Andrews named interim president

CAL POLY PRESIDENTS — Robert E. Kennedy and newly-appointed acting president Dale Andrews take time out from a meeting yesterday afternoon. Kennedy announced his retirement as

president last week and Chancellor Glenn Dumke appointed Andrews to take his place until a permanent one is found. (Daily photo by Ken Oraley)

Dr. Dale Andrews has been named Acting President of Cal Poly upon President Robert E. Kennedy's retirement next February.

Chancellor Glenn S. Dumke named Andrews to the post in an announcement today.

Andrews will assume duties as president until a successor for Kennedy is selected and takes office under procedures of the CSUC Board of Trustees.

Dumke said it is hoped the Board of Trustees' search and selection process will be completed prior to fall 1979.

When Julian A. McPhee retired as president, it took 10 months before Kennedy was named as his successor.

Don McCaleb, public information officer, said it usually takes several months before a new president is chosen.

"The process of selection has taken months at other campuses," he said.

Andrews has served as Executive Vice President since 1973. In 1966, he was chosen Vice President and Chief Executive officer and a year later was named Academic Vice President. Andrews came to Poly in 1950 as an agricultural education faculty member.

"I was pleased at the confidence he (Dumke) expressed," said Andrews of his appointment.

Andrews had previously served as Poly's chief executive officer after McPhee's retirement prior to the selection of Kennedy as president.

"I'm sure that the support of Poly faculty, staff and students which I experienced at that time will again be forthcoming as this university goes through the process of selecting Dr. Kennedy's successor," said Andrews.

Kennedy's last working days as president will be around Christmas although his retirement is not effective until Feb. 1, 1979. Andrews also takes over as acting president Feb. 1. During January, Poly will not have an official president.

McCaleb said however, there is always an acting president on campus when the actual president is on vacation.

"In the past, Andrews, Hazel Jones (vice president of academic affairs), and Russ Brown (dean of students) have all been acting presidents when Kennedy was off campus," said McCaleb. "I assume it will be no different this time."

Library information guides help students find their way

BY MAC McDONALD
Daily Staff Writer

Two Cal Poly library employees have finished a project that will hopefully make it much harder to get lost in the stacks.

Information guides about the library, covering everything from the library floor plan to reference sources to where to find information on Afro-American studies are available free at the library.

There are 30 guides now available, soon to be expanded to 70. They're readable, informative,

thorough and printed on eye-catching multi-colored paper. They're also punched to fit into a common three-ring binder.

The information guides represent almost 500 hours of work for Karen Call and her assistant Lori Robinson, a senior liberal studies major. They've been working on the project off and on since January compiling the guides.

"It's Dr. Alexander's baby," said Call. "It was his original idea, he deserves a lot of the credit."

Dr. Norman Alexander is the director of the library and instituted a similar project at Southern Oregon State College.

In addition, library specialists in each of the fields covered by the guides were asked to research and draw up a list which included general information about the subjects, guides to literature, bibliographies, biographies, chronologies, dictionaries and encyclopedias, directories, indexes and abstracts, statistics, periodicals, newspapers, reference books, opinion sur-

veys, maps and government documents.

In short, just about everything one would ever need to research a particular topic and to make full use of the resources available at the library.

Both Call and Robinson then waded through the materials, sorted, compiled, edited, typed and put the finishing touches on the guides before submitting them for final approval.

The Mustang logo was drawn by Tim Ernst, who also

was done by students in University Graphics before the guides were sent to the duplicators.

So far the most popular guides appear to be the general information and floor plan guides, both of which have gone through two printings. The guides are printed on heavy weight colored paper and as Call says, "They're not cheap."

The cost of the guides are included in the library budget.

she said. Other titles soon to be available include, "Basic Reference Sources on Women," "Writing a Research Paper," and "Short Story Criticism."

According to Call, the guides will not answer all the questions that could crop up, so at the end of each guide is the logo: "Questions? Ask the Librarian."

"I hope the guides are thought provoking," said Call, "and that they lead people in the right direction...at least in some direction."

Peeling
off the
profits

BY LESTER BURNS
Special to the Daily

Cal Poly is the largest non-supermarket user of bananas in San Luis Obispo County and students in Food Industries have been making a nutritional snack out of those popular bananas.

Last year more than 10,000 chocolate-covered bananas were sold on campus - 7,000 of which were sold during Poly Royal, according to Dr. Rudy Wooten, advisor to the Food Industries Club.

