Employee sues university

Lauren Rabaino

A Cal Poly employee filed a $160,000 lawsuit against the university on Monday for not providing a safe work environment when he was attacked by a subordinate employee last year. The custodial supervisor Chris Leitz claims that the university should have prevented the attack by then-custodian James Reynolds.

After Leitz reportedly gave Reynolds a poor review last year, Reynolds—who was armed with a machete—crashed his car into Leitz. Reynolds was sentenced to a year in county jail last July for assault with a deadly weapon.

In the lawsuit, Leitz alleges that his supervisor at the time, Tom Ramber, who has since left Cal Poly, instructed him to try to force employees to resign—which ultimately led to the employee-on-employee violence.

Although Leitz claims he attempted to convey Reynolds' violent nature to Ramber, he alleged that his concerns were ignored.

"The university actually had seminars on violence in the workplace and how to prevent it," said Leitz's attorney Patrick Sparks, "but they did nothing in this circumstance. That's where the problem is."

Sparks said Reynolds was an example of an employee "gone postal"—a phrase that comes from 1960s U.S. Postal Service workers who injured their managers because of work-related stress.

Cal Poly investigates Pismo Beach water contamination

Camas Frank

The water at the Pismo Beach pier has been on a danger list for some time, most recently making an appearance on the non-profit organization Heal the Bay's top 10 list of most polluted beaches in California. Although Pismo is a popular surfing spot, the water is often tainted with deadly bacteria, forcing the beach's closure to swimmers.

Now the city of Pismo Beach is turning to a group of Cal Poly professors to find out why. Using a $600,308 grant, courtesy of a popular surfing spot, the water is often tainted with deadly bacteria, forcing the beach's closure to swimmers.

The program's guidelines state that, "Once an administrator or supervisor has knowledge of workplace violence under his or her administrative jurisdiction, the administrator or supervisor must take timely steps to deal with the matter appropriately by consulting with Human Resources."

Cordova said this is the first lawsuit Cal Poly has received regarding workplace violence.

"This was a criminal act of an employee against another," Cordova said. "It's something we have no control over and certainly don't condone."

Driving cells out of cars

Best Buy worker Chan Oum shows his hands-free device for a cell phone in Mountain View, Calif. Police statewide began enforcing the new cell phone law on July 1.

Whitney Diaz

Both hands on the wheel? Two new state cell phone laws went into effect Monday prohibiting drivers from using a handheld wireless telephone.

Last year, 1,091 vehicle collisions statewide were associated with the use of handheld cell phones while driving, said Michael Dueñas, San Luis Obispo's California Highway Patrol public affairs coordinator.

"The law was written to ultimately save lives and cause fewer accidents.... and to reduce property damage in accidents," Dueñas said. "If you are under 18, you have to realize that if you're driving a vehicle, you can't use any device which allows you to communicate electronically (including hands-free or speaker phones)."

The first law bars all drivers from using a handheld cell phone while operating a motor vehicle; the second prohibits drivers under the age of 18 from using a wireless phone or hands-free device at all.

Although offenses will not lead to violation points on the violator's driving record, a first offense can cost up to $76, and a second offense and any subsequent citations can cost up to $190, Dueñas said.

"Just like the seat belt law, drivers can get pulled over if they have a cell phone pressed to their ear," said San Luis Obispo Police Department Sgt. Jeff Booth. "The law was enforced as of the first of January 2007, but it takes effect (July 1)."

However, minors cannot be stopped by an officer simply for using a hands-free device, Dueñas said. This particular violation is considered a secondary violation, meaning that a law enforcement officer may only cite driving minors for using a hands-free wireless phone if they were pulled over for another violation, Dueñas said.

"If anyone, no matter what their age is, is seen driving with a cell phone to their ear, it's a primary violation, and officers can stop you for that alone," Dueñas said. He did mention, though, that passengers can use cell phones freely.

The law is more strict for provisional drivers because statistics show that teens are more likely to be involved in accidents due to lack of driving experience and greater risk-taking tendencies, according to the California Highway Patrol Web site.

There is only one exception to the law — emergency phone calls. The law allows drivers to use wireless phones to make emergency calls to a law enforcement agency, a

just Mark Mahle, Marie Young, Michael Black and statistician Andrew Schaffer are bringing diverse elements to the project.

