## Software security alert

The Campus Information Security Officer and the ITS Chief Information Officer issued a security alert to the campus community last week about spyware that redirects all Internet traffic through an off-campus server. Running the software on a computer can expose personal information submitted to a Web site, as well as confidential university data accessed through My Cal Poly Portal (e.g., username, password, social security numbers, credit card numbers, email, etc.), to an outside entity. Users are being advised to download free anti-spyware software to detect and remove such programs from their home computers and to work with their LAN Coordinator or ITS to remove such spyware from campus computers as soon as possible. After their computers are clean, users should change any passwords that may have been compromised. ITS started blocking network access to one such threat, MarketScore, on Tuesday, Nov. 23, and will temporarily disable access by known users if the MarketScore spyware is not removed. If you cannot access campus Web sites or other applications, your computer is probably infected. For more information, visit: <http://security.calpoly.edu/spyware/sproxy.html>.
