Soul sounds set for 'star' concert

If you think the Repertory Music Co. plays long-hair music, you may be partially correct. That group of student-strumming musicians will be in concert Wednesday evening, Aug. 7, in the Amphitheater.

The 7:30 p.m. concert is the first in a series of three outdoor performances each entitled "Concert Under the Stars."

Featuring four men and a lass, the Repertory Music Co. plays contemporary music—that is, a little rock, a little blues, perhaps a little esoteric.

This will be a perfectly matched concert. The performers will be playing "hard-core electric sit-down music." And the audience will be seated in the thick summer grass behind the Little Theater.

A group spokesman said that the sounds will be "avant garde" and "progressive." Tunes like "Sunny" and "Satisfaction" will be treated in fine Repertory Music Co. style.

"We have a Dovro in our group," the spokesman said. "That is one of the original 200 steel guitars of its kind. The guy who plays it does an excellent thing."

The Wednesday evening outdoor concert will be followed by two more Wednesday evening concerts. The Chrome Plated Junk Band will perform on Aug. 14, and The Vintage Voice will appear the evening of Aug. 21.

All three star-bathed concerts are sponsored by the Summer Program Committee, and all three are free.

Dean outlines study system

Why are you in college? George Mulder, associated dean of counseling and testing, speaking at the noon speaker summer program stated, "I have found that most students are in college for the wrong reason. They come here to get a better job rather than to learn."

Mulder continued by stating that most people rush through life and don't slow down long enough to learn. "So I have developed something that will work. I call it a unit system for studying."

The unit system involves four different categories: preview, class, homework, and review.

Preview involves using the time before class to study. When one studies the material before class the lectures will be more interesting. "I recall the time I read the wrong chapter in history, my freshman year in college. The instructor went ahead and lectured on that chapter. I looked around and found most people were asleep, but I was interested because I had previewed," said Mulder.

Class is the second part of Mulder's unit system. "How many times have you seen people go to class and sit down as if they were going to relax. They are not ready to learn. Learn readiness. Be ready to study," continued Mulder.

Homework is the next part of

(Continued on page 4)

Campus radio goes on the air

COLLEGE VOCAL... Student disc jockey monitors first night of broadcast for KCPR, the new FM educational station produced on the campus. (photo by Olson)

Poor transmission cuts first program

Campus radio hit the air with a bang, or rather a hum, Monday night.

"Good evening ladies and gentlemen, welcome to another full evening of pleasurable listening. This is campus radio, 91.3 megahertz on your FM dial, educational FM for San Luis Obispo, broadcasting with 1.8 watts of power. Our transmitter is located on Radio Hill on the Cal Poly campus with studios located on Perimeter Road in the Graphic Arts Building, Room 201. We hope you enjoy tonight's programs," was the first announcement to be aired. Following initial sign-on, President Robert E. Kennedy presented a speech dedicating campus radio.

"A Look into the Life of Dr. Robert E. Kennedy," which was compiled without the president's knowledge, was the first program to be aired.

But, Monday night's "full evening of broadcasting" came to an abrupt end when technical "laryngitis" caused the sign-off of the campus' newest voice at 9 p.m.

"We started the programming of campus radio Monday night at 7:05 instead of 6 p.m. as planned, because the testing procedures to get us on the air extended beyond our sign-on time," stated Alan Holmes, station manager.

"The program lasted until 9 p.m., when we signed-off and began testing again which lasted past 1 a.m.," Holmes said.

The signal was very poor and not many receivers could pick up this station. It wasn't until 8:30 Tuesday evening that campus radio was putting out its full radiated power of 1.8 watts.

After hours of work by Chief Engineer Jim Long, the technical difficulties were cleared up and the station was heard all over town.

Many of the people have wondered just what is the purpose of this radio station?

"To provide another means of communication for the students," stated Holmes. "This means would be faster than our present means of communication. We will also provide entertainment for students."