"The goals of the city in this study are two-fold," said Dennis Deberti,

Pismo Beach’s city engineer and public works director. "We hope to find

the problem, and we’re using Dr. Kitts and the other professors from Cal

Poly to do that, and to correct the problem, whatever it turns out to be."

The mechanics of the investigation range from the 60 days of daily

sampling, which began on June 26 to the mapping of recent currents us-

ing an acoustic doppler radar device now installed at the end of the pier.

They ask Professor Kitts the subject of his research and the answer is

"pigeon poop."

"So this the highest pollution levels look like it’s correlating to the

spring tide," he said. "That’s the highest high tide on about a two-week

cycle. So once every fortnight the levels spike. We’re going to be col-

lecting E. Coli and finger printing them looking for specific, kinds of

bacteria. There are very specific markers for humans, cows, dogs, and

we’re working on horses."

While there are no specific markers to identify pigeons as the culprit,

Kitts informed the Pismo Beach City Council during his first quarterly re-

port Tuesday that the sourcing includes compiling a "Fecal Source Library

Collection," and contracting with a Seattle company for access to more

avian samples.

As part of the project’s historical data analysis, he also said that the cor-

relation at high tide to high bacteria levels might point to contamination

in the beach sand itself. Other theories, such as the fracture of a sunken

sewer line are unlikely as there has been no evidence of human fecal con-

tamination in the sampling thus far.

Pismo Beach Mayor Amy Ann Rees praised the first report and said it

was "making a lot of progress."

Driving

continued from page 1

medical provider, the fire de-

partment or other emergency

services agency.

As of yet, testing while driving is not illegal, although the CHP strongly disso-

uges it, and drivers can still be pulled over for reckless-

driving that could result from
testing.

"I don’t think it will change us (cell phone) habits,

because it’s just in conve-

nience. I use a hands-free de-

vice," said architecture senior

Nick Seward, who purchased

a Bluetooth device for $50.

"I probably won’t pur-

chase a Bluetooth. I’ll just

wait until I get to wherever

I’m going, and call them
back," said animal science se-

nior Mac Richie.

"What do you think about the new cell phone law?"

Compiled and photographed by Breechan Yoho-Mellor

"I don’t drive and it doesn’t affect me that much, but I saw a drop in the prices for Bluetooth so I got one."

Estevan Whitfield, computer engineering junior

"I think it’s going to affect me in a positive way because I’ve come into a couple of close encounters where people weren’t paying attention. I almost got hit a couple of times."

Jose "Cheech" Gomez, soil science senior

"It’s going to make me more conscious of when I use my cell phone, especially in the car."

Jessie Bierlich, nutrition senior

**Briefs**

**State**

**BIG SUR (AP)** — Authorities ordered the remaining residents of this scenic coastal community to leave Wednesday after an out-of-control wildfire jumped a fire line and threatened more homes.

New mandatory evacuation notices were issued Wednesday morning for an additional 12-mile stretch along Highway 1, bringing the total length of the evacuated area to about 25 miles of the coast, emergency officials said.

**SAN FRANCISCO (AP)** — The 9th U.S. Circuit Court of Appeals ruled Wednesday that police were wrong to detain and then run off abortion protesters driving a truck bearing large photographs of aborted fetuses around a middle school before the morning bell.

**WASHINGTON (AP)** — President Bush promised Wednesday to send more U.S. troops into Afghanistan by year’s end. He conceded that June was a "tough month," in fact, the deadliest for U.S. troops in Afghanistan since the war began.

Bush said it was a tough month too for the Taliban, but the insurgents’ latest gains in Afghanistan have now rebounded with deadly force.

**National**

**WASHINGTON (AP)** — The Supreme Court’s 5-4 decision Wednesday detailed the efforts of nearly a dozen states supporting the right to kill those convicted of raping a child — and said execution was confined to attacks that take a life and to other crimes including treason and espionage.

**WASHINGTON (AP)** — President Bush promised Wednesday to send more U.S. troops into Afghanistan by year’s end. He conceded that June was a "tough month," in fact, the deadliest for U.S. troops in Afghanistan since the war began. Bush said it was a tough month too for the Taliban, but the insurgent’s latest gains in Afghanistan have now rebounded with deadly force.

