People who consumed more than one soft drink per day after a meal and you feel satisfied. When aspartame is added to diet sodas in the past. I hope these varied perspectives will help quench your thirst on the matter. Let me know if you have any further questions."

Sarah Bailey is a nutrition senior, a Mustang Daily nutrition reporter, and a member of PULSE. E-mail your questions to sbailey@calpoly.edu.

Go ahead Daily readers, speak up!

Letters to the Editor:

A bone to pick

I’ve always been the kind of person to pick with whomever sets out the letters to the editor. As some of you long-time students may know, I’m a pretty frequent contributor to this section of the paper. As such, I’ve had some of these concerns for some time. The first concern I had was time. I was wondering if there was any way that I could have my letters appear sooner. It turns out that the more I submit, the more prominent they become. That’s the problem. I think I can stick around this section of the paper for a while longer. I think the more I stick around, the more my name becomes associated with this section of the paper.

Judge slashes damages in Fresno State sexual discrimination lawsuit

Brent VonCannon
THE CALIFORNIA DAILY MUSTANG

With the stroke of a judge's order, monetary damages from former Fresno State volleyball coach Lindy Vivas' sexual discrimination lawsuit, awarded during the summer, were slashed by $1.33 million on Friday — from $5.85 million to $4.52 million.

But Simpson also said a partial new trial was a possibility if Vivas doesn't accept the award reduction, according to The Fresno Bee. Vivas' attorney, Dan Siegel, said Vivas would decide within a week whether to accept or reject the new award amount.

Vivas could possibly recover part of the reduced judgment through recovery of her legal fees, which could be more than $500,000. She could present a bill to the court for that intent.

Vivas claims she was fired in 2004, after 14 years as the head women's volleyball coach, due to her advocacy for gender equity in sports and alleged discrimination due to her perceived sexual orientation. The university denies any discrimination, claiming Vivas' contract was not renewed due to her job performance as a coach.

Simpson argued that the economic loss part of the original damages award was excessive, saying he was skeptical that Vivas would have made $550,000 during a two-and-a-half-year period to justify that damage amount for future economic losses.

In all, anticipated future economic losses, as determined by the jury in Vivas' original trial, were cut from $1.38 million to $1.35 million, and future non-economic losses were reduced from $875,000 to $757,000.

The new developments in Vivas' case came within a day of the settlement of another lawsuit against the university that is also tied to athletics and sexual discrimination.

Former athletic director Diane Mikuliwitsch settled her lawsuit out of court for $3.5 million Thursday afternoon, marking her lawsuit as the first of three high-profile Fresno State athletics cases working their way through the court system, to be settled.

Vivas and former women's basketball coach Stacy Johnson-Klein represent the other two cases.

Mustangs tied for 11th place at UCS

The Cal Poly women's golf team is tied for 11th place with Portland State among the 19 schools competing in the Aztec Fall Classic women's golf tournament hosted by San Diego State at the Salt Creek Golf Course.

Coach Scott Cartwright's Mustangs compiled a four-person 312 total Monday on the 6,216-yard, par-72 layout. First place after 18 holes belongs to UC Irvine with a 297 total, followed by Hawaii at 301 and East Tennessee State at 302.

Mustang sophomore Julia Heath is Cal Poly's top finished after the first round of play, tied for 15th place with her round of 75. Junior Elise Walker is tied for 18th overall place with a 76 while sophomore Stephanie Yocum is tied for 99th place with a 78.

Also competing for Cal Poly are sophomore Maddy Fletcher, tied for 76th place with an 85, and junior Hannah Brabham, tied for 81st place following her round of 84.

Cali Poly Academic Achievement Team, comprising an individual, also is tied for 81st place with an 84.

Party Chalmers of UCS Irvine is the individual leader heading into Tuesday's final round, carding a two-under-par 70. Lu Kajihara of Hawaii and Kim Lorentzana of UCS Irvine share second place with 72's.

due to a knee injury. Moe rushed for 92 yards on seven carries with a 1-yard rushing touchdown, and caught three passes for 64 yards with a 33-yard reception for a score to earn Great West Offensive Player of the Week honors. "It feels good to be out there with a solid performance ... Of- fense is working great right now," Moe said. "We take it one game at a time, practice hard every day and play hard." 

