The purpose of this project was to design a pavilion that could entertain individuals, while also displaying artifacts belonging to the wine history organization of San Luis Obispo. Additionally, the project’s design followed the recently trending method of integrated project delivery, which included the Architecture and Architectural Engineering departments. From the beginning, the design was influenced by its value propositions while still working within the constraints of the project. For instance, the structure was designed to be easily deconstructed and transported while maintaining longevity of the materials. In the end, a design was created which showcases the simplicity and durability of aluminum framing and polycarbonate sheathing.