**International**

**IRAN (AP)** — Iran’s Foreign Minister Manouchehr Motaki predicted Wednesday that the United States and Israel would not risk the "futility" of attacking his country and possibly provoking a wider Middle East war or driving oil prices into uncharted heights.

His remarks come amid mounting speculation that Israel may be considering a strike on Iran’s nuclear facilities.

**BOGOTA, Columbia (AP)** — Colombia’s spies tricked leftist rebels into handing over kidnapped presidential candidate Ingrid Betancourt and three U.S. military contractors Wednesday in a daring helicopter rescue so successful that not a single shot was fired. Betancourt was saved six years ago.

Russell, who opened the shop nearly a year ago, "It's quick, easy, beautiful and olive oil is really high in good cholesterol and removes the bad ones from your blood."

Cal Poly nutrition junior Erica Wnichowski, who works for Russell, added that olive oil also contains healthy fats. "With everyone watching their saturated fat, olive oil has the good fat in it," Wnichowski said. "It makes your body function and work better."

Regular customer Rhonda Norton said she thinks the store goes well with San Luis Obispo's general vibe. "I think that this fits into San Luis Obispo really well because the training behind olive oil is wherever you grow great wine, you grow great olive oil," Russell. "Eighty-five percent of our olive oils are San Luis Obispo County local. 100 percent are California local."

We Olive also offers locally-made body care products, candles, soaps, ceramics, kitchen utensils as well as olives, tapenades, olive oils and balsamic vinegars before making a purchase. "The idea of being able to try it really makes a difference," Norton said. "Some of the things are unique and I would never have tried them if they hadn't told me to. There was one, the blackberry and pear balsamic vinegar, and it tasted so good and made such a great salad dressing with feta cheese and walnuts."

Norton added that Russell's knowledge of what oils go well with what entrees also helps her decide what products to choose. "He's very well educated about the different oils and the balsamic vinegars and some of the other products. And it's a fun thing to go and try them all," Norton said. "You wouldn't think of that when tasting olive oil by itself but they all have very unique flavors."

The store's main counter holds numerous bottles of olive oil. "Four of the olive oils on this bar have been graded top 10 in the world," said Russell, surveying the bottles. Three small serving bowls are filled with different olive oils, ranging from a golden hue to a darker green. They are labeled peppery, fruity and buttery.

"These are the three categories and you can think of them also as mild, medium and bold," Russell said. "For the most part a buttery is for something light like a salad, a fruity is for pasta and, finally, peppery is for bold food like steak."

Because the olive oil industry has seen some fraudulent oils pass off as extra virgin olive oil in the past, the store offers the "Olive Oil Certification," said Kussell, pointing to a small golden sticker on each of his bottles. "If they take this olive oil and send it to get tested, they will tell you what type of olive oil it was, the acidity rate and quantify it as extra virgin olive oil," Russell. "They'll tell you what tree it came from, what type of olive it was, the acidity rate and quantify it as extra virgin olive oil. We believe in this seal, it's the most stringent in the world. California holds for this."

Russell added that he also wants to introduce his customers to what olive oil should really taste like. "There's a lot of misconceptions about olive oil," said Russell. "Most of the olive oil you get at the stores is probably on the rancid side. Old. If I did a tasting here with you, you would taste the distinct and strong flavor versus if you were to open that bottle of store-bought olive oil and take a taste of that. Our main focus is to educate the public here on the uses and benefits of extra virgin olive oil."
In a fast-paced world that continues to be transformed by technology, not only do we continuously want to be connected to the Web, but in most cases, our lives demand that we be. Google is a company that caters to that need for connectivity — possibly because it created the dependency in the first place, or perhaps because they understand that not all of us can own an iPhone. Who needs an iPhone? If you’re not driving, simply type in the ZIP code, and give a business name. Because Google doesn’t make it a priority to publicize all its goodies, most people I talk to haven’t taken advantage of these services.

In a taste-packed world that continues to be transformed by technology, not every company is going to offer the same benefits. Google has an array of free services available.

**Movie times**

You know the standard procedure when calling a movie theater: before you can even get to the times, you have to listen to every special offer, movie rating, box office hours, ticket prices and so on. If your phone has text messaging capabilities, Google has a new way to find out what you need to know, even when you’re missing the game because of a final, worry not. Text the name of your sports team to Google, and you’ll get an update with who your team is playing, the score, what quarter they’re in and how much time is left. Google will also tell you results of the prior game.