The production of chocolate bananas began six years ago as an "enterprise" project for a student in Food Industries, and since then the popularity of chocolate bananas has grown.

Most "enterprise" projects deal with what would be considered normal agricultural endeavors, but the production of chocolate bananas has been quite successful and has consistently made money, Dr. Wooten said.

The purpose of an enterprise project is to make a profit. Of that profit, the students involved receive two-

thirds and the Cal Poly Foundation receives one-third because it provides loans for the projects.

The process of making the chocolate bananas begins by first peeling the fruit. "The bananas used must be firm and free of blemishes," said Dr. Wooten.

One of the problems with peeling a large number of bananas is that the skin possesses an enzyme that turns a person's hands black and takes several days to wear off.

After the banana is peeled, a popsicle stick is put into it. Because chocolate will not stick to a raw banana, it is then frozen.

Then, it is dipped in chocolate, dried, and then packaged.

In the past, the chocolate bananas have been a project worked on by an enterprise group of five seniors. This year, according to Dr. Wooten, the project is being taken over by the Food Industries Club. The Club hopes to increase the production of chocolate bananas this year.

GOING BANANAS — Maria Robe chocolate. The production of puts the finishing touches on a chocolate banana before it is dunked in chocolate. The production of chocolate bananas began six years ago. (Daily photo by Vince Buehl)

Editorial/Opinion

It's always there

From the very moment you step foot on the Cal Poly campus, something begins to loom over you. No matter how hard you try to ignore it, procrastinate about it, or wish it away, it will always be there: Senior Project.

Senior projects should be more than just obsessions for students. We feel it is time to re-evaluate the practicality of requiring senior projects for all majors and it is certainly all time to stop the practice of requiring students to pull senior project before they actually qualify for early registration.

Senior projects are something that make Cal Poly unique and in some cases they actually put to use the knowledge and skills students have learned in their classes. In majors such as architecture and engineering, students are usually involved in building something and their senior

projects are actually projects. But, senior projects that are nothing more than glorified term papers are a waste of time and energy.

The projects are designed to help students with problems they may face in their various fields of employment. Sorry, but "The Impact of Aunt Minerva's Flower Bed on Urban Culture" just doesn't quite make it.

In some cases senior projects may be a help in getting a job, but face it, life does go on without them. There are certainly many Cal Poly students who have left school for jobs in their professions and are working successfully without ever completing their senior projects.

But beyond the matter of whether senior projects are practical, there is the total impracticality of requiring students to pull the card at

registration before they can register early.

If you're a senior, you're a senior. A hundred and thirty five units should do it. You should not have to go through a ritualistic pulling of senior project just to get into early registration.

Taking senior project becomes sort of a game of "pull now and worry later." By the time they have taken 135 units, most students realize if they wait until their last quarter to pull senior project they may leave Cal Poly without ever realizing what it's like to go through registration and actually end up with the classes they want.

Therefore it turns into a game of pulling senior project as soon as you can and trying to con everyone into believing you have honorable intentions of actually working on it.

This early pulling of senior projects creates hassles and actually defeats the idea behind having senior projects. Theoretically, students should wait until their last quarter, pull senior project so they can use the accumulative knowledge they have learned over their college years in their projects.

Making senior project a barrier to early registration just creates frustration and doesn't do anything to help students learn to solve problems they "must" solve in their fields of employment.

Obviously, senior project is something everyone enjoys complaining about, but there should be more to it than that. A senior project should be something worthwhile and tangible.

And, if senior projects really are worthwhile, then there is no reason to require students to pull them before they are "legally" seniors. We hope when Cal Poly's new president takes office he will take a look at the problems surrounding senior projects and will be able to alleviate some of them. A senior project shouldn't become more of a problem than the problem it is attempting to solve.

Tune in and tune out

"Love Boat? You've gotta be kidding." You see, I never watch the tube for the sake of watching it. I believe it wastes the brain.

A few people I know really get wiped out by watching the kind of shows that don't necessarily add to their intellectual capacity. In other words, they undergo self hypnosis.

Generally, they like to let the "stuf" soak in, (who knows where?), as they allow the day's accumulated stress to seep into the tube. Not a bad depressant, actually, despite its time consuming qualities.

The relaxing tendencies of television are actually viable as I watch a certain viewer plop down on the sofa, preparing to tune into a session of the "Brady Bunch."