Students face lift president's pad

Progress on the president's campus home is moving along briskly and dustily. High over-looking the campus, roaring sand-blasters stir up clouds of grayish dust and air compressors chug with a dull, monotonous growl. Occasionally, the sharp crack of a hammer breaks through the racket.

Behind the dust-screen and through the din, 12 architecture students are learning the rudiments of carpentry and building—while at the same time, they completely remodel the home.

These students are receiving units for their rigorous "lab" efforts. They belong to their own campus organization, the Canyon Construction Company,

and their work-week consists of 40 hours.

The purpose of this project, besides re-designing and re-building the college president's home, is to teach students basic skills in building. "This is an instructional project, and our students gain valuable experience by actually putting together what they have designed," Architecture School Dean George Hasslein said. "Many of these men had never used a hammer prior to this project."

In addition to learning how to drive nails, mix mortar, and operate a sand blaster, this project is a kind of bridge between an age-old communication gap. "There has always been antagonism between the architect and the builder,"

Hasslein said, looking over his half-lens reading glasses. "If students can appreciate this problem during their college experience, they will be prepared to cope with it later, when it is more intense," he added.

Is there antagonism between the construction and architecture? "Yes—very definitely," Hasslein said. "This is a valuable experience in cooperation and communication. We're getting very serious this summer."

The original Spanish-style stucco home, of which only a shell remains, will be completely remodeled sometime next year, at which time President and Mrs. Kennedy will move into their home.

Student apathy cause of tour collapse and unsuccessful summer trips —Lucin

by John Fitzrandolph
Staff Writer

To this date, six ASI-sponsored tours were to have been taken by Summer Session and Summer Quarter students—there have only been two. The reason for the tour failures is basic.

Student interest in summer tours has been limited.

Activities advisor John Lucin says that the tours were originally designed to familiarize students with the central coast area, southern California, and San Luis Obispo County in general.

"Many students come here from distant locations," Lucin said. "We had hoped to show them the beauty and distinctive landmarks in our area. Apparently the interest has not been as great as we had anticipated."

Lucin stated that many summer students are older, working on graduate programs, and not excited about the tours.

Others, he said, "have families, and don't realize that their families are welcome on the tours."

The work load of Summer Sessions, he noted, "is often too great to afford a great deal of leisure time."

"There might be a bit of apathy," Lucin admitted, "but no more than during the rest of the year. When the enrollment is as low as it is now, what apathy there is hurts a great deal more."

Next summer? Lucin said he intends to approach next summer the exact same way. "Our real job is to meet the needs of the students. All we can do is to set up a schedule of events and tours. If students fail to respond, then we have an accurate record of interest."

In reference to next summer, Lucin said that he is "open to suggestions and/or criticism."

Two tours remain on the calendar for this summer, pending

student response. An airplane flight over the central county area will be offered on Aug. 4, and a historical tour of San Luis Obispo is planned for Aug. 10.

Further details on both of these dates may be obtained at the TCU.

Bio major secures study program

The San Luis Obispo Heart Association has awarded Miss Cynthia Arey a 10-week study program at the Pasadena Foundation for Medical Research.

Miss Arey has completed her sophomore year as a biological science major.

Dr. Anthony Wolfe, president of the County Heart Association, said it is from the ranks of science students now in college that the scientist who will find the ultimate answer to heart attacks may come. He said the local Heart Association is very interested and involved in encouraging talented young people toward careers in medical research.

The California Heart Association established the Student Associates Program in 1957. Almost 400 students have taken part in the program since its beginning.

Campus Capers

Historic area tour

A tour of San Luis Obispo's historic areas will be conducted Saturday, Aug. 10, by Mrs. Louisiana Clayton Dart, head of the San Luis Obispo Museum. Any student interested in going on the bus tour may obtain details in the Activities Office, T.C.U.

The tour will include the Sinsheimer Building, an adobe, the Mission and other historical spots.

sights and lights to set the mood for such bands as the Ordinance Clearwater Revival from San Francisco, who have just recorded an album on the Fantasy label, and West, who just released their single, "Just Like Tom Thumb's Thumb," on Epic Records.