**Driving directions**

We can’t all own a GPS system. So when you don’t know how to get where you’re going, driving directions are just a text message (or six) away. Enter your start location and ending location joined by the word “to” Example: “90001 to 93485” tested to 4-6-4-4-3-3, and you will get directions from Los Angeles to San Luis Obispo.

The downside to this service: Depending on how long the distance, it may take Google up to 10 text messages to get the full directions to you. And unlike a GPS, if you miss a turn or an exit, you won’t be immediately notified.

So although it shouldn’t be used as a primary source of finding directions, it’s a great last-minute resource. These are just a few of the mobile tools I’ve found to be most useful. You can also check the weather, stocks, flight information, word definitions and more. Just play around with it and you’ll be shocked at what you find.

**Sports results**

When your favorite sport is in season and you’re missing the game because of a final, worry not. Text the name of your sports team to Google, and you’ll get an update with who

The amendment that protects your independence

When it comes to freedom from government oppression, the First Amendment gets all the credit. When it comes to these liberties we all readily enjoy — speech, religion, assembly, petition and press — there is such a role who deny us all with commitments in America that these are inalienable rights that they're hardly ever questioned.

Yet when it comes to the Second Amendment and what should be an inalienable right to bear arms, the concept of personal independence is suddenly lost on half the population.

This Independence Day, let's re-examine that concept.

The Second Amendment states, "A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed."

Like the rest of the Bill of Rights, these words are clear and their intent is simple: to protect personal liberties. Independence Day doesn't just celebrate our nation's independence from Britain; it also celebrates the liberation of a people. America's citizens can proudly say they live in a country founded on the principle that each has the right to pursue life, liberty and the pursuit of happiness.

In his "Give Me Liberty or Give Me Death Speech" Patrick Henry said, "If we are not free, if we mean to hold in bondage these inestimable privileges for which we have so long contended, if we mean not to abandon the same, then we have so long endured, and so solemnly have pledged ourselves never to abandon, until the glorious object of our contest should be obtained, then we must fight! We must fight! A call to arms and an appeal to the God of hosts is all that we have left."

Two centuries after our first Independence Day America is again in the fight of its life.

On foreign soil, we fight terrorists that would rather see our nation succumb to a fanatic ideology, and again, the majority of us agree that we have a right to defend our nation from those attacks. But when one walks into the Sandy Hook School and finds themselves gunning for our own lives, for our own homes, for our loved ones — our so-called "right to life, liberty and the pursuit of happiness" — too many Americans are still confused on what should be a clear-cut answer.

Just as we as a nation have a right to defend our country, so do you as an individual have a right to defend yourself and your property. An unarmed citizenry is an open door to a tyrannical government, and you need look no further than the many nations around the world who have fallen under the rule of dictators after giving up their right to bear arms.

In America, gun control proponents have attempted to misconstrue the Second Amendment in an attempt to deny us our constitutional right to bear arms. But there's no questioning how our founding fathers felt about this inalienable right.

The advantage of being armed the Americans possess for the people of almost every other nation is that the government is afraid to trust the people with arms. "James Madison noted.

War, violence and murder are atrocities, but guns are merely props for the people to protect themselves from those of us who believe in peace and civilized society quickly give up our right to defend ourselves that the criminals and terrorists gain the upper hand. Personal arms keep the government in its proper place subservient to its citizenry.

And what country can preserve its liberties if its rulers are not warned from time to time that this people preserve the spirit of resistance? Let them take arms," Thomas Jefferson said.

As you sit back to enjoy the fireworks in Montecito Beach or Pismo tomorrow, take a moment to appreciate every facet of what comprises your freedom.

The Constitution may be the most beautiful document ever written, it guarantees your right to a fair trial, to speak freely and to own property. Just as importantly it guarantees your right to defend yourself and your government or mob that may come to take these other freedoms away from you.

Matthew van Rombough is a journalist editor and the editorial assistant of the Mustang Daily.

GUEST COMMENTARY

Equality shines in the Golden State

As I happily look back on May 15, 2018, I think to myself, "this is a day that I never thought I would see happen in my lifetime." That particular Thursday was a day that changed my life forever. That was the day the Supreme Court of California decided to grant myself and many others the right to marry someone of the same sex, as well as many other non-de­

serving same-sex couples.