By the time Cindy gets through peeking at Marla's diary, the viewer is steeping tea and getting out of jeans into "something more comfortable."

Author Lisa Cheves is a sophomore Journalism major and a Mustang Daily staff writer.

Although this active contributor to "anti-think" programming doesn't question the machine's effects, I can't help wondering about the media being the "massage" — a frightful idea allowed to penetrate minds of freshmen. Also recalled are the lists of "Things to do today" left over

from last week. Why do some choose to repress these and make themselves vulnerable to the period of the mesmerizing tube?

With all the things that need to be thought about, why choose not to think, and to let one's mind wander where it will?

My answer perhaps lies in the renewed state of mind, cool eyes, positive attitude and willingness to continue life in a peaceable manner that I observe in my unwary observees.

Sometimes this person ends a T.V. session in slumber. But this too appears thoughtful, though tension free. I think the answer ultimately lies in the mug of tea which awaits me. I look forward to the next half hour or so.

CAREER SURVIVAL

Finding your way out of the jungle of companies that visit your campus each year for interviews is tough. Sometimes you haven't even heard of them before they arrive. We'd like to help make that career decision easier by telling you about us now.

We're Lawrence Livermore Laboratory, operated by the University of California for the U.S. Department of Energy, and located in California's beautiful Livermore Valley just minutes from the San Francisco Bay Area. We're involved in many exciting projects concerning energy, national defense, and bio-medical research.

Let us help you choose that first job. If you have or are about to receive a degree in engineering or computer science, see us on campus at your Placement Office. Or contact us for more information about our many career opportunities by sending your resume to Employment Division, Lawrence Livermore Laboratory, P.O. Box 808 Dept. JCN, Livermore, CA 94550.

LAWRENCE LIVERMORE LABORATORY

Oil sands removal project proposed

BY ROBERT HOWARD
Daily Staff Writer

Indian Knob Hill may become the site of a new oil sands removal project by Phillips Petroleum Co.

The oil company has recently commissioned a study headed by four Cal Poly professors which will determine the feasibility of revegetating the oil site.

Professors Delmar Dingus, David Leszynski and Roger Vinande will determine if the soil will support plant life after it is processed to extract the oil, and if so, what types of plants. Professor V. L. Holland will catalog all plants existing in the area and collect seed samples for lab tests in the green house.

If the proposed project is undertaken, approximately 200 acres will be involved, according to Holland.

A hot water extraction process is being worked on but is not fully developed yet, said Dingus. The material will probably be heated up with hot water and the oil will float off to be reclaimed. At this time the professors involved said they do not know of a proposed reclamation site.

Leszynski will concentrate on setting up field sights and testing soil for density, nutrient content, and water holding ability both before and after it has been processed.

Vinande will test processed sand and natural soil for nutrient content to determine if modification may be necessary to support growth of plants. He will also grow samples of native plants in a greenhouse.

He will study the possibility of adapting any of 30 other species of plants to the proposed mining site in the event that processed sand is unsuitable for plants native to it.

Dingus, who heads the study, will help in both the chemical analysis of the soils and setup of the field sites.

If Phillips decides to go ahead with the project, a detailed mining proposal would have to be presented to the San Luis Obispo County Board of Supervisors, the California Coastal Commission or any appropriate agency, said Dingus.

"We would like to return the area as close as possible to its original condition," said Dingus. "I think Phillips would like to do that." As far as the landscape itself or the physical appearance of the area, it probably wouldn't be returned to its exact same state, he said. The original plant environment would be restored if possible, he said.

Dingus said some students would be employed in the study and that some senior projects would also come out of Poly's contact with the project. He said he was pleased with the opportunity to offer this research project as an extension of the classroom and felt students would be "gaining a fortune in ex-

perience working with a real world problem, in a 'hands-on' situation."

One rare and endangered shrub has been located at the proposed site along with one rare manzanita tree. The endangered shrub, commonly known as "mountain halm", grows only in three known areas of the world, all three in San Luis Obispo County, said Holland. The rare manzanita, known as "La Panza", is not endangered.

Holland said that ranchers in the adjacent areas would probably like to see the area restored to grazing land. Probably what will result, he said, is a mosaic type of revegetation, beneficial to both wildlife as well as grazing animals.

They have to also think

about restoring the natural animal habitat, he said. "I am very concerned that the area be restored with native plants and not with something like eucalyptus trees."