Moe's basketball head coach Kevin Bromley expressed high expectations of both himself and the players. "We want to win on every game, improve on a daily basis, have our older (players) have fun on the road, and show maturity and expe- rience," Bromley said. The team practiced for 10 days before a four-game exhibition trip to Australia from Aug. 31 to Sept. 9.

Three starters are returning from last season, including All- Big West Second Team selection Darwin Whitner, Trac Clark, and Big West Defensive Player of the Year Tyrell Shulton. Cal Poly will play an exhibition game in Matt Gym against Cal State Stanislaus, Nov. 3. The regular season will open at the BTI Tip-off Classic on Nov. 9, hosted by Northern Iowa. "We have some tremendous young men on the court," Bromley said. Mustang Daily staff contributed to this story.

Cumming out for year with torn ACL
Men's soccer team loses its leading scorer before match with UCSB.

Agnus-Dei Farrant

Monday's Cal Poly athletics weekly press conference brought together the anticipation of the upcoming men's basketball season and the end of football season and culminated with a focus on Wednesday's face-off of men's soccer against defending national champion UC Santa Barbara.

Both the Cal Poly and UCSB men's soccer programs remain undefeated in the Big West Conference this season.

"(Players) feel that they can win and that they should win," head coach Paul Holocher said.

Cal Poly (8-1-1 overall, 3-0-1 BWC) was picked fifth in the conference only to counter with a 3-2 come-from-behind victory over UC Irvine, and a 3-0 defeat of UC Davis Sunday afternoon before 2,052 fans.

Sunday's misfortune was the injury of F/MF Daniel Cumming.

Cal Poly took a 3-0 lead when Cumming volleyed a ball over the goalkeeper from 12 yards out and was injured during his ensuing celebration.

He immediately left the game with an injury believed to be to a torn anterior cruciate ligament (ACL) or medial collateral ligament (MCL). He received an MRI Monday. Holocher said after the conference that Cumming had torn his ACL and would be out for the season.

"It really put a damper on a great win but we've got to move forward... I think people are pretty excited about the game against UCSB," Holocher said. "It's not often you get national champions on campus... They play both (affensively and defensively) very well. We have to attack them."

The men's soccer match against the Gauchos is scheduled for 7 p.m. Wednesday at Alex G. Spanos Stadium, and is free for Cal Poly students with a student Polycard.

Cal Poly football routed rival UC Davis on Saturday in the team's first Great West Football Conference game of the season. Aggie Stadium saw its own fall to the Mustangs 63-28.

"We caught them on a good day and we got into a little bit of a zone. Clearly we have some firepower," head coach Rich Ellerson said.

We caught them on a good day and we got into a little bit of a zone. Clearly we have some firepower.

— Rich Ellerson
Cal Poly football coach

SPORTS INFORMATION REPORT

David Zamora earned Big West Player of the Week honors after scoring three goals and recording one assist last week in wins against UC Irvine and UC Davis, the Big West announced Monday.

Zamora (San Jose, Costa Rica/Santa Paul High) assisted Julian Alvarez in the Mustangs' first goal against UC Irvine on Wednesday. He then scored in the 83rd and 84th minutes via assists from fellow freshman Kyle Montgomery to give Cal Poly a come-from-behind victory over the Anteaters. Zamora also scored the game-winner in a 3-0 victory over UC Davis as he headed a 55-yard free-kick by K.J. Lenehan into the back of the net for the Mustangs' first goal of the contest.

On the season, Zamora has four goals and four assists for 12 points. His late-game heroics have helped Cal Poly keep a seven-game unbeaten streak alive and have put the Mustangs in a first-place tie with No. 14 UC Santa Barbara in the Big West standings.

Cal Poly (8-1-1, 3-0-1 BWC) will host the Gauchos (6-2-3, 3-0-1 BWC) Wednesday night at Alex G. Spanos Stadium in the last game of the "Best in the West" homestand with game time scheduled for 7 p.m.