This historical victory for equality was a direct result of Proposition 8, a California constitutional amendment that defined marriage as between a man and a woman. The amendment was ruled unconstitutional by the California Supreme Court in 2008, and the case was appealed to the U.S. Supreme Court.

On June 26, 2013, the U.S. Supreme Court struck down Proposition 8, clearing the way for same-sex couples to marry in California. The ruling was a historic victory for equality and a testament to the power of love and justice. It was a day to celebrate and mark as a turning point in the fight for equality.

We were among the first 50 couples to make history that day in the state of California; we were finally given the equality guaranteed to us under the U.S. Constitution. The equality that we never seemed to have before was now in our hands, instead of being just out of reach.

However, although the battle for equality has seen a victory here, the fight still wages on across the nation. There are the naysayers who do not understand the effects and consequences of inequality upon an entire group of people.

This ignorance exists for the simple fact that they have never had their rights nor their privileges taken away from them. Nor would I even bet that humiliation and degradation upon them, or anyone for that matter. I only ask for the understanding that there remain the naysayers who do not understand the consequences of inequality upon an entire group of people.

We have a long way to go, but we are moving forward. The fight for equality has only just begun, and we will not stop until we have achieved it.

As we look back on the历程 of the past few years, we can see the progress that has been made. The marriage amendment was overturned, and same-sex couples were finally able to marry. We have come a long way, but there is still work to be done.

As a couple who have lived through this journey, we want to encourage others to continue the fight for equality. We are not alone, and we are stronger together. The fight for equality is not over; we must continue to work towards equality for all.

As the left county office building, we expected that there would be protesters with picket signs or people telling us that we simply don't have the right to be happy — or even for that matter.

Instead, as we walked down the street, we were approached by many open-minded and accepting individuals who were happy to celebrate this new opportunity and other positive messages. We were among the first 50 couples to make history that day in the state of California; we were finally given the equality guaranteed to us under the U.S. Constitution. The equality that we never seemed to have before was now in our hands, instead of being just out of reach.

As a couple who have lived through this journey, we want to encourage others to continue the fight for equality. We are not alone, and we are stronger together. The fight for equality is not over; we must continue to work towards equality for all.

As a senior.

Additionally, he rushed for 475 yards on 99 carries while leading the Titans to a 12-0 campaign.

Expected to join football after training camp, Murray, who added eight tackles and a sack for the Titans last season, could find his niche as a defensive back.

If he's given a shot under center, however, his credentials could make Gardner an already crowded quarterback future at Cal Poly.

While senior Jonathan Dally is entrenched as the starter this season, the backup role appears largely up for grabs in light of the expected departure of would-be senior Matt Bronson, who started eight games in 2006 before backing up Dally last season.

While backup candidates appear to be sophomore Tim Smith and redshirt freshman Dylan Hawker, each of whom took most of their snaps April 5 during Cal Poly's annual spring scrimmage, a more viable option could be one with a more similar build.

Among three additions announced May 15, Harlan Prather, a 6-foot, 210-pound transfer from Cabrillo College, completed 51.3 percent of his 306 passes for 2,146 yards and 28 touchdowns at the community college.

"These numbers almost mirror the ones Dally posted in two seasons at Allan Hancock College, where he completed 60.9 percent of his 262 passes for 2,229 yards and 24 scores."

Two-time defending Big West champion's early slate features some of country's toughest competition

Lauren Rabaino

Although Cal Poly has not officially announced its volleyball schedule, other universities have released theirs, giving the Mustangs an early idea of where they stand.

The tentative slate is strong, Cal Poly head coach Jon Stevenson said, featuring home matches against Stanford and Nebraska.

"Stanford and Nebraska are two of the best programs in the country and have been for 26 years of NCAA volleyball," he said. "Our strategy is to be the best in the nation you have to play the best."

The Mustangs, who finished last season ranked 11th by the American Volleyball Coaches Association, open the season against Michigan State at the Oklahoma Invitational on Aug. 29. The following weekend, they'll host the Cal Poly Invitational, when they'll take on Tulane and Nebraska on Sept. 5.

The latter match, Stevenson explained, has been one he and Nebraska head coach John Cook have planned for three years.

"People don't think much of Lincoln, Nebraska," Stevenson said. "But they do volleyball right there."