Phillips seems to agree with this approach, Holland said. Dingus and his colleagues

will receive a grant of \$73,495 for their portion of the study, which is due May, 1979. Holland will be granted \$24,981 for his work to be completed by Sept. 1979. Holland required extra time to observe plant species in all four seasons to insure total and accurate cataloging.

Jarvis makes ads for candidates

SACRAMENTO (AP) — Howard Jarvis, the father of Proposition 13, has filmed television commercials helping both Gov. Edmund G. Brown Jr. and his Republican rival, Attorney General Evelle Younger.

Both campaigns plan to broadcast the Jarvis commercials beginning later this week.

The crusty, outspoken 76-year-old tax out-cruiser doesn't specifically endorse either the Democratic governor or his Republican foe. But he praised both for their efforts to put Proposition 13's \$7 billion property tax cuts into effect.

Jarvis was in New York City today and was not available for

comment on the seemingly contradictory commercials or to say which candidate, if either, he is endorsing.

In his commercial for Brown, who led opposition to Proposition 13 until its landslide victory last June, Jarvis said he knew 13 would work, "and I knew Gov. Brown was the man who could make it work."

In his commercial for Younger, Jarvis praises the Attorney General for "a brilliant legal brief" defending the initiative before the California Supreme Court, which upheld its constitutionality.

"We all owe Evelle Younger a debt of gratitude," Jarvis says.

The rest of the Brown commercial says the 40-year-old governor "imposed a hiring freeze on state agencies. Then he did something really remarkable. He signed a budget which actually went down instead of up. That hadn't been done in 17 years."

"Then Gov. Brown reduced income taxes by a billion dollars. Sure, I wrote Proposition 13, but it takes a dedicated governor to make it work," Jarvis concludes.

In the commercial for Younger, who gave only lukewarm support to 13 before the June primary, Jarvis said, "If Mr. Younger had not gone all the way to defend the taxpayers, Proposition 13 would not be law of California today."

OPEC threatens nations

VIENNA, Austria (AP) — The OPEC oil cartel threatened Monday to begin cutting back crude oil supplies to industrialized nations if they don't make it easier for OPEC to get into the "downstream" end of the business — producing and selling gasoline and other finished petroleum products.

"We can no longer afford to play the role of mere suppliers of raw material," said Ali Jalil, secretary-general of the 13 nation Organization of Petroleum Exporting Countries. His comments came at an OPEC seminar on downstream operations and were echoed by the oil minister of Kuwait, Ali Khalifa al-Babtain.

There was no immediate official reaction in the West to the OPEC statements. The U.S. Energy Department had no comment.

Newsline

Stronger punishment urged

NEW YORK (AP) — Sen. Edward M. Kennedy on Sunday urged that juveniles who commit violent crimes should be treated as adults and sentenced to "significant punishment."

In a speech to 2,000 law enforcement officials at the convention of the International Association of Chiefs of Police, the Massachusetts Democrat for the first time endorsed recent movements to try juveniles accused of violent crimes in adult courts rather than in the more protective atmosphere of juvenile courts.

Protestors refuse to eat

SEABROOK, N.H. (AP) — Twenty-four of the 42 protestors arrested at the latest demonstrations at the Seabrook nuclear plant construction site have refused to eat in jail since their weekend arrests.

The protestors, seven women and 17 men, turned away trays of food at their cells in Rockingham County Jail in Brentwood and the Hillsboro County Jail in Manchester where they were taken Saturday after refusing to post \$100 bail.

The remaining 18 demonstrators paid bail.

The arrests came after three groups of Boston Clamshell Alliance members entered the plant property by scaling an eight-foot-high fence topped with barbed wire.

Joshua Crossman, 19, of Boston, said the demonstrations were useful.

"This shows that there is a continuing commitment by the people of New Hampshire to stop this nuclear plant," he said, after being released on \$100 bail, following his criminal trespassing arrest.

The Clamshell Alliance, with affiliates throughout the northeast, has sponsored Seabrook protests since 1976.

EARN OVER \$650 A MONTH RIGHT THROUGH YOUR SENIOR YEAR.

If you're a junior or a senior majoring in math, physics or engineering, the Navy has a program you should know about.