Due to limited seating it is suggested that tickets be bought in advance. They can be purchased for \$8 a night at either the King and Queen Sound Service, Brown's Music Store or Pot Pourrie in San Luis Obispo.

Folk-rock concert

Cuesta College Auditorium will be the location of a folk-rock happening this Friday and Saturday nights, Aug. 2 and 3, when 16 bands from up and down the California coast will converge to offer two full evenings of entertainment. In the 1968 Cuesta Folk-Rock Concerts, officials said.

In addition to the eight bands which will perform each night from 6:30 p.m. to 12:30 a.m., there will be many individual performers, and additional psychedelic

'Duffy' slates talk

Duffy Daugherty, head football coach at Michigan State University, will speak at Noon, Tuesday, Aug. 6, in Science E-27.

Historian to speak

"Historic San Luis Obispo" will be the subject of a talk given by Louisiana Clayton Dart at the Noon Speaker Series on Wednesday, Aug. 7, in Science E-27.

Instructor studies anti-cancer drugs at research program in New York

Dr. Hewitt G. Wight of the Chemistry Department isn't having a dull summer.

Along with six other college and faculty members, Dr. Wight has been invited to participate in the 15th Summer Research Participation Program at Roswell Park Memorial Institute, a cancer research organization in Buffalo, N.Y.

During his stay at the institute,

Dr. Wight will be working in organic chemical research consisting of synthesis studies of purine and pyrimidine nucleosides and related compounds. The main goal in this type of research is to study new compounds which may be employed as anti-cancer drugs.

Dr. Wight is a graduate of the University of Utah and the University of California at Berkeley and has been a faculty member of both institutions. Before coming to Poly in 1962, Dr. Wight served as an officer in the U.S. Army and on the faculty of St. Martin's College, Olympia, Wash.

The Roswell Park Memorial Institute is a part of the New York State University system and offers visiting scientists an opportunity to work with the permanent staff on projects of mutual benefit.

Educator calls for change or 'violence may result'

Shall we turn public education over to the Army? Would private industry prove to be a more effective educational institution?

Sam Hammerman spoke here recently, and he scoffed at both of these suggestions. He is the assistant superintendent for urban schools in sprawling metropolitan Los Angeles, and he has some ideas of his own.

"The name of the game is change," he said. "I have heard all kinds of suggestions about how to improve public school systems—especially those systems in hard-core ghetto areas. But turning the responsibility over to another person or group is not the answer."

"Change is the first thing we must accept. If we think that we are being effective in the old methods of teaching, we are in trouble."

"Kids today, especially disadvantaged kids, are not willing to wait around for more library books. They need action. They want a personal contact with instructors, they demand a share in what is being taught. They are learning that force brings about

these wants. When they stage a walk-out, they are almost assured of more attention."

Force, according to Hammerman, may just be the key to effective change. "Frightening as it sounds," he warned, "we are learning to listen when something is forced upon us."

Educators are no longer safe behind platitudes, rationalizations, and vague excuses, he added. "Teachers are held accountable for the progress of students. He can't keep up? He sure can—and will, if you begin using creative techniques."

Education today is a stormy sea, he concluded, "and I don't know whether we're in the Titanic or the Ark."

SDX names outstanding member

Mike Williams has been named "outstanding graduating member" of the local chapter of Sigma Delta Chi, a national journalism society.

Williams, a spring graduate, majored in business and industrial journalism and was an active

staff member of the Mustang Daily.

The 24 year old Cambria resident said the award "came as a complete surprise."

A four-year stint in the Air Force had been his plans, until this week—when he failed to meet the physical requirements. Now he intends to land a job in his major field.

Opportunities increase for student employment

Employment opportunities for students will increase during the 1968-69 recruitment season as companies are already reserving interview dates for prospective employees.

Campus recruitment activity for 1967-68 reached an all time high as employer representatives made 6,661 student contacts.

An additional 8,868 interview appointments were available; 103 more employers would have visited this campus if student interest had been sufficient in the type of employment offered.