Then-junior middle blocker Jaclyn Houston (11) and then-redshirt sophomore outside hitter Gaby Rivera (18), shown Oct. 26, 2007 during a 3-1 win over Pacific, helped Poly to a regional semifinal appearance last season.

Nebraska, which went 30-2 last year and finished ranked fifth by the AVCA, swept the Mustangs in 2007 — 30-20, 30-19, 30-16. "This will be the biggest match in the history of Cal Poly volleyball in terms of playing a powerhouse at home," Stevenson said.

In the weekend following the Nebraska showdown, Cal Poly will face off against Notre Dame, Minnesota and Cal at the Minnesota Diet Coke Classic from Sept. 12 through Sept. 14.

The difficulty of that trip may pale in comparison to the challenge posed Sept. 20, when the Mustangs will host second-ranked Stanford, which Stevenson called a "perennial powerhouse."

Despite the obstacle presented by senior Cardinal Olympians Foluke Akintade and Cynthia Barboza, Cal Poly senior opposite Kylie Atherstone, the two-time reigning Big West Conference Player of the Year, seems undaunted.

"I think we're going to compete with them very well, especially if we get a good home crowd," she said.

"She needs to be a team leader," Stevenson said. "She needs to be great and selfless and play for the team."

Atherstone, who can become just the second three-time player of the year in Big West annals, seems ready to finish her college career in style.

"You can't have a leader — it's how well the team works together," she said. "One person can't win a game."

Stevenson also noted senior outside hitter Ah Waller as an emerging star.

"She is technically as good as any player in the country," he said. "Volleyball is a game of power and she's developing more power as she goes."

All the other Big West teams have announced their schedules, featuring September, October and November contests with Cal Poly.

Long before that, though, the Mustangs will begin to get a taste of what the rest of the country has to offer.

"By playing these teams around the country, we take advantage of the fact that we're not in school," Stevenson said, stressing the importance such out-of-state tests in elevating the national ranking.

Brian Thurmond, Cal Poly Athletics' director of media relations, said an official schedule will formally be announced toward the end of July.

Multi-sport star commits to Cal Poly

Donovan Aird

One of the state's best prep high jumpers, also the starting quarterback for an undefeated CIF-San Diego Section Division I football champion, has committed to compete in both sports at Cal Poly this year.

Tynan Murray of Poway High School will partake in track and field on a scholarship, and has been invited as a walk-on in football.

"It's the right fit for me," Murray told the San Diego Union-Tribune. "I really wanted to be able to do both sports, and this is the chance."

The 6-foot-4, 185-pound Murray was named May 5 a 2008 All-State Grid-Track Honor Roll member by CalHiSports, whose editor, Mark Tennis, wrote Murray "could represent a first in California history" because of his lofty accomplishments in both arenas.

Just the fifth high jumper in SDS history to clear 7 feet, he sized over 7-1 May 17 at prelims.

That mark — matched May 31 at the state finals by sophomore Harrison Steed of San Juan Capistrano's Sierra High — was the state's best this season, and tied with three others for the eighth-best in the country.

"He's a top-three or-fourth guy in the country," said Jack Hort, Cal Poly's jumps coach. "Sometimes high jumpers get a little finicky, but he just goes out there and gets the job done."

While Hort was quick to point out that several Cal Poly football players have excelled in track and field as sprinters or throwers, it's the first time in his three years with the program recruiting a jumper with such a football pedigree — one undoubtedly shaped by being a nephew of San Francisco 49ers offensive coordinator Mike Munch.

As if his exploits in his two premier sports weren't enough, Murray, named the San Diego Union-Tribune North Zone Athlete of the Year, even qualified for the SDS diving finals.

"He's not your prototypical guy," Hort added. "If he can get 7 feet for us, I'll most likely go to nationals see Murray, page 7

U.S. Olympic Trials

Day set to take last strides for Beijing

Sharon Day, shown during 2004, finished her Cal Poly career June 13 by coming in second place at the collegiate national outdoor championships in Des Moines, Iowa. At 7:30 p.m. Friday she'll compete in the women's high jump finals at the U.S. Olympic Trials at Hayward Field in Eugene, Ore. For a complete recap of how she advanced to the finals, and trial results of others with Cal Poly ties, go online to mustangdaily.net.