It's called the Nuclear Propulsion Officer Candidate-Collegiate Program (NUPOC-C for short) and if you qualify, you can earn as much as \$650 a month right through your senior year. Then after 16 weeks of Officer Candidate School, you'll receive an additional year of advanced technical education. This would cost you thousands in a civilian school, but in the Navy, we pay you. And at the end of the year of training, you'll receive a \$3,000 cash bonus.

It isn't easy. There are fewer than 400 openings and only one of every six applicants will be selected. But if you make it, you'll have qualified for an elite engineering training program. With unequaled hands-on responsibility, a \$24,000 salary in four years, and gilt-edged qualifications for jobs in private industry should you decide to leave the Navy later. (But we don't think you'll want to.)

Ask your placement officer to set up an interview with a Navy representative when he visits the campus on Nov. 14-16, or contact your Navy representative at 213-468-3321 (collect). If you prefer, send your résumé to the Navy Nuclear Officer Program, Code 312-B537, 4015 Wilson Blvd., Arlington, Va. 22203, and a Navy representative will contact you directly. The NUPOC-Collegiate Program. It can do more than help you finish college: it can lead to an exciting career opportunity.

Retreat

Concerned Christians are sponsoring a retreat at Camp Wawona Yosemite National Park Oct. 13-15. Cost for the retreat is \$20 and topics to be discussed include "witnessing on the secular campus" and "campus morality — how should the Christian relate." Call Preston Andrews at 544-1187 for more information.

Health council

Applications for the new Student Health Advisory Council (SHAC) are being accepted at the main desk in the Health Center. Call Chairman Jeff Lind at 543-2367 for more information.

Child Care

The Child Care Resource Center Advisory Group steering committee will meet tomorrow at 5:30 p.m. at San Luis Obispo County Mental Health Youth Services Office, 2180 Johnson Ave. The committee is developing proposed by-laws for the group and formulating the agenda for the November general membership meeting. For

more information call Greg Neshime at 544-4393.

Sign language

Casa de Vida, a nursing home for the developmentally disabled, is sponsoring a sign language class in the school room at Casa de Vida, 879 Meineke Ave. The class is every Tuesday from 3 to 5 p.m. and the cost is \$10 for non-employees and \$5 for employees of Casa de Vida. Call Elizabeth Perhammer at 541-2939 for more information.

Frisbee

The fourth annual Frisbee Fling sponsored by the Recreation and Tournaments Committee and the Intramural Department is Saturday, 10 a.m. in Mustang Stadium. There will be competition in accuracy, distance and freestyle demonstrations.

Seminar

A student-faculty seminar on "Bubble Memory Device: Past, Present and Future" will take place today at 11 a.m. in Room 126 of the library.

Speaker for the seminar will be Dr. Thomas T. Chen, manager, Bubble Memory Device Design, Rockwell International.

Coffee House

Featuring local professional entertainment and student performers, Coffee House is back for another year of entertainment in Mustang Lounge. The first Coffee House of the year is Thursday at 8 p.m.

First meeting

The first fall meeting of the American Cetacean Society is Thursday at 11 a.m. in room 450 of the Fisher Science Building. Organization and discussion of upcoming events and coordination of a whale watching trip are on the agenda for the meeting.

VALUABLE COUPON—CUT OUT

OH, STANLEY,
YOU CALIFORNIANS
ARE SO
ROMANTIC.

NONSENSE,
PAMELA.
THIS IS A
BLACKOUT.

Blackouts? Brownouts? In California?

Well, not really, not yet. But over the next 10 or 15 years electric shortages are inevitable...unless more power plants can be built. Even though all of us continue to conserve electricity, power needs

are expected to double by 1999. Because California's still a growing state, there are more people needing homes and jobs and other things that depend on electricity. And the law requires that PG&E provide adequate electric service for everyone.

It takes five to ten years or more to bring a new power plant into service, so it's important that we start now. But governmental approvals of all kinds are needed to build these new power plants. And the approval process has slowed down so much that it may

cause power shortages in the 1980's. Faster action is needed.

We don't like to be the ones to tell you about the possibility of shortages. But not telling you the facts would be a greater disservice.

If you have any questions, we'd like to hear from you. Just write: PG&E, P.O. Box 3728, San Francisco, CA 94106.

To keep things running in the 1980's, we must begin new power plants today.

PG&E

RECORD PASSER — Cal Poly quarterback Craig Johnston set a school record with 4 touchdown passes as the Mustangs routed Portland State 56-20. (Daily photo by Rick Reese)

Rout Vikings 56-20

Poly does it all

The football game Saturday night was supposed to be Portland State's offense against Cal Poly's defense. But instead, Cal Poly dominated both the offensive and defensive show winning 56-20.