For students whose careers or capabilities are not heavily recruited on campus, the Place-

ment Office continues to provide employment counseling and job search preparation, contacts with employers in non-demand areas and current job market information.

In addition to on-campus employment opportunities, over 1,400 requests from the local community for students to take part-time employment or to work at an odd job have been received since July 1, 1967.

Off campus part-time positions that have been filled by students include accounting, babysitting, bookkeeping, camp counseling, clerical, computer programming, delivery, disc jockey, drafting, etc.

Published once a week during the summer quarter except holidays and exam periods by the Associated Students, Inc., California State Polytechnic College, San Luis Obispo, California. Printed by students majoring in Printing Technology and Management. RILEY'S COLLEGE SQUARE FASHIONS

WINDOWS ON EDUCATION...new campus dorms, Yosemite Hall, are nearly completed. Architecturally they are the only ones of their kind on a California State college campus. (photo by Olson)

Unfinished look masks new dorms

The stark, slate-grey dormitories on the northeast portion of campus are nearing completion. Looming high and ghostly over other college buildings, the exteriors give an unfinished impression—because of their rough, concrete texture.

The interior of these buildings is another story.

"The dorms must be seen inside to be appreciated," said Douglas Gerard, associate dean of facilities planning. "The entire ten-tower project is exciting, but the inside is far more beautiful than the outside."

Gerard admitted the project was expensive (\$4 million), but he noted the rooms and courtyards are exciting and practical. "Five of the towers are completely furnished and ready now," he said. "The remainder will be ready for the Fall Quarter."

There will be a private phone in each room. "Also in each room," he added, "one wall will be covered with tackboard for student use."

The college is paying for the

monthly cost of the phones (not including long-distance calls). Expensive? "Yes," said R. A. Baker, campus housing manager. "For a ten-month term, it will cost \$19,765."

Further detailing the interior furnishings, Baker described the ceilings and walls of rooms as "off-white." The chairs and bookshelves, he said, "are metal with a walnut finish."

What about furniture colors? "The draperies—orange-flame; carpets—orange-gold; and phones—black," said Baker.

Baker said that some 12 architects (of state and national reputation) have visited the dorms

recently. All 12, he explained, "thought the design was different, and liked it." He added, "Ours is the only campus in the state system with this kind of design."

Both Baker and Gerard were cautious about saying just what the building design should be labeled. "The structures have been called a number of things," said Gerard. "I would say probably—though I'm not an architect—Moorish or Mediterranean."

Housing Manager Baker agreed with those two, and added another. "The large, beautiful inside archways have a kind of Roman look."

Of course, there also may well be a certain Spanish influence.

Homework, classwork set as best college study system

(Continued from page 1)
the unit system. The hardest part of homework is getting started, Mulder contended. He said, "Begin studying right after class instead of having coffee. The key to studying is to be involved. Read your material and then ask yourself questions."

Review is also very important, Mulder believes. He recommends that a student go over all notes each time he studies, so that he will always be familiar with the

material.

"This system is idealistic, of course. Sometimes schedules won't permit. But you don't have to study right after class, and you don't have to review right before class. You could study this way at other times."

"Use only the concepts of this system. If you have three classes in a row, then do your perusal early in the morning and go to class at 9 a.m.," concluded Mulder.

Rates increase \$4 for nonresidents

Students with out of state residence will feel the pinch of California inflation next September.

A recent announcement by the Admissions Office indicates that the Fall Quarter will cost students from other states \$20 per unit, \$4 more than the present rate. This makes the price of an average 10 unit load \$820. The previous tuition for such students was \$240 a quarter.

Going by this, the cost of one year of study for students who

wish to be in attendance for all four quarters will be \$1280.

The nonresident fee for students of foreign countries remains at \$85 a quarter and \$340 for the four quarters annual fee. State residents presently pay no tuition beyond the normal fee.

In addition to the tuition, out of state and foreign students pay the regular fees and so called "contributions" for Student Union activities.