The Mustangs set school records right and left while containing a team that has led its division (IAA) in total offense the last 3 years.

Sophomore tailback Lewis Jackson did everything except sell popcorn. He broke the school record for rushing in one game with 268 yards on 26 carries. The old record was set in 1967 by Ron Stulzman with 259 yards. Jackson also broke the longest run from scrimmage mark held by Alex Bravo in 1952 of 85 yards with a run in the third quarter of 87 yards and a touchdown. For good measure he also had an 83 yard run for another touchdown.

But Jackson was not the entire story.

Quarterback Craig Johnston broke the school record for TD passes with 4. The old mark of 3 was set 9 times.

And, free safety Randy Smith tied another school record when he intercepted 3 passes.

The fog rolled in in the middle of the third quarter and by then the game was in Cal Poly control. The Mustangs led 35-7 at half and added 14 more in the third to lead 49-7.

Poly continues to roll along undefeated. The Mustangs are now 4-0. They were ranked third in the nation division 2 before the game and are almost assured of moving up to at least second place in the AP rankings.

Cal Poly rolled up 622 total yards while limiting the potent Viking attack to 230. Portland State is 2-3 for the

year. Cal Poly's place kicker Graham Wiggill remains perfect for the year. He kicked 8 extra points Saturday night and now has booted 21 PAT's in a row. The school record, since the game had a lot of them broken, is 37 set by John Loane in 1973-74.

The Mustangs are off to their best start since 1973 when Joe Harper's team went 9-1 winning 8 in a row before losing to Boise State.

Next week the Mustangs travel to Colorado to battle the Bears of Northern Colorado.

Other scores: San Diego St. 31 Fresno St. 14, Pacific 35 Cal St. Fullerton 17, Northern Arizona 31 Cal Poly Pomona 3, Santa Clara 19 Cal St. Northridge 7, UC Davis 29, Cal St. Hayward 14, Cal St. Humboldt 22 Cal St. Sacramento 10, Montana 15 Boise 7 and Idaho St. 9 Northern Colorado 7.

of a TI-57.

The TI Programmable 57 is a powerful slide rule calculator with statistics and decision making capabilities to help solve repetitive problems... quickly and accurately.

Powerful program memory stores 50 fully-merged steps for up to 150 keystrokes. Computer-like functions include editing, branching, subroutines, and more. Slide rule capabilities include functions of x, as well as log, trig, and statistical functions. Comes complete with an easy-to-follow learning guide.

With its new, low price and limited time \$5.00 rebate, the TI Programmable 57 offers an unsurpassed value. Act now to take advantage of this outstanding offer.

New
low
price:
\$70.00

Do business and financial classwork quickly with this powerful calculator.

For business administration, financial analysis and planning, real estate management, investment analysis, and more. The MBA's financial functions include net present value and internal rate of return for variable cash flows. Payment, present and future value, number of periods for annuities. Also, days between dates, and direct solution of yield for bonds and mortgages.

Statistical functions include mean, variance, and standard deviation at the touch of a key. Built-in linear regression. Simple programability lets the MBA remember a sequence of up to 32 keystrokes.

The MBA comes with a valuable book, *Calculator Analysis for Business and Finance*. Shows you how to apply the power of your MBA to business and financial decision making.

At its new, low price, the MBA presents an exceptional value to the business student. See it today.

*U.S. suggested retail price.

Use this coupon to obtain your \$5.00 rebate.

Texas Instruments will rebate \$5.00 of your original TI-57 purchase price when you: (1) Return this completed coupon, including serial number, (2) along with your completed TI-57 customer information card (packed in box), and (3) a dated copy of proof of your purchase, verifying purchase between August 15 and October 31, 1978. Your coupon, customer information card, and dated copy of proof of purchase must be postmarked on or before November 7, 1978 to qualify for this special offer.

Spikers split league openers

BY KAREN LUDLOW

Special to the Daily

Women's volleyball opened up their Southern California Athletic Association league play with a win over the Diablos of Cal State Los Angeles Thursday night in the main gym.

Although the Mustangs were a little tight, they took the first three games in straight sets, 15-12, 12-13, and 15-9.

"The girls were tight playing before a home crowd," coach Mike Wilton said. "It's hard to play when you are thinking of what is going on in the stands."

"In the first two games, the girls were tight. We would get ahead, then we would give them points. We even fell behind sometimes," Wilton said.

The win over L.A. moves the Mustangs overall record to 5-1.

Freshmen Julie Holland, Ilona Jonynas, Bev Reimer and Joney Webster greatly contributed to the win over the Diablos.

Holland and Reimer both had seven kills, while Jonynas had eight. Webster accounted for 10 saves. Senior captain Diane Schmidt also had a great game.

Men dominate Aggie Invitational

BY JIM ALVERNAZ
Daily Sports Writer

Boy, are Poly's cross country teams for real.

The men were expected to be awesome and have been. The women were thought to be a power to be reckoned with and they have been. It all adds up to a lot of success on the Mustangs' part.

The men put on an unreal display of depth at the Aggie Invitational Saturday.

With Jim Schankel setting a record pace (23:52.4) over the flat five-mile UC Davis course, the Mustangs swept up six of the top seven places.

Coach Steve Miller's bunch finished with 18 points to easily outdistance second place Sacramento State which totaled 54.

Mitch Kingery (24:01) placed second for Poly. Sac State's Jim White placed third and was followed by four Mustangs: Dan Aldridge, (24:10); John Capriotti, (24:17);

Manny Bautista, (24:50) and Robby Bray, (24:54).

Poly's seventh man, Eric Huff, placed 14th in the 62-man field with a time of 25:06.

The victory was especially sweet for Miller and company because in the process of wiping out all of their competition the Mustangs also wiped second place Sac State. According to Miller, the Hornets are about the only Division II team out west who think (or thought) they have the depth to beat Poly.

Poly's dual meet record after two invitationals is now 17-0.

The women were hardly less impressive at the UC Berkeley Invitational Saturday. Still not running in good health as a team, Poly's women placed fourth in a nine-team field that coach Eddy Cadena calls the toughest next to the national meet.

The Mustangs placed fourth with 85 points, just two

points behind third placer Colorado which totaled 83. Host Berkeley won the meet with 43 points with the University of Oregon finishing second with 56.

Maggie Keyes and Sue Munday have been in relatively good health (cross country runners invariably have some type of nagging hurt) this season and have been steady performers. Such was the case at Berkeley.

Keyes placed fifth over the 5,000 meter Tilden Park course finishing in 18:07. Munday placed 12th in 18:36.

Maggie's sister, Kate continues to improve each outing coming off a broken bone in her foot. She finished 17th in 18:53.

Freshman Janice Kelly was Poly's fourth finisher placing 24th in 19:09. Jani Rouda, (19:27) and Eileen Kraemer, (19:30) placed 30th and 31st. Rouda is battling a recurring stomach ailment while

Kraemer is trying to overcome a hurting achilles tendon.

Saturday both the men and women will be in Palo Alto for the Stanford Invitational.

Stanford is especially big for the men in that it will be the first meet this season in which Poly isn't a favorite to

win.

The favorite has to be the University of Texas, El Paso which placed second in the Division I national meet last season. UC Irvine also is expected to be a strong contender.

The meet will feature some

outstanding international runners including Mike Bolt of Kenya and Americans Steve Scott and Duncan McDonald.

The big meet will be held on the Stanford golf course. The women's race starts at 9:15 a.m.

Kickers blank Bakersfield

In the first night home match ever for Cal Poly soccer the Mustangs routed Cal State Bakersfield by the score of 16-0.

Maybe the Mustangs should schedule all their games at night from now on.

Friday night the match wasn't close from the start. Poly jumped out to a 4-0 lead and never looked back. Nine different players scored for the Mustangs with Randy Cutting and Joe Bonchonski scoring 3 apiece.

The big win was the first this year and evened Cal Poly's record at 1-1-1.

Coach Tom Hinkle substituted freely in the game. He was modest afterwards, "it's not the coaching; we have a

bunch of good kids," he said.

"We were fired up. We wanted to win because it was the first night home match ever. The players were pleased with the turnout and support of the crowd," Hinkle said.

A crowd of 250 watched the Mustangs dominate the Roadrunners. This year is the first for Bakersfield in the league.

The Mustangs now must get ready for a rough match against Los Angeles Baptist Saturday in Newhall. Last

year Baptist beat the Mustangs 4-3. Hinkle said Cal Poly and LA Baptist are looked upon as favorites in the league.
